Although we have tried to explain the concept of independent living on many occasions, they still have trouble understanding. I have attempted to improve Connecticut's transportation opportunities for disabled riders since 1975 when I started to work with a regional planning agency called the Capital Regional Council of Governments. At their meetings, both elected and government officials acknowledged that you could not get from one town to another in the 29 regions of Connecticut as the Dial-a-Ride bus did not cross town lines. They promised regional transit. And promised. And promised, year after year. But in 1983, 13 years later, regional transit still does not exist.

If you live in West Hartford, a community of over 60,000 people, and want to go to work, even if it is in the same town, or attend a college, Dial-a-Ride will not take you even though they have four vans because they do not want an ongoing commitment. The same is true of every town in the capital region, except Hartford, which takes you to work for 3 months. After that, you are on your own. So, if you are considering paratransit, remember that regulations must require that disabled workers and students must be able to ride it or it is not really a working system.

In Minneapolis, where the city chose paratransit over lift-equipped buses as a way to get disabled people to work, it became known to disabled and quickly developed a 30 percent turn down—does that mean that my time is up?

Mr. Owens. Yes. You may finish your sentence.

Ms. Harris. I think that was the end of the sentence.

Mr. Owens. I would like to have your written testimony.

Ms. Harris. Yes. I left copies at the desk.

[The prepared statement of Edith Harris follows:]

ADA PUBLIC HEARING
LAFAYETTE HOTEL
BOSTON, MASSACHUSETTS
OCTOBER 24, 1988

TO: U. S. HOUSE OF REPRESENTATIVES
SUBCOMMITTEE ON SELECT EDUCATION

FROM: EDITH HARRIS, COORDINATOR OF VOLUNTEERS
DISABILITIES NETWORK OF EASTERN CT., INC.
R.F.D. 2
NORTH FRANKLIN, CT. 06254

RE: AMERICANS WITH DISABILITIES ACT

I WOULD LIKE TO SPEAK ON TRANSPORTATION FOR DISABLED PEOPLE, PARTICULARLY IN RELATION TO JOB OPPORTUNITIES, AND CONCENTRATING ON CONNECTICUT, WHERE I LIVE AND WORK. ALL ACROSS THE COUNTRY, GOVERNMENT AND PRIVATE AGENCIES ARE TRAINING DISABLED PEOPLE FOR GAINFUL EMPLOYMENT, BUT A CORRESPONDING EMPHASIS HAS NOT BEEN PLACED ON GUARANTEEING DEPENDABLE ACCESSIBLE TRANSPORTATION TO AND FROM THE JOB. THIS UNMET NEED EXISTS BOTH IN THE CITIES, WHERE I WAS FORMERLY THE TRANSPORTATION COORDINATOR FOR AN INDEPENDENT LIVING CENTER, AND IN THE RURAL AREAS, WHERE I WORK NOW. IT IS, OF COURSE, CRUEL TO RAISE PEOPLE'S HOPES WITH JOB TRAINING, ONLY TO HAVE THEM HAVE TO TURN DOWN A JOB BECAUSE OF LACK OF TRANSPORTATION. IT IS ALSO NOT COST-EFFECTIVE, FOR THOSE WHO CAN READ ONLY THE BOTTOM LINE.

I AM SURE THAT YOU ARE ALL FAMILIAR WITH THE WAY IN WHICH APTA, THE AMERICAN PUBLIC TRANSIT ASSOCIATION, BLOCKED THE 504 IMPROVEMENTS BY REFUSING TO LIFT_EQUIP BUSES, SAYING THAT DISABLED PEOPLE WOULDN'T RIDE PUBLIC TRANSIT ANYWAY. HOW COULD THEY POSSIBLY KNOW THAT, WHEN THERE WAS NOTHING ACCESSIBLE TO RIDE?

ANOTHER CONTRIBUTOR TO TEN LOST YEARS WAS THE UMTA "COMMITTEE" WHICH DECIDED TO REWARD ANY BUS COMPANY WHICH COULD BUILD THE LIGHTEST POSSIBLE BUS, INCLUDING A VERY HEAVY BUS LIFT. THIS RESULTED IN THE GRUMANN BUS, OF WHICH 280 WERE PURCHASED BY THE CONNECTICUT DEPARTMENT OF TRANSPORTATION. OVER 150 PARTS HAD TO BE REPLACED IN EACH BUS, WITH THE STEP-LIFTS A DISMAL FAILURE.

ALTHOUGH THIS BUS AND LIFT WERE DESCRIBED BY THE CONNECTICUT OFFICIAL IN CHARGE OF THE PURCHASE AS "STATE OF THE ART", DECISION-MAKERS IN THE SEATTLE AREA DECIDED TO HOLD OUT FOR HIGHER QUALITY. IN THE SAME TIME FRAME, THEY DEVELOPED THEIR OWN SPECIFICATIONS FOR LIFTS AND BUSES, AND PURCHASED LIFTS WHICH

HAVE PROVED VERY DEPENDABLE AND ARE STILL BEING USED, TEN YEARS LATER, ALONG WITH THE BUSES. PUBLIC TRANSIT IN SEATTLE HAS IMPROVED FOR ALL RIDERS, AS SERVICE FOR DISABLED USERS HAS STEADILY EXPANDED.

IT WOULD APPEAR THAT LOCAL OPTION WORKS ONLY IN THOSE AREAS WHERE THE TRANSIT AGENCY ALREADY HAS A COMMITMENT. IN CONNECTICUT, THE DEPARTMENT OF TRANSPORTATION, WHICH OPERATES THE MAJOR BUS SERVICE IN THREE CITIES, AND CONTROLS THE FUNDING FOR OTHER BUS SERVICES, HAS TO BE DRAGGED INTO THE 20TH CENTURY. THE KEY DOT OFFICIAL SAID, IN 1985, "WHY CAN'T ALL THE HANDICAPPED PEOPLE LIVE IN ONE PLACE AND WORK IN ONE PLACE? IT WOULD MAKE IT EASIER FOR US." ALTHOUGH WE HAVE TRIED TO EXPLAIN THE CONCEPT OF INDEPENDENT LIVING ON MANY OCCASIONS, THEY STILL HAVE TROUBLE UNDERSTANDING.

I HAVE ATTEMPTED TO IMPROVE CONNECTICUT'S TRANSPORTATION OPPORTUNITIES FOR DISABLED RIDERS SINCE 1975, WHEN I STARTED TO WORK WITH THE REGIONAL PLANNING AGENCY, CALLED THE CAPITOL REGION COUNCIL OF GOVERNMENTS. AT THEIR MEETINGS, BOTH ELECTED AND GOVERNMENT OFFICIALS ACKNOWLEDGED THAT YOU COULDN'T GET FROM ONE TOWN TO ANOTHER IN THE 29-TOWN REGION, AS DIAL-A-RIDES DIDN'T CROSS TOWN LINES. THEY PROMISED REGIONAL TRANSIT _ AND PROMISED AND PROMISED, YEAR AFTER YEAR, BUT IN 1988, 13 YEARS LATER, REGIONAL TRANSIT STILL DOESN'T EXIST.

IF YOU LIVE IN WEST HARTFORD, A COMMUNITY OF OVER 60,000, AND WANT TO GO TO WORK, EVEN IN THE SAME TOWN, OR ATTEND COLLEGE, DIAL-A-RIDE WON'T TAKE YOU, EVEN THOUGH THEY HAVE 4 VANS, BECAUSE THEY DON'T WANT AN ONGOING COMMITMENT. THE SAME IS TRUE OF EVERY TOWN IN THE CAPITOL REGION EXCEPT HARTFORD, WHICH WILL TAKE YOU TO WORK FOR THREE MONTHS. AFTER THAT, YOU'RE ON YOUR OWN. SO IF YOU'RE CONSIDERING PARATRANSIT, REMEMBER THAT REGULATIONS MUST REQUIRE THAT DISABLED WORKERS AND STUDENTS MUST BE ABLE TO RIDE OR IT'S NOT REALLY A WORKING SYSTEM.

IN MINNEAPOLIS, WHERE THE CITY CHOSE PARATRANSIT OVER LIFT-EQUIPPED BUSES AS A WAY TO GET DISABLED PEOPLE TO WORK, IT BECAME KNOWN TO DISABLED PEOPLE, AND QUICKLY DEVELOPED A 30% TURNDOWN RATE BECAUSE THERE WERE SO MANY POTENTIAL RIDERS. IN ADDITION, DISABLED WORKERS HAD TO BE READY ONE HOUR EARLY FOR PICKUP, AND OFTEN ARRIVED AT WORK ONE HOUR LATE. HOW CAN YOU DEVELOP GOOD WORK HABITS OR EXPECT TO BE PROMOTED IN A JOB IF THE TRANSPORTATION IS UNDEPENDABLE? IN CONNECTICUT, WORKERS HAVE HAD TO

QUIT THEIR JOBS AND GO BACK ON PUBLIC ASSISTANCE AFTER YEARS OF FRUSTATION AT RYING TO GET TO AND FROM WORK WITH A SYSTEM WHICH WASN'T FUNCTIONING.

THE FEDERAL GOVERNMENT, AND IN CONNECTICUT ALSO THE STATE GOVERNMENT, IS POURING A LOT OF MONEY INTO RIDESHARING, WHERE UP TO 12 RIDERS SHARE A VAN, BUT HAVE TO WORK IN THE SAME AREA AND LEAVE WORK AT THE SAME TIME. AS OF NOW, THERE ARE NO ACCESSIBLE VANS IN THIS PROGRAM, EVEN THOUGH THE DISABILITY ISSUE WAS FIRST RAISED IN 1980, WHEN THE RIDESHARE GROUP GOT THEIR FIRST BIG FEDERAL GRANT, WITH THE PROMISE THAT THEY WOULD NEVER ASK FOR MORE. THEIR BUDGET HAS TRIPLED, ALTHOUGH THE NUMBER OF ACTUAL RIDERS IN THE PAST YEAR REMAINED THE SAME. WHEN A LOCAL NEWSPAPER QUESTIONED THE DIRECTOR ABOUT THE LACK OF ACCESSIBILITY, HE SAID, "WE DON'T HAVE TO COMPLY, BECAUSE WE JUST DO MARKETING". FINDING A WAY NOT TO COMPLY IS NOT WHAT CAN BE REGARDED AS COMMITMENT.

THERE IS A LEGISLATIVE BODY IN CONNECTICUT CALLED THE CONNECTICUT PUBLIC TRANSIT COMMISSION WHICH HOLDS HEARINGS AROUND THE STATE, AND SAYS IT IS INTERESTED IN REGIONAL TRANSIT, BUT AFTER YEARS OF TESTIFYING AT THEIR HEARINGS, DISABLED RIDERS HAVE DECIDED JUST TO SEND IN THE PREVIOUS YEAR'S TESTIMONY, SINCE NO ACTION EVER SEEMS TO TAKE PLACE TO IMPLEMENT SUGGESTIONS WHICH HAVE BEEN MADE.

UNFORTUNATELY, BECAUSE THESE ORGANIZATIONS EXIST, AND HAVE BUDGETS, IT CREATES AN ILLUSION OF PROGRESS, AND UNTIL RECENTLY, MANY PUBLIC OFFICIALS ASSUMED THAT SOMEONE WAS RESPONSIBLE FOR ACCESSIBLE TRANSPORTATION. ONLY AFTER WE WENT FROM BLOCKING BUSES TO RALLYING WITH OVER 200 DISABLED RIDERS ON THE CAPITOL LAWN, DEMANDING BETTER TRANSPORTATION, DID WE GET THE ATTENTION OF LEGISLATORS, WHO PASSED BILLS IN THE LAST LEGISLATIVE SESSION THAT WILL BE HELPFUL. ALL BUSES PURCHASED IN CONNECTICUT MUST HAVE LIFTS: SENSITIVITY TRAINING WILL BE REQUIRED OF BUS DRIVERS, AND A CITIZEN ADVISORY BOARD (OPPOSED BY THE DEPARTMENT OF TRANSPORTATION) WILL GO INTO EFFECT IN JANUARY.

ONLY 30 OR 40 OF THE LIFTS IN THE 280 BUSES WHICH WERE PURCHASED BY CONN/DOT ARE CONSIDERED BY THE MANAGEMENT TO OPERATE, AND DUE TO THEIR PLACING A LOW PRIORITY ON LIFT MAINTENANCE, EVEN THOSE ARE OFTEN UNABLE TO FUNCTION. SEATTLE, ON THE OTHER HAND, HAS TWO REQUIREMENTS WHICH ARE ESSENTIAL FOR A SYSTEM TO WORK PROPERLY.

THEY PLACE A HEAVY EMPHASIS ON BUS AND LIFT MAINTENANCE, WITH EVERY LIFT CYCLED AT NIGHT WHEN THE BUS COMES IN AND IN THE MORNING, WHEN THE BUS GOES OUT. WHEN THIS PROCEDURE WAS SUGGESTED TO CONN/DOT OFFICIALS, THEY SAID IT WOULD take THEM "WAY OFF SCHEDULE". HOW IS SEATTLE ABLE TO STAY ON SCHEDULE, ALONG WITH OTHER BUS OPERATIONS WHICH HAVE PAID ATTENTION TO MONEY-SAVING MAINTENANCE?

THE OTHER THING WHICH SEATTLE DOES IS TO CONSTANTLY TRAIN AND RETRAIN ITS BUS DRIVERS, AND APPARENTLY THIS MUST BE PART OF ANY FUNDING PROVIDED BY THE FEDERAL GOVERNMENT, REQUIRING THAT DISABLED RIDERS BE INVOLVED IN THE TRAINING. IS IT BECAUSE WE HAVE VOLUNTEERED TO ASSIST WITH THE DRIVER TRAINING FOR NOTHING THAT WE HAVE NOT BEEN ASKED? IN THAT CASE, WE WOULD BE GLAD TO BE PAID. MANY CONNECTICUT BUS DRIVERS DO NOT KNOW HOW TO OPERATE THE LIFTS, AND SEVERAL HAVE STARTED THE BUS WHILE THE WHEELCHAIR-USER IS STILL GETTING LOCKED IN, AND THE WHEELCHAIR IS ROLLING AROUND IN THE AISLE.

THE CONNECTICUT DEPARTMENT OF TRANSPORTATION COMPLAINS CONSTANTLY ABOUT THE COST OF TRANSPORTING DISABLED RIDERS, BUT NEVER COMPLAINS ABOUT THE BILLIONS AND BILLIONS OF DOLLARS THEY CONTINUE TO PUT INTO BUILDING NEW HIGHWAYS WHICH CREATE MORE TRAFFIC. ONLY RECENTLY, THEY STARTED TO SPEND OVER 6 BILLION DOLLARS TO BEGIN TO MAINTAIN THE ALREADY EXISTING ROADS AND BRIDGES.

OUR NEEDS COVER A TINY FRACTION OF THEIR BUDGET, BUT WITHOUT A TOUGH FEDERAL LAW WITH REGULATIONS WHICH ARE MONITORED FOR COMPLIANCE, MANY WILL DO THEIR BEST TO AVOID SPENDING EVEN THAT TINY FRACTION WISELY.

THANK YOU FOR YOUR ATTENTION AND FOR YOUR HELP. GOOD LUCK IN YOUR EFFORTS.

Mr. **Owens**. Did you say that Seattle held out for a different bus or for the same Grumann bus that was improved?

Ms. **Harris**. But they asked for better quality lifts.

Mr. **Owens**. The same bus with better quality lifts.

Ms. **Harris**. Right. And their lifts are still working and ours are not. But you go back to Denver, and Denver already had taken the same buses that we did, the Grumann flexibles, but because they were dedicated to and helping the disabled transportation, they provided maintenance for those buses and worked out a system where they could be fixed so they would not break down. The Connecticut company just rose those up and welded them and decided, "To hell with it."

Mr. **Owens**. Thank you.

Ms. Linda Hanscom.

STATEMENT OF LINDA HANSCOM, CHAIRPERSON, AMERICAN DISABLED FOR ACCESSIBLE PUBLIC TRANSPORTATION, NORTH FRANKLIN, CT

Ms. **Hanscom**. Good afternoon. My name is Linda Hanscom. I am chairperson of ADAPT of Connecticut. ADAPT stands for Americans Disabled for Accessible Public Transportation. I am also the community educator for the Disability Network of Eastern Connecticut, an independent living center.

I have been disabled my entire life and I have dealt with discrimination my entire life. I am here today to ask for your support in passing the Americans With Disabilities Act. Discrimination is everywhere for people with disabilities.

I would like to share a few examples from my own experience. I live in a small town 11 miles outside of Hartford. Before I worked at the Disability Network, I was a computer programmer at a major insurance company in Hartford for almost 3 years. Although there are frequent buses and several van pools that go into the city, all of them are inaccessible. As a result, I spent thousands of dollars every year in paying someone to drive me to and from work in my own van. During the time I worked with this company, I asked over and over that the ladies' room be made accessible. For years, they claimed they were having meetings to discuss this issue. In the meantime, I was to continue to ask a coworker to escort me to the bathroom.

The final straw was when I found out that despite excellent reviews and one of the highest outputs of work, I was the lowest paid programmer in my category.

Housing is another example. Finding an affordable apartment in Connecticut is difficult enough. Finding an affordable first-floor apartment that can meet my needs simply by adding a ramp is nearly impossible. After searching for months, I finally did find such an apartment. After doing a credit check and all, the owner called and we made an appointment to sign the lease. When I went to sign the lease, the owners said they had changed their minds about renting to me because I was in a wheelchair and they felt this would increase their liability. I told them discrimination in Connecticut was against the law. I did not know at the time and, unfortunately, neither did they, that single and two-family homes were exempt. In other words, legally, they had every right to discriminate against me because I use a wheelchair.

We agreed at the time that if I could prove that they had no extra liability, I could rent the apartment. I did prove this to them and I live in that apartment today. My last example has to do with my son's school. My son is 7 years old and does not have a disability. His school is two blocks from our home. The only entrance I can get into is the entrance to the gym. To get to the administrative offices, the nurse's office or my son's classroom requires using the elevator. This would not be a problem except that you need a key to use the elevator. I contacted the principal of the school and then the superintendent trying to get a key. They both told me they had no legal obligation to provide me with a key. I told them I wanted access to the school just like any other parent and I could not understand what the problem was. Their lawyers sent me a letter stating that for security purposes they could not allow me to have a key.

It does not make any sense to me that able-bodied parents have access to their children, but to give me access to my child is a security risk.

In closing, I repeat: Discrimination against people with disabilities is an everyday occurrence. The Americans With Disabilities Act is necessary and long overdue. Thank you for listening.

Mr. OWENS. Thank you. And, Mr. Palotto, just one quick question. The situation that you pointed out were agencies that have responsibilities not living up to those responsibilities. Do you think that we have covered this in this act or is there something that should be added to make certain that that kind of situation is corrected?

Mr. PALOTTO. I feel strongly, knowing of a particular situation in Bridgeport, that the act should have some enforcement. That agencies that accept Federal funds or State funds should follow through with their charter. It says, "Serve people with disabilities." And I do not think they—as long as they have that charge and that mission—they should get involved in for-profit operations.

For instance, setting up a building with offices for doctors, setting up exercise programs for the banking community. Things like that, I think, have taken that agency far away from providing the services they should provide for people with disabilities.

Mr. OWENS. Thank you very much.

Mr. PALOTTO. Thank you.

Mr. OWENS. Our next panel: Mr. Bill Knight, Oakville, CT; Ken Beachman; Ed Preneta, Director of Connecticut Disabilities Development Office.

It is unfortunate. We continue to fall behind time. And we are now in the 4-minute schedule. So, I apologize and welcome you to submit any additional testimony in writing.

You may begin, Mr. Knight.

STATEMENT OF BILL KNIGHT, CHAIRMAN, GREATER WATERBURY CONSUMER ACTION FORUM

Mr. KNIGHT. Thank you, Mr. Chairman. My name is Bill Knight and I am the chairman of the Greater Waterbury Consumer Action

Forum which is a disability rights organization based in Waterbury, CT.

Our organization consists of persons with disabilities, family members, friends, advocates, and others who are interested in disability issues. It is the goal of our group to enhance the quality of life for persons with disabilities living in the greater Waterbury area. And it is on their behalf, as well as my own, that I stand here today to testify in support of the Americans With Disabilities Act.

At one point in the development of the rehabilitation profession, it was felt that the needs of persons with disabilities could best be served in institutional settings. Although I will concede to you that there are some educational services that go on in these institutions, but it is my opinion that these services are woefully inadequate and a segregated society is established due to institutionalization.

Through the natural evolutionary process of the rehabilitation profession, it is now in an era whose focus is on deinstitutionalization and mainstreaming. But there seems to be sharp differences in terms of the definitions between textbook theories and implemented community strategies for integration.

In my hometown, the powers that be feel that they are providing an opportunity for integration and community involvement by the provision of a paratransit system to deal with the needs of mass transportation for the disabled.

Municipal governments fail to realize that by the provision of this paratransit system that they are totally defeating the purpose of integration and it is my opinion that persons who are forced to use this service are no better off than when they were institutionalized.

I think it would be much better for local governments in conjunction with State departments of transportation to provide the necessary resources such as wheelchair lifts which would enable the independence of all its ridership.

Another major issue of concern to persons with disabilities is that of employment. I am dismayed at the lack of opportunities for employment for persons with disabilities. The State of Connecticut made a major investment in my future by providing me with the necessary resources to obtain my bachelor's and master's degree in therapeutic recreation. On receipt of my degrees, I found it very difficult to gain employment in my chosen field. My family was very supportive of my desires and drove me to many interviews. They also shared my frustrations as the rejection letters came in the mail.

In closing, I would like to say that the Americans With Disabilities Act needs to be passed for a multitude of reasons. It has been my experience that people tend to put the emphasis on the word disability on the wrong syllable. They tend to see us as less capable and less able, which is a perception that needs to be immediately rectified. And I urge the passage of this bill in the strongest terms. Thank you very much.

[The prepared statement of Bill Knight follows:]

Prepared Statement of Bill Knight

My name is Bill Knight and I am the chairperson of the Greater Waterbury Consumer Action Forum which is a disability rights organization based in Waterbury, Connecticut. Our organization consists of persons with disabilities, family members, advocates, and others who are interested in disability issues. It is the goal of Consumer Action Forum to enhance the quality of life for people with disabilities in the Waterbury area and it is on their behalf as well as my own that I stand before you today to testify in support of the American With Disabilities Act.

At one point in the development of the rehabilitation profession it was felt that the needs of the disabled could best be served in institutional settings. Although I will concede to you that some educational services are provided by institutions, but it is my opinion that these services are woefully inadequate and a segregated society is established due to institutionalization.

Through the natural evoluntionary process of the rehabilitation profession it is presently in an era who's focus is on mainstreaming, and deinstitutionalization which I heartily endorse. But there seems to be sharp differences in terms of definition of textbook theories and implemented coummunity strategies of integration.

In my hometown in Connecticut the powers that we feel is that they are promoting integration and community involvement by providing a paratransit system to deal with the needs of mass transportation for persons with disabilities. However, in doing so municipal governments fail to realize that by providing a paratransit system totally defeats the purpose of integration and in my opinion persons with disabilities are no better off than when they were institutionalized.

Although public transportation is a major issue that needs to be addressed in terms of providing quality service to the disabled, so is employment. I am dismayed at the lack of employment opportunities for an individual with a disability. The State of Connecticut made a major investment in my future by providing me with the necessary resources to go to college to pursue a Bachelors and a Masters Degree in Therapeutic Recreation for which I am grateful, however, upon receipt of my degree it was very difficult for me to get a job in my chosen field. My parents drove me to many interviews and my family was very supportive of my desires. They also shared my frustration as each rejection letter came to me in the mail.

In conclusion, I would like to say that I feel that the passage of this legislation is necessary for a multitude of reasons. It has been my experience that society puts the emphasis of the word disability on the wrong syllable. They tend to look at our limitations and in doing so forget that we also have abilities and that the disabled have the same hopes and dreams as everyone else and this perception of being less able and less hopeful needs to be immediately rectified.

Mr. OWENS. Thank you, Mr. Knight.

Mr. Beachman.

STATEMENT OF KEN BEACHMAN

Mr. BEACHMAN. Hi. I would like to first of all thank this distinguished panel for an opportunity to be heard in front of you. I feel that my testimony is valuable due to the fact that it gives examples of how even very minor disabilities can affect an individual.

I was born with specific learning disabilities and one of the results of that was that growing up, I was rather uncoordinated in my movement. And due to that fact, in seventh and eighth grade, I was verbally and to a much lesser degree, physically abused while in seventh and eighth grade. And due to the fact that that was such a common-day occurrence, the vast majority of nights during that time, I would go to sleep praying very fervently that I would not wake up the next morning.

And when I would wake up the next morning, many times I would be crying and rather harshly pounding my pillow due to the fact that I again would be forced to go through another day of so much pain.

Another example of how I was discriminated against due to my specific learning disabilities that I was born with was the fact that I, in college, my U.S. History I professor said that in order to assist me in a compensatory technique so that I could better get through his course, he agreed to allow me to take his essay tests orally.

And, despite the fact that I very successfully completed all the work required for the course and many times contributed brilliantly during class discussions, when I was finished with the course, he very fervently refused to give me a grade as the academic dean. And my fellow professors tried very hard to persuade him to give me a grade. He sort of smiled back at them and said, "If I am forced to give Ken a grade, I'll be more than happy to give him an F." And due to that fact, I did have to repeat that course, again.

And another example of discrimination is due to a very minor head injury that I sustained a few years ago. When the smog levels get very high, I have to wear a surgical type antipollution mask. And a few individuals have walked up to me and said, "Gee, if you are that sick, you and people like you should not be allowed outside." And I feel this along with the first area of discrimination that I mentioned in seventh and eighth grade could both be greatly reduced due to the educating of the general public that would come about as a successful result of the passage of the Americans With Disability Act.

Another example of discrimination, I feel, was after my head injury. For a while, I was totally unable to read and understand what people were saying, except for a few words at a time. And, due to that fact, if I was in a public place and at times would have to use the restroom facilities, I wouldn't know which was the men's room and which was the ladies' room. And the way that I figured out how to do that was that I would wait until somebody used either one or the other and then, depending upon which sex went in there, I would then either use it, you know, if a man went in there or use the other one if a lady went in the other one. And I feel that as some restrooms have a required pictorial display would be of much assistance in that.

I do have most of my testimony in writing, although I did leave out some. Would you rather have me submit it as is now and submit an addendum or submit the whole thing in a few days?

Mr. OWENS. Well, that is up to you. You have 10 days to submit any additional testimony you wish.

[The prepared statement of Ken Beachman follows:]

PREPARED STATEMENT OF KFN BEACHMAN

Hello, my name is Ken Beachman and the purpose of my testimony is to give examples of how minor disabilities can have an impact on someone's life. In the 7th and 8th grades my movement was uncoordinated. My fellow students constantly used my lack of coordination to verbally and to a lesser extent physically abuse me. The abuse affected me to the point that the vast majority of nights I would fervently pray that I would die in my sleep. The next morning I pounded my pillow and cry in anger that I was still alive. If A.D.A. is passed, this situation would be less likely to occur because the public would be better educated in the vital area of disabilities. Another example of discrimination happened in college. My U.S. History professor had agreed to give me his essay tests orally to help compensate for my learning disability. To spite the fact that I had very successfully completed all the course work and constantly contributed brilliantly to class discussions. He refused to give me a grade. Some of his fellow professors and the academic Dean attempted to force him to give a grade. His response was, "If I must give Ken a grade it will be an F."

Due to a minor brain injury, I have to wear a surgical type anti-pollution mask on days of very high smog levels. The discriminatory reaction I get from some people is, "if you are that sick you should not be allowed outside." This is another form of discrimination that hopefully would be alleviated by educating the public that would accompany the passage of A.D.A.

I am proud to be employed at an Independent Living Center and a member of many self advocacy groups.

Mr. OWENS. Mr. Preneta.

STATEMENT OF ED PRENETA, DIRECTOR, CONNECTICUT DISABILITIES DEVELOPMENT OFFICE, EAST HARTFORD, CT

Mr. PRENETA. Good afternoon, Mr. Chairman, members of the task force. My name is Ed Preneta. I am the director of the Connecticut Development Disabilities Office and I am representing the Connecticut Developmental Disabilities Council's support for the Americans With Disabilities Act.

I am pleased to say I come from a State where the disabilities-right movement has been very strong, a State where people with disabilities realized early-on the pervasiveness of unfair and unnecessary discrimination and found the leadership to organize themselves to pursue access to those opportunities afforded the rest of society.

Over these last 10 years, these people have done what they could to get State laws passed, State regulations changed—statute by statute, program by program—to overcome restrictions and limitations. Some major battles have been won. In particular, in November of 1984, Connecticut's Constitution was amended to include people with physical or mental disabilities as a protected class.

More often than not, people with disabilities have won small battles here and there only to find their rights eroded somewhere else. It has been a frustrating experience. It is no wonder that self-advocacy groups have sprung up all over Connecticut. It is also interesting to note that Connecticut Developmental Disabilities Council's funds are being used to promote self-advocacy and people with disabilities are being trained in the strategies and tactics of the civil-rights movement of the sixties and seventies.

People with disabilities are finding it necessary to march in the streets, block stairs, take sledgehammers to curb cuts, chain themselves to buses, go to jail, and stage sit-ins almost as far as the Chambers and Halls of the U.S. Senate.

The next powerful movement is the rising of people with mental retardation locked up in institutions and sheltered workshops.

The time is long overdue for a clear and comprehensive national mandate for the elimination of discrimination against persons with disabilities. The Americans With Disabilities Act will provide a tool for already existing activists, encouragement for the downtrodden and an opportunity to reach the most segregated members of our society.

I ask Congress, particularly the entire Connecticut delegation, to support the Americans With Disabilities Act. Thank you very much.

[The prepared statement of Ed Preneta follows:]

PREPARED STATEMENT OF ED PRENETA

Good afternoon.

My name is Ed Preneta. I'm the director of the Connecticut Development Disabilities Office and I am representing the Connecticut Developmental Disabilities Council's support for the Americans With Disabilities Act.

I am pleased to say that I come from a State where the disabilities rights movement has been very strong. A State where people with disabilities realized early-on the pervasiveness of unfair and unnecessary discrimination and found the leadership to organize themselves to pursue access to those opportunities afforded the rest of society. Over these last ten years, these people have done what they could to get State laws passed and State regulations changed, statute by statute, program by program, to overcome restrictions and limitations. Some major battles have been won, in particular, in November of 1984 Connecticut's Constitution was amended to include people with physical or mental disabilities as a protected class. More often than not, people with disabilities have small battles here and there only to find their rights eroded somewhere else. It has been a frustrating experience. It is no wonder that self-advocacy groups have sprung up all over Connecticut. It is also interesting to note that Connecticut Developmental Disabilities Council Funds are being used to promote self-advocacy and people with disabilities are being trained in the strategies and tactics of the civil rights movement of the 60s and 70s. People with disabilities are finding it necessary to march in the streets, block stairs, take sledgehammers to curb cuts, chain themselves to buses, go to jail and stage sit-ins almost as far as the Chamber and Halls of the U.S. Senate. The next powerful movement is the rising of people with mental retardation locked up in institutions and sheltered workshops.

The time is long overdue for a clear and comprehensive national mandate for the elimination of discrimination against persons with disabilities. The Americans With Disabilities. The Americans With Disabilities Act will provide a tool for already-existing activists, encouragement for the downtrodden and an opportunity to reach the most segregated members of our society.

I ask Congress, particularly the entire Connecticut delegation, to support the Americans With Disabilities Act.

Thank you very much.

Mr. OWENS. Thank you.

Mr. Knight, I thought there was a great shortage of specialists in therapeutic recreation.

Mr. KNIGHT. Yes, sir, there is. But I found it difficult in getting employment. One of the things that disheartened me most was I wanted to be as honest as I could when applying for jobs. So, when I first started calling for interviews, I explained that I was blind. I got very few calls for interviews that way.

So, in the future, I did not say I was blind and went to interviews and still had problems. Most people were very subtle about why they would not hire me, such as that I would create an insurance liability. There were some who blatantly said that they—or more blatantly said that my blindness was definitely a contributing factor in them not being able to hire me.

Mr. OWENS. Are you employed now?

Mr. KNIGHT. Yes, sir, I am. I am the Information and Referral Coordinator for Independence, Northwest, an independent living center in the Waterbury area.

Mr. OWENS. Mr. Preneta, what problems do children with mental illness face in getting an education?

Mr. PRENETA. Well, it is not just kids with mental illness. I think you may be aware that recently Connecticut was ranked sixth from the bottom in terms of integrating kids with disabilities into public schools. So, it is persuasive amongst kids and parents have struggled through fair hearings to try and get their kids into their neighborhood public school, not just one segment of the population.

Mr. OWENS. And how long have you been there?

Mr. PRENETA. In Connecticut?

Mr. OWENS. Yes; as director.

Mr. PRENETA. Well, I have been with Development Disabilities Council for 10 years, 6 years with the United Cerebral Palsy Association of Greater Hartford. I have been a Connecticut resident for 35.

Mr. OWENS. Thank you very much. I want to thank all of you for testifying.

The next panel is Mr. Bill Dorfer, Stratford, CT; Cindy Kappe, Bridgeport, CT; Shelly Teed-Wargo, Chairman, Connecticut Union of Disability Action Groups. You may begin, Mr. Dorfer.

STATEMENT OF BILL DORFER, STRATFORD, CT

Mr. DORFER. Good afternoon, Mr. Chairman. I thank you for this opportunity to appear this morning to share with you some of my personal experiences with discrimination because of my physical disabilities.

My name is Bill Dorfer. I am from Bridgeport, CT. I am assistant director of the Center for Independent Living of Southwestern Connecticut and Stratford.

Thirty-four years ago, I was diagnosed as having limb-girdle muscular dystrophy, a progressive disease. And for the past 13 years, I have needed leg braces, a cane, and most recently a wheelchair to maneuver around. I strongly feel that attitudinal and architectural barriers within our communities, more than illnesses and accidents, are the primary reasons for the inaccessibilities that cause us to be labeled handicapped or disabled. And earlier today, I believe it was Mr. Kennedy who also touched on that.

I would like to touch on an area that I do not think has been brought up. And that is these particular attitudes force some of us persons with disabilities into attitudes. Attitudes of dependency, of being forced to remain in relationships, marital or family or personal that perhaps are just as unhealthy as our illnesses themselves.

I rely on public transportation or paratransportation to go to my job each day. And in a city of 140,000 people, in a metropolitan area of half a million, there are only a half a dozen buses that are equipped with wheelchair lifts. And many of these buses quite often bypass men and women in wheelchairs or with crutches, walkers, because they do not want to take the time, quite frankly, to stop and to assist these people on the buses. I rely on paratransit and we have two buses in the greater Bridgeport area that accommodate wheelchair people. And this is in a population of nearly half a million people. And I believe you will hear further testimony this afternoon in regard to that.

Also, an area that is very important to me is that of life insurance. And, ironically, I live in the life insurance capital of America. And, because of my muscular dystrophy, I am lumped into a category: disabled with muscular dystrophy. There are approximately 40 neural muscular disorders that come under the classification of muscular dystrophy. Each person deals with their illness in their own way. Some people deteriorate rapidly, other people deteriorate quite slowly. But none of us are looked at as individuals. And none of us are taken at face value and are given insurance or any other benefits based on our ability. We are simply lumped into a category and therefore we are turned down, or our premiums are so high that we simply cannot afford life insurance. To this date, I do not have life insurance because I simply can't afford it.

And, yet, I am 44 years old and I have had muscular dystrophy for 34 years and, except for the inability to get up out of my chair or to drive a car, I am as healthy as anybody else in this room and I fully expect and my doctors fully expect me to live a very productive life. Yet, I am turned down.

I just feel that until we address this particular issue, which, by the way, is not covered in the Americans With Disabilities Act, that we are not equal, in insurance, we are not all equal under the eyes of the law.

Thank you for your time.

[The prepared statement of William Dorfer follows:]

Prepared Statement of William Dorfer, Jr.

Dear Members of the Committee on Education and Labor: My name is William Dorfer and I am from Bridgeport, CT. I would like to express my gratitude for this opportunity to share with you today some of my personal experiences with discrimination because of my physical disabilities.

Thirty four years ago I was diagnosed as having Limb-Girdle Muscular Dystrophy. For the past thirteen years I have needed leg braces, a cane and most recently a wheelchair to maneuver around in a world that is more inaccessible than most people realize. I strongly feel that the mental attitudes and physical barriers within the community, more than illnesses and accidents themselves, are the primary reasons for the inaccessibilities that cause us to be labled "handicapped" or "disabled". One area this is most prevalent in is public transportation.

Because of my illness, I am unable to drive a car or van, even with specially equipped devices. As a result, I must rely on a paratransit system that transports me to and from work five days a week. There are currently seven such buses for the disabled in the Greater Bridgeport Area but not all have hydraulic lifts for wheelchairs. These buses carry upwards of ninety people a day out of an overall population or more than 300,000 residents in the six-town area served. It is accurate to say that without this particular paratransit system, there is simply no way I could continue to remain self-supporting and relatively independent.

To talk about the importance of a paratransit system is not to detract from the equal importance of an accessible mass transit system. The city of Bridgeport has a number of buses equipped with wheelchair lifts that are supposed to make mass transit available for the disabled. However, the reality is that many of these lifts are continually inoperable, in dire need of repair but not a priority of the transit company. I have personally witnessed bus drivers purposely bypass obvious wheelchair passengers waiting at a bus stop or in a shopping mall with no regard as to how the disabled will return home. Such blatant disregard and disrespect only encourages people with disabilities to shrug their shoulders in despair and remain prisoners in their homes.

Another major area of discrimination in my particular case is that of personal life insurance. Because of my Muscular Dystrophy, I am lumped into the general category of "Disabled—with Muscular Dystrophy". There are currently forty known neuromuscular diseases under the classification of Muscular Dystrophy. Each person's body responds to the illness in its own manner; for some, the muscle deterioration is slow and for others the deterioration is rapid. In some instances a person's life span is shortened by the illness and in others the life span is normal. The same, of course, can be said for other illnesses, not just Muscular Dystrophy.

Until this generalization of illnesses and diseases is removed and persons with disabilities are treated as individuals, not as categories, discrimination against the disabled will continue to deprive an ever increasing number of men, women and children the necessary services and benefits that all of us are entitled to in a nation where we proudly proclaim that all are equal under the eyes of the law.

Again, members of the committee, I thank you for this opportunity to appear before you today to share these personal experiences with you and hopefully stress the importance of the Americans with Disabilities Act of 1988.

Mr. **Owens**. Ms. Kappe.

STATEMENT OF CINDY KAPPE, BRIDGEPORT, CT

Ms. **Kappe**. Thank you, Mr. Chairman. My name is Cindy Kappe and I am here to speak on discrimination of the disabled. I would like to bring up two points, if I may, that happened to me.

In 1984, I and my late husband were working at Goodwill Industries of Bridgeport, CT. We asked for our 6 months' leave of absence prior to our wedding that year. But they said no. Their reasons were they could not spare us for that length of time. As a result, we were forced to leave permanently.

Point No. 2 is on transportation. In November of 1987, I called People's Choice of Bridgeport, CT, for transportation for an appointment that I had at 12 noon. But on that day, they picked me up at 9:30 in the morning, instead of 11. When this error was pointed out to the company, they refused to change times. Therefore, I was forced to sit in the cold for 1½ hours prior to my appointment. Thank you very much.

Mr. **Owens**. Thank you. Ms. Wargo.

SHELLEY TEED-WARGO, CHAIRMAN, CONNECTICUT UNION OF DISABILITY ACTION GROUPS

Ms. **Wargo**. My name is Shelley Teed-Wargo. I am the executive director of the Connecticut Union of Disability Action Groups. Bill Knight, who you heard a few moments ago, is the chairman.

The Connecticut Union of Disability Action Groups is an organization made up of grassroots groups working on disability issues. Our involvement with our member organizations include supporting and assisting these groups to make positive changes for persons with disabilities both on local and State levels.

Since the issues we involve ourselves with are issues chosen by our members, our work is indicative of the priority issues of a large number of persons with disabilities in Connecticut.

Let me relate to you some of the work that we have been involved with over the last year. One of the groups we work with is a statewide group known as Citizens for Accessible Transportation, CAT. For many years disabilities groups in Connecticut had been trying to convince the Connecticut Department of Transportation to make the public transportation system in Connecticut completely accessible, including making all buses lift-equipped. When Citizens for Accessible Transportation was established in 1987, they took up those talks and arguments with the State Department of Transportation. It was not long before Citizens for Accessible Transportation realized that negotiating with the department of transportation was getting us nowhere.

The next step was to go to our State legislature. Last fall more than 200 people, most of them people with disabilities, marched on the State capitol demanding that the public transportation system in Connecticut be lift-equipped.

Through the work of Citizens for Accessible Transportation, a bill was passed in the last legislative session requiring that all public buses bought or subsidized with State funds will be lift-equipped. All of our buses should be lift-equipped by 1996. Through 1996 still seems like a long time, we still thought we had won a substantial victory.

A few weeks ago, we received information that the southwestern regional planning agency in Connecticut had applied for a UMPTA entrepreneurial services program grant from the Federal Government to put an express bus in place from Selton Trumble to Stanford, CT. Because these funds would not be from the State, they are reasoning that they do not have to adhere to the new State law and plan to purchase a bus without a lift. Once again, we stopped some discrimination and more discrimination appears.

Another of our groups that we work with has been involved with another issue regarding a building in Hartford. About 3 or 4 years ago, a beautiful new office building was built in Hartford. A special feature of this building was a skywalk that would take people from the office building to the civic center right next door without having to go outside. When the office building and its skywalk opened to the public, it was discovered that everyone could travel from the new office building to the civic center via the skywalk, except anyone with a mobility impairment since there were more than a dozen steps at one end of the skywalk.

While everyone else stays out of the snow and rain, someone with a mobility impairment must go outside and across the street. Again, we are discriminated against.

Just this past summer, another one of our groups worked on another issue regarding the Waterbury Library. One of the members of an organization tried to take out a video tape out of the local library. He was told he could not because he lives in a group home. He would need to return with a staff person from the group home or with a permission slip from a staff person in order to take out a video tape. This member is a man with mental retardation. He is an adult and was being treated like a child. The group that this man belongs to returned to the library with him the following week to speak to the library board. They told the library board that this was a discriminatory policy against people who happen to live in group homes. The board agreed that it was a discriminatory policy, but that people who live in group homes destroy their materials and, therefore, the material must be protected. The board was also told that the library was architecturally inaccessible and needed some renovations.

Three weeks later this disability organization held a demonstration in front of the library. The media covered it well, the following week we again attended the library board. A electronic door was being put in and their policy was changed. We do not know if other libraries in our State discriminate in this manner, but as other groups become involved in the disability-rights movement in Connecticut, we hope that we will change those practices as well.

Each time we feel we have made gains toward stopping the discrimination against people with disabilities, someone finds another way to segregate, separate, and discriminate against us. We need the Americans With Disabilities Act to help us fight against further discrimination and to assist us as we demand our rightful place in this country. Thank you.

[The prepared statement of Shelley Teed-Wargo follows:]

PREPARED STATEMENT OF SHELLEY TEED-WARGO

My name is Shelley Teed-Wargo. I live in Cheshire, Connecticut. I am the Executive Director of the Connecticut Union of Disability Action Groups (C.U.D.A.G.). The Connecticut Union of Disability Action Groups is an organization made up of grassroots groups working on disability issues. Our involvement with our member organizations includes supporting and assisting these groups to make positive changes for persons with disabilities both on local levels as well as a state level.

Since the issues we involve ourselves with are the issues chosen by our members, our work is indicative of the priority issues of a large number of persons with disabilities in Connecticut. Let me relate to you some of the work we have been involved with over the last year.

One of the groups we work with is a statewide group known as Citizens for Accessible Transportation (C.A.T.). For many years disability groups in Connecticut had been trying to convince the Connecticut Department of Transportation to make the public transportation system in Connecticut completely accessible including making all buses lift equipped. When Citizens for Accessible Transportation was estabiished in 1987 they took up these talks and arguments with the state Department of Transportation. It was not long before Citizens for Accessible Transportation realized that negotiating with the Department of Transportation was getting us nowhere.

The next step was to go to our state legislature. Last fall more than 200 people, most of them people with disabilities, marched on the state capitol demanding that the public transportation system in Connecticut be lift equipped. Through the work of Citizens for Accessible Transportation a bill was passed in the last legislative session requiring that all public buses bought or subsidized with state funds will be lift equipped. *All* of our buses should be lift equipped by 1996. 1996 still seems like a long time but we still felt we had won a substantial victory.

A few weeks ago we received information that the South Western Regional Planning Agency in Connecticut had applied for an UMPTA Entrepreneurial Services Program Grant from the Federal government to put an express bus in place from Shelton/Trumbull to Stamford Connecticut. Because these funds would not be from the state they are reasoning that they do not have to adhere to the new state law and plan to purchase a bus without a lift. Once again we stop some discrimination and more discrimination appears.

About three or four years ago now a beautiful new office building was built in Hartford. A special feature of this building was a skywalk that would take people from the office building to the Civic Center right next door without having to go outside.

When the office building and its skywalk opened to the public it was discovered that everyone could travel from the new office building to the Civic Center via the skywalk *except* anyone with a mobility impairment since there were more than a dozen steps at one end of the skywalk. While everyone else stays out of the snow and rain someone with a mobility impairment must go outside and across the street. Again we are discriminated against.

Just this past summer one of the members of one of our member organizations tried to take a video tape out of his local library. He was told he could not because he lives in a group home. He would need to return with a staff person from the group home or with a permission slip from a staff person in order to take out a video tape.

This member is a man with mental retardation. He is an adult and was being treated like a child. The group that this man belongs to returned to the library with him the following week to speak to the library board. They told the library board that this was a discriminatory policy against people who happened to live in group homes. The board agreed that it was a discriminatory policy but that people who live in group homes destroy their materials and therefore the material must be protected.

The board was also told that the library was architecturally inaccessible and needed some renovations. They said they knew that too and were working on remedies. The library board would not agree to change their policies regarding people who live in group homes without further study even though they agreed they were discriminating ultimately on the basis of disability.

Three weeks later this disability organization held a demonstration in front of the library building. People from around the state joined them. The demonstration was well covered by the media. The following week we again attended a library board meeting. When we arrived an electronic door was being put in. The board changed their policies at this meeting so that someone who lives in a group home will no longer be required to have permission to take out material.

We do not know if other libraries in our state discriminate in this manner but as more people with disabilities get involved with organizations dealing with disability issues we will probably find more and more discriminatory practices.

We talk to people everyday who cannot find a job though they have the education and training necessary for a job. They have the ability to live on their own but cannot find affordable accessible housing that a landlord is willing to rent someone with a disability. We cannot get into many office buildings to do business or to be employed, we cannot get into or use the facilities in many public museums, theaters, restaurants, libraries, schools and other public buildings.

Everyday we look at the next issue on our list of priorities for persons with disabilities and try to make changes to remove discrimination from our lives. Our list is long and we end up putting out fires as new buildings are built with steps and public transportation is bought sidestepping state law so as to better discriminate and new policies are put in place as protection "against" persons with disabilities.

Each time we feel we have made gains toward stopping the discrimination against persons with disabilities someone finds another way to segregate, separate, and discriminate against us.

We need the Americans With Disabilities Act to help us fight against further discrimination and to assist us as we demand our rightful place in this country.

Mr. OWENS. Thank you. As a former public librarian, I am glad they were at least responsive in that one instance. [Laughter.]

I hope that the pattern is that they are more responsive.

Mr. Dorfer, we deliberately, as you know, it was a consensus that the best political strategy was not to tackle the insurance issue in this bill head on. So, it is the kind of thing that we should be preparing legislation for in another bill and start that fight rolling.

Mr. DORFER. Why is that?

Mr. OWENS. We can discuss it in more detail later on. In terms of strategy, to take on the insurance industry, to put it bluntly, to take on the insurance industry might guarantee far more difficulty, double or triple the difficulty that we are going to encounter at this time to take on the insurance industry. But we understand the need. And, as a matter of strategy, let us move ahead with this and perhaps we should have the insurance bill—the bill to confront the insurance industry in the works, now, as a proposition for tomorrow. Thank you very much.

The next panel, Mr. Bob Baton, Wethersfield, CT; Julie Reisken, Middletown, CT; Melissa Marshall, North Franklin, CT. Mr. Baton? Ms. Marshall, you may begin.

STATEMENT OF MELISSA MARSHALL, EXECUTIVE DIRECTOR, DISABILITIES NETWORK OF EASTERN CONNECTICUT

Ms. MARSHALL. Good morning. My name is Melissa Marshall and I am the executive director of the Disabilities Network of Eastern Connecticut, a new center for independent living in Franklin, CT.

Normally, as an executive director of an independent living center, I tend to speak on behalf of constituents and consumers of the center. Today, I thought for a change I would talk on a more personal note and give you some of my life experiences as a person with a disability.

I would like to invite you to take a journey back in time with me. Let us go back 13 years. The year is 1975. I am 15 years old and living in Kenton, MA. It is September. I have met with mild cerebral palsy, and I walk with crutches. I am, in theory, protected against discrimination in education on the basis of my disability. Chapter 766 of the Massachusetts general statutes which insures my right to an equal education regardless of my disability has been in effect for 1 year. The new Education for All Handicapped Children Act, Public Law 94-142, has just been enacted so that now I enjoy Federal and State guarantees of my right to a free and appropriate education. One might imagine that on this September day, I am in school with my peers. I am not. Instead, I am at home wondering if I will ever attain a high school diploma. I know that being tutored less than 2 hours per week is not comparable to receiving a real high school education. The reason I am being tutored at home has nothing to do with my physical or other abilities. I am receiving, quote/unquote, homebound education because the public high school that I am assigned to attend is architecturally inaccessible to people with mobility disabilities. Kenton High was and still is, to the best of my knowledge, located in three buildings with at least three floors in each building. Students must be able to walk up multiple flights of stairs and go from building to building in order to attend public high school in Kenton.

Despite legal protections and my family's obtainment of counsel, I remained at home that entire year. Not until 18 months later would school board officials compromise and finance my education in a public school in an adjacent town. Eventually, I secured that high school diploma and went on to receive a bachelor's degree from Hampshire College.

Let's skip ahead a few years, now, to 1984. I am a second year law student at the University of Connecticut. The school has been moved from a modest wheelchair usable single building facility to a more grandiose inaccessible multibuilding campus. I am in my constitutional law class and I am angry. I am angry because the class has just finished analyzing *Brown* v. *The Board of Education*, the landmark case supposedly abolishing separate but equal education for Third World people for all time. I am not angry because minority people have won a small amount of protection of their civil and human rights. I am angry because the mood in the classroom is self-congratulatory. The people of my generation just knew that they could never allow such a thing as intentional discrimination to happen. I raised my hand and I said to the professor: What about my situation and that of other people with disabilities who might wish to attend school or to even teach here? What about the fact that I can only enter the building through the back door and when I do, I can only get into a small section of the building? What about the fact that if I were to meet with the dean or other administrators, I must call on the phone and meet with them in the Disabled Students Conference Area where they keep the sports equipment because their offices are inaccessible to me? What about the fact that the library will be completely unusable to me because the elevator renovation will not be complete until the end of the semester? Does not this smack of separate but equal? What about the fact that a major university is not in compliance with State and Federal antidiscrimination law?

Upon hearing this, the professor replied that this was interesting, but we needed to move on to the next case.

Now, it is 1988. I managed to get my law degree and I am pleased to have this opportunity to share my story with you. I share it with you and hope that you recognize that existing protections are far too narrow and difficult if not impossible to enforce. I share it with you in the hope of illustrating how discrimination on a basis of disability is alive and well.

And, finally, I share my story with you and hope you will make the Americans With Disabilities Act law.

Mr. **Owens**. Thank you.

[Bell sounded.]

Is that legal training? [Laughter.]

Mr. **Owens**. Ms. Reisken.

STATEMENT OF JULIE REISKEN, COMMUNITY ORGANIZER, CONNECTICUT COALITION OF CITIZENS WITH DISABILITIES

Ms. **Reisken**. My name is Julie Reisken. I am the community organizer for the Connecticut Coalition of Citizens With Disabilities. I am here today to urge your support of the Americans With Disabilities Act, unamended. The Connecticut Coalition of Citizens with Disabilities, CCCD, is a statewide grassroots organization which advocates for the full participation of all citizens with disabilities. By citizens with disabilities, I am including people with communicable diseases, including AIDS. CCCD reaches over 2,000 Connecticut citizens.

Without laws preventing discrimination in obtaining housing, employment, transportation and more, full participation cannot be a reality. The Americans With Disabilities Act will put people with disabilities on an equal basis with other minority groups. No, it will not end discrimination. However, it is the most significant leap toward doing so since the passage of the section 504 of the 1973 Rehabilitation Act.

Often when I am working with disabilities rights groups, they run up against barriers in the community and attempt to go through the proper legal channels to deal with those, only to discover that in many cases there is no law to protect their rights. No legal channels to go through.

With the means to get around, life in our society is extremely limited. The Americans With Disabilities Act will create more accessible transportation which will enable more people to leave their homes and be participating citizens. Many of our members wanted to be here today, however, there is no accessible bus from Connecticut to Boston, very few accessible trains, although the train stations are not accessible, and let alone the issue of getting from one's home to the station. Persons with disabilities who do not own and drive a vehicle are literally prisoners in their homes.

We hear a lot about welfare rolls and government funding. We also hear a lot about a labor shortage. There are also a disproportionate number of persons with disabilities who are not in the work force who want to be working. Passage of the Americans With Disabilities Act could enable more people entering the work force, thus being a part of the active economy, helping the economy. Through barrier reduction and active antidiscrimination laws, a significant number of people would work, saving the whole economy financially.

Housing, transportation, jobs, access are all essential for survival in our society. These things constitute what we call quality of life measures. We are a country which prides itself in a democratic process but do not allow all to participate. We pride ourselves on a free market economy, but the market freely excludes 10 percent of its population. We pride ourselves on technology and mobility and, yet, we do not use that for the benefit of all of our citizens. We pride ourselves with the ideal of freedom, yet, Americans with disabilities are not free. It is 1988. We should by now be enlightened enough to see that discrimination hurts everyone. Separate but equal is not equal. Persons with disabilities need to be seen and treated as true equals and the Americans With Disabilities Act is a leap in this direction.

There is only one thing that separates persons with disabilities from other minority groups. That is we are the only group that anyone can join at anytime. For the future of this country, please support the Americans With Disabilities Act.

[The prepared statement of Julie Reisken follows:]

CONNECTICUT COALITION OF CITIZENS WITH DISABILITIES

My name is Julie Reiskin. I am the Community organizer for the Connecticut Coalition of Citizens With Disabilities. I am here today to urge your support of the Americans With Disabilities Act unamended. CCCD is a statewide grassroots organization which advocates for the full participation of all citizens with disabilities. CCCD reaches over 2,000 Connecticut citizens.

Without laws preventing discrimination in obtaining housing, employment, transportation, and more, full participation cannot be a reality. The Americans With Disabilities Act would put people with disabilities on an equal basis with other minority groups. No, it will not end discrimination. It will not end ableism. However, it is the most significant leap toward doing so since the passage of section 504 of the 1973 Rehabilitation Act. Often when I am working with disability rights groups, we run up against barriers in the community and attempt to go through proper legal channels, only to discover that in many cases there is no law to protect their rights.

Without means to get around, life in our society is extremely limited. The Americans With Disabilities Act will create more accessible transportation which will enable more people to leave their homes and be participating citizens. Many of our members wanted to be here today. However, there is no accessible bus from Connecticut to Boston and very few accessible trains, let alone the issue of getting to a station. Persons with disabilities who do not own and drive a vehicle are literally prisoners in their homes.

We hear a lot about welfare rolls and government funding. We also hear a lot about a labor shortage. There are also a disproportionate number of persons with disabilities who are not in the workforce who want to be working. Passage of the Americans With Disabilities Act could enable more people entering the workforce, thus being a part of the active economy, helping the economy. Through barrier reduction and active anti-discrimination laws, a significant number of people would work, saving the whole economy financially.

Housing, transportation, jobs, access, all are essential for survival in our society. These things constitute what we call quality of life measures. We are a country which prides itself in a democratic process, but do not allow all to participate. We pride ourselves on a free market economy but the market freely excludes 10% of its population. We pride ourselves on our technology and mobility, yet we do not use that for the benefit of all of our citizens. We pride ourselves with the ideal of freedom, yet Americans with disabilities are not free. It's 1988. We should by now be enlightened enough to see that discrimination hurts everyone. Separate but equal is not equal. Persons with disabilities need to be seen and treated as true equals and the Americans With Disabilities Act is a leap in this direction. There is only one thing that separates persons with disabilities from other minority groups. We are the only group that anyone can join at any time. For the future of this country, please support the Americans With Disabilities Act.

Mr. OWENS. Mr. Baton.

STATEMENT OF ROBERT E. BATON, PRESIDENT, GREATER HARTFORD ADVOCATES FOR CHANGE, WETHERSFIELD, CT

Mr. BATON. My name is Robert E. Baton, Jr. I am the president of the Greater Hartford Advocates for Change. I speak for 80 of our members in the Greater Hartford area who are committed to making Greater Hartford a more accessible place.

The transportation issue is of importance. I think transportation, particularly for those who do not make enough to own a car, public transportation is crucial, whether you are disabled or not. It is even more crucial if you do have a disability because you have to compete in order to get ahead. So, in regard to transportation I would urge that the law be adopted, unamended.

Thank you very much.

Mr. OWENS. Thank you very much. I think one of the great benefits of these hearings is we discover the tremendous amount of talent among us. And the three of you are examples of the resources that we have to wage this fight. Thank you very much.

Mr. BATON. Thank you.

Mr. OWENS. The next panel is Laura Nicholas, New Haven, CT; Nancy Durkin, executive director of CILSC—you will tell me what that is later, Stratford, CT; Marcie Roth, Danbury, CT.

Are we missing somebody? Is Ms. Nicholas missing?

Ms. DURKIN. Yes. She has not checked in, yet.

Mr. OWENS. All right. Ms. Durkin.

STATEMENT OF NANCY DURKIN, EXECUTIVE DIRECTOR, CILSC, INC., STRATFORD, CT

Ms. DURKIN. Thank you, Mr. Chairman. I want to introduce myself as Nancy Durkin, the executive director of the Center for Independent Living of Southwestern Connecticut. I have been actively involved with the disability rights movement for over 10 years and have seen numerous cases of discrimination. In spite of the many different pieces of legislation that guarantee equal access, people with disabilities are still regularly subjected to biased act. And I firmly believe that the ADA will help to eliminate such practices.

I would like to take this opportunity to discuss some of the issues in the act that I feel are very crucial. First is the definition of discrimination. This is a broad definition and encompasses situations which a person with a disability is subjected to unfair and unnecessary discrimination. This global definition which will finally address the concerns of those people who have slipped through the cracks and this will provide the scope of coverage that other civil rights acts offer.

I also want to address the issue of communicable diseases. During the past 5 years, the general public has learned more and more about communicable diseases, especially Acquired Immune Deficiency Syndrome, AIDS. During the past year, various court rulings have clarified that those individuals with AIDS are protected under section 504 of the Rehab Act and, therefore, are considered disabled. This bill will lend strength to this fact. People with AIDS have faced horrific incidences of discrimination. People have been run out of their homes, jobs, schools, and communities because of fear and misunderstanding. And, in many cases, people have been ridiculed and denied services from the medical profession.

I also wanted to address the issue of insurance, but I heard your comments earlier. And I would just encourage us all not to lose sight that insurance companies regularly do discriminate against people with disabilities and we do need to address that issue in the future.

All of us in some way or the other are affected by disabilities: ourselves, family members, coworkers, friends, neighbors may have a disability. Because the issues people with disabilities face have been consistently neglected for so many years, it is difficult and uncomfortable to admit that discrimination is still actively practiced. In my family, discriminatory behavior has been denied. For example, my mother was excused from jury duty because of her severe hearing loss, denying her right to fully participate as a citizen. My father's emphysema is greatly aggravated when he goes to a town meeting because the handicapped parking is a block away.

I was told for months that I have emotional problems when, in fact, I have chronic fatigue syndrome and cannot physically work a full day.

I have worked at the Center for Independent Living in Southwestern Connecticut for 8 years. During that time, I have witnessed some of the most outrageous cases of discrimination which I thought were no longer possible in this country. One woman with a rare physical disability married a man in the Navy and when she got pregnant, she had to use Naval medical facilities. She was told by the Navy doctors that no one with her disability had lived to have a child and if the pregnancy did not kill her, the child would be severely retarded and physically disabled. She was then advised to have an abortion. She requested consultation with specialists at Yale New Haven Hospital. The Navy refused to pay for this consultation for several weeks. She eventually went through the Yale clinic, gave birth to a very normal girl and was back to work in less than 4 weeks. This woman worked at an independent living center and knew her rights, but because of the discriminatory behavior of the medical staff, she almost gave in to what they were proposing.

I have submitted discrimination diaries out at the front desk and I hope you will have the opportunity to review them.

As I mentioned, I am from lower Fairfield County and, therefore, represent over 18,000 disabled people. We could only bring a small group of people here today because of the lack of transportation. Many of our consumers live in nursing homes or with their families because of the lack of affordable accessible housing in Fairfield County. Most of them are not employed because they are too disabled for traditional rehab services or employers are unwilling to take the chance or make the necessary modifications. These are very basic issues in a person's life. Transportation, a home and a job. None of us can say that discrimination is a thing of the past when people still do not have access to the commonplace rights most people take for granted. Thank you for allowing me this opportunity.

[The prepared statement of Nancy E. Durkin follows:]

Center INDEPENDENT
for Living of Southwestern Connecticut
959 Main Street, Stratford, Connecticut 06497
(203) 378-6977 (V/TDD)

To: Members of the Committee on Education and Labor
From: Nancy E. Durkin, Executive Director
Re: Americans with Disabilities Act of 1988
Date: October 24, 1988

I want to thank you for the opportunity to provide testimony. I have been actively involved with the disability rights movement for over ten years and have seen numerous cases of discrimination.

In spite of the many different pieces of legislation that guarantee equal acess, people with disabilities are still regularly subjected to biased acts. I firmly believe that the Americans with Disabilities Act of 1988 will help to eliminate such practices and is a much needed bill.

I would like to take this opportunity to discuss some of the issues in this Act that I feel are very crucial. First is the definition of discrimination. This is a broad definition and encompasses situations in which a person with a disability is subjected to unfair or unnecessary exculsion. This is a global definition which will finally address the concerns of those people who have "slipped through the cracks." This will provide the scope of coverage as the other civil rights acts.

I also want to address the issue of communicable diseases. During the past five years, the general public has learned more and more about communicable diseases, especially Aquired Immune Deficiency Syndrome (AIDS). During the past year, the various court rulings have clarified that those individuals with AIDS are protected under Section 504 of the Rehabilitation Act and therefore, are considered disabled. This bill will lend strenght to this fact. People who have AIDS have faced horrific incidents of discrmination. People have been run out of their homes, jobs, schools, and communities because of fear and misunderstanding. And, in many cases, people have been ridiculed by and denied services from the medical profession.

People with disabilities are regularly discriminated against by insurance companies. I believe that this issue should be specifically addressed in the Americans with Disabilities Act of 1988. Not only are disabled individuals denied insurance but employers who have hired disabled workers and want to provide medical coverage are often told that the insurance company does not accept individuals with "pre-existing conditions." I recognize the fact that insurance is based on the odds and as a result discrimination occurs. However, a disability does not and should not automatically place an individual into a high risk category, and therefore, is uninsurable. People with disabilities face the same risks of accidents, illness, or theft as everyone else. This legislation presents an excellent opportunity to tackle one of the largest discriminators in this country. Let us not lose sight of the purpose of the Americans with Disabilities Act: to eliminate discrimination against people with disabilities.

All of us, in some way or the other, are effected by disabilities. Ourselves, family members, co-workers, friends, neighbors, etc., may have a disability. Because the issues disabled people face have been consistently neglected for so many years, it is difficult and uncomfortable to admit that discrimination is still actively practiced. In my family, discriminatory behavior has been denied. For example, my mother was "excused" from jury duty because of her severe hearing loss denying her right to fully participate as an United States citizen. My father's emphesema is greatly aggravated when he goes to a town meeting because the "handicapped parking" is a block away making it extremely difficult for him to participate in local government. I was told for months that I had emotional problems when in fact I have chronic fatigue syndrome and cannot physically work a full day.

I have worked at the Center for Independent Living of Southwestern Connecticut, Inc. for eight years. During that time, I have witnessed some of the most outrageous cases of discrimination which I thought were no longer possible in this country. One woman with a rare physical disability married a man in the Navy and when she got pregnant she had to use the naval medical facilities. She was told by Navy doctors that noone with her disability had lived to have a child and that if the pregnancy didn't kill her, that the child would be severely retarded and physically disabled. She was then advised to have an abortion. She requested a consultation with specialists at Yale-New Haven Hospital. The Navy refused to pay for this consultation for several weeks. She eventually went through the Yale clinic, gave birth to a very normal girl and was back at work in less than four weeks. This woman worked at an independent living center and knew her rights, but because of the discriminatory behavior of the medical staff, she almost gave in to what they were proposing. I have brought with me "discrimination diaries" that we have been collecting at the center. I hope you will take some time to read what these constituents have experienced.

As I mentioned earlier, I work at an independent living center in lower Connecticut. I speak on behalf of the over 18,000 disabled people in our catchement area. We could only bring a small group of people here today because of the lack of accessible transportation. Many of our consumers live in nursing homes or with their families because of the lack of affordable, accessible housing in Fairfield County. Most of them are not employed because they are too disabled for traditional rehabilitation services or employers are unwilling to take the chance or make the necessary modifications. These are very basic issues in a person's life: transportation, a home and a job. None of us can say that discrimination is a thing of a past when people still do not have access to the commonplace rights most people take for granted.

Thank you again for allowing me this opportunity to submit this testimony in support of the Americans with Disabilities Act.

Mr. **Owens**. Thank you. Ms. Roth.

STATEMENT OF MARCIE ROTH, SUPERVISING ADVOCATE, WE CAHR

Ms. **Roth**. Hi. My name is Marcie Roth. I am the supervising advocate of We CAHR, an organization which offers advocacy services to people in western Connecticut who happen to have disabilities. Last year, We CAHR provided these services to over 850 people. I am also a member of the State of Connecticut Independent Living Council and I chair its planning committee.

I wish to thank the 113 Representatives and 25 Senators who are truly representing the wishes of their constituents by cosponsoring this bill. Clearly, it is time to insure that those of us with disabilities are afforded the same rights protection that other minority groups now enjoy.

I wish to remind you that many of us have hidden disabilities. We often risk discrimination by the very act of disclosing our disability. Once disclosure is risked, we have little recourse when denial of accommodation and exclusion occur.

For those of us who have a communicable disease, this bill is crucial. As with other medical diagnoses, communicable diseases are often misunderstood and their transmission potential is usually sensationalized in a most misinforming way. The effects of communicable disease vary, but discrimination is the one effect which is both catastrophic and preventable in every case.

People with disabilities experience the most blatant discrimination of all at the hands of the insurance industry. I know that you have made some comments about the insurance industry, so, I will not continue with that part of my testimony.

Mr. **Owens**. No. I did not mean to restrict testimony at all. Go right ahead and include it.

Ms. **Roth**. We must specifically include insurance companies in this act. Not only is private insurance generally denied most folks with disabilities, but those lucky enough to obtain private insurance find the items crucial to maintenance of function and optimum health are categorically denied or provided only once over a person's lifetime.

Recently, a little girl was born in Connecticut and it happens that she was born without arms. She was fitted with her first pair of prosthetic arms before her first birthday. Her insurance company will only provide one set of prosthetices in her lifetime. Her family will have to purchase the subsequent prosthetices. She will need her arms replaced yearly until she stops growing and then periodically for the rest of what is expected to be a long and productive life. It is when she is not wearing her prosthetices that she may find her options limited, her ability to maintain optimal health jeopardized.

In closing, I want to tell you about my friend, Joe. He is 23 years old. He has lived in a nursing home since he had an accident at age 17. He stayed because he was unable to find an apartment, transportation, a job, the amount of personal care he requires, and other necessities. Joe is a great artist. In fact, one of his collages, hangs in the White House. Joe did not like the nursing home and was working hard to move out. In April, Joe had to enter the local hospital for medical treatment due to what some considered poor care in the nursing home. He had to stay in the hospital so long that his bed at the nursing home was given to someone else.

Four days ago, Joe was placed in a nursing home 1 hour away from his friends and family. He did not choose this location. It was the first available bed. And he was given less than 24 hours notice of the impending move. This is the third time this has happened. After 6 months of hospitalization, Joe needs to build up his strength. All the work he had done to start the wheels rolling to move to a living situation of his choice has been lost. And his self-esteem is not great. The battery for his motorized wheelchair is missing. No one will take responsibility for losing it. So, he must find a way to replace it, himself. In the new nursing home, he is unable to have his own telephone. He cannot have cable TV, either. He is again rooming with a man who is in his nineties and is dying. Even the Americans With Disabilities Act will not help Joe, now. But if there was housing, access to a good job, transportation and quality services available to him before last April, maybe he would be here today or maybe he would be back at work, today. Joe was ready to get the wheels turning again so that he can move on. Passage of the ADA will play a key role in his success.

Thirty-five million Americans are counting on your support and this is one minority group that is growing all the time. Thank you for inviting me to be here today. And thank you for your support of the Americans With Disabilities Act of 1988.

[The prepared statement of Marcie Roth follows:]

JOINT SELECT SUB-COMMITTEE
EDUCATION AND LABOR
CONGRESSIONAL HEARING
HR 4498
THE AMERICANS WITH DISABILITIES ACT OF 1988
BOSTON, MASSACHUSETTES
OCTOBER 24, 1988

My name is Marcie Roth. I am the Supervising Advocate at WeCAHR, an organization which offers advocacy services to people in Western Connecticut who happen to have disabilities. Last year, WeCAHR provided these services to over 850 people.
I am here today to urge your support of HR 4498, the Americans with Disabilities Act of 1988, without ammendment.

I am here for myself, my family, my friends and for the rest of the 35 million people in America who happen to have disabilities and who were not able to be here today.

I wish to thank the 113 Representatives and 25 Senators who are truly representing the wishes of their constituents by co-sponsoring this bill. Clearly, it is time to insure that those of us with disabilities are afforded the same rights protection that other minority groups enjoy.

Today you will have the opportunity to hear from many people who support this bill. You will hear many reasons why we need passage of this bill. I could take several hours citing examples of discrimination in our communities. I could talk about many different people and the impact that a discriminating society has on their lives, but I hope that they have expressed themselves in person or by submitting diaries documenting discrimination they have experienced over a seven day period. You need to hear it or read it in their own words. I also urge you to remember that our society has discouraged so many of us from using the power of our own words and that many of us have not yet realized our right to enjoy living our lives as we choose, as valued members of our own communities.

I also wish to remind you that many of us have hidden disabilities. We often risk discrimination by the very act of disclosing our disability. Once disclosure is risked, we have little recourse when denial of accomodation and exclusion occur.

Mr. **Owens**. And thank you, both, for your testimony. We are going to have two more panels before we break for 15 minutes. The next panel is Paul Zapun, Eileen Horndt, and Jenny Domini. Mr. Zapun.

STATEMENT OF PAUL ZAPUN, EXECUTIVE DIRECTOR, INDEPENDENCE UNLIMITED, HARTFORD, CT

Mr. **Zapun**. Good afternoon. My name is Paul Zapun. I am the executive director of Independence Unlimited, the independent living center of the capitol region of Connecticut which constitutes the 29 towns of Greater Hartford with a population of almost 800,000 and with an estimated population of persons with disabilities of approximately 118,000.

I am here not to speak for myself but for this constituency. Let me begin by telling you a little story. A number of years ago, I was traveling out West with a friend of mine. Our car broke down in a small town and we had to hang around waiting for it to be repaired. We, therefore, spent the time wandering about. We were suddenly approached by a local sheriff who informed us rather matter of factly after asking us who we were, what we were doing there, why and so on, that if anything happens in town while we are there, anything out of the ordinary, we are going to be held responsible; that is, that our presence was not really welcome. His announcement made us feel threatened, afraid. We felt discriminated against and finally caused us to retreat back to the gas station, back to our car, and as soon as possible, out of town. Fortunately, we had that option. We were able to get out of town and forget it and move on with our lives. The persons with disabilities that Independence Unlimited and other organizations like ours serve, may feel that same anger, same frustration, they may need to retreat unto themselves or into their homes every time they attempt to ride a bus which is not lift equipped, rent an apartment that is not accessible or adaptable, cannot enter a restaurant because it is not accessible or, if they can enter that restaurant, find that they cannot use the rest room.

Disabled persons are discriminated against daily in every aspect of their lives from where, when, and how they travel, where they eat, sleep, where they work. And, unlike my friend and myself, they cannot leave their disability. They cannot just leave town. They live with it and they travel with it everyday. It is all persuasive and it is for this reason that a civil rights bill such as the Americans With Disabilities Act of 1988 must be enacted Thank you.

[The prepared statement of Mr. Zapun follows:]

Prepared Statement of Paul Zapun, Independence Unlimited, Inc.

Good morning, my name is Paul Zapun. I am the Executive Director of Independence Unlimited, Inc. the Independent Living Center of the Capital Region of Connecticut which constitutes the 29 towns of greater Hartford with a population of almost 800,000 with an estimated population of persons with disabilities of approximately 118,000. I am here not to speak for myself, but for this constituency. Let me begin by telling you a little story:

A number of years ago I was traveling out West with a friend of mine. Our car broke down in a small town and we had to hang around waiting for it to be repaired. We, therefore, spent the time wandering about, we were suddenly approached by the local Sheriff who informed us rather matter-of-factly, after asking us who we were and what we were doing there and why that "If anything happens in town that is out of the ordinary—we will be held responsible," i.e., that our presence was not really welcomed. His announcement made us feel threatened, and afraid feeling discriminated against, and finally caused us to retreat back to the gas station, to our car and as soon as possible—out of town. Fortunately, we had that option. We were able to get out of town and if not forget it at least move on with out lives.

The persons with disabilities that Independence Unlimited see daily may feel the same anger or frustration as need to retreat into themselves as their homes . . . every time they attempt to ride a bus which is not lift equipped, rent an apartment that is not accessible or adaptable, can't enter a restaurant because it is not accessible or if they can enter the restaurant itself, find once there that they cannot use the bathroom. Disabled persons are discriminated against daily in every aspect of their lives, from where, when and how they are able to eat and sleep to where, when and how they work or travel and unlike my friend and I they can not leave their disability when they leave town—it travels with them. Discrimination is every where and all pervasive and it is for this reason that a Civil Rights bill such as the Americans With Disability Act 1988 must be enacted.

Thank you.

Mr. OWENS. Ms. Domini.

STATEMENT OF VIRGINIA DOMINI, INDEPENDENCE UNLIMITED

Ms. DOMINI. Hello. My name is Virginia Domini and I work for Independence Unlimited of Hartford. You know I can talk and also walk. I do all my personal care. Therefore, am I really disabled? Unfortunately, I have to say, yes. But my disability is a less understood one. For openers, I do not qualify for any help from an agency because I can take care of myself and my home. I cannot sneak 3 extra hours a day to do it, though. I get up very early to squeeze in the chores that I could not finish the night before. It takes me from 2 to 2½ hours a day just to get dressed and look like I have got something to offer the employment world.

When I try to buy groceries for me and my teenage son, I was told I bought too many groceries to use Dial-a-Ride. I could only buy four bags of groceries. Try feeding a teenager, his cats, and myself on three or four bags of groceries. I do not fight Dial-a-Ride anymore. I walk. And if I walk one way, I can afford a taxi back. But winter is coming and I do not know how I am going to pull this winter off without risking my health or my safety. I know I will, but to do it at best, the price is exhausting. At worse is asthma and arthritis. I find the general public has no knowledge of people with disabilities and must fight to function in a society where busdrivers start moving before I have my balance or State human resources yell, "I can't understand you," to justify leaving a man without food or access to food over the weekend.

[The prepared statement of Ms. Virginia Domini follows:]

PREPARED STATEMENT OF VIRGINIA DOMINI, TRAINING COORDINATOR, INDEPENDENCE UNLIMITED, INC.

Today I would like to speak to you about the "less disabled" or the mulattoes of the "crip world." As you can see I talk and I also walk. I can take care of all my bodily needs. Therefore, am I really disabled? Unfortunately I have to say yes, but my disability plays itself out in less understood ways.

For openers, I don't qualify for any help from an agency because i can take care of myself and my home . . . I just need an extra 3 hours in a day to do all my chores. I get up very early to squeeze in last minute housekeeping chores I didn't get done the night before. It takes me 2 hours to look like I have something to offer the employment world.

When I tried to buy groceries weekly for me and my teenage son, I was told I bought too many groceries to use Dial-A-Ride. I could only buy 4 bags. The assumption was that every one who uses Dial-A-Ride has but one person to feed. Try to feed a teenager and his cats with those constraints. I don't use Dial-A-Ride anymore. I walk and then take a taxi home. Winter is coming, I am wondering how creatively I will get to the store without spending too much on a taxi and not risking my health and safety. I know I can and will do it but the price is at best exhaustion and at worst asthma and arthritis attacks.

I find that the general public has no knowledge of people with disabilities. I must fight to function in a society with bus drivers who start the bus moving before I have my balance, to the State Human Resources' worker who "can't understand a word you say" as you inquire about how they could leave a man without food or means to get food for a weekend, or with the laundry attendant who waits until you've put your clothes in the washer before she tell you to go to the back of the laundrymat . . . (where you are out of the way). You know the general public doesn't want to see you doing your laundry, being a case worker, a shopper, or a Mom. It is difficult to see yourself as a valuable member of society, and sometimes it is so hard to see yourself as a person worthy of so much more respect than you get from the general public.

Mr. OWENS. Ms. Domini, thank you very much.

Ms. Horndt.

STATEMENT OF EILEEN HEALY HORNDT, EXECUTIVE DIRECTOR, INDEPENDENCE NORTHWEST

Ms. HORNDT. My name is Eileen Healy Horndt. I am the executive director of Independence Northwest, a center for independent living located in Waterbury, CT. We serve the 44 towns and cities that comprise northwestern Connecticut. I am here today to show support for Americans With Disabilities Act on behalf of the board of directors and the membership of Independence Northwest and for myself as a person with a disability.

Section 504 of the Rehabilitation Act, the Civil Rights Restoration Act and Public Law 94-142, were a beginning attempt to eliminate discrimination against people with disabilities, but they were just a beginning. These pieces of legislation are too limited in scope to ensure equal access for people with disabilities. Discrimination continues to exist everywhere.

Let me give you some examples. A man with mental retardation was told he could not open a savings account at his local bank. His advocate was told that he did not fit the image the bank wants to project. At a supported employment site, persons with mental retardation and emotional disabilities have been asked to become dues paying members of the union, but they are not allowed to vote, nor are they entitled to the other benefits offered to their dues paying union brothers and sisters.

Parents of a junior high school boy are fighting their local special education department to change their son's individualized education plan, IEP. The school officials had agreed to make changes in the IEP and the parents signed the changed IEP, but somehow the school personnel lost those changed ones. They have returned to the original IEP and have told the parents to take their complaints to an administrative hearing.

A young mother must delay going grocery shopping because there is no available handicap parking spaces. They are all occupied by people without disabilities who just ran in quick.

The majority of the police departments do not enforce the handicap parking laws and I have even had the opportunity to report police officers parked in the handicap parking spaces.

The board of education of an affluent town has decided to reduce the number of remedial classes, their euphemism for a special education class, in favor of increasing the number of gifted classes. The reduction will result in an increased student-to-teacher ratio in the remedial classes and obviously less one-to-one instruction and attention.

Some States' commissions on the deaf and hearing impaired are considering whether or not they can continue to provide interpreting services when they are unable to charge for these services. Therefore, individuals who are deaf or hearing impaired may not have access to an interpreter for a private doctor's appointment or a job interview.

A senior citizen with arthritic needs is not able to step into the suburban type limousines and buses run by the Connecticut Limousine Services and from what I have seen from Boston, they also run the same kind of limousines. This service and many others do not offer accessible transportation to the airports.

Two children with disabilities were sent to private schools because the public school personnel could not protect these children from harm by other students. A recommendation for disability awareness training for the students was ignored. It was easier to have the disabled children attend a school further from home.

A parent with a disability is denied access to her nondisabled child's classroom because of architectural barriers. Complaints filed with the Commission on Human Rights has been unsuccessful in resolving this issue.

A man with quadriplegia and myself were invited to a Presidential campaign office to discuss accessibility. We were told that the office was accessible. There was no handicap parking that would allow sufficient room to let the van lift down. The elevator was a freight elevator that had to be operated by a campaign worker. When I requested his assistance, I was asked if I was one of them.

Yes, I am one of them.

Like all of the people in the examples I have presented to you, I face discrimination on a daily basis. I do consider myself to be a person with a disability. My disability is known as zoachondroplasia. It is one of over 80 different types of dwarfism. I prefer the term, "short stature."

In addition to being handicapped by a society that assumes that everyone is at least 5 feet tall, I also have a secondary disability that makes using stairs a painful experience for deteriorating joints. In many ways, but not all, I need the same types of physical access as someone who uses a wheelchair. Ramps, elevators, lifts on buses, and handicap parking spaces are not special services to me. They are absolute necessities if I, like so many others, am to remain an active citizen in my community.

Where I differ from someone using a wheelchair is my shorter arm length. Some examples of the differences would be: wheelchair accessible sinks are too deep for me. I cannot reach the faucets at the back of the sink. Pay phones are low enough for me to use the dial and the handset, but I cannot reach the coin slot. Therefore, I pay more than the average person using a pay phone because I have to charge my call to a calling card. Most bank counters are so high, the tellers do not even know I am there. And I can forget using the automated telemachines. These are only but a few of the differences.

I point this out to you to make you aware that discrimination comes in a variety of forms. Some are obvious, such as lack of physical access. Some is out of ignorance regarding people's disabilities, but that does not make it acceptable. And some is so subtle that we cannot even build a case to fight the discrimination.

These individuals or organizations have found the loopholes in the existing pieces of discrimination legislation and continue to discriminate against people with disabilities.

We need the broad-based coverage that the Americans With Disabilities Act offers so that these types of discrimination are eliminated and people with disabilities have an effective recourse when they have been discriminated against.

While I understand that the insurance industry requires a specialized approach, this is an area that has traditionally been a major problem for people with disabilities. Many people are paying exorbitant amounts of car, life, and medical insurance if we can get the insurance at all. The car insurance people tell us it is because of the equipment on the car. Personally, I would be more worried about the lack of appropriate equipment on the car.

Statistics show that people with disabilities have no higher incidence of accident than the average driver and in some cases people with disabilities have better driving records.

Because disability is seen as an illness, the life and medical and disability insurance companies do not want to insure us. Many people with disabilities are medically stable. We are not in and out of hospitals. But one trip in could be financially devastating without medical insurance and that is true of anybody whether you have a disability or not.

Some employers, such as the independent living centers have either been denied medical and life insurance because half the staff are persons with disabilities or we are paying premiums that we can barely afford.

Despite working consistently for the last 12 years, I cannot get disability insurance should I need to be away from my employment for any illness whether it is related to my disability or not.

[The prepared statement of Eileen Healy Horndt follows:]

AMERICANS WITH DISABILITIES ACT OF 1988
TESTIMONY

My name is Eileen Healy Horndt. I am the Executive Director of Independence Northwest, a Center for Independent Living located in Waterbury, Connecticut. We serve the 44 towns and cities that comprise northwestern Connecticut. I am here today to show support for the Americans With Disabilities Act (ADA) on behalf of the Board of Directors and the membership of Independence Northwest, and for myself as a person with a disability.

Section 504 of the Rehabilitation Act, the Civil Rights Restoration Act, and Public Law 94-142 were a beginning attempt to eliminate discrimination against people with disabilities. But they were just a beginning. These pieces of legislation are too limited in scope to ensure equal access for people with disabilities. Discrimination continues to exist everywhere. Let me give you some examples:

> A man with mental retardation was told he could not open a savings account at his local bank because he did not "fit the image" the bank wants to project.
>
> At a supported employment site, persons with mental retardation and emotional disabilities have been asked to become dues-paying members of the union, but they are not allowed to vote, nor are they entitled to the other benefits offered to their dues-paying union brothers and sisters.
>
> Parents of a junior high school boy are fighting their local special education department to change their son's Individualized Education Plan (IEP). The school officials had agreed to make changes in the IEP and the parents signed the changed IEP's, but somehow the school personnel "lost" those IEP's. They have returned to the original IEP and have told the parents to take their complaints to an administrative hearing.

A young mother must delay going grocery shopping because there is no available "handicapped" parking spaces; they are all occupied by people without disabilities, who "just ran in quick". The majority of police departments do not enforce the "handicapped" parking laws, and I have even had the opportunity to report police officers parked in the "handicapped" parking spaces.

The Board of Education of an affluent town has decided to reduce the number of "remedial" classes (their euphemism for special education class), in favor of increasing the number of "gifted" classes. The reduction will result in an increased student to teacher ratio in the remedial classes, and obviously less one-to-one instruction and attention.

Some states' Commissions on the Deaf and Hearing Impaired are considering whether or not they can continue to provide interpreting services when they are unable to charge for these services. Therefore, individuals who are deaf or hearing impaired may not have access to an interpreter for a private doctor's appointment, or job interview, etc.

A senior citizen with arthritic knees is not able to step into the "suburban" type limousines and buses run by Connecticut Limousine Service. This service and many others do not offer accessible transportation to the airports.

A public library in Waterbury instituted a policy requiring anyone who lived in a group home to present a note from a group home staff person before she/he would be allowed to borrow anything from the library. (This policy was recently changed because of the pressure the library received from disability advocates.)

Two children with disabilities were sent to private schools because the public school personnel could not protect these children from harm by the other students. A recommendation for disability awareness training for the students was ignored. It was "easier" to have the disabled children attend a school further from home.

A parent with a disability is denied access to her non-disabled child's classroom because of architectural barriers. Complaints filed with the Commission on Human Rights have been unsuccessful in resolving this issue.

A man with quadriplegia and myself were invited to a presidential campaign office to discuss accessibility. We were told that the office was accessible. There was no "handicapped" parking that would allow sufficient room to let the van lift down. The elevator was a freight elevator that had to be operated by a campaign worker. When I requested his assistance, I was asked if I was one of "them".

Yes, I *am* one of them. Like all of the people in the examples I have presented to you, I face discrimination on a daily basis. I do consider myself to be a person with a disability. My disability is known as pseudoachondroplasia; it is one of over 80 different types of dwarfism. I prefer the term short-statured. In addition to being handicapped by a society that assumes everyone is at least 5 foot tall, I also have a secondary disability that makes using stairs a painful experience for deteriorating joints. In many ways, but not all, I need the same types of physical access as someone who uses a wheelchair. Ramps, elevators, lifts on buses, and "handicapped" parking spaces are not special services to me; they are absolute necessities if I, like so many others, am to remain an active citizen in my community.

Where I differ from someone using a wheelchair is my shorter arm length. Some examples of the difference would be:

-wheelchair accessible sinks are too deep for me; I cannot reach the faucets at the back of the sink.

4.

-payphones are low enough for me to use the dial and the handset but I cannot reach the coin slot; therefore I pay more than the average person using a pay phone because I have to charge my calls to a calling card.

-most bank counters are so high the tellers do not even know that I am there and I can forget using the automated teller machines.

These are only but a few of the differences. I point this out to you to make you aware that discrimination comes in a variety of forms. Some is obvious, such as lack of physical access; some is out of ignorance regarding people with disabilities, but that does not make it acceptable; and, some is so subtle that we cannot even build a case to fight the discrimination. These individuals or organizations have found the loopholes in the existing pieces of discrimination legislation and continue to discriminate against people with disabilities.

My one criticism of Americans With Disabilities Act is that it does not include the insurance industry. This is an area that has traditionally been a major problem for people with disabilities. Many people are paying exorbitant amounts of car, life, and medical insurance, if we can get insurance at all. The car insurance people tell us it is because of the "equipment" on the car. Personally I would be more worried about the lack of appropriate equipment on the car! Statistics show that people with disabilities have no higher incidence of accidents than the "average" driver and in some cases, people with disabilities have better driving records.

Because disability is seen as an illness, the life and medical insurance companies do not want to insure us. Many people with disabilities are medically stable; we are not in and out of hospitals. But one trip in could be financially devastating without medical insurance. This is true whether you have a disability or not. Some employers such as the independent living centers have either been denied medical and life insurance because half the staff are persons with disabilites or we are paying premiums that we can barely afford. Without discrimination laws that include the insurance companies, people with disabilities will be forced to choose between Medicaid/Medicare and the opportunity to become employed, but without insurance.

5.

Lastly, some states such as Connecticut, apparently have state statutes that allow insurance companies to deny an employer liability insurance based on the types of people she/he may hire. If the insurance company determines that a person with a disability is a liability risk, the insurance company can deny or cancel the employer's liability insurance, or make it so expensive that the employer cannot afford to keep that disabled employee. I ask that you all consider how effective the Americans With Disabilities Act will be with the insurance companies potentially undermining the legislation.

With the passage of the ADA, people with disabilities of all types will be afforded the opportunity to participate equally in society. It will increase our choices of work, to have a home, to raise a family, and to share in the joys and responsibilities of community life. We are currently being denied this through one form of discrimination or another. It is time that we had true equal opportunity.

Eileen Healy Horndt

INDEPENDENCE NORTHWEST
25 Hillside Avenue
Oakville, CT 06779

Mr. **Owens**. Thank you very much.

Ms. **Horndt**. Thank you.

Mr. **Owens**. I want to thank all three of the panelists.

Our next panel is Stanley Koslowski, Director, Office of Protection and Advocacy, Hartford, CT; Michael Oestreicher; Bob St. Laurent. And following this panel, we will have a 15-minute break.

Mr. Koslowski.

STATEMENT OF STANLEY KOSLOWSKI, ASSISTANT DIRECTOR, OFFICE OF PROTECTION AND ADVOCACY, HARTFORD, CT

Mr. **Koslowski**. Good afternoon. I want to thank you for two things. One is for calling me on the panel before you took the break. I appreciate that. Second, is to thank you, personally, as well as other people that might be here today, for your tremendous support for the rights and services of people with disabilities and your understanding of the meaning of the term "empowerment" and how that affects us and how important it is to us.

I am not the director, but the assistant director of the Connecticut Office of Protection and Advocacy for Handicapped Persons. We are the agency in Connecticut that is responsible for implementing the protection and advocacy system for the developmentally disabled persons as well as the protection and advocacy system for people with mental disabilities and we also run the client assistance program which advocates for people who are clients for the vocational rehabilitation agencies in Connecticut.

I would like to share with you briefly some general information about discrimination based on disability as it occurs in Connecticut and then three specific instances that I have been involved with personally just in the last 2 weeks. The Connecticut Office of Protection and Advocacy represented over 2,000 people last year who had some form of disability related problem. These problems included special education issues, employment discrimination, transportation deficiencies, housing needs, including discrimination, financial entitlement denials, denials of services from state agencies and institutional abuse and neglect, and architectural barriers.

I am here to tell you that based on this experience that discrimination based on disability is alive and well in Connecticut and I suspect in the rest of the country as well. The people who experience difficulties with discrimination come in all shapes and sizes. They are rich. They are poor. They are white. They are black. They are Hispanic. They live in the cities. They live in the suburbs. They live in the country. They are mentally retarded. They are physically disabled. They are hearing impaired. They have visual disabilities. They have psychiatric handicaps and they have disabilities which are not visible to the casual observer.

In all cases, prejudice, stereotyping and discrimination are a fact of life. And it is one of the tragedies of our day that we have not yet found a way to rid ourselves of this terrible phenomenon.

Now, on to the three incidences that I have recently been involved with. The first occurred in an urban school system when physically disabled students were being denied the opportunity to participate in a field trip with their able-bodied peers. The reason for this denial was that there was not enough money available to hire a lift equipped van which the students required.

When the issue became public, it was presented as a charity case and, as expected, two private wheelchair service companies from the community came forward and donated vehicles for use on the day of the trip. I am sad to report that this was not the first time that such an incident occurred in the city and I am also sad to report that it still remains a charity issue that is being addressed by the community rather than the recognition that it was truly the civil rights issue that it was.

The second incident involves a woman who called me last week to inquire about getting a waiver from the State building codes so she would not have to make her daycare center accessible. She claimed it was not necessary to provide access to the center because, quote, the State takes care of all of the handicapped children, end quote. And besides a person with a disability could not possibly work in a daycare center because of the need to change diapers and supervise playground activities.

Well, first, I patiently explained to her the waiver process. And then I tried to educate her of the importance of integrating children with disabilities with children without disabilities at an early age. I further explained—to no avail, I might add—that if she tried to exclude handicapped children from her center, she might legitimately be charged with discrimination. I also told her of my experience personally diapering and otherwise caring for my daughter and even shared with her my wheelchair sports experience which would certainly assist me in supervising any playground activities.

I told her that I thought I would make a good daycare worker and would it not be unfair to deny me employment opportunities her center might offer.

She seemed deaf to my words and asked me to again explain the waiver process.

The third incident was already reported by Shelly T. Wargo about a half hour ago. And that involves the commuter bus that a city in Connecticut was buying with Federal funds that they refused to include a wheelchair lift on it. And I will not repeat that example. But that was the third instance that I have been involved within the last couple of weeks.

Because of these three recent instances as well as all the other instances of discrimination that our office deals with, I plead with you to move the Americans With Disabilities Act forward on the House agenda. It is desperately needed by the 36 million Americans who have disabilities and need the additional protection such an act offers. Thank you for the opportunity to be here today.

[The prepared statement of Stan Koslowski follows:]

STATE OF CONNECTICUT
OFFICE OF PROTECTION AND ADVOCACY FOR HANDICAPPED
AND DEVELOPMENTALLY DISABLED PERSONS

TESTIMONY ON THE AMERICAN WITH DISABILITIES ACT

OCTOBER 24, 1988

Good afternoon. My name is Stan Kosloski and I am the Assistant Director of the Connecticut Office of Protection and Advocacy for Handicapped Persons. I would like to share with you some general information about discrimination based on disability as it occurs in Connecticut, and then three specific incidents that I have been involved with personally in the last two weeks.

The Connecticut Office of Protection and Advocacy represented over 2000 people last year who had some form of a disability-related problem. These problems included special education issues; employment discrimination; transportation deficiencies; housing needs, including discrimination; financial entitlement denials; denial of services from state agencies; institutional abuse and neglect; and architectural barriers. I am here to tell you that discrimination based on disability is alive and well in Connecticut, and I suspect in the rest of the country as well.

The people who are experiencing difficulties with discrimination come in all shapes and sizes. They are rich, they are poor; they are white, they are black, they are Hispanic; they live in the cities, they live in the suburbs, and they live in the country; they are mentally retarded, they are physically disabled; they are hearing impaired, they are visually impaired; they have psychiatric disabilities, and they have disabilities which are not visible to the casual observer. In all cases prejudice, stereotyping, and discrimination are a fact of life, and it is one of the tragedies of our day that we have not yet found a way to rid ourselves of this terrible phenomonom.

I have been involved in three incidents recently which point out the need for stronger civil rights efforts on behalf of persons with disabilities. The first occurred in an urban school system when physically disabled students were being denied the opportunity to participate in a field trip with their able-bodied peers. The reason for this denial was that there was not enough money available to hire a lift-equipped van that the students required. When the issue became public it was presented as a charity case, and, as expected, two wheelchair service companies from the community came forward and donated vehicles for use on the day of the trip. I am sad to report that this wasn't the first time such an incident occurred in this particular school system. And the civil rights aspect of this issue has yet to be understood as a legitimate claim.

(ENTRANCE IN REAR OFF CEDAR STREET)
An Affirmative Action/Equal Opportunity Employer

The second incident also involves transportation. The transit district of a second urban area sought to use federal money to purchase motor buses to transport commuters from outlying suburbs to the city for employment purposes. When I raised a question regarding the need to equip the buses with lifts so that physically disabled commuters could benefit from the service I was told they could take a dial-a-ride service to the train station and then take the train to the city. Anyone who is familiar with dial-a-ride service knows of the impossibility of such an arrangement, and besides, why shouldn't people with disabilities have the same right to ride the commuter bus as people without disabilities. We need a federal law to prevent this type of discrimination from happening.

The third incident involves a woman who called me to inquire about getting a waiver so she would not have to make her day care center accessible. She claimed it wasn't necessary to provide access to the center because the state takes care of all the handicapped children, and besides a person with a disability could not possibly work in a day care center because of the need to change diapers and supervise playground activities. Well, I patiently explained the waiver process to her, and then tried to educate her to the importance of integrating children with disabilities with children without disabilities at an early age. I further explained, to no avail I might add, that if she tried to exclude handicapped children she might legitimately be charged with discrimination. I also told her of my experience diapering and otherwise caring for my daughter, and even shared with her my wheelchair sports experience which would certainly assist me in supervising playground activities. I told her that I thought I would make a good day care worker, and wouldn't it be unfair to deny me the employment opportunity her center might offer. She seemed deaf to my words, and asked me to again explain the waiver process.

I plead with you to move the ADA forward on the House agenda. It is desparately needed by the 36 million Americans who have disabilities and who need the additional protections such an Act offers.

Mr. OWENS. Thank you.
Mr. Oestreicher.

STATEMENT OF MICHAEL OESTREICHER, DIRECTOR, CHALLENGES UNLIMITED

Mr. OESTREICHER. Thank you very much, Mr. Chairman. Thank you for this opportunity. I am the director of Challenges Unlimited, a nonprofit architectural firm that designs barrier-free environments and specializes in creating adapted recreation areas. Seventy-five percent of our staff is disabled.

I will address my remarks to the need for a barrier-free environment and why the ADA is so important to that goal. One of our services is to provide consulting to professional design firms on accessibility issues. In the last 4 months, with the passing of the Civil Rights Restoration Act and the fair housing bill, we have received calls from 26 architects or landscape architectural firms, about 20 more than our average for an average 4-month period. Of these 26 calls, only 2 firms were interested in learning more about the laws and how they could implement them in a positive way. The other 24 firms only wanted to know how they could get around the rules or how they could get a variance.

Mr. OWENS. They were willing to pay quite a bit for that.

Mr. OESTREICHER. They were willing to pay almost anything for that.

To a firm, they all said something like, "We think the laws are good. Those people need that help, but this project is different. If I have to do all this access stuff, it will kill my budget."

Now, these are educated, articulate people. Most of them read the New York Times and watch public TV, and, yet, they seem to be totally ignorant and insensitive to over 35 million human beings.

To make this situation worse, these professional designers are 100 percent dead wrong. If accessibility is part of the planning from the onset of a project, then that access costs no more or at the most marginally more than a project with no access.

It is obvious that a clear message must be sent to the people who design our environment that no access or bad access will not be tolerated. Furthermore, strong, specific enforceable legislation must be enacted to aid these designers to create true barrier-free environments.

The enactment of the Civil Rights Restoration Act and the fair housing law is a good start. The Americans With Disabilities Act will be a welcome addition.

It must be noted that all of the provisions of the ADA need a strong barrier-free environment to work. It is important that in addition to legislation, we must also inform and educate the able-bodied community of the reason for the legislation.

During a late-night planning session for beach accessibility for a local community, a very tired and frustrated member of our group said, "You know, sometimes I almost wish a person would hate me for being disabled. Then at least I would know they knew I was alive."

This is a major key, for generally speaking, unless an able-bodied person has the privilege of working with, playing with, loving, or simply knowing a disabled person, the sad truth is they seldom ever think about them. We must awaken the consciousness and social responsibility of the able-bodied community. And one positive way is through this type of legislation.

Mr. Chairman, I have the distinct privilege and honor of working 6 days a week with a group of people that are labeled "handicapped" and "disabled." Mr. Chairman, let me assure you that they are neither. They are creative, intelligent, sensitive and have more common sense than many able-bodied people I know.

In closing, I would like to make one additional point. When our group designs barrier-free environments, you know what? It is not really that difficult. We are not doing brain surgery or nuclear fission or something like finding affordable parking in Boston. With good common sense, solid design precepts, and most importantly, strong input from the disabled people, we can create barrier-free environments. Thank you.

Mr. Owens. Thank you.

Mr. St. Laurent.

STATEMENT OF ROBERT ST. LAURENT, WORCESTER, MA

Mr. St. Laurent. Thank you, Mr. Chairman. My name is Robert St. Laurent. I live in Worcester, MA. Most of the handicapped individuals in the city have decided, "Let's fight and let's get things together." I gave a piece of evidence to you in regard to discrimination on transportation, discrimination in equal housing, also discrimination of the Handicap Affairs Office, who does nothing for the disabled in the city of Worcester. You cannot be elected to an appointed position and be nothing but a rubberstamp.

The disabled community is up in arms because of transportation, housing, hospitals' bathrooms not accessible to even take a shower, as a patient. When they are told as individuals, "Well, you are only going to be here for a short stay. You will be out in a few days." Or if you have no feeling, they do major surgery in your room. That is wrong.

I think we have got to start educating the system. There are people out there who need the education.

Mr. Chairman, many of us who are in wheelchairs cannot even go to a funeral parlor and not only that, cannot even go to a church of our denomination. Equal rights to all, not to a certain few. Thank you for much for letting me testify.

[The prepared statement of Robert St. Laurent follows:]

Prepared Statement of Robert St. Laurent

To Whom It May Concern: I am Robert St. Laurent, 7A Sever St., approximately age 50 years, disabled 17 years, testifying here today in regards to discrimination in the city of Worcester. I sit on the Worcester Regional Transit Authority Advisory Board and have done so for the past 7 years—trying to bring about accessible transportation throughout the whole city for the disabled. We have requested main route accessibility—for the past 7 years we have gotten nowhere with the Worcester Regional Transit Authority. The excuse they use is they don't know how many disabled need the service; they have refused to even try to complete a survey in the city of Worcester. We also have a local Handicapped Affairs Office in the city of Worcester and some of the issues that we have been bringing to the Executive Director of the office are—curb cuts, lighting for the disabled; lines in roads and sidewalk repairs. We have not seen in the local downtown area that any of these projects have been completed in the past 7 years. Every year we have Handicap Awareness Month and we have the city councillors and the mayor go out to see the deplorable condition of sidewalks, curb cuts, etc. Many of the councillors and the mayor have filed orders to have curb cuts and sidewalks fixed in the city of Worcester; however, in the last 3 years that they have been filing—nothing has been completed yet. The banks in the city of Worcester do not make it accessible for the disabled to reach the counters to cash checks or do banking and presidents of banks have stated the disabled can have their checks sent directly to the bank and do their deposits from home (via mail) rather than come into the bank. Most of your supermarkets are inaccessible for reaching shelves, racks—check-out counters are very narrow—independence is taken away due to these conditions.

I will gladly answer any questions that are given to in regards to the above.

Mr. OWENS. Thank you very much, the three of you. I have one question for Mr. Koslowski. The protection and advocacy program now covers adults with mental illness. What role does discrimination play in preventing people with mental illness from getting housing?

Mr. KOSLOWSKI. Well, it plays a major role. I think there is a tremendous—there is stigma attached to all disability, but I think the stigma attached to someone who has a history of hospitalization, institutionalization or psychiatric disability is probably more severe than any other stigma. I think that area in particular of the disability rights movement is perhaps farthest behind other areas. Access is something that people might not necessarily always agree with, but they can certainly understand a ramp and a bathroom door. Psychiatric disability is something that very, very few people in our society understand. And I think there is more stigma attached to that disability than any other. And I think that that disability above all others hopefully will stand the most to gain from the passage of the Americans With Disabilities Act.

Mr. OWENS. Thank you very much.

We are going to take a 15-minute break at this point. I think you will find that we are—we were at one point an hour and a half behind, now we are in far better shape than that. And if we have a 15-minute break, we will be able to get back on schedule and guarantee that everybody who was scheduled to be heard will be heard.

[Whereupon, a brief recess was taken.]

Mr. OWENS. Would everyone please come to order.

Returning to our schedule, the next panel consists of Jean Healy, Janet Kyricos, Joseph Caudre. Are we adding somebody?

Mr. ATKINSON. Ray Atkinson.

Mr. OWENS. Ray Atkinson.

Ms. Healy, would you like to begin?

STATEMENT OF JEAN HEALY, DIRECTOR, DEAF-BLIND CONTACT CENTER

Ms. HEALY. Hello. My name is Jean Healy. I am the director of Deaf-Blind Contact Center. I am here on this great day for people with all disabilities to get together in support of the Disabilities Act. I wanted to talk about two things. First of all, I want to say that I have two disabilities: deafness and blindness.

I have experienced subtle discrimination. And this happens in different ways. First of all, I will explain one situation. And the situation is related to transportation. Communications and announcements and so forth need to be provided for deaf blind people so that they can know what is happening in the transportation system. For example, if there is an emergency situation or things like that. In the past, I complained about bus signs in another city's transportation system. So, I was invited to try to determine which type of sign was the best. I chose one sign, but the man who was in charge who himself had no visual problems told me that another type of sign was the best one and he refused to listen to me. That man's attitude was not good for disabled people. He needs to listen to disabled consumers.

Another experience I had was a situation which was accessible for other disabled people, but not for deaf blind people. And the reason was that there were no interpreters for deaf blind people.

I wanted to go to a city-sponsored event, but they refused to hire more interpreters for the deaf blind people and the reason was that there was no money in the budget. But in that city, they need to think about accessibility for deaf blind people because we are part of the community and we want to participate and have equal access. Thanks for listening to me.

[The prepared statement of Jean Healy follows:]

DEAF-BLIND CONTACT CENTER, INC.
299 NEWPORT AVENUE, No. 5
WOLLASTON, MASSACHUSETTS 02170
(617) 770-0262 (TTY) (617) 770-0278 (VOICE)

October 24, 1988

To Whom It May Concern:

Today is a great opportunity for people with all disabilities to come together to show support for the Americans with Disabilities Act of 1988. This is a very important step in our goal toward equal access in employment, housing, communication, and so forth. And also in educating the general public that disabled people can be independent, have jobs and be involved in the everyday real world. It is our civil right to be involved in everyday activities the same as nondisabled people.

I am glad to have this chance to express my thoughts about discrimination. I have two disabilities-deafness and blindness-and from my experiences, discrimination has happened but in subtle ways. I will focus on communication access. A good communication system is very important for deaf-blind people to receive information-any information, emergency, current events, and so forth. For example, many deaf-blind people travel alone on public transportation and therefore communication/announcement systems need to be developed so that deaf-blind people can know what is happening with flashing lights, easy to read signs, braille, or the system is not accessible.

In the past, I complained to the transportation system in another city about the difficulty i had reading that city's bus signs. I could not know which route the bus was going and it was very frustrating to ask people because I'm deaf. I was invited to go to determine from various bus signs which one would be the easiest for most visually impaired people to read. I chose one sign that was not my ideal but it was the best among the choices. However, the man in charge, who had no visual problems, told me that in his opinion another sign was better but his choice was the worst one for me to read. He was not willing to listen to my point. He decided his choice was better and that was it. This man's attitude is what causes subtle discrimination. He is supposed to listen to disabled consumers, but he refused to listen to me.

Several times, I have confronted situations that were accessible to people with other disabilities but not for deaf-blind people. For example, an event sponsored by a city in which the advertisement read that a sign language interpreter would be available for deaf people but when contacted that city department refused to hire more interpreters for the deaf-blind people interested to attend the event. The reason was that there was no money in the budget for more interpreters. That whole event was wheelchair accessible but nothing for deaf-blind people.

Deaf-blind people are part of the community and want to participate in different and events. Communication access for deaf-blind people is different than for deaf people or blind people even though deaf-blind people use sign language interpreters and braille. The reason is that many deaf-blind people need their own interpreters for tactile/touch communication or close interpreting. Communication access for deaf-blind people needs to be considered with everything and we should not be discriminated against because it costs too much to provide the access.

Thank you for listening.

Sincerely,
Jean Healy
Jean Healy
Director

Mr. **Owens**. Thank you very much.

STATEMENT OF JANET KYRICOS, MASSACHUSETTS

Ms. **Kyricos**. I have experienced discrimination throughout my life. It became a way of living to me, almost like oppression. On most of the jobs that I have had—which I have had many. I have been working for over 25 years—would always have a certain level of discrimination involved and I will explain that. They are all pretty much similar.

I would be hired. And oftentimes have not found it difficult to be able to find a job. And in the interviews, I would often explain that I have a hearing impediment and cannot use the phone effectively and need people to face me so that I may read their lips for communication. Different things like do not talk behind my back to give me instructions. Make sure you get my attention. And most of the time it was fine, no problem. And I would start the job. And within 2 months, I would start being given pressure to start using the phone to make business phone calls related to my job. I would then speak up and say, "I let you people know before I cannot effectively do this." And I have been met with a great deal of anger and impatience. And in some situations, I was threatened in terms of losing my job if I did not use the phone. I eventually had to leave. I have had situations where my boss made fun of my speech in front of many people. We would have many, many people coming in for different interviews and I would have to call their names out. And she would make fun of my speech in front of everyone.

I have also had situations where, because I wear two hearing aids, I read lips and I use sign, now, because I now have a progressive sight loss. I have had situations where I made it clear that I could not use any kind of equipment involving like a dictaphone, for example, because I would have to take my aids off and I would not be able to see anyone to read lips and so on. I was told at one point that if I did not use the dictaphone, I would lose my job. I had a coworker cover for me. This person used to type for me and do the dictaphone work. And, eventually, I had to confront my boss and tell her that this was happening and that what she was doing was quite unfair. Unfortunately, it did not get anywhere. I had to leave that job.

Essentially, each job I have had, I would run up against this communications, sort of subtle discrimination, and it was always put on my so that I had to leave because no one else was willing to make any kind of accommodations for me.

I was in a situation once where my boss was wonderful, really wonderful. And she wanted to keep me because she thought I was very, very good. She had to appeal to a board of trustees. The board of trustees refused to change the job description in order to eliminate the phone and give me other responsibilities.

I was also in situations where people would hire me and I sort of felt very much like the token disabled person because I never got promotions. I never got any pay increases, always being told because I could not use the phone or because I could not use the dictaphone, or I could not use shorthand, all things related to communications, I am very frustrated to say the least because there was not anything wrong where people were willing to coming forth and support me and be able to fight these people, so to speak.

I have experienced a situation very recent in which I lived in a two-family house and had to leave because my landlady essentially said, "Had I known how handicapped you were, I never would have rented this place to you." In the meantime, I had gotten a guiding eye dog, which she gave me permission to get. She did not really have to because it is a law that I could have the dog. But, essentially, she increased the rent twice to $75 within a year's time. I could not afford. So, I eventually was forced to get out of that situation. And when I was leaving, I wanted my security deposit back, which is a great deal of money, and she refused to give me the money back. So, I told her I would bring her to small claims court. And I knew that was really going to be a big deal if it came down to that. Eventually, over about a period of 5 months, she finally gave me back my security deposit before the time for the court date had come around.

[The prepared statement of Janet M. Kyricos follows:]

TESTIMONY October 24, 1988

Janet M. Kyricos
114 Converse Avenue
Malden MA 02148

I have always experienced discrimination, it had become a way of life, like oppression.

I have experienced discrimination in most jobs school, college, in housing, transportation and within some public places such as stores and restaurants. I will only highlight some specifics here. but first i will explain a bit about my disability in order to better understand the nature of the discrimination.

I am an oral deaf woman and legally blind. I wear hearing aids, read lips and in the recent past has begun learning sign language. I need to read lips in order to communicate, along with the help of my hearing aids and sign My progressive sight loss sometimes creates a situation in which i must used sign by touch. I use a cane and also have a guide dog. [Guiding eyes dog]

EXAMPLES OF DISCRIMINATION

I was accepted into a smal Boston Liberal Arts College, but I was denied admission clearly on the basis of my deafness. As I was told my hearing impairment and imperfect speech did not make me a good candidate to suceed in college. I appealed this decision without results. I was not legally blind at the time, my sight problem was confined to night blindnes at the time.

ESTIMONY Pg. 2

I later entered a Business School (reluctantly as Business was not my first love, but the Rehabilitation Counselor told me it was the only place for me). Two requirements were necessary for graduation. A speed of shorthand and dictaphone. With shorthand one has to keep their head down in order to obtain accuracy and speed, I could not do this as I had to read lips in order to understand. With the dicta.. phone, I had to remove my hearin aid in order to use the machine, iI could not discriminate speech in this way. I appealed to the dean who told me not to worry, waived the requirements and substituted with other courses. On the day of graduation I was awarded a "Certificate of Attendance" not my Associate Degree/Legal Sciences. I went to the dean and was I told I should be grateful that they had their rules and could not change them for one person. Later when I received my transcrip my fourth semester of grades were missing. The transcript looked as if I failed and withdrew from school. I went up to the school again confronted the officials, but no one could find the grades, nor did anyone want to pursue it beyond a certain point. I had no where to go to receive any help.

I obtained a job with a Law School. I explaine my hearing problem and that I could not use a dictaphone, and that I needed to read lips to communicate effectively. I was hired on the spot. I worked for one year and during that time my boss would make fun of my speech in front of many people, she would threaten to fire me if I did not use the dictaphone, My co-worker would cover for me. We had a intercome system in which my boss used to call on us. I could not understand when my name was called, she would accuse me of not being ② cooperative

*My experiencas in the world of work continued along these lines, I would just leave and look for another job hoping to find a place that would accommodate me. Now after 25 + years of working I am finally being given access to do my job well. I work for a smal social service orgainization as a Finacial Consultant on a part time basis. I never knew what it meant to feel self esteem from a job that was not loaded down with obstacles and attitudes creating barriers to prevent me from growth. I got here on my own, I was not given support. I had felt the the Rehabilitation Commissions were not interested in the quaility of life and work, but "as long as you had a job, you should be grateful". My support primarily came from people outside the system.

I was living in a two family house renting the first floor. My sight had worsened, and I decided that a guide dog might be safer to travel with. I approached my landlady with my thought of getting a dog before I applied for one. She understood, and granted permissio Well, eventually, I was forced to leave. She increased the rent to $75 and then less than a year later increased it again to $75 . She told me I had to move that the "dog drove her crazy" The dog was doing nothing, its a highly trained animal. She said to me "if I had known how handicapped you are I would never have rented the place to you." She refused to return my deposit, and I put in a Small Claims in the local court. She eventually returned my deposit.

* At a later date when I had to leave another job I sought help from a Rehabilitation agency. They found me a job in a shoe factory.' They told me this was the best they could do and I was then a Certified Full Charge Bookkeeper. ③

TESTIMONY pg 4

I patron local stores frequently with my guide dog. In one local store I was asked to leave because dogs were allowed. I explained that she was a guide dog for blind people. They insisted I leave the dog outside, I said that the law protected me, and that I had a right to be in the store. The Manager physically pushed me oot of the store. I went home called the police. They dodmt tgomk ot was a big deal. I pleaded with them and said my rights were at stake. I went back to the store and met the police. Eventually, I was allowed to go back in. Amazing, throughout the whole situation, other customers just looked on, no one wanted to get omvplved/ I have been subjected to similar treatments in Boston stores as well!

Public transportation is difficult because all announcements about any changes are done over PA systems, which is not communication accessible for any persons who are deaf, for those of us who are both hearing and visually impaired it is very difficult.

INSERT pg 5

It kind of overwhelms me to put all this down on paper, and I know there is so much more to say, but I've said enough for now. I feel that to be able to testify today is a wonderful experience, thank you for caring! I look forward to the day when we can all live togethe on equal terms, in harmony and without the fear that create the barriers and are more disabling than our disabilities are.

Janet M. Kyricos

TESTIMONY Pg 5

INSERT

I want to mention a few points in reference to the world of work to highlight the type of discrimination i have experienced.

I rarely had difficulty finding a job, in the past* During interviews I was honest about my hearing impairment explaining that people had to face me when they talked to me so that I could read lips, not talk to me from behind me. And that using the phone would not be such that would not any benefit. I was still . hired with oral promises that there would be no problem to these accommodations. It was after I was on the job for a couple of months that pressure would be put on me to use the phone to make business calls, and when I asserted that I had made it clear in the interview that it would not be reasonable to expect, I was met with anger and had to experience a great deal of tension. I was never given promotions or pay increases the excuse being that because I was unable to use the phone I could not be promoted. No efforts were made to work it out even though I rated high in my reviews. Also people were continually forgetting to speak to me face on and were constantly putting pressure on me to get the information and do my job efficiently while they refused to take the time to give it to me in a way I needed. My only option was to eventually leave.

Discrimination with communication is very subtle and complex and needs desperately to be changed. Especially in the case of myself who spent 13 years in speech and auditory training and speak well, and people expect that i "should be able to hear well too".

*Now, It would be quite different with both a hearing [illegible]

Mr. OWENS. Thank you, Ms. Kyricos.
Joseph Caudre.

STATEMENT OF JOSEPH CAUDRE, AIDS ADVISORY BOARD, STATE OF MASSACHUSETTS

Mr. CAUDRE. I am a member of AIDS Advisory Board for the State of Massachusetts which deals with Social Security. And one of the problems that I have heard about in the last couple of weeks were the turnover rate of the counselors at Social Security offices throughout New England which have been so severe that each of these counselors or the people who are replaced either get paid at a reduced rate or are not getting paid enough, so, they have a Social Security Administration—at least in this region—has a high turnover rate. And, therefore, if they talk work incentives or any other area which are concerned with disability individuals, they do not give out the right kind of information.

Last week, I was at a consumer conference which the Massachusetts Rehab Commission held and I heard two stories about the incentive situation at least in the New England area. And these clients called up their Social Security Administrations in their area and got two different stories. This is a large problem because I feel that Social Security ought to have a much better understanding of the board incentive program. If they are going to serve the disabled people and provide jobs for them, they have got to have a much better understanding of the incentives that are there. A lot of the regulations that SSA has are out of date or they are nonproductive for workers, for disabled people who want to become workers, work-related individuals and taxpayers.

For me, this is a personal point: I am getting a job. And the rules and regulations that Social Security is dealing with, as far as I am concerned and a lot of disabled people who are in my situation, they are disincentives. If you will check the regulations, I think you will understand exactly why.

I have too short a time to really explain, but if you check the regulations, I think you will understand why a lot of disabled people do not work. In fact, if you do not work, you get more benefits. It is just that simple.

Mr. OWENS. Do you think this is a public policy problem or a discrimination problem?

Mr. CAUDRE. It is both. And the Reagan administration has made it worse in the last 8 years.

Mr. OWENS. Thank you.
Mr. Atkinson.

STATEMENT OF RAY ATKINSON, ASSISTANT DIRECTOR, CENTER FOR INDEPENDENT LIVING AND WORKING, WORCESTER, CT

Mr. ATKINSON. Good afternoon, Mr. Chairman. My name is Ray Atkinson. I am the assistant director at the Center for Independent Living and Working in Worcester. And I have been disabled for 15 years, now. And throughout that timeframe, I have become pretty much a good self-advocate and I have learned how to make the best of the situation, so to speak.

So, today, rather than talk about small instances I might run into in day-to-day living, such as restaurants, transportation, things like that, I think I would rather be an advocate of the clients of the Center for Independent Living and Working, incorporated in Worcester.

Some of the problem areas or areas that could use improvement with Federal moneys, aspects of housing, when people become disabled. They are looking to go —we have got a transitional program there where we can take on as many as seven clients at one particular point in time. And after the fact we have done the 9-month transitional program, we have to try placement for them. And there is a housing shortage for everybody. And it seems to be more prevalent, even, for the disabled population because of the fact that just a certain percentage is allocated or accessible for disabled persons.

The second point I would like to make would be the aspect of transportation. I live in Fitchburg, myself. I would have liked to have taken the train to come in, but it is not set up, as of yet, to make it accessible for persons in a wheelchair to take the train into Boston. I know it takes Federal moneys and some administrative push to make these things happen so that persons can come into such a function like today and be able to speak without having to rely on others.

Another aspect I would like to talk about briefly would be employment. Many—there have been great strides in employment. I think people are doing as much as is required of them at present time. I think today's meeting might require employers to do just a little bit more to make people with disabilities more marketable in the job place and give them an opportunity to be persons who can become productive members of society, build their self-esteem and be proud to be out there in the work force.

I think the aspect of housing is important, the aspect of transportation to get to and from work is important and the aspect of allocating Federal moneys for employment also so that there could possibly be some sort of a watchdog committee so that these things could transpire, will help everybody as a whole in the future to come. And I hope after November 8, these things will come about. I appreciate your time, Mr. Chairman.

Mr. OWENS. Thank you very much. I want to thank all the members of the panel. Thank you all for testifying.

The next panel is Cathie Marshall, Rima Sutton, and Laurie Williams. Ms. Sutton is the director of the National Multiple Sclerosis Society.

Ms. Sutton, you may begin.

STATEMENT OF RIMA SUTTON, SERVICE COORDINATOR, NATIONAL MULTIPLE SCLEROSIS SOCIETY, MANCHESTER, NH

Ms. SUTTON. Thank you. Just a small correction. I am really the service coordinator for the MS Society.

Mr. OWENS. Service coordinator for the Multiple Sclerosis Society.

Ms. SUTTON. Right. I help people with multiple sclerosis obtain services, provide information and referrals, and help with problems that they face. Many of their problems are caused by discrimination. Discrimination toward the handicap takes many forms, but I will focus on four: employment, insurance, including health and life, housing and accessibility.

At this time, when an individual in New Hampshire becomes disabled, they can be fired from their job if they are physically unable to do it. No accommodations of any kind are required of the employer by law. In many cases, disabled people are able to continue working with minimum modifications. Unfortunately, most employers will not even consider these simple and easy options.

I know a woman who was required to climb a spiral staircase to get to her desk when her legs could hardly support her. It would have been quite simple to move her down to the first floor so that she could continue working her desk job.

I know a man who used to work in a hospital in which he was required to be on his feet for 8 to 10 hours a day. He began falling. When he asked to be reassigned to more sedentary work, he was told that either he accept forced retirement or work in the laundry.

People with MS cannot tolerate heat or humidity, nor do they want to work for minimum wage. It is a waste of these people's potential to completely shut them out of the workplace and creates economic hardship for them and their families.

One woman I know applied for Social Security disability after being fired from her job. She waited approximately 6 months for a decision and was denied. In the meantime, no money was coming in at all. She has the right to appeal, but this process often takes as long as a year.

Another major problem disabled people face is an inability to obtain health or life insurance. Insurance companies refuse to sell them policies under the preexisting clause condition.

I know a man that wanted to buy life insurance for his family of six, but could not find one carrier in the whole State of New Hampshire to offer him a policy.

Multiple sclerosis is not a fatal disease. Nor are many other disabilities. An even uglier form of discrimination is insurance companies that cancel existing health insurance policies when they find out that an individual is disabled. I know a woman who worked for a company for 10 years before she was diagnosed as having MS. Not only was she fired from her job, but both her short term and long-term disability was cancelled. After paying for this insurance for 10 years, she is denied her right to use it now that she needs it. Disabled people need health insurance. Their medical costs are high. They are willing to pay high premiums for it.

In New Hampshire, we have a great need for more handicapped housing. I know of one family in New Hampshire that searched all summer for a handicapped accessible apartment for their family of four. They were finally forced to move into a one-room motel efficiency while the local housing authority continued looking. The State of New Hampshire does not have a central office that maintains listings of available handicapped units. Often when a handicapped unit becomes available, it gets rented to a nonhandicapped person. As of October 1, this family still has not found an apartment.

Also, the percentage of handicapped units in existing or under-construction housing complexes is very low or nonexistent. If a disabled individual cannot afford their own home and have it adapted to their needs, they are often trapped inside their home. This creates much loneliness and depression and can be very dangerous.

I know a woman who lives in a third-floor apartment building which had a fire when her husband was away at work. If the neighbors had not been aware of the fact that she was home alone, she could have died.

In conclusion, I would like to address the problems of accessibility. Most of our public buildings in New Hampshire are older and do not provide access. I know a man who went to city hall to vote in one of our major cities and could not get in the building. He was forced to vote outside in his wheelchair in the middle of the winter.

I know a public school teacher who, every morning, has to drag herself up the stairs on her behind to get to the top of the landing and her wheelchair.

Disabled people depend greatly on provided handicap parking spaces. But every day I see spaces filled by cars without handicap plates or stickers. If a disabled person cannot park their car, they can't get out.

[The prepared statement of Rima Sutton follows:]

NATIONAL MULTIPLE SCLEROSIS SOCIETY
New Hampshire Chapter
50 Bridge St, Manchester, NH 03101

Subcommittee on Select Education
Committee on Education and Labor
U.S. House of Representatives
518 Annex 1
Washington, DC 20515

Dear Ladies and Gentlemen:

I would like to introduce myself; my name is Rima Sutton. I am the Services Coordinator for the National Multiple Sclerosis Society's, New Hampshire Chapter. I help people with MS obtain services, provide information and referrals and help with problems that they face.

Many of their problems are caused by discrimination. Discrimination towards the handicapped takes many forms but I will focus on four: employment, insurance(health & life), housing and accessibility.

At this time when an individual in NH becomes disabled they can be fired from their job if they are physically unable to do it; no accomodations of any kind are required of the employer by law. In many cases disabled people are able to continue working with minimum modifications. Unfortunately, most employers will not consider these simple and easy options. I know a woman who was required to climb a spiral staircase to get to her desk when her legs could hardly support her. It would have been quite simple to move her down to the first floor so that she could continue working her desk job. I know a man who used to work in a hospital in which he was required to be on his feet for eight to ten hours a day; he began falling. When he asked to be reassigned to more sedentary work he was told that either he accept forced retirement or work in the laundry! People with Multiple Sclerosis cannot tolerate heat or humidity! It is a waste of these people's potential to completely shut them out of the workplace and creates great economic hardship for them and their families. One woman I know applied for Social Security Disability after being fired from her job; she waited approximately six months for a decision and was denied, in the meantime no money was coming in at all. She has the right to appeal but this process often takes as long as a year.

Another major problem disabled people face is an inability to obtain health or life insurance. Insurance companies refuse to sell them policies under the pre-existing clause condition. I know a man that wanted to buy life insurance for his family of six but could not find one carrier in the whole state of New Hampshire to offer him a policy. Multiple Sclerosis is not a fatal disease nor are many other disabilities! An even uglier form of discrimination is insurance companies that cancel existing health insurance policies when they find out an individual is disabled. I know a woman who worked for a company for ten years before she was diagnosed as having Multiple Sclerosis; not only was she fired from her job but both her short term and long term disability was cancelled. After paying for this insurance for ten years she is denied her right to use it now that she needs it. Disabled people need health insurance; there medical costs are high and they are willing to pay high premiums for it.

In New Hampshire we have a great need for more handicapped housing. I know of one family in New Hampshire that searched all summer for a handicapped-accessible apartment for their family of four. They were finally forced to move into a one room motel efficiency apartment while the local housing authority continued looking. The State of New Hampshire does not have a central office that maintains listings of available handicapped units; often when a handicapped unit finally becomes available it gets rented to a non-handicapped person. As of October 1st this family still has not founnd an apartment. Also the percentage of handicapped units in existing or under construction housing complexes is very low or non-existent. If a disabled individual cannot afford their own home and have it adapted to their needs, they are often trapped inside their home; this creates much loneliness and depression and can be very dangerous. I know a woman who lives in a third floor apartment building which had a fire when her husband was away at work; if the neighbors had not been aware of the fact that she was home alone; she could have died.

In conclusion I would like to address the problems of accessibility. Most of our public buildings in New Hampshire are older and do not provide access. I know of a man who went to City Hall to vote in one of our major cities and could not get in the building. He was forced to vote outside in his wheelchair in the middle of the winter! I know a public school teacher who every morning has to drag herself up the stairs on her behind to get to the top of the landing and her wheelchair! Disabled people depend greatly on provided handicapped parking spaces but every day I see spaces filled by cars without handicap plates or stickers. If a disabled person can't park their car in an accessible spot they can't get out of there car. Parking tickets do not seem to work; perhaps towing the cars would! As for going out for dinner, going grocery shopping or going to a movie, these simple pleasures are denied the disabled person. At this time there is no legislation in New Hampshire that requires businesses to provide access to the disabled.

We need the Disabilities Act of 1988. The fact of the matter is that any one of us could become disabled at anytime due to disease, illness or injury. The passage of the Disabilities Act of 1988 would protect all of our rights and allow our disabled citizens to continue participating in our society.

Thank you for your time and consideration.

Sincerely,

Rima Sutton
Chapter Services Coordinator

Mr. OWENS. Thank you, Ms. Marshall. I am sorry. Ms. Sutton.

Ms. MARSHALL. I am Ms. Marshall.

Mr. OWENS. Ms. Marshall is next. Cathie Marshall.

STATEMENT OF CATHIE MARSHALL, NASHUA, NH

Ms. MARSHALL. Right. Many people assume or believe that handicapped people are content to live their lives at the expense of the Government, happy to have few responsibilities, lucky not to have to work for a living. This is a fallacy. Most of us are not content, not happy, and definitely not lucky. Most of us want and need something constructive to do, the satisfaction of financial independence, to live as normally as possible. Unfortunately, it is not our bodies that prevent us from achieving our goals, but rather the inadequacy of society and the governmental agencies that fail to make it possible for thousands of handicapped people to become taxpayers instead of tax takers, to achieve our maximum potential.

Most handicapped people who want an education or a job must deal with vocational rehabilitation. To start with, you have to have a physical to determine if you are eligible. If you are, your problems really start because you must be in touch with your assigned counselor. Fully, 75 percent of the time, he or she is in conference, unavailable, on another line, out sick or on vacation.

When you leave a message, you very rarely get your call returned. When you do get in touch, then you have to deal with being told what you can and cannot do, what kind of work you are capable of, what kind of courses you may take in college, what kind of medical equipment is best for you—usually the cheapest and most ineffective—and how little money is available.

If you try to tell your counselor what your needs are, what you can do and what you would like to accomplish, you are told what is best for you, to be a realist, and then you are ignored.

In July 1982, my counselor told me that I was unsalvageable and that I would no longer receive the funds to finish my college education, nor would I receive any help to go to work. Finally, after 18 months of arguing and a final threat of court action, I was put into a work assessment program that led to a real job.

My work record was excellent, better than a nonhandicapped worker and had it not been for an accident that redisabled me, I would still be with the company.

From May 1987 until June 3, 1988 when I testified at a hearing held by Justin Dart in Concord, NH, my counselor was again talking about my multiple medical problems as though I was not worth the investment of time and money. All my requests for help are consistently delayed with excuses and almost all were denied.

Suddenly, after the hearing, all my requests have been approved. My wheelchair was repaired, physical therapy granted and a new wheelchair cushion was immediately approved. I am now in the process of trying to regain my college funding.

Another benefit of my testimony was an invitation to become a member of the Consumer Advisory Committee. I accepted and have become an active member. Good for me. But what of the hundreds of clients who either cannot or will not advocate for themselves? What happens to these clients who have problems with vocational rehabilitation? What if like me they are not made aware of the client assistance program or are unable to understand how it works? Anyone who is successful in dealing with vocational rehabilitation, myself included, should be canonized. [Laughter.]

What, if through an accident or an illness, you are unlucky enough to become redisabled? If a person thinks he had problems while on Government aid, they are nothing compared to what you are now facing. All those lovely benefits you were so careful to get to ensure your financial security now create a hell on Earth.

Six months after losing your job, your medical insurance is no longer covered by your company. You must now pay for it out of your own pocket. And because you are now on an individual plan, your coverage is seriously inadequate. Now, most likely, you will have no coverage for blood tests, x rays, CT scans, MRI's, medication, physical therapy, emergency room care, doctor's fees, dental fees, psychiatric care, medical equipment and repairs, and in-home care. This inadequate insurance will cost you in the area of $550 every 3 months. If you think you are lucky to be getting long-term disability through your company, think again. You only get 60 percent of your income with no cost-of-living increases. It is hardly enough to make ends meet. And when you add on the cost of the medical expenses not covered by your inadequate insurance, it could leave you with less to live on than someone on Government aid.

However, because your income is higher than qualifying income for assistance, door after door will be shut in your face.

This brings me to Medicaid and food stamps. You can apply and probably get accepted for Medicaid on a spend down program. This means that you have to cough up the difference between your income and the income of someone on Government aid every 6 months before Medicaid kicks in. In my case, I have to come up with $1,324 every 6 months. And food stamps? Well, if your medical bills were incurred before your application, they do not qualify as a deduction from your income. This is also true of Medicaid. Although I pay out fully half of my income for existing medical bills, my application for food stamps has been denied three times. My income is considered too high. And, yet, most months, I have only $30 left for food. Sometimes less.

Recently, I have been turned down for city welfare, food stamps, Social Security, Medicaid, SSI, and necessary medical care because I cannot pay up front. I believe that there is a solution to these problems. First, there should be a more efficient way of dealing with voc rehab so that months are not wasted trying to get approval for one thing. Counselors should be more objective and allow that handicapped people generally know more about what they are capable of and what their needs and goals are. Also, counselors should verbally tell clients and/or guardians of the client assistance program and any other recourse the client may have in case of problems. And, further, should be sure that the client and/or guardian fully understands. Too often, counselors become bureaucratized and it is the client who suffers.

Most of all: No counselor has the right to say someone is unsalvageable and is not worth any effort or money to help that person achieve his or her maximum potential.

[The prepared statement of Catherine E. Marshall follows:]

October 24, 1988

Regional Congressional Hearing
Boston, Massachussetts

Many people assume or believe that handicapped people are content to live their lives at the expense of the government; happy to have few responsibilities; lucky not to have to work for a living. This is a fallacy ... most of us are NOT content; NOT happy; and definitely NOT lucky. Most of us want and need something constructive to do, the satisfaction of financial independence, to live as normally as possible.

Unfortunately, it is not our bodies that prevent us from achieving our goals, but rather, the inadequacy of society and the governmental agencies that fail to make it possible for thousands of handicapped people to become taxpayers instead of taxtakers, to achieve our maximum potential.

Most handicapped people who want an education or a job must deal with Vocational Rehabilitation. To start with, you have to have a physical to determine if you are eligible. If you are, your problems really start because you must be in touch with your assigned counselor. Fully 75% of the time he or she is in conference; unavailable; on another line; out sick or on vacation. When you leave a message you very rarely get your call returned. When you DO get in touch, then you have to deal with being told what you can and cannot do; what kind of work you are capable of; what kind of courses you may take in college; what kind of medical equipment is best for you (usually the cheapest and most ineffective) and how little money is available. If you try to tell your counselor what your needs are, what you can do and what you'd like to accomplish, you're told what's best for you, to be realistic and then are ignored.

In July of 1982, my counselor told me that I was "unsalvageable" and that I would no longer receive the funds to finish my college education nor would I receive any help to go to work. Finally, after 18 months of arguing and a final threat of court action, I was put into a work assessment program that led to a real job.

My work record was excellent, better than the non-handicapped workers and had it not been for an accident that re-disabled me, I would still be with the company.

From May of 1987 until June 3, 1988 when I testified at a hearing held by Justin Dart in Concord, N.H., my counselor was again talking about my multiple medical problems as though I weren't worth the investment of time and money. All my requests for help were consistently delayed with excuses and almost all were denied.

Suddenly, after the hearing, all my requests have been approved. My wheelchair was repaired, physical therapy was granted and a new wheelchair cushion was immediately approved. I'm now in the process of trying to regain my college funding.

Another benefit of my testimony was an invitation to become a member of the Consumer Advisory Committee. I accepted and have become an active member.

Good for me! But what of the hundreds of clients who either cannot or will not advocate for themselves? What happens to these clients who have problems with Vocational Rehabilitation? What if, like me, they are not made aware of the Client Assistance Program or are unable to understand how it works?

Anyone who is successful in dealing with Vocational Rehabilitation, myself included, should be canonized!

What if through an accident or an illness you are unlucky enough to become re-disabled? If a person thinks he had problems while on government aid, they are nothing compared to what you are now facing! All those lovely benefits you were so careful to get to ensure your financial security now create a hell on earth! Six months after losing your job, your medical insurance is no longer covered by your company. You must now pay for it out of your own pocket and because you are now on an individual plan, your coverage is seriously inadequate. Now most likely, you will have no coverage for blood tests; x-rays; CAT scans; MRI's; medication; physical therapy; emergency room care; doctor's fees; dental fees; psychiatric care; medical equipment and repairs and in-home care. This inadequate insurance will cost you in the area of $550.00 every three months.

If you think you're lucky to be getting long-term disability through your company, think again! You'll only get 60% of your income with NO cost of living increases. It is hardly enough to make ends meet and when you add on the cost of the medical expenses not covered by your inadequate insurance, it could leave you with less to live on than someone on government aid. However, because your income is higher than the qualifying income for assistance, door after door will be shut in your face.

This brings me to Medicaid and Food Stamps. You can apply and probably get accepted for Medicaid on a spend-down program. This means that you have to cough up the difference between your income and the income of someone on government aid every 6 months before Medicaid kicks in. In my case, I have to come up with $1,324.00 every 6 months.

And Food Stamps-well, if your medical bills were incurred before your application, they don't qualify as a deduction from your income. This is also true of Medicaid. Though I pay out fully half of my income on existing medical bills, my application for Food Stamps has been denied three times. My income is considered too high and yet most months I have only $30.00 left for food. Sometimes less.

Recently I've been turned down for City Welfare; Food Stamps; Social Security; Medicare; SSI and necessary medical care because I can't pay up front.

I believe that there is a solution to these problems. 1st, there should be a more efficient way of dealing with Vocational Rehabilitation so that months aren't wasted trying to get approval for one thing. Counselors should be more objective and allow that handicapped people generally know more about what they are capable of and what their needs and goals are. Also, counselors should verbally tell clients and/or guardians of the Client Assistance Program and any other recourse the client may have in case of problems and further, should be sure that the client and/or guardian fully understands. Too often, counselors become bureaucratized and it is the client who suffers. Most of all, NO counselor has the right to say someone is unsalvageable and isn't worth any effort or money to help that person achieve his or her maximum potential.

2nd, I believe that the government should guarantee medical care for the handicapped and disabled. You may say that this would be too expensive, but I say that in the end the government would about break even. Many thousands of handicapped people do not work for the simple fact that they cannot afford to lose their medical coverage. Were this medical coverage guaranteed, they would go to work and no longer need to be financially subsidized and they would also be paying taxes. They would in effect be putting money INTO the government rather than taking money OUT of the government.

3rd, I believe that all money spent out on medical bills should be deductible from a person's income when he or she applies for Medicaid and for Food Stamps. No matter when the bills were incurred, if one is presently paying out on them, it leaves that much less to live on.

No person who needs it should be denied medical care. They should not have to worry because whatever medical insurance they may have been able to salvage is inadequate and fails to meet their needs. They should also be able to put food on their table.

Three weeks ago I fractured my arm in a 10 K road race. Sure, I ran the race for a personal reason ... I need to prove to myself and others that I am NOT an invalid. But the MAIN reason was because I needed the $100.00 awarded to the winner. I NEEDED FOOD ON MY TABLE! I won the $100.00 and in the process incurred a doctor and hospital bill of $300.00.

Does this qualify me for in-home care now that I need help to shower, dress, do dishes and housework? Certainly not! I spent a full week on the phone trying to get help and heard over and over "You haven't met your Medicaid spend-down." "I know your situation is desperate but your income is too high." "We cannot help you." And finally, "Sorry, but our funds have been cut and we have no one free to help you." My frustration has hit an all-time high!

We are talking about human beings, human lives! Lives that many handicapped people take in suicide because they can no longer cope with the Catch-22's, the cracks they fall through; the emotional rejection and the negative responses they receive every day from society and government.

But then, why should we expect society to help when the government is truly negligent in helping the handicapped and disabled? The government makes a SHOW of helping us but when it comes down to actually developing and directing good, workable programs, it becomes a "bureaucratic ostrich"!

Catherine C. Marshall

Catherine E. Marshall
583 West Hollis Street
Apt. 3B
Nashua, N.H. 03062
tel. (603)880-3545

Mr. **Owens**. Thank you, Ms. Marshall. I did not hear the bell ring, but I think we are out of time. You did very well in the time allotted. You went from being unsalvageable to being canonized.

Ms. **Marshall**. Also, the Government is a bureaucratic ostrich. That was my next line.

Mr. **Owens**. We will be happy to have your written testimony.

Ms. Williams? Laurie Williams.

STATEMENT OF LAURIE WILLIAMS, MANCHESTER, NH

Ms. **Williams**. My name is Laurie Williams and I live in Manchester, NH. I have muscular dystrophy and for the past 4 years I have used a wheelchair for my mobility.

New Hampshire is a bitter cold State with majestic mountain ranges and serene lakes. There are many attractions that I would like to see and take part in. But I cannot because they are not accessible. I cannot take a bus to visit my mother who lives 60 miles away because the buses are not equipped with lifts.

I have been to several restaurants that do not have accessible front doors and/or restrooms. I have to rely on someone else to get me books from the public library because it is not completely accessible. I am tired of this kind of discrimination. I want the same opportunities as everyone else in this country. Thank you.

Mr. **Owens**. Thank you, Ms. Williams. I want to thank all three of you. We are going to take a 10-minute break at this point.

[Whereupon, a brief recess was taken.]

Mr. **Owens**. Would everyone please come to order?

Our next panel consists of Lindsy White from New Hampshire, Lisa Lyons and Eleanor Smith, all from New Hampshire. Are we missing someone? Marilyn Levin?

Ms. White?

Ms. **Levin**. Marilyn Levin. Ms. Lindsy White is not here, apparently.

Mr. **Owens**. Oh, Lindsy White will not be here?

Ms. **Levin**. That is my understanding.

Mr. **Owens**. Lisa Lyons.

STATEMENT OF LISA LYONS

Ms. **Lyons**. Discrimination has been brought to my attention by my fellow disabled colleagues. To begin with, many individuals are not given the proper help in the division of vocational rehabilitation to assist them in getting them meaningful employment and the training which they must receive to achieve their goals. Therefore, there are a number of disabled people who are not working in their chosen field. They cannot get into the program which is mandated to assist them in fulfilling their goals.

My situation was somewhat different in that the Division of Vocational Rehabilitation did not come through with the promise that they had committed to me for my master's degree program. My parents were able to help me out in fulfilling my goal.

[Portions of Ms. Lyons' testimony were incomprehensible.]

I am currently completing the master's degree program in counseling psychotherapy. Prior to this I had contacted, traveled to 16 regional units across the country. Ten have responded favorably concerning the feasibility of my employment.

Several of the individuals whom I have dealt with have a difficult—wish they could find jobs in their chosen field. However, they are afraid of losing their benefits they need to live. Some of the most mentally disabled people's cost of living can be $400 a day. So, therefore, no one can commit a salary high enough to employ them, once these benefits have been cut off.

For the past 10 years, I have resided in nursing homes. When I first was admitted to the nursing home, the nurse who admitted me—enabled me to be picked up Saturday and returned to the nursing home Sunday night. Since the nursing home—the State ruled that I could be thus covered since I was in residence full time, 24-hour period.

Three years ago, the Federal statutes concerning—making it necessary for the individual to be in the nursing home at 12 o'clock. I graduated from a Catholic college 15 years ago where we had worse stringent curfews.

Furthermore, it is beyond my understanding why the nursing homes are allowed to take the private rate of $69 a day, when the State pays $42.50 for a person residing in a nursing home.

Many letters to Congressmen and President Reagan have been written by myself and my physicians. To date, no exception has been made to the rule has been restored.

It appears ludicrous the Constitution which guarantees the person's pursuit of happiness would punish a family who was willing to take his or her loved ones home for an occasional overnight.

In concluding, the disabled now number 35 million nationally. These individuals are entitled to live lives with respect and dignity and to maximize their abilities without having to fight for their basic rights.

To quote a renown psychologist who put forth of the theory—to achieve what is impossible, it can be possible to be as much as we can be in the dream of being more. Thank you.

[The prepared statement of Elizabeth H. Lyons follows:]

Testimony Submitted to the Congressional Task Force on the Discrimination of the Disabled; Hotel Lafayette Place, Boston, Massachusetts, October 24th, 1988.

There are several areas of discrimination which have been brought to my attention by my fellow disabled colleagues. To begin with many individuals are not receiving the proper help from the Division of Vocational Rehabilitation to assist them in gaining meaningful employment and the training which they must receive to achieve their goals. Therefore, there are a number of disabled people who would and should be working, who cannot achieve their occupational goals because they are denied the services of the program which is mandated to assist them in fulfilling their goals.

My situation was somewhat different in that when the Division of Vocational Rehabilitation did not come through with the funds they had committed to me for my Masters Degree program, my parents were able to help out so that I was able to pursue my goal to become a counselor. I am currently completing the Masters Degree program in Counseling and Psychotherapy at Notre Dame College in Manchester, N.H. Prior to this I contacted twelve of the sixteen regional spinal cord units specified by the National Institutes of Health and Research concerning the feasibility of my obtaining a job upon the completion of my Masters Degree. Ten of those responded and all did so in a favorable manner so the feasibility of my employment could not be challenged.

Several of the individuals whom I have dealt with as a Peer Support Facilitator for the Granite State Independent Living Foundation would and could find jobs in their chosen fields, however, they cannot work due to the fact that they would lose the services which they are receiving, that enables them to live in the community. Clearly, there need to be programs set up which would encourage disabled individuals to join the work force once they have been trained in a given field. These individuals should not fear losing medical coverage, low cost housing, personal care attendant services which are just some of the necessi for a disabled person. Some of the estimates for the cost of supporting a person with a closed head injury go as high as $400.00 a day. No person can command that high a salary, so clearly the persons benefits cannot be cut off when he or she has entered the work force.

For the past ten years I have resided in nursing homes. When I first was admitted to a nursing home, my neurosurjeon made a deal with the State which enabled me to be picked up at noontime on Saturday and returned Sunday evening. Since the nursing home day goes from midnight to midnight, the State ruled that I would thus be covered since I was in residence part of each twenty-four hour period. Three years ago the Federal Statute concerning nursing home

BEST COPY AVAILABLE

attendance was changed, making it necessary for an individual to be in the nursing home at twelve o'clock midnight each night.
I graduated from a Catholic College fifteen years ago where we had far less stringent curfews. Just because one resides, through necessity, in a nursing home should not mean that he or she must be in by midnight or should be penalized by being charged the private rate of $69.00 when not there when the State pays $42.50 a day for a person residing in a nursing home.

Many letters to congressmen and even to President Reagan have been written by myself and my physicians. To date no exception to the rule has been restored. It seems ludicrous that a constitution which guarantees the persons pursuit of happiness would punish a family who is willing to take their loved one home but who are not able to provide constant care for him or her by refusing to allow the family the right to take the individual home overnight when the family is willing to do so. The ramifications of this law struck me this year when I was on my pilgrimage to St. Anne de Beaupre with the Ahearn Memorial Pilgrimage from Springfield, Mass.
They have traditionally brought some severely disabled patients from Goldwater State Hospital in New York along on the pilgrimage. This year, however, the hospital did not allow these patients to go because they would have been away more than the ten days allowed by the Federal Statute. One could question, does'nt the Constitution guarantee one freedom of religion?

In conclusion, the disabled now number thirty-five million nationally. These individuals are entitled to live lives with respect and dignity and to maximize their abilities without having to fight for their basic rights. Abraham Maslow, renowned psychologist, puts forth the theory of self-actualization which can be summized by "To achieve all that is possible, we must attempt the impossible, to be as much as we can be, we must dream of being more."

Respectfully submitted,

Elisabeth H. Lyons

Mr. **Owens**. Thank you, Ms. Lyons.
Ms. Smith.

STATEMENT OF ELEANOR SMITH

Ms. **Smith**. My name is Eleanor Smith. I reside in a nursing home right now. I am an active-minded person though physically disabled. I would have preferred to be able to live outside the nursing-home in order that I might have independence to arrange my living style to meet many basic rights not currently available through a nursing home residence. These basic needs and rights includes as follows: The right to maintain the privacy of telephone calls and mail and correspondence. The right to have some input into my general care and therapy. The right for a quiet surrounding with those facilities are not accessible to me that would enable me to do the personal tasks I would wish to do.

Mr. **Owens**. Thank you, Ms. Smith.

Ms. Levin is the coordinator of death services, supervisor of occupational therapy, department of mental health. Ms. Levin.

STATEMENT OF MARILYN LEVIN, SUPERVISOR, OCCUPATIONAL THERAPY, DEPARTMENT OF MENTAL HEALTH, MASSACHUSETTS

Ms. **Levin**. Good afternoon. My name is Marilyn Levin and I am very pleased to be here to testify today on behalf of Edward M. Murphy, Commissioner of the Massachusetts Department of Mental Health, a State agency which serves over 100,000 individuals with mental illness in the Commonwealth.

The millions of people across our Nation who are stricken with mental illness face numerous instances of discrimination and oppression on a daily basis. They and their families and the professionals who work with them are stigmatized for an illness they did not cause nor control. The dictionary defines stigma archaically as a mark burned into the skin of a criminal or slave. And, today, a mark or token of infamy, disgrace, or reproach.

Throughout history, people with mental illness have been viewed as weak-willed, violent, morally defective, and less than human. People with mental disorders have been herded into jail-like asylums along with the poor and criminals. Mental patients have been isolated, chained and beaten, and abused. At one time, tickets were sold to the public to watch the, quote, lunatics, as entertainment, adding to the degradation and brutality. Is it any wonder, then, that the legacy today are views of the mentally ill as dangerous and criminal, objects of ridicule and blame, people to be shunned and abused.

The mentally ill are among the two largest disability groups in America. Yet, they are the least known. And they receive the least public support. Research into the causes and treatment for mental illness is minuscule. Major forms of mental illness such as schizophrenia and manic depressive illness are biochemically based diseases of the brain. Schizophrenia strikes approximately 1 out of every 100 Americans. There are over 2 million schizophrenic individuals in the United States.

Contrary to popular myths, persons who are mentally ill are not criminals. In fact, the mentally ill are far more likely to be victims of violent crime than perpetrators of such crimes. Given a supportive environment and appropriate medical treatment, mentally ill persons can live and work successfully in our community.

The stigma of mental illness stemming from public ignorance, prejudice, and superstition adds to the already terrible burden and anguish imposed by the illness. Our clients face exclusion from jobs, housing, and the basic rights that all citizens should enjoy.

Due to discrimination and lack of resources, many of our mentally ill citizens are among the growing numbers of homeless. The Massachusetts Department of Mental Health has initiated a major campaign to combat stigma in the Commonwealth. We have joined with newly empowered consumers and family methods. Our methods are educational and consciousness raising. The proposed legislation will provide the legal basis to eliminate discrimination due to handicap in many important areas of public life.

The mental health community of consumers, providers, advocates, and professionals will continue to work to eliminate attitudinal barriers. The proposed legislation will mandate behavioral change. Both efforts are necessary and complementary.

The Department of Mental Health is in full and unequivocal support of the proposed national disabilities rights legislation. Passage will bring our Nation forward in expanding rights to the least represented and most stigmatized in our society. Thank you.

Mr. OWENS. Thank you.

I want to thank all the panelists. Thank you very much for your testimony.

The next panel consists of Shelly Lemilim, Joe Malle, and Barbara Waters. You may begin.

STATEMENT OF BARBARA WATERS, MASSACHUSETTS

Ms. WATERS. I started attending a Massachusetts State college part time in the fall of 1985. Between then and the spring of 1987, I had many epileptic seizures on campus with no repercussions. Suddenly, in the spring of 1987, with the advent of an administrative change at the college, I was asked to leave the college due to the seizures.

The fact that I had contributed a lot of time to the college programs and had a high grade point average and was a committed student did not matter. Neither did the fact that I was the leadership behind the college's first Handicap Awareness Day. I was told that I was a liability risk. I was also informed by the administration that I was disruption, even though my professors and classmates did not feel that way.

Mr. OWENS. Excuse me 1 minute, Ms. Waters.

Could we please clear the door? The noise level is too high. We cannot hear. Can you please close the door?

I am sorry, Ms. Waters. Would you continue?

Ms. WATERS. It was only the threat of legal action by the Disability Law Center of Boston that caused the college to back down. I was able to stay in the school and, hopefully, will graduate next year, only due to the intervention of the lawyers. But the fact that this occurred in the middle of the semester did affect my studies that semester and that is all I have to say. Thank you.

Mr. Owens. Did you mention the name of the college?

Ms. Waters. Excuse me?

Mr. Owens. Did you mention the name of the college?

Ms. Waters. No, I did not. Would you like me to? It is Salem State College.

Mr. Owens. Thank you.

Mr. Mallen.

STATEMENT OF JOSEPH MALLEN, PORTSMOUTH, NH

Mr. Mallen. My name is Joseph Mallen and I live in Portsmouth, NH. Some of the problems facing handicapped citizens today are as follows: There is not enough of handicap accessible transportation. A disabled person cannot have a job if he cannot get transportation to get there. Also, narrow aisles in stores make it difficult, if not impossible to shop. Public restrooms that are not always stocked with paper towels pose a problem because it means that a person has to use the air blower to wipe their hands and they are almost impossible to use, especially for people who use crutches. Buildings that do not have ramps pose a very frustrating situation for people in wheelchairs who want to get into a building but cannot because of the lack of a ramp.

These are just some of the problems facing handicapped citizens today. That is why I urge you to support H.R. 49, the Americans With Disabilities Act of 1988. It will help all citizens with disabilities live more independent and productive lives.

Mr. Owens. Thank you, Mr. Mallen.

Shelly Lemelim.

STATEMENT OF SHELLY LEMELIN, DOVER, NEW HAMPSHIRE

Ms. Lemelim. My name is Shelly Lemelim. Social Security is on the mind of most of the disabled population. I personally have experienced many situations in which buildings were not accessible. When I moved into an apartment on my own nearly 2 years ago, at the main entrance at the front of the building, there were two handicap places, parking spaces, one on each side of the fire lane. One would think that that is a good place for a curb cut for access to the sidewalk from the street. It would have been nearby so that people in wheelchairs, walkers, or even public elderly people could easily reach it.

Incidentally, the apartment complex was built to accommodate the elderly and the handicapped. And there is a dialysis center on the ground floor. The only access to the sidewalk is to the extreme right of the building, 100 feet away from the main entrance. It would not only create a dangerous situation but also mean it was very inconvenient. But with the help of my dad and the cooperation of a very good friend, who was also handicapped, I was interviewed by a reporter for the local newspaper. An article was published explaining to the public how it is difficult to get around the sidewalks, the streets are not made accessible for the handicapped and the elderly. It was sort of hard at first to go through this process, but it was worth the while. This past summer, they answered my request and many others and they got a curb cut put into place.

[The prepared statement of Shelly Lemelim follows:]

GOOD AFTERNOON EVERYONE' MY NAME IS SHELLIE LEMELIN'

PUBLIC ACCESSABILITY IS STILL ON THE MINDS OF MOST OF THE DISABLED POPULATION. I, PERSONALLY, HAVE EXPERIENCED MANY SITUATIONS IN WHICH BUILDINGS WERE NOT ACCESSABLE.

ONE EXAMPLE WAS WHEN I MOVED INTO AN APARTMENT COMPLEX, ON MY OWN, NEARLY TWO YEARS AGO. AT THE MAIN ENTRANCE, IN FRONT OF THE BUILDING, THERE ARE TWO HANDICAPPED PARKING SPACES, ONE ON EACH SIDE OF THE FIRE LANE. ONE WOULD THINK THAT THE LOGICAL PLACE FOR A CURB CUT OR ACCESS TO THE SIDEWALK FROM THE STREET WOULD HAVE BEEN NEARBY, SO THAT PEOPLE IN WHEELCHAIRS, WALKERS, OR ELDERLY PEOPLE COULD EASILY GET ONTO THE SIDEWALK. INCIDENTLY, THIS APARTMENT COMPLEX WAS BUILT TO ACCOMMODATE THE HANDICAPPED AND ELDERLY. ALSO, THERE IS A DIALYSIS CENTER ON THE GROUND FLOOR OF THIS BUILDING.

FOR WHATEVER REASON, THE ONLY ACCESS TO THE SIDEWALK, WAS AT THE EXTREME RIGHT OF THE BUILDING, ABOUT 100 FEET FROM THE MAIN ENTRANCE, NEAR THE ENTRANCE TO THE PARKING GARAGE, WHICH NOT ONLY CREATED A HAZARDOUS SITUATION, BUT ALSO MADE IT VERY INCONVENIENT.

WITH HELP FROM MY DAD AND THE COOPERATION OF A GOOD FRIEND WHO ALSO HAS A HANDICAPPED DAUGHTER, I WAS INTERVIEWED BY A REPORTER FROM THE LOCAL NEWSPAPER, FOSTER'S DAILY DEMOCRAT, AN AN ARTICLE WAS PUBLISHED, EXPLAINING TO THE PUBLIC, HOW DIFFICULT IT IS TO GET AROUND IF SIDEWALKS AND STREETS ARE NOT MADE ACCESSABLE FOR THE HANDICAPPED AND ELDERLY.

I MUST ADMIT THAT THE PROCESS WAS NOT THE KIND OF THING THAT I LIKE TO DO, BUT IF IT MADE PEOPLE AWARE OF A PROBLEM AND THAT THE RESULTS ARE BENEFICIAL TO THE HANDICAPPED AND ELDERLY, IT MAKES IT WORTHWHILE.

WORTHWHILE IT WAS, THIS PAST SUMMER, WHEN THE CITY OF DOVER, NH ANSWERED MY REQUEST AND THAT OF MANY OTHERS. WHY IS IT THOUGH, THAT THE DISABLED AND HANDICAPPED, NEARLY HAVE TO BEG, IN ORDER TO BE HEARD.

ACCESSABILITY TO PUBLIC BUILDINGS -

THOUGHT SHOULD BE GIVEN IN REGARDS TO ENTRANCES AND EXITS, AS WELL AS DOORWAYS TO INSIDE ROOMS, BATHROOMS, ETC.

THOUGHT SHOULD BE GIVEN IN REGARDS TO THE CLUTTERING OF FLOOR SPACE AND AISLES IN BOOKSTORES, GROCERY STORES, CLOTHING STORES, ETC.

PUBLIC PLACES SHOULD BE MADE EASY AND CONVENIENT PLACES TO GO, THEREBY CREATING AN ATMOSPHERE THAT WOULD MAKE THE DISABLED, HANDICAPPED AND ELDERLY, HAPPY TO RETURN TO, IF THEY WISH.

AS A LAST COMMENT, I WOULD LIKE TO SEE THE FUTURE BUILDING OF PUBLIC PLACES, DONE SO WITH MORE AWARENESS AND CONSIDERATION OF PEOPLE OF THE COMMUNITY AND OTHERS WHO HAVE DISABILITIES.

BUILDERS AND PEOPLE ON PLANNING BOARDS SHOULD INVITE SOMEONE WHO IS DISABLED, HANDICAPPED AND ELDERLY AND QUESTION THEM CONCERNING THEIR NEEDS IN REGARDS TO ACCESS TO AND FROM THE BUILDING, AS WELL AS INSIDE. INVITATIONS CAN BE MADE PUBLICLY, EITHER BY NEWSPAPER ADS, RADIO OR TELEVISION.

IF AT ALL POSSIBLE, I WOULD LIKE TO SEE A PROCESS ESTABLISHED THAT WOULD MAKE IT PART OF THE REGULAR PROCESS TO INCLUDE THE DISABLED IN NEW CONSTRUCTION OF PUBLIC BUILDINGS, HOUSING, ETC. WITHOUT COMMUNICATION FROM BOTH SIDES, IT IS DIFFICULT TO KNOW THE NEEDS OF THE OTHER.

THANK YOU FOR GIVING ME THE OPPORTUNITY TO BE HEARD.

Mr. **Owens**. Thank you. Thank you all for testifying. The next panel consists of Stephen Cohen, Sandy Gorski, Neil Eichorn.

Mr. Cohen is not here, so we will take Lynda Hoffman.

Ms. Hoffman, would you like to begin?

STATEMENT OF LYNDA HOFFMAN

Ms. **Hoffman**. Yes, thank you. To be honest, I am very tired of fighting for all the services and equipment that I need. And it gets harder and harder every year. The three areas I am going to talk about is employment, housing, and transportation and, if time, the present situation employment.

My first job was as a caseworker in the Public Welfare Department in Massachusetts. I was patronized and prevented from handling any difficult cases of consumers because my supervisors did not want to upset me. After all, I am—I was a social worker.

My next job was Social Security. That was even more discriminating. And after my first 700-hour position under the authority, I was terminated. And even personnel tried to help me out. But the regional commission——

Mr. **Owens**. You were terminated from Social Security, you say?

Ms. **Hoffman**. Excuse me?

Mr. **Owens**. You were terminated from Social Security?

Ms. **Hoffman**. Yes. And the regional commissioner told personnel, "Keep your fingers out of this one." I went to my Congressman and he got my job back. And they asked me to be a service rep at the teleservice center. They harassed me about my slowness, about my legibility—I had been only writing with my left hand for a few years—and about not coming up with my own reasonable accommodations. And, finally, I was prevented from upward mobility and lateral transfers and was even asked to come to two offices. That is when I decided to become an employment specialist for people with severe physical disabilities.

And housing? Are you aware that in elderly housing, where most handicap housing is placed, they do not allow children? My 15-year-old son, he was 15 at the time, had to be taken away—well, asked to live with relatives, I should say. To me, it felt like he was being taken away from me, especially as an adolescent. Who wants an adolescent? They are impossible to live with. And he was my responsibility. I may joke about some of these things.

Transportation. I used to be able to mainline service wherever I wanted to go, whenever I wanted to, however I wanted to go. I had no problems with jobs, et cetera. Now, I am stuck with the ride. And that is forcing me into a block of time: When I can go, when I can come. And I have to apply for transportation services a week ahead of time in order to get it. God forbid I want any changes. There is no such thing.

It was so bad this summer, I wanted to go into a long-term-care facility because I just could not handle it anymore. And then when Mass Rehab's funding was cut, both federally and State level, I knew employment was out of the picture because I needed services and I needed argumentative devices and equipment for a computer because I could no longer physically write. In my kind of profession, I need to be able to write. And there just is not any money.

And they do not have on-the-job transportation which would have provided me with a perfect job as home-service coordinator. But you have to be able to travel quite a distance, as far as Worcester. And, of course, the ride does not go there. That is it in a nutshell.

[The prepared statement of Lynda N. Hoffman follows:]

Prepared Statement of Lynda N. Hoffman

I have experinced discrimination due to my disability for most of my life. As a child and then in applying for college, I was denied appropriate education because "my disability would not allow me to complete the program". This was by the admissions interviewers in the mid 60's. I did eventually go to college, but not thanks to MRC.

My first job was as a caseworker for the Welfare Dept, where I was patronized, and prevented from holding difficult consumers because my supervisor did not want me upset at all. I was a social worker after all. My employment at Social Security was even more discriminating as even Personnel Department backed me up as much as they could. But the Regional Commissioner told them to stay out of it! Since this was only a 700 hour appointment under the U authority there was nothing I could do except go to Rep. Father Drinan who got my job back. I was asked to work as the Teleservice rep and I was excellent at the job. I was harassed about my slowness, about my legibility and about not coming up with my own reasonable accommodations. Finally I was prevented from getting lateral transfers or upward mobility. After three years, I left to get my Master's degree in Rehab Counseling to specialize in Job Preparation and Placement for the Physically Disabled.

It was at this point that my disability became progressive and within two years I was forced to turn to the Ride for transportation. I am a very spontaneous individual, especially when it comes to work and my social life. When there is extra time, I would like to go to work, etc. Transportation needs to be made a week ahead of time.

Housing is another story—Are you aware that childen are not able to live in elderly housing, but that is also where handicapped housing is? My son (15 at the time) could not live with me and had to live with relatives. Adolescence is a tough age and after all he is my responsibility.

Massachusetts Rehabilitation Commission has been providing hit-or-miss services to me for 25 years-career testing, job placement, follow-up, appropriate IWRP, misinformaiton on services and equipment. The latest took place one year ago when I was determined eligible, but did not have an IWRP for three months. I was considered unmotivated and not able to make a commitment. I was forced to keep looking for a volunter position to justify the expenditure of funds on computer training. She was not too thrilled with my choice, and again dragged her feet some more until my CAP rep and/or an official at the Administrative Office called and demanded answers. We should have choices between Part A and VR. I also dread the future because the cut backs in funding is going to prevent my getting computer equipment and supportive services. I also lost the chance for a job because MRC does not pay for on-the-job transportation.

Employment appears to be very far off.

Mr. **Owens**. Thank you, Ms. Hoffman.

Ms. Gorski.

STATEMENT OF SANDY GORSKI, PORTSMOUTH, NH

Ms. **Gorski**. Mr. Chairman, recently, a couple of months ago, I went down to Portsmouth city hall and I was not able to register to vote, because I went down there to vote because I became a Portsmouth resident. And I had to sit out on the lift and get registered. They could not let me in. And I thought that was pretty discriminating against me. And I would like them to fix that if possible. It was cold that morning and I had to sit out on the lift to register for voting. And that was not to my satisfaction at all. And I think this needs to be addressed totally because if city hall cannot make it accessible, they are discriminating against us, totally. Thank you.

Mr. Owens. Thank you, Ms. Gorski.
Mr. Eichorn.

STATEMENT OF NEIL EICHORN

Mr. Eichorn. Thank you, sir. You have heard many pieces of testimony today that is encouraging about the kinds of provisions that have been made. The discouraging side of the picture is that so often these assets that have been gained by the handicapped do not filter down to the lowest level at individual use. And that remains a tremendous discouragement. I will cite but one incident from my own experience in the deference of saving time.

I moved into a home that was not accessible because there were not, in New Hampshire, homes readily available that were accessible. I invested $9,256 in making that home an accessible place for me and for my family.

When that was reported to the board of selectmen, somehow that got translated into an increased cost of $11,450 with an exemption granted of $3,500 or a net cost of $7,950. That increased my taxes by about $250 a year.

Then we went through the magical mysteries of townwide reevaluation 1 year ago, in which our property which previously had been valued at a total of $29,323 including the $3,500 exemption was now determined to be worth $173,300, maintaining the same $3,500 exemption.

We went to the Board of Taxations for the State of New Hampshire and found in section 7237[a]:

> Exemptions for improvement to assist the physically handicapped, every owner of residential real estate upon which he resides and to which he has made improvements for the purpose of assisting a physically handicapped person who also resides on said real estate is each year entitled to an exemption from taxation upon such residential real estate determined by deducting the value of such improvements from the assessed value of the residential real estate before determining taxes upon said real estate.

When in the process of reevaluating the entire town, they factored the value six times from $29,343 to $173,300. We asked that they understand that the value should have been proportionate with the exemption. To which we were informed: "It is our prerogative as selectmen to read value any way we so see fit. We see fit to determine that in terms of net cost, not current price." Exception denied.

This is what happens to many incidences. It is a small incidence that represents perhaps a $500 tax bill a year, $45 a month. But for many of us, $45 a month determines whether we make the grade financially or do not. It is not an easy thing today to raise a family of four on $738 a month. That is what I am faced with.

When people cannot comprehend even clear-cut English the frustration level becomes great indeed for those of us trying to survive without being any further of a liability than we have to be. Thank you for hearing this and other concerns of this nature, sir.

Mr. Owens. You do not mean they could not comprehend—it was the law that they should deduct or exempt up to the same amount of the cost of the improvement to accommodate your condition. That was the law?

Mr. Eichorn. That is correct.

Mr. OWENS. So, they just violated the law.

Mr. EICHORN. That is right because they say:

> It is our position to be able to interpret that as we see fit. We see fit to determine it in terms of actual out-of-the-pocket expense and not value. That is what value means to us. And so long as we choose to interpret it that way unilaterally, our decision will be to deny you further exemption.

There is something wrong with law when it permits our officials to interpret it to their own guidelines and not to a standard set to everyone.

Mr. OWENS. Thank you very much, Mr. Eichorn and Ms. Gorski.

The next panel is Sara Bloor, Susan Downie, and Nancy Blackmoor. Are Ms. Bloor and Ms. Blackmoor here?

Ms. BLOOR. Yes.

Mr. OWENS. Please begin, Ms. Bloor.

STATEMENT OF SARA BLOOR

Ms. BLOOR. My name is Sara Bloor, and I have epilepsy. Two years ago, I applied for a job in Newton, MA, in a position as an educator in an urban setting. I had an interview over the telephone and then I was asked to fly down to Boston for a second interview in person. At that time, I spoke to the school director, a personnel committee, and the board director.

At that time, I revealed that I had epilepsy, though I knew at the time I legally did not have to share my health information with them. But I needed them to know that at the time I could not drive. At the time, I was also a resident of Wisconsin and Wisconsin had tougher driving laws than out here.

My seizures were under control and I thought that in the other jobs I had had, revealed my epilepsy and I have worked with children and that it would not be a problem. And it is something I do not mind disclosing.

At the end of the interview, they told me they would let me know about the job. They also told me that there was no problem with my epilepsy. And I had also explained to them how I have dealt with children with working with epilepsy.

Well, I never heard from the director when I was supposed to. So, I finally called them back and they said they needed a little bit longer to decide as another candidate had come into the picture. And I said, fine. And they would let me know on Saturday.

They called me that Saturday at the scheduled time and told me they could not hire me because of my seizures. At that time, I called the director back and asked what it was about my seizures he could not hire me for.

He did not know anything about epilepsy to begin with. He did not know what to do in case someone had a seizure. So, I reexplained what people do when you have seizures or that I was under control and that I was willing to let them talk to my doctors to find out and to make sure that I was seizure free. Which he did and he told me he still had not hired anyone for the position and that I had gotten excellent recommendations from my references and I was the person they wanted to hire.

He took it back to the board. Ten days later they decided again they could not hire me because I had epilepsy and that my seizures would get in the way, even though I had been seizure free.

At that point, I sued against this program for discrimination. I have won the case and it was settled in March, this past March after almost 2 years. It is still hard today to look for employment. I do hold jobs and my seizures are still under control. I do drive. I do what everyone else does. I just take precautions in what I do. But I always still have that fear that someone is still going to reject me against my seizures. Thank you.

[The prepared statement of Sara Bloor follows:]

Name: Sarah Bloor

FACTS

1. I applied for a position with AN After School program in Newton, Massachusetts on June 12, 1986.

2. On Tuesday, June 17th, 1986 I received a call from a woman [illegible] the board (5:30-6:00 p.m. - Eastern Time at Camp Eagle Island in Saranac Inn, New York). and told me she was on the personnel committee for the After School Program and that the director of the program, , would like to talk with me. I asked her to have him call me between 7 and 8 p.m. that night.

3. The Director called me and interviewed me on the phone for approximately 45 minutes. After the interview, The Director asked if I could come to Boston for a second interview.

4. I cleared the time with my camp director. — And I flew to Boston on Thursday June 19th, 1986. My interview was scheduled for 9:30 p.m. at the home of a board member in Newton, MA. Present at the meeting were the woman , the director of the program, , and the President of the Board. who made the initial call

5. It was during the second interview that my seizure disorder was brought up. I know legally I do not have to share health information, but I needed to let them know that I could not drive. I wanted to make sure that wasn't part of the job. We talked about my seizures and I was told they saw no problems with my seizures.

6. At the end of the interview they said they would let me know by Monday, June 23rd or June 24th, and if I had not heard from them by June 25th, I was to call and find out the decision. (As I was leaving on a family gathering in Spain on June 27th and the board did not want to wait until my return to make a decision, they wanted the position filled by a certain date and I wasn't going to be around on that date.)

7. I never heard from , the director, on June 23rd or the 24th; on Wednesday, June 25th I called the board member at her home but got no answer and I continued to call throughout the day, but only got her answering machine. (In the time span between my second interview, my plans changed. I no longer was going to Spain; I was returning to my home state, Wisconsin, to resolve medication problems with Dr. Salinsky in Madison, Wisconsin.) I could never reach the board member, so I left a message on her answering machine that I could be contacted at my Wisconsin number on June 26 in the evening.

Name: Sarah Bloor

8. Thursday night I called back to her house who was not yet home from the board meeting, but I was told she would call me as soon as she got in.

9. At approximately 10 p.m. the Director called me. He told me that the board had not come to a decision yet, and could I wait until Saturday, June 28, 1986 to receive an answer. We set a time that He would call me at 10:00 a.m. my time on Saturday. Before He and I hung up he said that he and the board were very, very interested in hiring and having me as an employee.

10. On Saturday, June 28, 1986 the Director called at the specified time. He told me that he had called Camp on Friday, June 27, 1986 looking for me, although he knew I was in Wisconsin. The director of the program talked to my director at the camp who said I had returned to Wisconsin because of my seizures, but I had plans to return to the Island during the course of the summer. The director of the program asked my director for a work reference, as well as about my seizures and how they were dealt with at the Island. After telling me he had called the camp and talked to my director he said we cannot offer you the position due to your seizures.

11. After that conversation with the director of the program I called my director at the camp on Saturday, June 28th and asked what was said in the phone conversation with the director of the program told me she gave me a good work reference, and she repeated her remarks to the director of the program as to how the camp has dealt with my epilepsy during the past two summers. my camp director told me she was told that I was the top contender for the job at Newton, MA.

12. Later on Saturday, the 28th, I called the director back and asked what was it exactly with my epilepsy that caused me not to be hired. I wanted to know for future employment. He and I talked for about 45 minutes about epilepsy. It is to my knowledge that He knew very little about the subject. During our talk I reexplained my seizure disorder. At the end of our talk he thanked me for calling back and talking about subject. He told me no one had been hired for the position yet. He also said that my camp director gave me a good work reference, and that I was the person they were going to give the job to. After our conversation he said he would talk to the board again and get back to me. This time he asked for two references as well as asked if he could talk to my doctors . . . I gave him the names of my references as well as my doctors.

13. The following are the references and doctors I gave:

- A former assistant camp director of mine in Wisconsin.
- My director at Boston University's Outdoor Education Center (1986).

page 3

Name: Sarah Bloor

Dr. Martin Salinsky - University of Wisconsin Hospital. Madison, WI

Dr. John Margraf - Concord, NH

Dr. Tom Sutula - University of Wisconsin Hospital. Madison, WI

14. The Director [redacted] talked with Dr. Salinsky on Tuesday, July 1, 1986. Dr. Salinsky came to me and told me that a director had called from the After School asking about my epilepsy. Dr. Salinsky replied that there would be no problem with me performing the job as long as I did not need to drive or swim, which are not part of the job.

15. The director never called me back; so I got back in touch with him on Wednesday, July 9, 1986 to find out what decision had been made. I was told again they could not offer me the job because of my seizures.

16. I have talked to my references and my other doctors and have found only one doctor was contacted as well as only one reference.

Mr. **Owens**. Thank you. Ms. Downie.

STATEMENT OF SUSAN DOWNIE, SPRINGFIELD, MA

Ms. **Downie**. Yes; I appreciate the opportunity to present testimony. My name is Susan Downie. I am a resident of Springfield, MA. I am the director of Traumatic Brain Injury Services at a rehabilitation center in Hartford, CT. I am also a licensed speech-language pathologist with a master's degree. Accomplishing this was not an easy task, as most college students will tell you, but in light of the discrimination that I encountered in this process, it was a dehumanizing struggle. At the private college where I began my studies, I was discouraged from being a speech pathologist. My advisor tried to persuade me to be a social worker because the other two women with disabilities attending the college were going to be social workers. I am not sure to this day why she tried to pigeonhole me, but I pursued my initial choice.

Finally, as a bit of unsolicited advice, the head of the speech department, in her attempt to help me with her problem, told me that I could not be a speech pathologist. I left the college and transferred to a university where the needs and the rights of students with disabilities was accommodated through an office which provided transportation and other essential services.

What I did not expect was that in reorganizing the speech department at the university, the department and the speech clinic relocated to a building where the clinic was housed on the second floor without access for its clients or its graduate students.

Once again, I had to fight and a reasonable accommodation was made by making available to me a therapy room in the basement where the audiology equipment was housed. In my 2 years in that graduate program, I never once worked in a clinic setting and was afforded the opportunity to interact with my fellow graduate students or access to testing and other materials and to learn what it was like to operate in a professional and clinical atmosphere.

In my third semester, I had been chosen from among seven other graduate students to do a clinical affiliation at a local rehabilitation hospital, working primarily with people who have aphasia, a communication impairment resulting from stroke, which was my primary area of interest.

Two weeks before the placement which had been arranged several months ago, I was told by my advisor that another affiliation would have to be set up. Through my own efforts, since the university did not want to support me and endanger the clinical affiliation at this hospital, I found out that although I was presented with a smokescreen of excuses, the pathologist of the unit did not want me there because I would have a negative effect on the patients.

I did complete my clinical affiliation there, but not in a positive supportive atmosphere that any other graduate student should have expected.

Finally, in California, during my second job search, I interviewed and was verbally hired at a large State facility for severe and profoundly mentally retarded individuals. During my physical, a routine step in the hiring process, I was asked by the facility's physicians humiliating, unethical, and illegal questions about my disability. For example, if my mother had taken drugs while she was pregnant with me. Again, I was told that I could not work there because I could not protect myself from the residents. I filed and won a discrimination suit.

The Americans With Disabilities Act is critical to insure that my rights as a human being as well as a person with a disability will be guaranteed and that I will not have to settle for second best. Thank you.

Mr. Owens. Thank you.

Ms. Blackmoor.

STATEMENT OF NANCY BLACKMOOR, HARVARD DYSLEXIA SOCIETY, CAMBRIDGE, MA

Ms. Blackmoor. Thank you very much, all of you, for the opportunity to be here today to testify on behalf of learning disabilities. My name is Nancy Blackmoor and I am dyslexic. Currently, I am a graduate student at the Harvard School of Education and also work as assistant to an academic dean at one of the undergraduate houses.

Discrimination to the learning disabled population, I believe, is done in such a way that it is not readily visible by the ones doing the discrimination—or discriminating—or the ones being discriminated against.

As you know, a learning disability is not visible and this is an added handicap to the learning disabled person in that it is not seen. And we have to work all the harder and we have the burden of convincing people around us that even though we look normal, we do have a handicap.

Both as a student and a young adult in the workplace, I have been in situations where I have been discriminated against, whether it was having points taken off for turning a paper in late or having points taken off for spelling mistakes or not being hired for a certain position or being screened out of it because I could not pass a timed typing test when timed typing was only a convenience for the job and when timed typing was a moot point.

I felt that the majority of circumstances where I have been discriminated against were due mostly to people's ignorance or lack of awareness as to what a learning disability is. For this reason, I started a group at Harvard. The group sponsors a monthly lecture series where experts in the field dedicate their time to come and talk about dyslexia and what the current research trends are.

The group has gone for 3 years and it has attracted people from not only the Harvard community, but all over the greater Boston area and it has even had national recognition. It has far exceeded any expectations and continues to excel in attendance.

This has provided me with first-hand experience and knowledge of what can be done to help minimize discrimination through awareness. People have come out of the woodwork. They have learned more about themselves. They have gotten help. They have learned advocacy techniques. They have learned their legal rights. Employers and administrators from around the area have been more sensitized to what a learning disability is.

And the one example I have is so many Americans speak loudly to someone who does not speak English, thinking if they speak louder that the person is going to understand. They are missing the total point. It is the same attitude that you get with learning disabled or that we get from people around us: "Well, if you just listen a little bit more close. If you just try a little bit harder." And I was just told last week, "If you just start your paper a little bit earlier, you know, you can get it in on time." This is a total misunderstanding of what the disability is. And this act would heighten awareness and definitely minimize the discrimination and the barriers that many of us face with learning disabilities.

I have been very fortunate to know and to understand my disability and to have had insightful people in my life that have made a difference. There is no reason why everyone else cannot be afforded those opportunities. Everyone should have these rights afforded to them and to take away the unseen barriers and discrimination to allow the learning disabled population to contribute to society because we think in a very unique way. Thank you.

[The prepared statement of Nancy Y. Blackmoor follows:]

October 24, 1988

Nancy Y. Blackmore
Claverly Hall 4-A
Harvard College
Cambridge, MA 02138

To the Members of the Boston Congressional Hearing of the Americans with Disabilities Act:

My experience with learning disabilities is that I am dyslexic. As a response to my own personal trials with dyslexia, I started the Harvard Dyslexia Awareness Group at Harvard University 3 years ago--a group dedicated to bringing the problems of the dyslexic and learning disabled adult to the attention of the university and the community. The attendance at the Group's activities--both from inside and from outside the university--continues to be overwhelming. This points to one fact: there are many people suffering silently with a learning disability, and that any serious attention given to the problem by community or government organizations has the potential to do enormous good.

Many of those that attend the Harvard Dyslexia Awareness Group's lectures are learning disabled adults in the professional world. They constantly reiterate one, ever-present concern: discrimination against learning disabled adults in the employment world does not have to be explicit. Requiring the taking of a typing test for the pure convenience of screening job applicants for a job that has nothing to do with typing puts many LD adults at an immediate disadvantage--many cannot type, or cannot type at the speed required by the test. In other situations where potential or talent is measured quantitatively, when LD people have serious difficulty performing at a pre-established level (for exa[illegible] standardized, timed exams) level, a common response from em[illegible]s or teachers is that the person must simply "try harder" [illegible] work harder". And this is a perfect example of silent discrimination--it's just like trying to speak English loudly to someone who only speaks, say, Chinese; speaking loudly and slowly will not make that person understand English. To the LD adult, "try harder, work harder" is the equivalent of speaking English loudly in an attempt to make the speaker of Chinese understand.

One very tragic effect of discrimination against the LD adult is that extremely talented, capable people are summarily dismissed from employment or education opportunities because they do not fit a standard pattern. One of the most treacherous aspects of LD discrimination is that even the LD adult may not know he/she is being discriminated against; some employers have discriminatory attitudes and judgments, and may not be aware of it themselves. The Act being considered here today can be a tremendous step in helping solve a very complex and serious problem. People come to my Dyslexia Awareness Group's lectures from all parts of life--they come out of the woodwork. The attendees are people who have been desperately hoping for the attention they need to their problems. The Americans with Disabilities Act is extremely important.

Some suggestions as to what could be done might be in the form of:

. Increasing awareness by providing public awareness/sensitivity to the problem, e.g., blurbs on TV, more mass media publications, pamphlets, books etc.

.Increase awareness of teachers and educators through teacher training. Educators at all levels must be able to recognize when a student is having problems related to a learning disability as opposed to an "attitude" problem. But, many attitude problems stem from learning disability problems. School is where the future generation's minds are being shaped.

.Do not use any one way to measure the abilities and capabilities of the LD population. There need to be alternative ways of measuring the unique abilities of the LD.

.Most LD people are discriminated against in employment situations because they never make it in the door due to standardized tests that measure success or failure on precisely those bases that cause an LD person problems. There need to be alternative hiring procedures. Many LD people I know consciously avoid careers that require passing any kind of tests.

.Many tests are only a convenience for hiring, and the material being tested may not be essential for the performance of the job.

.If tests are used then alternatives should be provided (like ACT, SAT tests, etc.).

.On-the-job alternative ways of training, increased time for training, adjusting, etc. Many people cannot "meet quota", then are fired. Many can't read the training manuals (not because they are illiterate, but because reading is extremely diffcult--this, for example, is the case of the dyslexic. Many dyslexics are quite capable of understanding what is being discussed, it's just that they can't get the information through reading.)

.Increase general employers' awareness as to the special thinking pattern of the learning disabled and see them as the learning abled. Hire them for their unique capabilities, not to just fill legal quota.

.Increase availability of computers, training programs, help agencies, etc., for LD people.

BEST COPY AVAILABLE

.Increase funding to support research in the area of the benefits of the LD brain patterns and the advantages of this way of thinking. Research the brain.

1171

Mr. OWENS. Thank you. Again, all three of you are examples of the tremendous amount of talent and resources that are available in people with disabilities.

I have an unfortunate announcement to make. We thought we had the room for a little more time than we do have it for, and I am going to have to take 1 more minute away from the remaining panelists, the remaining people testifying. If you could please go to your testimony, remembering that we will take written testimony if you have it and you can always submit additional written testimony to us within the next 10 days. I apologize for this, but this is as a result of our attempt to try to get as many people in as possible.

Would you like to begin, Mr. Chao?

STATEMENT OF MATTHEW CHAO, LEGISLATIVE COMMITTEE CHAIR, BAY STATE COUNCIL FOR THE BLIND, NEWTON, MA

Mr. CHAO. Thank you, Mr. Chairman. Good afternoon. My name is Matthew Chao. I am here to advocate for expeditious passage of the Americans With Disabilities Act on behalf of myself and the Bay State Council for the Blind, which is an affiliate of the American Council for the Blind.

I am also here to describe briefly some personal experiences in terms of what I have dealt with as far as discrimination is concerned. The four areas on which I will touch briefly are: Public accommodations, housing, employment, and communications, both of which can be related.

Basically, in terms of public accommodations, we all assume we have the right to access to facilities in which the public is invited. I am a guide-dog user. And there have been repeated attempts to deny me access to such areas as restaurants and hotels. For more details, please refer to the report which you should be getting shortly.

But this is a major problem for those of us who are blind and visually impaired and one which I hope under the ADA will be less of a problem.

The next area on which I will deal with is that of housing. Many blind and visually impaired are denied housing because landlords are concerned in terms of liability or that the person will burn the house down while cooking because of their visual impairment. This is something that cannot and should not be tolerated. And I feel that the ADA, again, will put people on notice that such standards of behavior will not be tolerated in the future.

Finally, in terms of employment, one of the things I would like to touch upon is employment and communications are the final areas I would like to cover. In this area, there is a lot of overt or what I would call soft discrimination. This is identified more in my report.

Basically, the problems are numerous. It is difficult to have access to testing materials as well as the very job leads which you need in order to become employed. Personally, I am in the process of seeking employment and have had difficulty in having access to information/job leads.

Another aspect of employment is that of communications. The ability to not only get information regarding job leads but the dignity and the privacy which our sighted counterparts are afforded when having to deal with disciplinary matters on the job.

Imagine, if you will, being put on notice that your performance is below par and having a report read to you by your boss and your supervisor. Imagine the feelings of intimidation, fear, and disbelief as a disciplinary report is read to you. Contrast that with the ability of sighted counterparts to take that report, go to their private office and read that report with the ability to rebut it at a later date. Granted, this happened 8 years ago, but this is something that should no longer be tolerated.

I realize my time is up, but I thank you for the opportunity to speak and one thing I would like to say before closing is that we are at a point now where the technology should allow us to work, but yet this technology outruns the very attitudes of employers in terms of our ability to get hired. Thank you very much.

[The prepared statement of Matthew Chao follows:]

REPORT ON PERSONAL ASPECTS OF DISCRIMINATION AND DISABILITY

Testimony Before the House Select Education Subcommittee'
by Matthew Chao
48 Hollis Street, Apt. 2
Newton, Ma 02158
October 24, 1988

Members of the House Select Education Subcommittee:

As Legislative Chairman of the Bay State Council for the Blind, I am writing this report to both present my personal observations concerning discrimination on the basis of disability, and to strongly encourage development and passage of the Americans with Disabilities Act(H.R. 4498 and S. 2345). While this report may be somewhat lacking in terms of statistical information to support my testimony, the primary purpose for my writing this report is to briefly examine discrimination on a level which is often overlooked by the majority of people in this country--a personal one. Specifically, I will discuss discrimination as it pertains to those of us who are blind and visually impaired. Emphasis will be on four major areas: public accommodation, housing, employment, and access to information (communications.)

INTRODUCTION. Before discussing these four areas in detail, I feel some background information is necessary. There are approximately 1.7 million persons in the U.S. who have a serious visual impairment. Of these, 491,000 are totally blind, unable to see at all. It is estimated that there are 15,000 dog guide users. These statistics, important as they may be, do not look at the intangibles, the human aspects of discrimination based on disability.

PUBLIC ACCOMMODATION. As a person who uses a dog guide, I have encountered discrimination in the area of public accommodation. This category includes everything from restaurants to hotels and amusement parks. Under the various state and Federal laws, those of us using dog guides are afforded access to accommodations to which the general public is invited. However, in practice, attempts are repeatedly made to exclude us from access to these facilities. This initial denial to access is due partly to ignorance on the part of the operator, and partly as a flagrant disregard for the law. Two examples of my personal experiences concerning discrimination come to mind in this area.

In the summer of 1986, a friend and I went to eat at a small Chinese restaurant in Norwood, Mass., a community 15 miles southwest of Boston. My dog guide, Josie accompanied us. As we stepped in the door, the owner asked, "Could you please leave your dog outside? Health reasons." I responded by saying, "Excuse me, under state law, I am allowed access to restaurants with my dog." The owner then replied, "Nothing personal, it's for health reasons. Does your dog have to be with you at all times?" "Yes," I replied, "and it is the law! Would you like to see my identification and the law itself, or should I file a complaint with the Norwood Police Department that my rights were violated?" Only then did the owner allow me to enter the restaurant. While I was successful in gaining access, a person with less resolve might have given up and left. In this case, the owner seemed to be aware of the law granting access by those with dog guides to restaurants, but thought he could circumvent it by hoping that I would easily comply with his request. That's only part of the story, however. Imagine the embarrassment and humiliation to which my friend and I (and maybe Josie) were subjected! Imagine being at the door of that restaurant knowing that everyone's looking at you! An incident such as this evokes feelings of being a second-class citizen. I certainly can understand how racial minorities felt before the Civil Rights Act of 1964.

A more current incident occurred in the summer of this year, this time in Boston. A friend and I walked into a delicatessen to buy a sandwich. As we entered the place, the owner of the establishment said to my friend, "Hey, you can't bring that dog in here." My friend alerted me to the problem, at which point I told the owner that my dog guide had access to eating establishments under state and Federal law. One of the workers at this place also brought these laws to his attention.

Disturbing as the above-mentioned incidents are, the same problems have befallen friends of mine, one of whom was denied access to a restaurant at which he was to have a business lunch with his associates. The case is in the process of being litigated. In summary, public accommodations should be truly public. The Americans with Disabilities Act would serve to put people on notice that discrimination in terms of access to public accommodation will not be tolerated. Additionally, this bill would serve to codify state and Federal laws concerning this issue. It is important that those who are least able to speak for themselves be protected and treated with equality.

HOUSING. For those who are blind or visually impaired, obtaining adequate housing can at times be difficult. According to Roberta Douglas at the American Council for the Blind headquarters in Washington, D.C. there have been a number of complaints concerning housing discrimination based on blindness or visual impairment. While there are no statistics to indicate the extent of the problem, there are cases in which people have been denied housing. Reasons for this denial range from that of concerns on the part of landlords concerning liability and the fear that the prospective tenant will somehow cause damage to the property (the most common concern here is that he or she will burn down the house while cooking) to that of refusing housing because the person has a dog guide, and the animal will damage the premises. Although I have not had any difficulty in obtaining housing, I raise this issue in the hope that problems such as the ones presented here will be adequately covered in the proposed legislation of ADA. It is vital that we as persons with disabilities be accorded equal protection as those persons who come under the aegis of the Civil Rights Act of 1964 and its amendments.

EMPLOYMENT. One of the most difficult areas in which to make inroads with respect to lowering the barriers of discrimination on the basis of disability is that of employment. For blind and visually impaired, it is estimated that approximately 70% of working age blind are unemployed. Of those who are working, 70% of them are underemployed.

In terms of securing employment (a task which I am currently undertaking), we encounter a lot of what I would call "soft" or overt discrimination. Even if we get to the interview and are able to explain how we will be able to do the job despite our limitations, there is an underlying feeling or "vibe" on our part that our explanations are unbelievable. Occasionally, there is the employer who directly or indirectly will say that it's too expensive to hire a blind or visually impaired person to do the job. In some cases, this concern is valid, but in many cases there are several ways to make up for the lack of vision. In the realm of today's technology, we are able to perform jobs which would have been difficult or impossible three years ago. For example, only three years ago, it would have been extremely difficult for me to have drawn up this paper with only a few days' notice. I would have had to take notes on my topic, write the rough draft in Braille, then type out the report. Such an undertaking would have involved several days' work, and many, many, sheets of wasted paper if I wanted the print copies to be error-free. Today, however, I can work on a report such as this one and be finished in a day or two. In other words, the technology which allows us to be productive has outrun the attitudes of the prospective employer. By banning discrimination on the basis of disability, perhaps the attitudes and technology can be brought more into line.

If our job-hunting strategies are successful, there are discriminatory aspects which affect our ability to strive for career advancement. As one who has worked for the Commonwealth of Massachusetts for 8 years, I can give you an instance in which I was put at a disadvantage with respect to career advancement. As a Vocational Rehabilitation Counselor for the Massachusetts Rehabilitation Commission, I availed myself of as many opportunities as possible for advancement within the agency. As part of the process of advancing in state service, we were required to take state Civil Service exams. When it came time for me to take these exams, I inquired as to whether my test could be administered in Braille, as this method is the best way by which I can process information. I was informed by the Department of Personnel Administration (which was administering the exam) that this option was ruled out because it "cost too much." Instead, I was provided with a reader to read me a 120-question, multiple choice exam. The option of a reader would have been satisfactory if not for the fact that the reader was at the exam in body, but not in mind. He proceeded to read the exam, but confused the answers from one question with those of the previous question, making a tough situation even worse. It was bad enough that I was taking a standardized test under nonstandard conditions, which was made even worse by the lack of adequate support services. Imagine yourself being on Question 100, and not being sure whether your reader's giving you the appropriate choices for that question! Further, imagine that there are 4 job slots for 800 applicants. Combine these two factors and you can understand how career advancement can be hampered if not stymied.

In summary, discrimination pervades nearly all aspects of employment, from job-seeking to career advancement. While I do not expect ADA to eliminate this problem, I hope that this bill will put employers on notice that discrimination on the basis of disability is as intolerable as discrimination based on race, color, or national origin. Safeguards must be put in place which will give us as many opportunities as those afforded our able-bodied counterparts. Reasonable accommodations must be provided both in the spirit and not just the letter of the law. We must have access to both professional information and test materials in the medium most appropriate to our learning style and disability needs.

COMMUNICATIONS. Communications to me is the ability to have access to, exchange, and analyze information. In our ever-changing society, the ability to have access to current information is necessary if we are to make well-informed decisions. For those of us who are blind or visually impaired, finding the right information at the right time can be difficult if not impossible, even in the era of computers. The technology to access this information is here, but the commitment to make this information accessible is not. A few examples here are appropriate:

This is an election year. As a responsible voter, I feel that it is important to fully understand the issues on both a state and Federal level before casting my vote. However, if you are blind or visually impaired, much of the information you need is inaccessible because most of it is in print. And if that's not bad enough, most government agencies don't have information available in accessible formats. When faced with this problem, you have a few choices, many of them undesirable. First, you can talk to others about the ballot questions, but there is no guarantee you will get an unbiased view. Next, you can gain some of your information concerning the issues through the electronic media (radio, TV, etc.) However, most of this information comes to you in a capsule summary. Finally, you can get a friend or significant other to read the paper to you and instruct him or her to look for certain information. This solution is fine, if you have people who are willing to take the time to read to you.

Another example of information inaccessibility is in the area of employment. In order for me to look up job information, I must rely on sighted help to accomplish this task. This method is both inefficient and labor-intensive. If you're poor and unemployed, your only hope is to rely on friends or volunteers from a variety of agencies. If they can't show up at a predetermined time, you are stuck without information on job leads, and you could possibly miss out on a good job opportunity as a result. It is frustrating at best to rely on someone only to have them let you down at a critical time. Making job opportunities accessible could give us more flexibility and a greater degree of independence. The technology is here; all we need is the commitment to provide the information. It is my hope that, as part of the ADA, steps would be taken on a national level to make key information available in media other than print.

CONCLUSIONS. In closing, I strongly encourage the passage and implementation of the Americans with Disabilities Act. While such a bill will not eliminate the many instances of discrimination which we have encountered through the years, it will be a step towards greater and more equal participation of the blind and visually impaired and those with other disabilities in our society. Such a bill will enable our country to better utilize its most under-utilized resource--our disabled population!

Mr. **Owens**. Thank you very much, Mr. Chao.

Linda Mills.

STATEMENT OF LINDA MILLS, FARMINGTON, ME

Ms. **Mills**. Thank you. I would like to describe to you what I have had to go through to try to obtain a driver's license through vocational rehabilitation in the State of Maine. They refused to modify my van for me to drive until I actually had a driving license. The following explains what the process was that rehab forced me to go through in order to try to get that license.

Six years ago, I requested voc rehab to help me in obtaining a driver's license. I had gone through an evaluation and it had been recommended that with the proper modifications to a van, I would be able to successfully drive. When rehab received this evaluation, they started picking it apart and required me to overcome a number of issues that they were uncomfortable with. I strongly sensed that rehab thought I was not capable of driving and obtaining a driver's license.

First, I was required to take an eye exam even though my evaluation stated I fall within the requirements. Next, VR requested I get a permit through a local driver's training. That was not possible because their vehicles were not modified for the severely disabled and they would not grant me a permit from just taking the classroom aspect of the class. I had to then convince rehab to allow me to get a permit by taking a written exam to get it, as a majority of individuals do. They finally agreed.

I was then referred to a service provider who provides driver's training for the severely disabled. After inspecting their vehicles, it was felt with a few simple adjustments, I would be able to use it for road training. VR then did not want me to drive from my wheelchair. They wanted me to transfer from my chair to the chair in the modified van. I then consulted my doctor on this. He agreed with me that this was not safe because of my disability. He strongly recommended I do not transfer to drive, especially since I cannot transfer myself.

After reading my doctor's statement, rehab then questioned again my ability to drive and had my case reviewed by the rehab medical advisor. Before proceeding with the road training, the medical advisor insisted on getting case histories from other rehab agencies in other states to see if they had a success rate with any persons with my particular disability to drive. They received several replies from over eight States stating that they had had a success rate in helping persons with osteogenesis imperfecta obtain their licenses. Some of these replies were from individuals themselves with OI who were driving. VR did not receive one negative response.

The VR then decided they should have me sign an indemnifact to protect them and the State of Maine should I get hurt or hurt someone else during my training. At this point, I called in an advocacy agency to investigate this to see if signing such a statement was a routine process or one which rehab was only requesting of me.

The advocates investigated and reported that only one other individual had ever been required to sign such a statement. I refused to sign feeling I was being discriminated against. The advocate advocated on my behalf and forced VR to drop the indemnifact situation and proceed with my on-the-road training. The issue of me driving from my wheelchair was still pending. After several trips to the provider of the job training—the VR finally agreed to let me drive from my chair. This is finally happening after 2 years from the time I started this process. I then spent over 30 hours of successful——

Mr. OWENS. Ms. Mills, we have run out of time. Thank you very much.

[The prepared statement of Linda J. Mills follows:]

VOCATIONAL REHAB VS. LINDA J. MILLS (DRIVER'S LICENSE)

I am about to describe to you what I have had to go through to try to obtain a driver's license through Vocational Rehabilitation in the State of Maine. They refused to modify my van for me to drive until I actually had a driver's license. The following explains what the process was that VR forced me to go through in order to try to get that license.

Six years ago I requested VR to help me in obtaining a driver's license. I had gone through an OT evaluation and it had recommend that with the proper modifications to a van I would be able to successfully drive. When VR received this evaluation, they started picking it apart and required me to overcome a number of issues that they were uncomfortable with. I strongly sensed that VR felt I was not capable of driving and obtaining a driver's license.

First, I was required to take an eye exam even though my OT eval stated I fell within the range. Next VR requested I get a permit through a local driver's training. It was not possible because their vehicles were not modified for the severly disabled and they would not grant me a permit from just taking the classroom aspect of the class. I had to then convince VR to allow me to get a permit by taking a written exam to get my permit as a majority of individuals do. They finally agreed. I was then referred to a service provider who provides driver's training for the severly disabled. After inspecting their vehicle, it was felt with a few simple adjustments I would be able to use it for road training. VR then did not want me to drive from my chair. They wanted me to transfer from my chair to the chair in the modified van. I then consulted my doctor on this. He agreed with me that this was not safe because of my disability and strongly recommended I do not transfer to drive especially since I cannot transfer myself. After reading my doctor's statement, VR then questioned again my ability to drive and had my case reviewed by the VR Medical Advisor. Before proceeding with the road training, the medical advisor insisted on getting case histories from other Rehab Agencies in other states to see if they had a success rate in training persons with my particular disability to drive. They received several replies from over eight states stating that they had had a success rate in helping persons with O.I. (osteogenesis imperfecta) obtain their license. Some of these replies were from individuals themselves with O.I. who were driving. VR did not receive one negative response.

VR then decided they should have me sign an indemnifact to protect them and the State of Maine should I get hurt or hurt someone else during my training. At this point I called in an advocacy agency to investigate this to see if signing such a statement was a routine process or one which VR was only requesting of me. The Advocates investigated and revealed that only one other individual had been required to sign such a statement. I refused to sign feeling I was being discriminated. After further advocating on my behalf, the Advocates forced VR to drop the indemnifact situation and proceed with my on-the-road training. The issue of me driving from my chair was still pending. After several trips to the provider of the driver's training and pointing out the danger of not having me drive from my chair, VR finally agreed to let me drive from my chair. This was finally happening after two years from the time I started this process.

I then spent over fifty hours of successful, and I repeat successful, on-the-road driving in a major city in Maine. When my instructor felt I was ready to for my license, VR was then contacted by the service provider. The service provider told VR I was ready to take my road test to obtain my license, however, I could not use the same vehicle I had received my training on. VR was furious and stated that paying them for my on-the-road training was so that I could use that vehicle to take my road test. The service provider refused to let me use their vehicle and VR refuses to modify my van for me to drive until I have a driver's license in my hand.

There is no vehicle in New England that is designed for me to drive to take a road test on. At this time Pennsylvania was the closest state that had a driver's training course to get me my license and VR refused to send me because they claimed we already had a similar one in Maine. This was four years ago I received my training. I still do not have my license, VR still refuses to modify my vehicle, and the service provider still refuses to let me use their vehicle to take my road test!!! This past summer I went to California to a national conference for folks with O.I. I talked to several people who have O.I. to the same degree I have and who are also driving their own vehicle. All of them received the license through the help of VR with no problems. They were surprised to hear what VR had put me through and I still have no license.

Over the past six years I have put in alot of physcial and emotional energy in successfully overcoming every stumbling block VR has set before me. The State of Maine is spending thousands of dollars a year to provide me with a driver in order for me to be "gainfully employed". I strongly feel that VR has discrimminated against me personally every step of the way since this process began and it has to be stopped.

Mr. Owens. Ms. Cindy Miller.

STATEMENT OF CINDY MILLER

Ms. **Miller**. This is a day in my diary of discrimination. My day started at 5:30 a.m. with my roommate getting me out of bed. Because of the personal care assistant rates of pay, it is impossible to attract qualified personal care attendants to work as overnight attendants and to require them to come early enough to get me out of bed for work. Consequently, I have to offer free rent as an incentive. It is not my choice to live with a roommate, but it is my survival within a health care system that does not provide decent working wages for personal care attendants. It does not provide decent working wages, because it does not value the people for whom the work is being done: Americans with disabilities.

I live in constant fear that the economics argument subsidizing personal care assistants programs will be lost and I will be institutionalized. Because independent living is not a right to freedom for Americans with disabilities, this is a realistic fear. But it will not be my choice.

As a rehabilitation counselor, I have seen these institutions. The smell of human waste and detergent has stuck in my throat. I have looked into the vegetative eyes of its inmates and the sterile environments. I have heard of the premature death rates and prevalence of pneumonia, literally allowing them to rot in their beds.

I have witnessed their jailers rational taking away their wheelchairs as a form of punishment as if that is different than punishing prisoners by breaking their legs. I have witnessed their jailers taking away their food as a form of punishment, as if that is different than starvation. I have witnessed their jailers talk about them in their third person and leave them naked to the public as if that does not strip them of their human dignity.

I left my house at 7:30 a.m. to be at work at 9:00. It is a 20-minute bus ride, but I have to leave an hour and a half early because the bus lifts are not maintained. All the buses do not have lifts. But sometimes, like this morning, the bus with the lift just does not stop for me. The transportation authorities in America do not provide accessible transit because it does not value people with disabilities or the contributions that are gained by Americans with disabilities being able to get to work, vote, medical appointments, or cultural events. It does not matter the concept of equal accessible public transit in a free society. It again concerns itself only with an economic argument. I pay taxes. Are blacks, or Jews or Hispanics or American Indians, or Asians or women or children or criminals on furloughs, or aliens or tax evaders or anyone else who touches American soil besides Americans with disabilities limited to a specific kind of transportation or no transportation. Was it not local auction that allowed slavery in States?

I live in constant fear that what accessible transportation does exist will disappear. May I just summarize?

Mr. Owens. Yes.

Ms. **Miller**. I made a list of things to do based on today. I thought of doing all of these things, but the list seems to grow every day. Instead, I got angry and depressed. I got angry and depressed because after I work all day, fight the barriers to get to work, fight the barriers to do things all Americans do, like shop—I have meetings and phone calls and letters and other things I have to do to fight for my equal rights as an American with disability. I am tired of being tired, fighting angry, and depressed every day fighting for my rights. And now I am writing a stupid diary until 2 in the morning to prove that discrimination exists, to my Congress. Why does Congress think so many Americans are fighting this battle if discrimination does not exist? Does Congress think we enjoy or prefer to fight for equal rights before we eat or sleep. I would like Congress to know that I would like to watch the Cosby show with slippers on my feet and time on my hands like other Americans. Please enact the ADA quickly. I am missing a lot of episodes and I am missing a lot of life. I do not want to be Rose Parks, I just want to be Cindy Miller. And I have some petitions that I would like to submit.

MILLER, p. 2

of Americans with disabilities. It does not value the concept of Independent Living as a right in a free society. It concerns itself only with whether the costs of subsidizing Personal Care Assistance is less than the costs of imprisoning me in an institution.

As I write this, I am frightened. I live in constant fear that the economic arguement will be lost and I will be institutionalized. Because independent living is not a right to freedom for Americans with disabilities, this is a realistic fear. But, it will not be my choice. As a rehabilitation counselor, I have seen these institutions. The smell of human waste and detergent has stuck in my throat. I have looked into the vegatative eyes of its inmates in their sterile environments. I have heard of the premature death rates and prevalence of pneumonia and necrotic decubitis, literally allowing them to rot in their beds, these living dead, our imprisoned Americans with disabilities. I have witnessed their jailors rationalize taking away their wheelchairs as a form of "punishment" -- as if that is different than punishing prisoners by breaking their legs. I have witnessed their jailors taking away their food

MILLER, p. 3

as a form of "punishment" -- as if that is different than starvation. I have witnessed their jailors talk about them in the third person and leave them naked to the public -- as if this doesn't strip them of their human dignity. We have laws to protect animals from these conditions, ~~but~~ while Americans with disabilities continue to suffer.

As I write this, I am tired. I left my house at 7:30 am to be at work at 9:00 am. It is a 20 minute bus ride, but I have to leave an hour and a half early because the bus lifts are not maintained, all the buses don't have lifts (sometimes I wait for seven buses before a bus with a lift comes), or sometimes, like this morning, the bus with the lift doesn't stop for me. The transportation authorities in America does not provide accessible transit because it doesn't value people with disabilities -- it doesn't value me. The DOT doesn't value the contributions to society that are gained by Americans with disabilities being able to get to work, vote, medical appointments or cultural events. It doesn't value the concept of equal, accessible public transit in a free society. It concerns itself only with providing transportation

MILLER, p. 4

within a 3% cap of an authorities operating budget and gives each authority "local option" to decide what kind of transportation is provided. I pay taxes. Are blacks, or jews, or hispanics, or American Indians, or Asians, or women, or children, or criminals on furloughs, or aliens, or tax evaders, or anyone else who touches American soil, besides Americans with disabilities, limited to 3% or a specific kind of transportation? Wasn't it "local option" that allowed slavery in states?

As I write this, I am frightened. I live in constant fear that what accessible public transportation does exist will disappear. Because accessible public transportation is not a right of freedom for Americans with disabilities, this is a realistic fear. Infact, the accessible bus route that I use to get to work is being replaced by inaccessible trolleys. This means that I will have to use the DOT's "local option"--paratransit. Paratransit is segregated and unequal. It's a Nigger bus. On the Nigger bus, I am denied trips, I have to request trips 9 days in advance, I am consistently late for work, I have bee

ADA DIARY
MILLER, p. 5

sexually harrassed by drivers, I have had drivers who were drunk and on drugs, I have had drivers who drove dangerously, I have seen equipment literally fall off vehicles, I have seen vehicles literally burn to the ground, and I have permanently damaged my neck, shoulder and arm in multiple incidents. I live in fear to leave my street because accessible, equal public transportation is an economic, local decision and not a right of Americans with disabilities.

As I write this, I am tired. Work today was busy and, like many days, I used my lunch and breaks advocating for the rights of Americans with disabilities. Yesterday, I went to the bank and withdrew money for groceries, but I had to go again today because someone stole the money. Crimes against Americans with disabilities is an ignored epidemic in America. The Police do not provide crime prevention, apprehension or prosecution because they see it as fate that Americans with disabilities will be victims.

As I write this, I am frightened. Yesterday's theft was not unusual for me. As an American with a disability, I have experienced many crimes.

BEST COPY AVAILABLE

ADA, DIARY
MILLER, p. 6

As a child, I was sexually abused by supposed care providers. People have attempted to kidnap me. Someone tried to run me down with a motorcycle. I have been robbed countless times. I have given up on police protection because of their attitude that Americans with disabilities are natural victims. Never was this so graphic as when an officer pointed his gun at my head, cocked it, and (unknowingly to me) pulled the trigger on an empty barrel because he thought it would be "funny" since I have quadraparesis and couldn't flee or fight. I live in fear of crime because equal protection under the law is not seen as a right of Americans with disabilities because Americans with disabilities are seen as natural victims rather than equal citizens.

As I write this, I am tired. After work I went grocery shopping. The grocers in my neighborhood have erected barriers to prevent people from stealing their shopping carts. The barriers prevent entrance and egress by Americans with disabilities too, but they don't care because they value their shopping carts more than consumers with disabilities.

BEST COPY AVAILABLE

ADA DIARY
MILLER, p. 7

The grocery store has a gate at the barrier with an access symbol, but they keep the gate pad locked. I have to wait for a volunteer to go in the store, find the manager, and for the manager to find the key to open it. There is a bank and pharmacy behind the barrier too and, when the grocery store is closed, Americans with disabilities have no access, but the bank and pharmacy do not take action to change this. After I enter the store, they pad lock the access gate again; and, in the event of a fire, I would have to hope that the manager arrived with the key to escape. Fire codes prevent the locking of fire exits, but the fire department has done nothing to prevent this. I presume that the fire department allows this violation because the only people who would die as a result of it would be Americans with disabilities.

As I write this, I am tired. It is now 2:00 am and I have been up since 5:30 am. This has been a typical day and, more than my physical exhaustion, I am tired of being discriminated against as an American with a disability.

ADA DIARY
MILLER, p. 8

Saturday 9/10/88

I got up this morning at 9:30 am and like most working Americans rushed out to do my Saturday morning errands. When I got to the cleaners, someone had parked in the HP parking space. There was a garage attached to the lot, but it could not accomodate a van with a raised roof. I left my van parked perpendicular to the illegally parked car. I suppose that I could have called the police, but when I have in the past, the police have taken a long time to get there and, besides, they usually don't ticket HP violators, they just excusingly ask them to move. Lack of police enforcement of HP violators since many a police cruiser has blocked my path to curb cuts.

Once, police cruisers blocked all of the curb cuts in front of a police station to the entire block. I had someone bounce me onto the curb and went to the station to ask them to move their cruisers. The police station was inaccessible and I wondered what I would do if I was alone and needed the police. Someone opened the door and I shouted up the stairs at them.

BEST COPY AVAILABLE

ADA DIARY
MILLER, p. 9

Their expressions and tones demonstrated their annoyance when they came down and I asked them to move the cruisers blocking the curb cuts. They moved one of the cruisers and promised to do the same with the others, but, as I rode down the sidewalk, I looked back to see them pulling the cruiser in front of the curb cut again.

After I dropped off the cleaning, I went back to my van. The illegally parked car owner was angry that he had to wait for me to move my van. He said he was only there 5 minutes as if that justified it.

Then I went to pick up a present. The stores were inaccessible so I had to send someone in to bring out items for me to choose from.

After shopping, I went to the Registry but it was closed. So, I went to a pay phone to call another branch to see if it was open. But, the pay phone was inaccessible.

Then, I went to the hospital to visit my sister. I needed to use the bathroom, but it was inaccessible.

I got home late this evening and did the things most Americans do like cooking,

ADA DIARY
MILLER, p. 10

cleaning, feeding the cat. Then I made a list of things to do based on yesterday and today:

1. Improve health care systems belief in independent living as a right of Americans with disabilities.
2. Improve laws to ~~provide~~ protect civil rights ~~to~~ of institutionalized Americans with disabilities.
3. Improve laws to provide accessible, equal transportation for Americans with disabilities
4. Improve equal protection under the law by police for Americans with disabilities.
5. Improve access to public stores for Americans with disabilities
6. Improve fire department enforcement of codes to protect Americans with disabilities
7. Improve police enforcement of HP parking laws for people with disabilities
8. Improve accessibility of public communication systems for Americans with disabilities.
9. Improve accessibility to public rest rooms for Americans with disabilities.

I thought of doing all these things, but the list seems to grow every day. Instead, I got

ADA DIARY
MILLER, p. 11

angry and depressed... I got angry and depressed because after I work all day; fight the barriers to get to work; fight the barriers to do the things all Americans do like shop; I have meetings and phone calls and letters and other things I have to do to fight for my equal rights as an American with a disability. I'm tired of being tired, frightened, angry and depressed every day fighting for my rights. And now, I'm writing a stupid diary until 2:00 in the morning to prove that discrimination exists to my Congress! Why does Congress think so many Americans are fighting this battle if discrimination doesn't exist? Does Congress think we enjoy or prefer to fight for equal rights before we eat or sleep sometimes? Diary, I would like Congress to know that I would like to watch The Cosby Show, with slippers on my feet, and time on my hands, like other Americans. Please enact the ADA quickly... I'm missing alot of episodes... I'm missing alot of life. I don't want to be Rosa Parks... I just want to be Cyndy Miller.

Mr. **Owens**. Thank you very much. You may submit the petitions along with your written testimony that we did not get to. The petitions will be kept on file. We would be happy to have them. Thank you very much for testifying.

Our next panel consists of Kathleen Mulligan, Lelia Batten, and Barbara Johnson.

Would you like to begin, Ms. Batten?

STATEMENT OF LELIA BATTEN, PORTLAND COALITION FOR PSYCHIATRICALLY LABELED, PORTLAND, ME

Ms. **Batten**. Yes. My name is Lelia Batten and I have been diagnosed as having a mental illness. It is not important that I share with you my specific psychiatric label as it is time that we stopped looking at people as labels. It is important that we start seeing people who are gifted and unique in spite of their pain.

And I am going to start midway in my testimony due to lack of time. State hospitals in the State of Maine are notorious for using medication for controlling the behavior of clients and not for treatment alone. Seclusion rooms and restraints are used to punish clients. In spite of the client's rights passed in the State of Maine, people are treated deplorably. Rights are treated as privileges rather than as rights. If you cooperate, you are allowed your rights. And if you do not, you are forced and overmedicated.

The side effects of medications are often seen as symptoms of the illness and treated as such. This summer, four deaths occurred in one of our State hospitals. At least one person experiencing medical problems from the heat was treated as if it was a symptom of his psychiatric illness and put in restraints where that client died. Lack of medical care is common among the mentally ill. If you can afford medical treatment and seek it out, then, once they find out you have a psychiatric history, your symptoms are seen as a part of your psychiatric problems. If you go to the emergency room in my city, then they pull your psychiatric chart before they will even listen to your symptoms.

Just the other day, a gentleman walked into my office and said he had just gone to apply for a job for which he was not hired because a question on the application asked him if he had ever had a psychiatric hospitalization. Those kinds of questions are still being asked on job applications today.

Vocational rehabilitation, often the solution for receiving job training and ultimately a job for other disabilities is not even recommended to the mentally ill.

If consumers of mental health services contact vocational rehabilitation on their own, they are put through the same testing and training as people with mental retardation. One gentleman I know, before his illness, had received a Ph.D. in chemistry, was sent to Goodwill to sort socks as a part of his training and testing.

It is my belief that the mentally ill would like to work also, but are discouraged because they have no way of obtaining the quality of jobs and careers as other citizens.

Discrimination was experienced by our organization, the Portland Coalition for the Psychiatrically Labeled when we tried to find wheelchair accessible office space. Several landlords ready to sign a lease with us refused to do upon finding out what disability we represented.

Being mentally ill is a poverty issue as well as a disability. Finding affordable housing is a real problem. Often, affordable housing means cockroach infested, dark small rooms or apartments. Subsidized housing is often a warehousing of the mentally ill and elderly into certain buildings in the city. Thank you.

[The prepared statement of Lelia Batten follows.]

PORTLAND
COALITION
For the Psychiatrically Labeled

My name is Lelia Batten. I have been diagnosed as having a mental illness. It is not important that I share with you my specific psychiatric label as it is time that we stop look at people as labels. It is important that we start seeing people who are gifted and unique in spite of their pain.

Mental illness is an illusive disability. Since it is invisible it is often overlooked and ignored. Psychiatrists themselves can only therorize as to the causes and cures of mental illness. Heredity, enviroment , and chemical causes are some of the suggested causes and the cure depends on which theory the doctor you are presently seeing believes is the cause.

It is at this point discrimination starts. Seldom is the client listened to. After all they are ill and can not best decide what is best for them or even set appropriate goals for themselves or so psychiatrists tell us. Medication, often the opiate of the psychiatrist's conscience, is usedto manage client's behavior rather than to provide relief from the client's suffering. Clients are over-medicated and released into the community without sufficient monitoring on extremely high dosages of psychotropic meds and are expected to lead active and fufilling lives.

Patients who are requesting psychtherapy to supplement the chemotherapy are prevented from receiving therapy by the attitudes of service providers and economic factors. Service providers are more often than not led to believe that medication is the only neccessary treatment and clients are not given the chance to benefit from other treatments. If a patient is given the option of receiving psychotherapy than they have to find a therapist who is medicaid reimbursable. Most psychiatric clients do not have insurance because of their poverty levels. Most private therapists do not take Medicaid aand most clinics do not promote any treatment besides medication. State hospitals in the state of Maine are notorious for using medication for controlling behavior and not for treatment alone. Seclusion rooms and restraints are used to punish clients. In spite of the client's rights passed in the state of Maine people are treated deplorably. Rights are treated as privileges rather than rights. If you cooperate you are allowed your rights and if you don't you are forced and over medicated.

Side affects of medications are often seen as symptoms of the illness and treated as such. This summer four deaths occured in one of our state hospitals. At least one person experiencing medical problems from the heat was treated as if a symptom of the illness and put in restraints where this client died . Lack of medical care is common among the mentally ill. If you can afford medical treatment and seek it out then once they find out you have a psychiatric history your symptoms are seen as a part of your psychiatric problems. If you go to the emergency room in my city then they pull your psychiatric chart before they listen to your symptoms.

Just the other day a gentleman walked into my office and said he had just gone to apply for a job for which he was not hired because a question on the application asked him if he had ever had a psychiatric hopitalization.

Vocational Rehabilitation often a the solution for receiving job training and ultimately a job for other disabilities is not even recommended to the mentally ill. If consumers of mental health services contact Voc. Rehab. on their own then they are put through the same testing and training as people with mental retardation. One gentleman I know who before his illness had received a Ph. D. in Chemistry was sent to Goodwill to sort socks. It is my belief that the mentally ill would like to work also but are discouraged because they have no way of obtaining the quality of jobs and careers as other citizens.

Discrimination was experienced by our organization, the Portland Coalition for the Psychiatrically Labeled, . when we tried to find wheel chair accessible office space. Several landlords ready to sign a lease with us refused to do so upon finding out what disability we represented.

Being mentally ill is a poverty issue as well ad a diability. Finding affordable housing is a real problem. Often affordable housing menas a cockroach infested, dark, small room or apartment. Subsidized housing is often a warehousing of the mentally ill and the elderly into buildingss. This does not allow mentally ill person to feel normal and a part of society.

Finally I woould like to talk about the need to educate society on the issues of disabilities. People need to be made aware of the abilities of those who are disabled. I would like to tell you about something that happened to me just after I got out of the hospital I had applied to social security for SSDI and gone through the process. I had received word that I was eligible and that it had been granted and I went to sign the final papers. Wondering what the next step was in the process I asked the worker what I had to do next. Looking through the file I saw his eyes fall on the statement that my disability had been due to a psychiatric disability. His whole response to me changed. Very slowly he said to me, " Go...home... and...find... someone...to..help...you...spend... your... money." Obviously this worker had his own preceptions about what a psychiatric disability meant. As long as people with disabilities are being treated differently even in attitudes our work is not finished. Thank-you.

Mr. **Owens**. Thank you. Ms. Mulligan.

STATEMENT OF KATHLEEN MULLIGAN

Ms. **Mulligan**. My name is Kathleen Mulligan and I am appearing before you today to state my strong objection to a Federal Social Security policy that continues to discriminate against parents who choose to raise their severely disabled children at home. Current Social Security eligibility criteria require me to get divorced or put Caley in an adoptive home, foster home, or institution before she can qualify for benefits.

Families like mine have seen their American Dreams turn into nightmares, solitary struggles to survive in the face of the Federal Government's ignorance and apathy. My family has been somewhat fortunate. People in the Merrimac Valley started the Caley Mulligan Foundation to build bridges between the urgent unmet needs of these families and the time when the Federal Government finally wakes up to the fact that these children are a part of us and not apart from us. As the president of that foundation, I can report two things with absolute certainty.

First, my foundation, unlike the executive branch of the Federal Government, wastes neither a minute nor a dime in getting immediate help to these families.

Second, the number of these families will continue to increase as advances in medical technology enable more and more of these children to survive. That is a reality that no amount of empty rhetoric can refute.

Additional help has come from the Commonwealth of Massachusetts. A medicated waiver program has been implemented, also named after my daughter. And this effort provides insurance coverage to some of the children with severe disabilities. Congressman Donnelly and Senator Carey have filed legislation designed at ending the discrimination against these children and their families.

But as of these today, these families are still considered outcasts by the executive branch of the Federal Government. Our children are disavowed by our Federal bureaucrats and denied the equal protection of our laws.

Secretary of Health and Human Services, Dr. Otis Bowen, could change that situation at anytime with a simple stroke of his pen. To date, he has declined to exercise the authority he already possesses. He has turned his back on these children and ignored the crisis confronting their families.

So, we continue to struggle. But no longer in solitary silence. I will leave with you nearly 100 newspaper articles that have appeared on this issue in metropolitan Boston newspapers over the past year. Be assured that this is only the beginning. More and more of these children are being born every day. And fewer parents are willing to quietly accept the Federal Government's continued indifference. The Americans With Disabilities Act is an important piece of civil rights legislation. As the parent of a severely disabled child, I support it along with other legislative efforts. They are essential steps at making this kind of inclusive and empathetic world within which all of our children will grow up and grow old. I believe that all three branches of the Federal Government have an absolute obligation to aid our most vulnerable and voiceless citizens. The executive branch appears to have abdicated their responsibility. My hope is that your response affirming the human dignity of everyone with a disability will be decidedly different. Thank you.

[The prepared statement of Kathleen Mulligan follows. Additional material submitted by Ms. Mulligan will be kept in subcommittee files.]

Remarks by Kathleen Mulligan before the House Select Education Sub-committee hearings in Boston on October 24, 1988./

- -

My name is Kathleen Mulligan and I am appearing before you today to state my strong objection to a federal social security policy that continues to discriminate against parents who choose to raise their severely disabled children at home. Current social security eligibility criteria require me to get divorced or put Kaileigh in an adoptive home, foster home or institution before she can qualify for benefits.

Families like mine have seen their American dreams turn into nightmares: solitary struggles to survive in the face of the federal government's ignorance and apathy.

My family has been somewhat fortunate. People in the Merrimac Valley started the Kaileigh Mulligan Foundation to build bridges between the urgent unmet needs of these families and the time when the federal government finally wakes up to the fact that these children are a part of us and not apart from us.

As the president of that foundation, I can report two things with absolute certainty. First, my foundation — unlike the executive branch of the federal government — wastes neither a minute nor a dime in getting immediate help to these families. Second, the number of these families will continue to increase as advances in medical technology enable more and more of these children to survive. That is a reality that no amount of empty rhetoric can refute.

Additional help has come from the Commonwealth of Massachusetts. A medicaid waiver program has been implemented, also named after my daughter, and this effort provides insurance coverage to some of the children with severe disabilities. Congressman Donnelly and Senator Kerry have filed federal legislation designed at ending the discrimination against these children and their families.

But, as of today, these families are still considered outcasts by the executive branch of the federal government. Our children [illegible]
are disavowed by our federal bureaucrats and denied the equal protection of our laws.

Secretary of Health and Human Services Otis Bowen could change that situation at any time with a simple stroke of his pen. To date, he has declined to exercise the authority he possesses. He has turned his back on these children and ignored the crisis confronting their families.

So we continue to struggle. But no longer in solitary silence. I will leave with you nearly a hundred newspaper articles that have appeared on this issue in metropolitan Boston newspapers over the past year. Be assured that this is only the beginning. More and more of these children are being born every day, and fewer parents are willing to quietly accept the federal government's continued indifference.

The Americans with Disabilities Act is an important piece of civil rights legislation. As the parent of a severely disabled child, I support it along with other legislative efforts. They are essential steps in making this the kind of inclusive and empathetic world within which all of our children deserve to grow up and grow old.

I believe that all three branches of the federal government have an absolute obligation to aid our most vulnerable and voiceless citizens. The executive branch appears to have abdicated their responsibility. My hope is that your response, affirming the human dignity of everyone with a disability, will be decidedly different.

Thank you.

Mr. OWENS. Thank you. Ms. Barbara Johnson.

STATEMENT OF BARBARA JOHNSON, ORONO, ME

Ms. JOHNSON. Thank you, Mr. Chairman. I am going to cite problems with the availability of the insurance in this country, the criteria having come from the U.S. Insurance Manual. And, hopefully, I will have time to give examples from my own life.

The first type of availability problem with insurance involves new kinds of risk. The tradition of American insurance is to view new risk with suspicion, pending the gathering and the analysis of pertinent loss data. As a result, coverage is usually very slow in forthcoming if it is offered at all.

The second type of availability problem is closely related to the first and involves situations where a currently insured peril becomes unpredictable in character and catastrophic in its consequences. In this instance, insurers are prone to not only withhold coverage, but actually withdraw existing coverage. Should no alternative source of coverage exist, a major availability problem will arise.

A third instance in which availability of insurance becomes an issue is when an insurer sees a particular group of insureds as consistently costing more in claims than they are paying out in premiums. In these cases, the insurer may choose to either limit or restrict the type of coverage or the amount of coverage available to the insured.

I myself was a product of Blue Cross-Blue Shield failure on several occasions. I suffered from seizures for several years. The seizures were under control, but I lost my Blue Cross-Blue Shield when I was hospitalized with a reoccurring attack because they called it a preexisting condition. I am getting sick of the word, "preexisting condition."

Today, I am a coordinator for the Maine Independent Living Center and I cannot afford to take out insurance because of preexisting conditions. And I had the inability to get insurance when I left the State hospital after 20 years because, again, preexisting conditions and too much medication.

Then I had brain surgery. I had a bilateral lobotomy in 1960 and my insurance bill for the surgery was astronomical. My father's business was attached and he was forced to sell to pay my bills and I was over 18 years of age. I was actually over 21. And he was forced to sell his business to pay my bills because Blue Cross said I had a preexisting condition. And now, I have had four—I have had three back surgeries, I beg your pardon, I have applied insurance through a previous employer and, again, I am told because of preexisting conditions I am unable to get the insurance I so desperately need.

I feel the ADA can do something about this. And I wish you most success in all of your endeavors. We really need your help. Thank you.

[The prepared statement of Barbara Johnson follows:]

Problems with Availability of Insurance

The first type of availability problem involves new kinds of risk. The tradition of American insurers is to view new risks with suspicion, pending the gathering and analysis of pertinent loss data. As a result coverage is usually slow in forthcoming, if it is offered at all.

The second type of availability problem is closely related to the first and involves situations where a currently insured peril becomes unpredictable in character and catastropic in its consequences. In this instance, insurers are prone to not only withhold coverage but actually withdrew existing coverage. Should no alternative source of coverage exist, a major availability problem may develop.

A third instance in which availability of insurance becomes an issue is when an insurer sees a particular group of insureds as consistently costing more in claims and expenses then they contribute in premiums. In these cases, the insurer may choose to either limit or restrict the type of insurance or the amount of coverage available to the insured.

Example #1-Loss of Blue Cross because of seizures.

Example #2-Inability to get insurance-to much medication.

Example #3-Insurance dropped and parents business attached to pay existing bills.

Example #4-Unable to get insurance because of pre-existing condition.

Mr. **Owens**. Thank you very much, all three of you. I have one question for Ms. Batten. Has discrimination against the mentally ill, in your opinion, kept people in the hospital longer than they needed to stay in the hospital? And is this a great waste of money?

Ms. **Batten**. Yes, it is. Often, in the State of Maine, as I said before, it depends on how cooperative you are whether you stay in the hospital. If you cooperate and take all your medication and they see that as getting well, and if you do not—if you do not agree with the treatment that they advise you to take and you do not cooperate, then you are seen as being iller and you are not allowed to leave the hospital. And I think this is a wasted condition, a waste of money because if you listen—if they would ask the clients and listen to what the clients have to say about what treatments are necessary for them, then people would get out of the hospitals sooner.

Mr. **Owens**. Thank you.

Our next panel is Tim Foley, Larry Espling, Ruth Long, Nancy Husted-Jensen.

Would you like to begin, Mr. Foley.

STATEMENT OF TIM FOLEY

Mr. **Foley**. Thank you, Mr. Chairman.

Boston, MA is a good place in 1988 for people with disabilities to tell Congress that we want some basic rights that our Founding Fathers wanted for all Americans.

> We hold these truths to be self-evident that all people are created equal. That they are endowed by their creator with certain inalienable rights. That among these are life, liberty and the pursuit of happiness.
>
> We, the people of the United States in order to form a more perfect union, establish justice, insure domestic tranquility, provide for the common defense, promote the general welfare and secure the blessings of liberty to ourselves to our posterity do ordain and establish this Constitution of the United States of America.

All our lives, we have read these lines and these fine words from the Declaration of Independence and the Preamble of the U.S. Constitution. Today, after over 200 years after these principles were articulated, we, the people with disabilities respectfully urge you, our representatives in the Congress, to make these words finally come true, to declare that all of us are truly equal under law. And, second, to form a more perfect union, but establishing justice for all persons. Thank you.

[The prepared statement of Tim Foley follows:]

THE COMMONWEALTH OF MASSACHUSETTS
MASSACHUSETTS DEVELOPMENTAL DISABILITIES COUNCIL
600 WASHINGTON STREET, BOSTON, MA 02111

October 24, 1988

MICHAEL S. DUKAKIS
GOVERNOR

THOMAS J. LARKIN
CHAIRMAN

(617) 727-6374

JODY SHAW
EXECUTIVE DIRECTOR

TO: Chairman Major R. Owens, Committee on Education and Labor, Subcommittee on Select Education

FR: Tim Foley, for the Massachusetts Developmental Disabilities Council

RE: H.R. 4498, **AMERICANS with DISABILITIES ACT**

I am pleased to testify on behalf of the Massachusetts Developmental Disabilities Council, of which I am a member. The Council consists of 59 persons appointed by the Governor to advocate for the estimated 86,000 persons with developmental disabilities in Massachusetts. Developmental disabilities are severe, chronic conditions which a person is born with or attains before his or her twenty-second birthday. These disabilities can be physical, mental, sensory, medical or emotional--or any combination of these. They limit major life functions such as self-care, mobility, learning, expressing oneself, among others. Because of the early onset, severity, and long-term nature of developmental disabilities, people with these kinds of conditions are especially eager to have basic legal protections such as those included in the Americans with Disabilities legislation.

Boston and Massachusetts make a good place--in 1988--for people with disabilities to tell the Congress that we want some basic rights that our founding fathers wanted for all Americans:

> We hold these truths to be self-evident, that all [people] are created equal, that they are endowed by their Creator with certain unalienable Rights, that among these are Life, Liberty and the Pursuit of Happiness.
>
> We, the people of the United States, in order to form a more perfect Union, establish justice, insure domestic tranquillity, provide for the common defense, promote the general welfare, and secure the blessings of liberty to ourselves and our posterity, do ordain and establish this Constitution for the United States of America.

All our lives we have all heard these fine words from the Declaration of Independence and the preamble of the United States Constitution.

Today, over 200 years after these principles were first articulated, WE THE PEOPLE WITH DISABILITIES respectfully urge you--our representatives in the Congress--to make these words come true:

- to declare that ALL of us are truly equal under law
- to form a more perfect union by establishing justice for ALL of us.

Thank you.

Mr. **Owens**. Thank you. Ms. Long.

STATEMENT OF RUTH LONG, PEER ADVOCATE COUNSELOR, VERMONT CENTER FOR INDEPENDENT LIVING

Ms. **Long**. Thank you. I am here to represent people in the State of Vermont. I work as a peer advocate counselor for the Vermont Center for Independent Living. There were a number of us who were going to be here today, but evidently, I am the only one who made it.

Everyday when I work, I hear stories about discriminations, about segregation, about poverty, about trying to overcome attitudinal barriers. The list goes on and on. I, myself, am very concerned about the lack of adequate transportation in the State. We are a very rural community. We have very little public transportation. What we have is very inadequately accessible. People do not get out. They do not make themselves known. Nobody believes that there is really a disabled community in the State of Vermont because they are invisible.

Very often, when I go out, I have to think about where I am going: Is there going to be handicapped parking space? Is that space going to be occupied by somebody who is not a disabled person? If that is a space that is incorrectly occupied, is there going to be any penalty? Is that going to be policed? Am I going to be able to get where I want to go? Very often, you can call ahead, as I do very often, to find out whether a place is really accessible and you are told, "Oh, yes. Just a few steps." Or else, "It is accessible." And I recently had an occasion where I went to a place where there was an elevator. However, the elevator had no light and I accepted on faith that I would get to the second floor, but I got into this elevator with no light, went up to the second floor, found myself going down again because where I was going on the second floor was blocked. It was blocked by a band that was in the middle of a set and just could not be bothered to move away from the elevator door. So, what often is supposed to be accessible is not accessible.

And I do not want to be carried up a flight of stairs. People in Vermont have very hard times with transportation. Taxi cabs will not take people who have a disability. I guess that is all I want to say.

Mr. **Owens**. Thank you, Ms. Long.

Mr. Larry Espling.

STATEMENT OF LARRY ESPLING, WALTHAM, MA

Mr. **Espling**. Thank you for giving me this opportunity.

[Some portions of Mr. Espling's testimony were incomprehensible.]

I want to get a job, but it is hard to get a good job. There are many people who have gone to college but they cannot get a good job.

May I read to you——

[Mr. Espling asked an interpreter to read from his prepared statement.]

Most people view employment as economic self-sufficiency and personal and professional identity. As Kiernan and Start say in their book, "Pathways to Employment. The concept of work and the place that work occupies in the social structure of the United States is central to the establishment of a sense of belonging for most adults."

However, for many or most people with developmental disabilities, including cerebral palsy, the sense of belonging comes from holding a job is an experience that remains out of reach. Despite the rosy economic picture in Massachusetts, between 50 and 80 percent of people with developmental disabilities are unemployed, according to the Boston Office of Handicapped Affairs."

[The prepared statement of Larry Espling follows:]

TO: Chairman Major R. Owens, House Committee on Education and Labor, Subcommittee on Select Education

FR: Larry Espling, Waltham, Massachusetts

RE: Testimony regarding H.R. 4498, "The Americans with Disabilities Act"

October 24, 1988

I am pleased to present the following materials in the hopes that my own experiences will help this committee and other members of Congress to understand the importance of passing legislation that will ensure basic civil rights for persons with disabilities in America.

The following appeared in Changing Waltham, a newspaper in my home city; it is written by Ms. Susan Burkhart, based on her interview with me. The final column is about employment, and was written by myself and published in the same newspaper.

LARRY ESPLING has been a Waltham resident for nine years; he also happens to be a person with a disability. At three years of age, he was diagnosed as having cerebral palsy. When he was five, his parents took him to a specialty clinic. There they were told by the physician that their son was mentally retarded and would never learn to walk or talk. He advised putting Larry in an institution. Luckily for Larry, he had parents who disregarded the doctor's advice. His mother, a teacher, and his father, a general store owner, chose to keep him at home and teach him themselves. Larry did learn to walk and talk, although both are done with some difficulty as are many functions involving his hands.

In spite of his disability, Larry graduated from the University of Maine, Presque Isle, in 1978 with a degree in Behavioral Science. He has lived independently since moving to Waltham in 1979. A member of the National Board of Church and Society, United Methodist Church, since 1984, he has traveled throughout the U.S. to attend board meetings. He has been a gubernatorial appointee to the Massachusetts Developmental Disabilities Council since 1985 and has served on the board of United Cerebral Palsy of Boston. He is also actively involved with St. John's Methodist Church in Watertown and Waltham Concerned Citizens. Larry has worked as a program aide for mentally retarded individuals, taught pre-vocational skills to the multiply-disabled, worked as a camp counselor, and has done disability research for the Department of Employment Services and the Boston Office of Handicapped Affairs.

S.B.: ***What are the major issues facing people with disabilities?***

L.E.: It depends on the disability. I'll talk about people who went to high school and college. Everybody is unique, but the major problem is finding jobs. Transportation, public attitudes and housing can be problems. Housing is sometimes difficult because of discrimination against the handicapped and because income is often low. There is a new bill before the Massachusetts legislature to prohibit discrimination in housing, but it hasn't passed yet.

S.B.: ***What in your own life are the major issues?***

L.E.: Jobs are the biggest problem I face—keeping a job, and finding the ideal job for me. The jobs I've had have been mostly with local or state government agencies. These jobs have tended to be temporary ones either because funding ran out or because they were only planned as short-term projects to begin with. It's very hard for someone with severe cerebral palsy to get a job in the private sector.

S.B.: ***How do you feel about being labeled as handicapped?***

L.E.: Handicapped means "hand in the cap," or to beg. It's an old English expression. Another meaning is in golf. You give someone a handicap so he or she can compete. I prefer the expression "person with a disability." Everybody has a disability of some kind, even if it's just wearing glasses. If anyone with a disability would like to get together to talk about common problems or to start a group in Waltham for those with disabilities, please call me at (617) 647-0017. People can get very isolated, especially if they live alone.

S.B.: ***What are the most common misconceptions people have about those who are disabled?***

L.E.: Some people think we are retarded. They don't know how to act. At the ethnic festival in Waltham in 1986, I wanted to buy a book on Lithuania at one of the booths. The person sitting there said, "Why do you want this book? You can't read." Another misconception is that if a person with cerebral palsy marries, any children will have C.P. I know of two C.P. couples with normal children. It's not hereditary.

S.B.: ***Are there unhelpful ways that people deal with those who are disabled?***

L.E.: Many programs that work with the disabled can be harmful. They can be overprotective, in part because they get money from the government and don't want anyone to get hurt. They don't encourage people with C.P. to be independent. I was lucky to grow up in a tiny town in Maine where there were no programs. My parents let me work. I helped in the small general store they owned, mowed the grass and did other yard work, shoveled snow, piled wood and brought it into the basement, and picked potatoes. . . . People say things sometimes as if you can't hear them. I was on a bus and two men near me said, "He'll be put away." I've had things like that happen before.

S.B.: ***How would you like to see things improve or change?***

L.E.: In the last 20 years there's already been a big change. I don't think I could have gone to college before I did. Congress passed a bill in 1975 mandating that handicapped people be allowed to enter public schools. I would like to see more programs that encourage people who were born with disabilities to become more independent.

Larry Espling. Photo by Dick Crowley.

Employment Obstacles and the Developmentally Disabled

Most people view employment as economic self-sufficiency and personal and professional identity. As Kiernan and Stark say in their book *Pathways to Employment*, "The concept of work and the place that work occupies in the social structure of the United States is central to the establishment of a sense of belonging for most adults." However, for many or most people with developmental disabilities,* including cerebral palsy, the sense of belonging that comes from holding a job is an experience that remains out of reach. Despite the rosy economic picture in Massachusetts, between 50 and 80 percent of people with developmental disabilities are unemployed, according to the Boston Office of Handicapped Affairs.

The major reason for this high unemployment rate has been the perceptions of professional rehabilitation counselors, employers and some of the disabled themselves. They have felt that people with developmental disabilities couldn't hold a job in society. So those with cerebral palsy and other developmental disabilities who want work in industry or business are denied the chance to prove themselves.

We have all heard about how tight the job market is in Massachusetts and how Wendy's is paying $5.00 an hour. This has led employers to begin looking at the possibility of hiring people with cerebral palsy or other disabilities. Fortunately, employers are discovering that hiring people with developmental disabilities is highly cost effective and their fears that their insurance rates would go up as a result of hiring those people are unfounded.

Even though it is getting easier for people with developmental disabilities to get jobs, there is still a long way to go. We need new ideas for people who want to work. As I see it, this is the next new challenge for United Cerebral Palsy and other groups—helping people who want to get a job in the economy. As Phillip Johnston, Secretary of Human Services, has said, "If we can't give a job to every single person in Massachusetts, no matter how disabled, then we ought to be embarrassed."

—Larry Espling

---

*Developmental disabilities are severe, chronic conditions which a person is born with or attains before his or her twenty-second birthday. These disabilities are mental, physical, or a combination of the two. They can limit function in such areas as self-care, mobility and expressing oneself, among others.

Mr. OWENS. Thank you very much.

Ms. Nancy Husted-Jensen.

STATEMENT OF NANCY HUSTED-JENSEN, CHAIRMAN, GOVERNOR'S COMMISSION ON THE HANDICAPPED, PROVIDENCE, RI

Ms. HUSTED-JENSEN. Thank you. I am the chairman of the Rhode Island Governor's Commission on the Handicapped. And I have submitted testimony in writing to you, but there is an important issue I would like to speak on at this particular time.

It is an extremely important issue facing citizens with disabilities. The problem concerns voting. Since 1980, the Rhode Island Governor's Commission has registered citizens with disabilities to vote. In fact, this year, we registered 10,000 citizens. The Rhode Island constitution enfranchises every citizen over the age of 18 with the right to vote. The only exceptions are those people who are in prison for 1 year or more or those people who are deemed incompetent by the courts for whatever reason. Only the courts are empowered in Rhode Island to take away a person's right to vote.

The problem exists now that many social workers feel they also have the right to decide who can vote and who cannot vote. Recently, I participated in this year's voter registration. I was sworn in statewide registrar for the board of elections. I visited an association of retarded citizens work activities workshop. I had spoken to the director several days before and explained to him our procedure. And we invited residents from the group homes in the area to the center so they could hear my speech and decide whether or not they would like to participate in voting.

Upon arrival, I was met by only four people. Before I had come, I was told it would be groups of 15 to 18 people that I could talk to and then they would decide whether or not they wanted to be registered to vote.

I spoke to one of the social workers who came to me and explained to me that in the group homes, the people who were running the group homes, the social workers and the supervisors, were deciding who they deemed competent to vote and who they deemed not competent. They were not telling all the people about this opportunity to be registered.

Another problem arose when I took a registration card from that meeting to a local town board of canvassers. The voter has cerebral palsy and is blind. The clerk of the board of canvassers looked aghast as soon as I showed her the card and said to me, "Is that person competent? Look at that signature."

I guess the look on my face did not really please her and I protested. And she then announced to me that there was no such street that existed in that town. After I checked the post office, the person's personal identification in the telephone book, I went back and demanded the person be put on the voting roll. I knew when I left there, the person was not going to be put on the voting rolls. So, I went back to the Commission's office. I had the director of the Commission contact the Rhode Island Board of Elections and Senator Chaffe's office. After a lot of phone calls, the person was put on the board—on the voting list.

And I happen to be a real estate agent and one of my colleagues who was down at the town hall at the same time told me they had actually had to go out in the dumpster behind the town hall and dig out the registration card.

I cannot tell you, as a parent, how angry that made me. I have also been told by the Commission's director who was involved in Project Vote, in the past years people with disabilities have been turned away from the polling places after they have been registered to vote because they did not look competent. Thank you very much.

[The prepared statement of Nancy Husted-Jensen follows:]

STATE OF RHODE ISLAND AND PROVIDENCE PLANTATIONS

Executive Department
GOVERNOR'S COMMISSION
ON THE HANDICAPPED
Building 51, 3rd fl, 555 Valley Street
Providence, R.I. 02908 - 5686
(401) 277 - 3731 (v/tdd)

The Honorable Major Owens Oct. 24, 1988
Chair. of the US House of Representatives
Subcommittee on Select Education
Boston, MA

Dear Representative Owens,
Members of the Select Education Subcommittee and Justin Dart:

I welcome this opportunity to present, on behalf of the R.I. Governor's Commission on the Handicapped and the people of the State of Rhode Island, our support of the Americans with Disabilities Act of 1988. All 167,200 Rhode Islanders with disabilities are proud that our entire Congressional Delegation have become co-sponsors of the ADA. The ADA will extend to all citizens of the United States the rights Rhode Islanders with disabilities now enjoy. The passage of the ADA will place the power of the Federal Government behind each individual with a disability as they exercise their rights as Americans.

As we in Rhode Island know only too well, passage of civil rights legislation is only the first small step on the long road to equality and dignity for all. Once enacted, the people most affected must be educated about their rights and feel comfortable in exercising them. The fear of retribution, whether well founded or not, is a powerful ally of bigots and hate mongers. Passage of the ADA will send a message LOUD and CLEAR to individuals with disabilities; that "they have arrived in the promised land", and that Uncle Sam is their ally.

State and local civil rights laws cannot address all problems facing people with disabilities. Many aspects of their lives: interstate commerce and transportation; telecommunications and broadcast communications etc. are federally regulated activities. The federal government must stop assisting in the segregation of Americans with disabilities.

I would like to take the few moments I have left to address an extremely important problem facing citizens with disabilities. The problem concerns voting. Since 1980, the R.I. Governor's Commission has registered citizens with disabilities to vote. The RI Constitution enfranchises every citizen over the age of 18 with the right to vote. The only acceptions are for those who are imprisoned for one year or more, or who the courts have decided are mentally incompetent.

Only the courts are empowered to take away a person's right to vote in Rhode Island. The problem is that many social workers feel that they also have the power to decide who is competent to vote and who is not ! Recently as part of this year's voter registration effort, I visited an Association of Retarded Citizens Work Activities/Sheltered Workshop. I'd spoken to the Director of the center several days before. He agreed to invite the residents of the group homes in the area to the center so they could hear my speech about voting and if interested then become registered voters. Upon arrival, I was met by 4 persons, and told, on the side, that the group home supervisors had decided who was qualified to vote and didn't tell any of the other residents about my visit.

Another problem arose when I took a registration card to the local town board of canvassers. The voter has Cerebral Palsy and is blind. The clerk at the board of canvassers said to me "Look at that signature, that person can't be competent!" When I protested, the clerk then announced that the street address was not correct. After I checked the Post Office, the person's I.D. card, and the telephone book, I returned with the registration card and demanded that they accept it. But feeling unsure that they would follow through, I had the Commission's director contact the RI Board of Elections, and with the help of Senator Chafee's Office we made sure the disabled person became a registered voter. I found out later that a board of canvasser's employee had to hunt through the trash container out behind town hall for the registration card, after the state board of election's started its investigation.

I was told by the Commission's director that in past years voters with disabilities have been turned away at the polling place for "not looking competent" even through they were registered to vote. One person running for state senator bragged about having torn up mail ballots one year because he did not think it looked right for him to have registered group home residents in his district to vote by mail. So these people voted but their ballots never made it to the "counting house".

Until universal voter registration is in place and a strong criminal penalty is available we will always have "well meaning" social workers / parents / and election officials who will deny individuals their right to be part of this great democracy because they DO NOT LOOK COMPETENT, or worse their signature doesn't look competent ! We need the ADA, but with strong criminal penalties for violating a person's rights. We need passage of HR 3950 and S 2061 the Universal Voter Registration Act, to establish a national standard for voter registration.

Until we are free from bigots and the uninformed, we will always need strong effective civil rights laws and fully funded enforcement agencies.

Sincerely,

Nancy Husted-Jensen

Nancy Husted-Jensen
Chairperson

cc: Governor DiPrete
Senator Chafee

Mr. **Owens**. Thank you very much. I want to thank you all for your testimony.

Our next panel consists of Judy Rogers, Phillip Campbell, Larry Urban, Denise Karuth.

Would you like to begin, Ms. Rogers?

STATEMENT OF JUDY ROGERS

Ms. **Rogers**. I am Judy Rogers and I went as far as ninth grade. And when someone sees that you went as far as ninth grade, you know, when you are filling out a job application, they say, without even knowing your background, they will say, "Oh, she is retarded. She's this. She can't do it." They do not give you the chance to prove you can. And they automatically say, "Why give her a chance." And I have been turned down several times because I am over the borderline retardation. And they say, "Why should I give them the opportunity." They give it to someone else who is more capable and turn you down, which they do all the time to me. I have not worked since 1979. I am on SSI now which I have been remaining on since.

Mr. **Owens**. Thank you. Mr. Campbell.

STATEMENT OF PHILLIP CAMPBELL, EXECUTIVE DIRECTOR, ASSOCIATION FOR RETARDED CITIZENS OF MASSACHUSETTS

Mr. **Campbell**. Good afternoon. First, let me thank you for the opportunity to submit some testimony today. My name is Phillip Campbell. I am the executive director of the Association for Retarded Citizens of Massachusetts. I am here in an attempt to represent the thousands of individuals and families across the Commonwealth who experience the disability of mental retardation. We are comprised of 25 local ARC's and thousands of members from one end of the State to the other.

During the 1950's, the United States recognized the need to become proactive in the steps to guarantee access and opportunity for all Americans in the civil rights movement. Yet, at that time, in effect, America was able to be passive in its support to different groups in accessing their civil rights. Now, as we end the 1980s, what is necessary is an act like the ADA in which there is an active role for Government that provides the necessary supports and requires that we, as a society, provide the supports for persons with disabilities to access our society as a whole and have an opportunity to excel based upon their abilities.

Persons with mental retardation have experienced some of the grossest examples of discrimination during the last 100 years. They have been relegated to segregated congregate facilities across the Nation. Only after multiple court inquiries have the courts concluded that the treatment offered to these individuals in the name of treatment and service was inhumane, degrading, and illegal in most cases. And this incarceration was only because of their disability. Enàctment of the Americans With Disabilities Act would further state person's rights to live in the community among their family members and their society as a whole.

As I began to prepare for these hearings, I realized that the strongest amount of testimony would not be given by someone like myself, but by those persons who had actually experienced discrimination themselves. As I talked to friends and acquaintances I have who are labeled mentally retarded, I realized that many of them have not even had the opportunity, as odd as this may sound, to experience the discrimination offered to others with disabilities because of that incarceration that has occurred.

Since the advent of the judicial intervention and Federal acts such as Public Education Law 94-142, we have seen that individuals with mental retardation have great ability and have many opportunities now to exercise their skills and jobs in communities across the Nation.

The ADA would provide a guarantee to fulfill people's desires and hopes based upon their abilities, not based upon the labels that they carry. Often persons with mental retardation have a secondary disability: an impairment either in communication or in mobility. The actions of this act when enacted into law, would further provide supports to families because one of the greatest barriers families that experience mental retardation have had is that the secondary disability, especially if it is in the area of mobility has prevented a family from vacations, from traveling, from accessing normal accommodations provided to everyone.

Over the last 30 years, thousands of people have demonstrated their ability to work and become taxpayers. The discrimination such as that that Judy just related to you would become illegal through this act.

I think, to summarize, the reason we are here today and that so many people have testified before you is that in America, in effect, discrimination is legal. Only until we declare that discrimination exists and that it is prejudicial and it is based on erroneous generalizations is it then illegal. And, so, with the enactment of the ADA, then this type of discrimination will change from being legal to illegal. Thank you.

Mr. OWENS. Thank you. Ms. Denise Karuth.

STATEMENT OF DENISE KARUTH, CHAIR, MASSACHUSETTS COALITION OF CITIZENS WITH DISABILITIES

Ms. KARUTH. Good afternoon. My name is Denise Karuth. I am the chair of the Massachusetts Coalition of Citizens with Disabilities and the Governor's Commission on Accessible Transportation.

As a young visually impaired child in public school in Buffalo, NY, I had to fight to sit in the front row of my classes so that I could participate and try to see the board. No effort was made until the exams of my junior year in high school to accommodate for my disability. Instead, I was held back from advanced classes and told that because of my disability I should take easy courses.

At the State University of New York, as a music major, I had to drop a required theory course because I was unable to read the photo-reduced score of a Bach cantata. As a special education minor, I informed one of my professors that I was legally blind. He replied, "What are you doing in this program if you can't see?" And refused to accommodate me in any way.

In 1976, my counselor at the New York State Commission for the Blind informed me that the Commission would not sponsor me for a masters degree in rehabilitation counseling because the State would not hire blind rehabilitation counselors, "Since," and this is a quote: "they could not drive to see their clients."

I then made the difficult decision to leave my home and family in order to pursue my goal in the more liberal Commonwealth of Massachusetts. After my first conversation with a blind worker at the Massachusetts Commission for the Blind, I felt like I had died and gone to heaven. Finding housing has been difficult, even before I started using a wheelchair. Affordable housing is in short supply and perspective landlords often told me they would not rent to someone with a guide dog. They said they did not care if it was illegal, knowing that in all likelihood I would be too busy trying to find a place to live, to fight them.

Once I became severely physically disabled due to multiple sclerosis, I found that housing was even harder to find and that I was discriminated against for a variety of reasons. Once I was refused housing in a new development despite the fact that I lived in the neighborhood the development was built to serve and was paying over 25 percent of my income to live in substandard inaccessible housing. The reason? Two of my personal care attendants were males. Furthermore, the application to the development asked many intrusive personal questions, such as: Do you use a catheter or other urinary appliance? In an apparent effort to determine if there was a risk of having their rugs soiled by urine.

Like all persons with disabilities, I face the discrimination in places of public accommodation from restaurants and taxis to accessible stores with inaccessible aisles and displays and new construction that does not meet architectural accessibility standards.

Like thousands of my peers, I am continually frustrated that the burden for enforcement of these regulations falls largely to disabled consumers through the complaint resolution process rather than through routine inspection and enforcement by building inspectors and responsible agencies. It is hard enough running into these barriers all the time knowing that you are the one that has to do something about it every time. It is infuriating.

One cannot speak of barriers without speaking of transportation. I have had pilots refuse to take my motorized wheelchair. I will try to summarize.

We talked about the difficulties of accessible transportation, talked about my role as chairperson in the Governor's Commission on Accessible Transportation. The need, the difficulty of not having Federal transportation regs. It is in the written testimony. I would like to read my concluding paragraph if I might?

The year 1988 marks the 40th anniversary of the signing of the United Nations Universal Declaration of Human Rights. Forty years later, we in the United States need the Americans With Disabilities Act, a declaration of rights for persons with disabilities so that we can fully join the human community which the United Nations document celebrates. We are not asking for your money. We are not asking for pity. We are not even asking for your sympathy.

All we ask is that you make real the promise and the opportunities that America strives to offer everyone, the respect and dignity we deserve as free and responsible citizens in a great Nation. Thank you.

[The prepared statement of Denise Karuth follows:]

TESTIMONY BRFORE MEMBERS OF CONGRESS REGARDING PAST DISCRIMINATION AND THE AMERICANS WITH DISABILITIES ACT

October 24, 1988

Good Afternoon. My name is Denise Karuth. I am the Chair of the Massachusetts Coalition of Citizens with Disabilities, and the Governor's Commission on Accessible Transportation. I am also a member of the Governor's Human Resource Forum.

As a young visually impaired child in public schools I had to fight to sit in the front row of my classes so that I could participate in class and try to see the board. No effort was made, until I took the NY State Regent's exams in 1971 at the end of my junior year in high school, to accommodate for my disability. Instead, I was held back from advanced classes and told that because of my disability I should take "easy" courses such as homemaking, rather than advanced courses such as physics.

At the State University of New York, as a music major in 1972, I had to drop a required theory course because I was unable to read a photo-reduced miniature score of a Bach Cantata. As a special education minor in 1975, I informed one of my professors that I was legally blind. He replied "What are you doing in this program if you can't see?" and refused to accommodate me in any way.

In 1976 my rehabilitation counselor at the New York State equivalant to the Commission for the Blind informed me that the Commission would not sponsor me for a Master's degree in rehabilitation counseling because the state would not hire blind rehabilitation counselors since, and this is a quote, "they couldn't drive themselves to their clients' homes." I then made the difficult decision to leave my home and family in order to pursue this goal in the more liberal Commonwealth of Massachusetts. I still remember my first phone call to the Massachusetts Commission for the Blind. When I heard the person I was talking to using a braille writer to take down my name and address I said to her "Pardon me for asking, but are you blind? Shr replied "Yes." I said "The Massachusetts Commission for the Blind hires blind people?" and she said "Of course. Lots of blind people work here." I felt like I'd died and gone to heaven!

Finding housing has been difficult, even before I started using a wheelchair. Affordable housing is in short supply and prospective landlords often told me they would not rent to someone with a guide dog. They said they didn't care if it was illegal knowing that, in all likelihood, I would be too busy trying to find a place to live to fight them. Once I became severely physically disabled due to Multiple Sclerosis I found that housing was even harder to find and that I was discriminated against for a variety of reasons. Once, I was refused housing in a new accessible development despite the fact that I lived in the neighborhood the development was built to serve, and was paying over 25% of my income to live in a substandard, inaccessible apartment. The reason? Two of my personal care attendants were males. Furthermore, the application to the development asked many intrusive personal questions such as "Do you use a catheter or any other urinary appliance?" in an apparent effort to determine if there was a risk of having their rugs soiled by urine.

Like all persons with disabilities, I have faced discrimination in places of public accommodation from restaurants and taxis which refused me because of my wheelchair or guide dog to accessible stores with inaccessible aisles and displays, and new construction that does not meet architectural accessibility standards. Like thousands of my peers, I am continually frustrated by the fact that the burden for enforcement of these regulations falls to largely disabled consumers through the complaint process rather than through routine inspection and enforcement by building inspectors and responsible agencies. It's bad enough running up against these barriers every time I leave my home. Knowing that, unless I report each violation, nothing is likely to be done about it is completely infuriating.

One cannot speak of barriers without speaking of transportation. I've had pilots refuse to fly my motorized wheelchair even though its sealed gell batteries were designed for safe transport and airline staff who tried to make me put my guide dog in a crate in the airplane's cargo bay. I've also experienced the major difficulties inherent in using advance notice dial-a ride services and fixed route accessible services from trips not available to drivers without lift keys to elevators and escalators out of service. In August of 1983 I traveled by train to Washington D.C. to commemorate the twentieth anniversary of the famous Civil Rights March , only to discover that our charter train had pulled up at an inaccessible platform. AMTRAK personnel told me, in all seriousness, that I would have to stay on the train for thirteen hours until it returned to Boston. I did not agree. I made them carry me down.

In my role as chairperson of the Governor's Commission on Accessible Transportation, I heard testimony from hundreds of persons with disabilities who face transportation barriers. One compelling testimony was presented by a woman who relied on a motorized wheelchair for mobility, had only one arm, and was deaf. She lost her Social Security disability because she had her PhD and, therefore, had been judged able to work. During the lengthy appeals process she had to sell her lift equipped van so she could eat. Now, several years later, she was ready to buy another van but could not obtain funding for accessibility modifications because of a policy which stated that only one vehicle would be modified per client. Fortunately, we were able to change the policy.

Normally, I would be travelling with a guide dog. But Irene is thirteen years old, and retired, and spends her days sleeping in the sun. I began using a wheelchair four years after I acquired Irene. Because I know use a wheelchair, there is not a single guide dog school in the entire country that is prepared to train me with another dog. And so because of discrimination against wheelchair users, I am denied the right to leave my apartment and travel in safety.

I know this is supposed to be a nonpartisan rally, but I feel it would be a disservice to the community if I did not bring up some of what has happened to us these past eight years. One of the first things that Mr. Reagan and Mr. Bush did when they came into office in 1981 was to rescind the Department of Transportation's 504 regulations. They held the new regulations hostage for six years until the courts forced their hand to release them in June of 1986. The new regulations, which allow for local communities to decide how they will comply and do not require any rail system accessibility, clearly serve the interest of transit providers and not disabled consumers. I cannot make this point strongly enough. In addition, the fact that transit authorities had until June of 1987 to submit a six year compliance plan and that these plans were not approved until the summer of 1988 means that, for all practical purposes, there has been virtually no regulation of accessible transportartion in this country since the Reagan/Bush administration came into office. This is discrimination on a grand and hideous scale. It must not be continued.

1988 marks the 40th anniversary of the signing of the United nations Universal Declaration of Human Rights. Forty years later, we in the United States need the Americans with Disabilities Act, a Declaration of Rights for persons with disabilities, so that we can fully join the human community which this sacred UN document celebrates. We are not asking for your money. We are not asking for your pity. We are not even asking for your sympathy. All we ask is that you make real the promise and opportunity that America strives to offer everyone: the respect and dignity we deserve as free and responsible citizens of a great nation. Thank you very much.

Respectfully submitted,

Denise Karuth

Mr. **Owens**. Thank you. Mr. Larry Urban.

STATEMENT OF LARRY URBAN, DIRECTOR, RENAISSANCE CLUB, LOWELL, MA

Mr. **Urban**. Good afternoon. I am director of the Renaissance Club, which is a comprehensive rehabilitation program for persons with mental illness. Discrimination against persons with mental illness is widespread. And, today, I am going to give several examples in the area of housing, public services, and education.

The stigma attached to persons labeled mentally ill is widespread. Evidence of the negative attitudes held by the general population toward persons with mental illness is vividly illustrated by the following letter to the editor printed in the Lowell Sun this past year concerning a State plan to provided community-based housing mentally ill.

This letter states, it is written by a person named Chris Dagle:

> Recent news reports have said that state hospitals would begin placing patients in private homes. Next to yours? Shortly. What are they thinking about? The streets are not safe to walk on now, let alone your yard for children to play next to a home where some mental patients are living. They named six or seven cities and two of them were Lawrence and Lowell. Why not spend a little money to fix up our state hospitals and make them homey and comfortable and keep the patients in their own environment. The state hospitals are on the best land in the cities. They are on perfect sites. Metropolitan State sits high on a hill overlooking Boston. Worcester State sits high on a hill overlooking Worcester. Both with beautiful grounds. Three-fourths of all mental patients are schizophrenic. Their moods can change in a second. Let's ask professionals, doctors, nurses, et cetera, if mental patients should live outside of the hospital. Now is the time to write to your state senators and congressman to get this stopped now.

OK. That letter reveals the negative attitudes and irrational fears that people have toward persons with mental illness. And these attitudes can be an insurmountable barrier to establishing housing programs for the mentally ill in residential neighborhoods. I know of two attempts to establish a supervised group home in Lowell that was stopped by irrational neighborhood reactions. In one case, derogatory graffiti were written on the proposed residential sites, such as "Nuts go home".

In both cases, the neighbors staged emotionally charged rallies that prevented any meaningful dialog concerning their stated objection such as property devaluation and the safety of their children. Under these circumstances, political pressures against agencies attempting to establish housing are often the deciding factor forcing the mentally ill out of the better, safer neighborhoods and into neighborhoods that are drug-infested and that pose other threats to their welfare.

I would like to, in the area of public services, inform you of an example of discrimination that occurred almost 2 years ago and it is still going on. Because of legal action, I cannot give names. This situation involves a restaurant which is in close proximity to a day treatment center for persons with mental illness. This restaurant was frequented by a number of people being served by the day treatment center until one day one of their members became disruptive and was rightfully asked to leave the restaurant. However, later the same day when several other members of the day treatment center attempted to get service at the restaurant, they were asked to leave. The owner of the restaurant directed negative comments toward them as a group and told them because of the incident that occurred earlier, he would no longer serve day treatment people again.

Now, almost 2 years later, people who are recognized as being from the day treatment program are still refused services. Thank you.

October 24, 1988

Major R. Owens, Chairman
Congressional hearing on H.R. 4498,
"Americans with Disabilities Act of 1988."
Lafayette Hotel, Boston, MA

Dear Chairman Owens,

The following reflects my testimony presented at the Congressional hearing on H.R. 4498 at the Lafayette Hotel, Boston, MA on October 24, 1988.

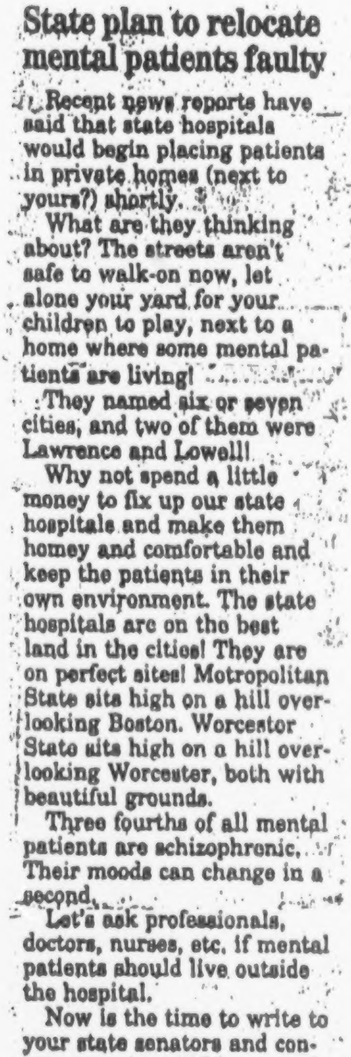
Discrimination against persons with mental illness is widespread and today I am prepared to give several examples of discrimination in the areas of Housing, Public Services and Education.

First, I would like to establish that I use the term "mental illness" to describe persons who have a psychiatric disability such as schizophrenia or manic-depression, which has usually required hospitalization in a psychiatric facility and treatment with antipsychotic medications.

The stigma attached to persons labelled mentally ill is widespread. Evidence of the negative attitudes held by the general population toward persons with mental illness is vividly illustrated by the following Letter to the Editor printed in the Lowell Sun this past year concerning a state plan to provide community-based housing for the mentally ill.

The letter printed in the Lowell Sun by a person by the name of Chris Daigle follows:

"for the red of courage and the gold of faith are woven whene'er a man looks in the face of failure and does the best he can . . . "



State plan to relocate mental patients faulty

Recent news reports have said that state hospitals would begin placing patients in private homes (next to yours?) shortly.

What are they thinking about? The streets aren't safe to walk-on now, let alone your yard for your children to play, next to a home where some mental patients are living!

They named six or seven cities, and two of them were Lawrence and Lowell!

Why not spend a little money to fix up our state hospitals and make them homey and comfortable and keep the patients in their own environment. The state hospitals are on the best land in the cities! They are on perfect sites! Metropolitan State sits high on a hill overlooking Boston. Worcester State sits high on a hill overlooking Worcester, both with beautiful grounds.

Three fourths of all mental patients are schizophrenic. Their moods can change in a second.

Let's ask professionals, doctors, nurses, etc. if mental patients should live outside the hospital.

Now is the time to write to your state senators and congressmen to get this stopped *now*!

CHRIS DAIGLE
Lowell

This letter reveals the negative attitudes and irrational fears that people have toward persons with mental illness and these attitudes can be an insurmountable barrier to establishing housing programs for the mentally ill in residential neighborhoods.

I know of two attempts to establish a supervised group home in Lowell that were stopped by irrational neighborhood reactions. In one case derogatory graffiti were written on the proposed residential site such as "Nuts go home!". In both cases the neighbors staged emotionally charged rallys that prevented any meaningful dialogue concerning their stated objections such as property devaluation and the safety of their children. Under these circumstances, political pressures against agencies attempting to establish housing are often the deciding factor forcing the mentally ill out of the better and safer neighborhoods and into neighborhoods that are drug infested and that pose other threats to their welfare.

While these situations do not constitute discrimination against specific individuals, they are symptomatic of society's attitude toward persons with mental illness and can be expected to operate in individual situations as well.

In the area of public services, I would like to inform you of an example of discrimination that occurred almost two years ago and is still going on. Because legal action may be pending, I cannot give names. This situation involves a restaurant which is in close proximity to a day treatment center for persons with mental illness. This restaurant was frequented by a number of the people being served by the day treatment center, until one day, one of their members became disruptive and was rightfully asked to leave the restaurant. However, later that same day when several other members of the day treatment center attempted to get service at the restaurant, they were asked to leave. The owner of the restaurant directed several negative comments toward them as a group and told them that because of the incident that occurred earlier, he would "no longer serve day treatment people again". Now, almost two years later, people who are recognized as being from the day treatment program are still refused service.

In the area of education, another example of discrimination was recently related to me by a person with a history of mental illness. This person was being interviewed for admission to a nursing school and she felt the interview was progressing very satisfactorally until she revealed that she had previously had two hospitalizations for mental illness. The interviewer then immediately informed her that there was no way she would be admitted to nursing school since nursing was a very stressful profession and her psychiatric history would indicate that she would not be able to deal with stress. However, since that interview occurred this person has obtained a B.A. in Liberal Arts and a Masters in Social Work from Boston University.

BEST COPY AVAILABLE

This last example suggests the pressures that people with a history of mental illness are often under when attempting to obtain educational or employment opportunities. Their fear of being rejected soley because they have a history of mental illness causes them to lie about their history. Over time, you can imagine the toll this can take on a person's integrity and the effect that it can have on a person's dignity and self-worth which is being constantly erroded by the effects of stigma and discrimination.

I hope that the "Americans with Disabilities Act of 1988" will help deal with some of these areas of discrimination against persons with mental illness that I have stated.

Sincerely,

Laurence E. Urban

Laurence E. Urban
Exectuve Director
Renaissance Club, Inc.

Mr. OWENS. Thank you. I want to thank all of the panelists for their testimony.

Our next panel consists of Stephen Cohen, Alan Wein, Peter Myette.

Mr. Cohen, you may begin.

STATEMENT OF STEPHEN COHEN

Mr. COHEN. My name is Stephen Cohen, and I am the co-coordinator for the Men's Project: The AIDS Memorial Quilt, in New England.

I am speaking here not as a representative of that group but more from my experience in working with that group and working with people who have AIDS. I see this bill as being very important to people who are either HIV positive or who have AIDS or some AIDS-related illness because they face discrimination in both housing and jobs. And I have seen it happen; in fact, there are people who might have wanted to speak tonight, but for fear of losing housing, would not be able to do so. I know of instances where people have been evicted by landlords, and when a person is struggling for medical treatment, for acceptance by family and friends, the last thing that person needs to deal with is a situation where there is discrimination in terms of housing or in terms of jobs.

I know there has been a breach of confidentiality with people who were actually HIV positive and who went on later to develop AIDS and subsequently have died, but where they had to file a suit in order to protect their job, in order to retain their job and retain medical insurance that came with the job. So, I would certainly offer my support in terms of including people with AIDS and people who are HIV positive as part of the people who are covered by a bill like this. I think it is an important one and needs support. Thank you.

Mr. OWENS. Thank you. Mr. Wein.

STATEMENT OF ALAN WEIN

Mr. WEIN. I want to thank you for the opportunity to speak before you. I am here today in support of the Americans with Disabilities Act. I am here to tell of the countless ways I have been discriminated against on the basis of my disability, of how I have not been able to participate equally with fellow human beings because there was discrimination taking place.

Discrimination, like the time I wanted to take a healing workshop to heal my mind and was told there were too many inaccessible buildings and bathrooms to accommodate my needs. Or the time I wanted to see a movie with a close friend and was told there was no wheelchair access to the second floor. The many times I simply wanted to use the facilities where a Federal program is housed, such as a U.S. Post Office, but found it inaccessible to me. Or the times that I attended concerts and have been unable to see the artist perform because the area designated for wheelchairs is behind people who constantly stood.

I ask you: Are these instances of the American constitutional promise of liberty and justice for all? Of not being able to gain access to a mass transit station because it was inaccessible to myself and another in a wheelchair. Of the numerous times I was unable to take my daughter to play with other children because there was no public transportation available to me. Of not being able to enter a coffee shop or a restaurant at my own discretion to eat and talk with family or friends.

The constant categorical discrimination that I and millions of others who have disabilities experience on a daily basis is depriving us all of equal participation in mainstream society. And we are here to show strong support for the ADA which would give the 36 million Americans with disabilities a comprehensive civil rights legislation on a scale similar to other civil rights bills of the last decade on the basis of race and sex, national original and religion.

America is supposed to be a beacon to the rest of the planet. I ask you: Is she doing that when she has no law which protects people from instances of categorical discrimination? All people should have the equal right to give input to this Nation of ours. You can no longer discriminate against the disabled population and truly be a great nation. The United States has to have a vision where all Americans have equal access to all of its greatness and it has not had this vision to this date. I present to you that America will not be a truly great nation until it stops discriminating against its disabled population. People with disabilities have countless abilities they have been deprived of contributing to society because of unequal access to the American Dream. This vision can greatly be enhanced by enactment of the Americans with Disabilities Act. Respectfully.

[The prepared statement of Alan Wein follows:]

Americans with Disabilities Act Testimony

I am here today to tell of the countless ways I have been discriminated against on the basis of my disability. Of how I haven't been able to participate equally with fellow human beings because there was discrimination taking place. Discrimination like the time I wanted to take a healing workshop and was told there were to many inaccessible buildings and bathrooms to accommodate my needs. Of the time I wanted to see a movie with a close friend and was told there was no wheelchair access to the second floor. Of the many times I simply wanted to use the facilities of a federal building such as a U.S. Post Office and found it inacessible to me. Of the times I have attended concerts and have been unable to see the artists perform because the area designated for wheelchairs was behind people who constanly stood. I ask you are these instances of the American constitutional promise of liberty and justice for all? Of not being able to gain access to a mass transit station because it was inaccessible to myself and another in a wheelchair. Of the numerous times I was unable to take my daughter to play with other children because there was no public transportation availible to me. Of not being able to enter a coffee shop or restaurant at my own descretion to eat and talk with family or friends. The constant categorical discrimination that I and millions of others who have disabilities experience on a daily basis is depriving us of equal participation in mainstream society. I am here to show strong support for the ADA which will give the 36 million Americans with disabilities a comphrehensive civil rights legislation on a scale similar to other civil rights bills of the last decade on the basis race, sex, national origin and religion.

America is suppose to be a beacon to the rest of the planet. I ask you is she doing that when she has no law which protects people from instances of categorical discrimination? All people should have the equal right to give imput to this nation of ours. We can no longer discriminate against the disabled population and truly be a great nation. The United States has to have a vision where all Americans have equal access to all of its greatness. It has not had this vision to this date. And I present to you that America will not be a truly great nation until it stops discriminating against its disabled population. People with disabilities have countless abilities that they are being deprived of contributing to society because of unequal access to the American dream. This vision can greatly be enhanced by the enactment of the Americans with Disabilities Act.

Respectfully,

Alan Wein

Mr. Owens. Thank you. Mr. Myette.

STATEMENT OF PETER MYETTE, MAYOR'S COMMISSION ON PERSONS WITH DISABILITIES, BOSTON, MA

Mr. Myette. Good afternoon. First of all, on behalf of the mayor, Raymond Flynn, I would like to welcome you to the city. I know you have been here for a long time or a long day. But this is when our turn was.

My name is Peter Myette. I am the acting director for the Boston Commission for Persons with Disabilities and a board member of the Massachusetts Coalition of Citizens with Disabilities. I have been active in advocating for and implementing Federal, State, and city civil rights laws for the past 14 years.

I would also just like to reemphasize what Mr. Cohen said. Americans With Disabilities Act without persons with AIDS included in that act is no American with disabilities act. It is so important that we not exclude in this movement any disability from this act.

Given the City of Boston has included persons with disabilities in its fair housing and human rights ordinance from its inception and the Massachusetts Constitution was amended in 1981 to prohibit discrimination on the basis of disability in any program or activity in the Commonwealth and that the U.S. Congress passed title V of the Rehabilitation Act in 1973, some people may ask why we are here again today. They are certainly not in this room and they certainly have not faced the exclusion, the rejection and the barriers we all know.

Today, persons with disabilities are not only out of the mainstream of society, they are also still outside of the mainstream of the civil rights movement. The laws are not enforced with equal jurisdiction. They are not understood in the private or public sector and investigators shy away from disability cases because they are too hard, too complicated and not reimbursed by the Federal Government.

Some civil rights coalitions in the area do not include persons with disabilities because it is too much for them to handle and the conferences on fair housing exclude disability cases.

While thousands of persons with disabilities have benefitted from the existing laws, millions of Americans with disabilities continue to be discriminated without help, discriminated against without help and it is not because their cases lack probable cause. There is, however, a lack of jurisdiction, a lack of enforcement, a lack of understanding of congressional intent, a lack of interest, and a lack of commitment. But there are no lack of cases.

Time after time as State and local laws come into effect, persons with disabilities and advocate will avoid or use as a last resort Federal investigative cases. Cases that used to be decided at the regional level now go to Washington, DC, for review and approval. And we wait and wait. And while we wait, we see the U.S. Government testifying in cases against our right. I refer you to the Justice Department and the *Alleen* case.

We have watched the U.S. Department of Housing and Urban Development, HUD, sell over 2,000 housing units in Boston last year without the assurances required by Congress in section 504.

While a mother in those units carries her disabled son down three flights of stairs and wonders how she will get him off to school if he gets any bigger or a grandmother in that same neighborhood talks to a neighbor from a second floor because she cannot get out of the building. And these are HUD-owned properties. These are HUD-owned properties with 15 years guaranteed of section 8s and with all the assurances for nondiscrimination on the basis of sex and race, HUD has simply put disability on the back burner.

When I read the Americans With Disabilities Act, I am reminded of past battles, unfulfilled hopes and some important victories. In 1973, the U.S. Congress passed the following words which became law, quote:

"It shall be the function of the board to insure that public conveyances, including rolling stock, are readily accessible to and usable by physically handicapped persons." Section 502. That is on the books today.

Today, 15 years after that law was passed, ADA repeats that promise. We in Boston hope, again, that it will mean the end of special orders to Japan for light rail vehicles designed to exclude persons with disabilities.

[The prepared statement of Peter J. Myette follows:]

**COMMISSION FOR
PERSONS WITH DISABILITIES**

Boston City Hall — Room 708
Boston, Massachusetts 02201
617-725-3682 (Voice/TDD)

RAYMOND L. FLYNN
MAYOR

CHARLES J. SABATIER, JR.
EXECUTIVE DIRECTOR

TESTIMONY BY PETER J. MYETTE
ACTING DIRECTOR
BOSTON COMMISSION FOR PERSONS WITH DISABILITIES
IN FAVOR OF THE PASSAGE OF THE

AMERICANS WITH DISABILITIES ACT

BEFORE THE

COMMITTEE ON EDUCATION AND LABOR
U.S. HOUSE OF REPRESENTATIVES

OCTOBER 24, 1988
BOSTON, MASSACHUSETTS

MEMBERS OF THE COMMITTEE ON EDUCATION AND LABOR:

MY NAME IS PETER MYETTE, I AM THE ACTING DIRECTOR AND DIRECTOR FOR CIVIL RIGHTS OF THE BOSTON COMMISSION FOR PERSONS WITH DISABILITIES, I AM ALSO A BOARD MEMBER OF THE MASSACHUSETTS COALITION OF CITIZENS WITH DISABILITIES. I HAVE BEEN ACTIVE ADVOCATING FOR AND AN IMPLEMENTOR OF FEDERAL, STATE AND CITY CIVIL RIGHTS LAWS FOR PERSON WITH DISABILITIES FOR THE 14 YEARS.

GIVEN THAT:

> THE CITY OF BOSTON HAS INCLUDED PERSONS WITH DISABILITIES IN IT'S FAIR HOUSING AND HUMAN RIGHTS ORDINANCES FROM THERE INCEPTION;
>
> THE MASSACHUSETTS CONSITTUTION WAS AMENDED IN 1981 TO PROHIBIT DISCRIMINATION ON THE BASIS OF DISABILITY IN ANY PROGRAM OR ACTIVITY IN THE COMMONWEALTH; AND
>
> THE U.S. CONGRESS PASSED TITLE V OF THE REHABILITATION ACT IN 1973.

SOME MAY WONDER WHY WE ARE HERE AGAIN TODAY, BUT THE'RE NOT IN THIS ROOM AND THEY HAVEN'T FACE THE EXCLUSION, THE REJECTIONS OR THE BARRIERS THAT WE KNOW TOO WELL.

TODAY PERSONS WITH DISABILITIES ARE NOT ONLY OUT OF THE MAINSTREAM OF OUR SOCIETY, THEY ARE ALSO STILL OUTSIDE OF THE MAINSTREAM OF THE CIVIL RIGHTS MOVEMENT.

THE LAWS ARE NOT ENFORCED WITH EQUAL JURISDICTION. THEY ARE NOT UNDERSTOOD IN THE PRIVATE OR PUBLIC SECTORS. INVESTIGATOR SHY AWAY FROM DISABILITY CASES BECAUSE THEY ARE TOO HARD, TOO COMPLICATED AND NOT REIMBURSED BY THE FEDERAL GOVERNMENT. SOME CIVIL RIGHTS COALITIONS IN THE AREA DON'T INCLUDE PERSONS WITH DISABILITIES BECAUSE ITS TOO MUCH FOR THEM TO HANDLE AND CONFERENCES ON FAIR HOUSING EXCLUDE DISABILITY CASES.

WHILE THOUSANDS OF PERSONS WITH DISABILITIES HAVE BENEFITED FROM THE EXISTING LAWS. MILLIONS OF AMERICANS WITH DISABILITIES CONTINUE TO BE DISCRIMINATED AGAINST WITHOUT HELP AND IT IS NOT BECAUSE THERE CASES "LACK PROBABLE CAUSE".

THERE IS HOWEVER;

A LACK OF JURISDICTION,
A LACK OF ENFORCEMENT,
A LACK OF UNDERSTANDING OF CONGRESSIONAL INTENT,
A LACK OF INTEREST
AND
A LACK OF COMMITMENT.

BUT THERE IS NO LACK OF CASES.

TIME AFTER TIME AS STATE AND LOCAL LAWS COME INTO EFFECT PERSONS WITH DISABILITIES AND ADVOCATES WILL AVOID OR USE AS A LAST RESORT FEDERAL INVESTIGATIVE AGENCIES. CASES THAT USE TO BE DECIDED AT THE REGIONAL LEVEL NOW GO TO WASHINGTON FOR REVIEW AND APPROVAL AND WE WAIT AND WAIT AND WHILE WE WAIT, WE SEE OUR GOVERNMENT TESTIFY IN CASES AGAINST OUR RIGHTS.

WE HAVE WATCHED THE U.S. DEPARTMENT OF HOUSING AND URBAN DEVELOPMENT (HUD) SELL OVER 2,000 HOUSING UNIT IN BOSTON LAST YEAR, WITHOUT THE ASSURANCES REQUIRED BY CONGRESS IN SECTION 504. WHILE A MOTHER IN THOSE UNITS CARRIES HER DISABLED SON DOWN THREE FLIGHTS OF STAIRS AND WONDERS HOW HE GO TO SCHOOL IF HE GETS BIGGER OR A GRANDMOTHER TALKS TO NEIGHBORS FROM A SECOND FLOOR WINDOW, BECAUSE SHE CAN'T GET OUT.

WHEN I READ THE AMERICAN WITH DISABILITIES ACT, I AM REMINDED OF PAST BATTLES, UNFULFILLED HOPES AND SOME IMPORTANT VICTORIES.

> IN 1973 THE U.S. CONGRESS PASSED THE FOLLOWING WORDS WHICH BECAME LAW "IT SHALL BE THE FUNCTION OF THE BOARD ...TO INSURE THAT PUBLIC CONVEYANCES, INCLUDING ROLLING STOCK, ARE READILY ACCESSIBLE TO, AND USABLE BY, PHYSICALLY HANDICAPPED PERSONS." (SECTION 502). TODAY 15 YEARS AFTER THAT LAW WAS PASSED ADA REPEATS THAT PROMISE AND WE IN BOSTON HOPE, AGAIN, THAT IT WILL MEAN THE END OF SPECIAL ORDERS TO JAPAN FOR LIGHT RAIL VEHICLES DESIGNED TO EXCLUDE PERSONS WITH DISABILITIES.

LIVING IN THE AGE OF COMMUNICATION AND TECHNOLOGY WE HAD HOPED TO REACH OUT AND SHARE WITH ONE ANOTHER. SOME OF US SAW TELEVISION AS A DREAM OF THE THE FUTURE OTHERS WERE LEFT OUR OF THAT DREAM, WE SAW COMPUTERS AS OPENING UP EMPLOYMENT BUT SOME EMPLOYERS HAD OTHER IDEAS, OLD IDEAS THE WALLS AND BAGGAGE OF THE PAST THAT SAID ITS TO MUCH TROUBLE TO HIRE PERSONS WHO ARE DEAF OR BLIND EVEN IF WE CAN COMMUNICATE. WE HAD HOPED THAT IN TIME OF TROUBLE WE COULD CALL FOR HELP, AND WHILE WE HAVE 911 THAT RESPONDS TO TDDs, WE KNOW NOT TO GET INTO TROUBLE OR CALL FOR HELP FROM A PAY PHONE, EVEN THOUGH WE HAVE THE TECHNOLOGY TO RESPOND.

TODAY IT IS ALMOST IMPOSSIBLE, IF YOU ARE A STUDENT WITH A DISABILITY, NOT TO GET A DIPLOMA. IT IS ALMOST EQUALLY IMPOSSIBLE TO GET AN EDUCATION. AND WITH EQUAL OPPORTUNITY IN EMPLOYMENT THAT SAYS YOU MUST BE ABLE TO PERFORM THE ESSENTIAL FUNCTIONS OF THE JOB WE NEED EQUAL OPPORTUNITY IN EDUCATION THAT SAYS YOU WERE GIVEN THE CHANCE TO READ AND WRITE AND ADD AND SUBTRACT AND THAT RIGHT WAS GIVEN IN THE COMPANY OF STUDENTS WITHOUT DISABILITIES. TODAY IN MASSACHUSETTS WE HAVE THE 100% RULE AND IT SAYS THAT IN ORDER TO BE APPROVED AS A SPECIAL ED SCHOOL YOU MUST SERVE 100% DISABLED STUDENTS. WHEN WE ASK THE U.S. DEPARTMENT OF EDUCATION IF THIS IS LEGAL THEY SAID THEY WOULD LOOK INTO IT, THAT WAS IN 1983 AND WE'RE STILL WAITING FOR THE ANSWER.

IF IN FACT CHILDREN ARE THE FUTURE, THEN WE ALL MUST LEARN THAT WE ALL GAIN WHEN WE LEARN TOGETHER, AND THERE IS NOTHING SPECIAL ABOUT A STUDENT WITH A DISABILITY AND FOR SURE THERE IS NOTHING SPECIAL ABOUT AN EDUCATION THAT DOES NOT PREPARE US TO WORK AND LIVE IN THE COMMUNITY.

THE AMERICANS WITH DISABILITIES ACT AGAIN PROVIDES US WITH HOPES, DREAMS, PROBLEMS, CHALLENGES AND OPPORTUNITIES. IF WE DO NOT EXCEPT THEM WE WILL CONTINUE TO FACE HIGH UNEMPLOYMENT, SUB-STANDARD LIVING, WASTEFUL SPENDING, FRUSTRATION AND DESPAIR.

I URGE YOU TO MOVE ON THIS BILL, WE CAN NOT AFFORD DELAY, WE MUST PASS ADA.

Mr. OWENS. Thank you, Mr. Myette. We have run out of time. Thank you very much, all the members of the panel.

Our next panel consists of William Fennessee, Jerry Johnson, and Pat Deegan.

Again, I apologize for our time limitations, but we are about to run out of time for this room already. It is very necessary for us to complete our testimony.

Mr. Johnson, do you want to begin?

STATEMENT OF JERRY JOHNSON, NAMES PROJECT NEW ENGLAND

Mr. JOHNSON. Good evening, sir. My name is Jerry Johnson. I am a member of the Names Project New England and Names Project DC. I am also HIV positive, asymptomatic, which means I have no symptoms.

As you can look at me and tell, I am still healthy, intelligent, have all my capabilities and capacity to reason and to carry on a normal decent life. On August 14, 1988, I was working for a company in the Washington, DC. metro area when they learned of my infection and I was immediately dismissed. They told me and I quote: "Your job is no longer needed. You are more of a liability to the company."

Later on that month, the home that I was living in, the landlord found out that I was HIV positive. And my landlord evicted me without notice. I was out with the Project, came out and my things were sitting on the front porch.

Mr. Chairman, I do say that HIV positive and people with AIDS are not lepers. They do not plan to infect the whole world. The education is getting better, but there is still a lot more that needs to be done. We can carry on in society and we can be an asset to society. Our time is limited. I do not feel that we need to have to keep proving ourselves and keep going into court and keep showing the world that we are somebody and that we have our feelings and our rights just as much as everybody else.

Mr. OWENS. Thank you very much. Mr. Fennessee.

STATEMENT OF WILLIAM FENNESSEE, RHODE ISLAND

Mr. FENNESSEE. My name is William Fennessee and I am a certified rehabilitation counselor, national certified counselor. I also have a doctorate in rehabilitation administration and a four-State experience including Texas, Tennessee, Illinois, and Rhode Island.

What I would like to speak to is regarding employment of the disabled people. The Rehabilitation Services Administration funds programs that are not required to have any affirmative duties relative to employment. By this, I am referring to the State rehabilitation agencies, the 6,000 rehabilitation facilities and some 80 or so odd college and university programs.

These programs have no affirmative action requirements whatsoever and, therefore, professional disabled people do not receive good opportunities and they are underrepresented in these programs.

I might also add that with the other two major Federal agencies, such as the Social Security Administration and the Veterans' Administration, of course, the service delivery process includes those individuals that are providing services at the local level to be Federal employees. These agencies include non-competitive placements for disabled individuals. However, at the State level, with the State agencies, with rehab facilities and with the college and university programs, no such requirement exists.

I submit to you that with the 1973 Rehabilitation Act and subsequent amendments have omitted consistently and persistently this reckless disregard for civil rights of disabled people in the main agency that provides services. I say that the Americans with Disabilities Act as it passed, I think this needs to be looked at very closely.

I would like to also add that section 504 of the Rehabilitation Act and its regulations, once upon a time when they first were submitted in 1977, included protection for any individual that complained or testified under the Privacy Act. However, under the current administration any individual that complains or provides testimony must sign an agreement that their name can be given to the respondent. This is a definite problem that will prohibit individuals from complaining and other individuals who are aware of disabled individuals being discriminated against from coming forth.

Likewise, with the Defense Department's current problem with whistle blowers, I think this current practice allows us to inhibit individuals from coming forward.

I would like to close by saying that I think that this has been an omission by the Congress and I wish that they would take action on it.

Mr. OWENS. Thank you very much, Mr. Fennessee. And thank you both for testifying.

Diana Viet, Speed Davis, and Bill Williams.

Diana Viet, Mr. Davis is not here. Marilyn Price-Spivack?

Would you like to begin, Mr. Williams?

STATEMENT OF BILL WILLIAMS, BROCKTON, MA

Mr. WILLIAMS. My name is Bill Williams. I would like to just talk a little bit about discrimination in employment. People with disabilities, they go through verbal "nos" as well as nonverbal "nos," that funny look as they see you in a chair or with braces or crutches. People that do not know anything about disabilities—I am mainly concerned about an awful lot of people who are in the positions to talk for and about people with disabilities. They do not know our feelings. They do not know what we live in, how we live in. And they do not represent us, they cannot. There is an awful lot of people, do gooders, that do help, but I think we not only need this bill to be passed, but we need people with disabilities in an awful lot of decision making slots.

I lost a job—the gentleman just testified a few minutes ago about the Mass Commission on Discrimination. We bought a house in New Bedford. I directed that house. I came down with MS and I was staggering—of course, that is one of the symptoms of MS. They fired me because they said I was drunk. I had not had a drink in 12 years at that time. I went back to school because in that particular field I was working in, they said you had to have a BA or above because they wanted you to be in the third-party building. I went back to school. As I was going to school, I applied for a probation officer's job over in Cambridge. The guy gave me the interview and I went over there. It was coming down more, so, I had a cane. He said, "Your qualifications is good." The second interview was set up.

So, I came back for the second interview and I could not hardly make it at that time. I had crutches. And when I walked in for the second interview he said, "Well, do not call me. I will call you." And he never called me.

Third, I went to school. I got my masters. First, I got a BA and I applied for a job and they said, the third-party building is not going to pay you with a BA. So, I went and got my masters. And I asked—two seconds and I am through. The Department of Rehabilitation would they pay for it? And they said, "No, we will not pay for it." But there was other people there that paid for them with their masters degree. They would not pay for my masters. OK. I got the masters degree. They in turn sent me for a job. The same thing happened. At the same time, I was investigating them because they had no people of color in that office to deal with people with disabilities. They did not give me the job.

As I began to raise hell about that, they in turn hired two people. I applied at Bridgewater in a unit there. They did not have no people of color in that unit. We need this. But we also need people with disabilities to be able to accept decisionmaking positions. Thank you.

Mr. Owens. Thank you very much, Mr. Williams. Ms. Viet. Diana Viet.

STATEMENT OF DIANA VIET, STATE OFFICE OF HANDICAPPED AFFAIRS

Ms. Viet. You probably have heard many, many stories today. I want to tell you about my story. These are our lives, all of our lives. We get up every day and do them over and over and over. I am tired of them. And I am sure everybody in this room is tired of them.

I grew up in Vermont and I moved to Boston about 6 months ago to join the disabilities rights movements here in Boston. I am going to tell you a story that I had not told yet in public but it is very difficult for me to tell.

I grew up in Vermont. I have three sisters and a mother who has been a major influence in my life and have known about the disability laws and equal education to all. So, I have had the opportunity to go to public school and to get a college education but with a lot of work.

About 2 years ago, after I graduated from a 2-year college, I took a year off. That year was very difficult for me, but it also changed my life and what I chose to do in my life. I did not want to live anymore. The first time I graduated from college, I wanted to end my life. I felt like I was not a good person, not a strong person. That reason is because I got up every day and walked down the street and kids stopped playing in the street to look at me. It is because I go to the bank and people stare at me when I am deposit-ing my check, my money that I earn every week. And in that year that I took off—I know that my time is up—but I have something to say. In that time I took off, I met people with disabilities come to Vermont Center for Independent Living and I learned about the disability rights movement. I started telling my story with other people with disabilities like we are doing right here. And I learned what happened in my life and I started using the energy that I have felt other stereotypes had done—have felt about myself, in a positive way towards create change. The Americans With Disabilities Act is one more step to that change. The discrimination that we feel every day is much.

Mr. **Owens**. Thank you very much, Ms. Viet.

Ms. Price-Spivack.

STATEMENT OF MARILYN PRICE-SPIVACK, NATIONAL HEAD INJURIES FOUNDATION

Ms. **Price-Spivack**. Thank you, Mr. Owens. It is not easy to follow Diane.

My name is Marilyn Price-Spivack. I am cofounder of the National Head Injuries Foundation. But more importantly, I am the parent of a severely brain damaged daughter who suffers a multitude of disabilities.

I am not here to talk so much about Debbie as I am to talk about all the victims of traumatic brain injury as they are added to the 36 million disabled Americans.

I am going to focus my short time on one area. And that is access to health care. One of the problems that we perceive and we see and witness and we try to deal with on a daily basis is that many people with disabilities cannot access appropriate health and rehabilitation care which is the presetter of acquiring human services and educational services.

People with traumatic brain injury—it is recognized as a new disability. And I plead with the public policy makers that if we are going to save people and we are going to commit to a heavy-duty up front medical costs, what are we going to do to improve the quality of their lives? We desperately need to begin to address the access to health care and medical services. I think that is probably the most important message that I want to bring: That we are not going to move into the community until we are able to rehabilitate people out of hospitals. And for that, we have a major problem.

Traumatic brain injury brings 60,000 to 70,000 severely disabled people to the population each year. We do not do anything that we should be doing in the area of prevention. We can prevent disabilities and we are not doing a good enough job in that area.

I would plead that this committee with the support of the Americans With Disabilities Act look to the development of those services that will enhance the future for those people who need to find quality in their lives.

In terms of what Diane has just said, we deal at our office with suicide calls on a regular basis, who cannot deal with the discriminations they face. I don't think a week goes by when we don't have a suicide call. The fact that people with disabilities such as this gentleman just referred to you, when you have communications disorders and ataxia, people assume that you are on alcohol, that you are a substance abuser. It is a unique experience to me because I am relatively new to the disability field. I am appalled by the general public's still ignorance as to what disability really means in this country. Thank you.

Mr. OWENS. Thank you very much. Ms. Deegan.

STATEMENT OF PATRICIA DEEGAN, NORTHEAST INDEPENDENT LIVING CENTER, LAURENCE, MA

Ms. DEEGAN. My name is Patricia Deegan and I carry a diagnosis of schizophrenia and have received treatment on both an in-patient and out-patient basis. I am also a clinical psychologist and I am currently working as program director with persons with psychiatric disabilities at Northeast Independent Living Program. I am the president of the Empowerment Sponsoring Committee. And we are working towards organizing a statewide organization of current and former consumers of mental health services.

It is my experience that the most depressive stigma and discriminatory attitude that persons with psychiatric disabilities face is the assumption that what we say about our own experiences is an expression of a disordered mind and can therefore be ignored. The assumption that what we have to say is crazy and can therefore be ignored sets the stage for the whole scale violation of our first amendment right to freedom of speech. Freedom of speech implies the right to be listened to and heard. Once it is known that we have a history of mental illness, our right to be heard and listened to is discriminated against.

For instance, this is a frequent occurrence in medical settings. Carolyn from Hyannis reported to her mental health workers that she was pregnant. She was assumed to be delusional and was ignored. Later, she sought services at the Cape Code Hospital Emergency Room with what was thought to be delusional and was ignored and later that evening, while wandering the streets, she miscarried with serious hemorrhaging.

Louis from Hyannis is mentally ill and mentally retarded. He is elderly and lives in single room squalor. He arrived at the Cape Code Hospital Emergency Room complaining of abdominal pains. He was subsequently discharged with a catheter in place, but was completely untrained and unable to irrigate the catheter due to his arthritic hands. He developed infections and was subsequently hospitalized at the facility for the indigent and poor. By the time he was released from that hospital, he had lost his rented room in the community due to nonpayment of rent and was resigned to existence in a rest home.

In the realm of psychiatric care, persons with psychiatric disabilities are frequently subjected to multiple forms of abuse and discrimination. Paramount among these is the fact that over 20 percent of persons treated with antipsychotic drugs are developing permanent irreversible tarta disconnesia as a result of this drug treatment and we are routinely not presented with consent to treatment forms. And this is a routine practice.

Mr. OWENS. Thank you very much. Our final panel, Ms. Eleanor Blake, Jim Brooks, Eric Griffith. And Mr. Davis, you are here already. Just remain seated. This is our final panel. The management is threatening to throw us out. Literally evict us.

Mr. Jim Brooks, Steve Davis. Eleanor Blake is here.

Ms. BLAKE. I am here.

Mr. OWENS. Mr. Davis.

STATEMENT OF SPEED DAVIS, ASSISTANT DIRECTOR, MASSACHUSETTS OFFICE OF HANDICAPPED AFFAIRS

Mr. DAVIS. Thank you. My name is Speed Davis. I am the assistant director of the Massachusetts Office of Handicapped Affairs. I want to thank you for the opportunity to speak today. I am here representing our director, Jim Black, who is a staunch supporter of the act. The OHA is a statewide——

Mr. OWENS. Excuse me, Mr. Davis.

Would you please close the door? We want to hear our last panelists.

You may continue.

Mr. DAVIS. Thank you. OHA is a statewide civil rights agency for persons with disabilities. We report directly to the office of the Governor and we have a long list of accomplishments which I will submit in our written testimony in the interest of time.

The message of our accomplishments is clear: Massachusetts which served as the cradle of liberty for soon to be born the United States of America has continued to provide leadership in protecting unalienable rights of all individuals to life, liberty and the pursuit of happiness. In spite of the progressive record of the Commonwealth, OHA daily receives confirmation that discrimination based on disability continues to occur.

Last year, our client services program received over 5,000 complaints that reflected some sort of discrimination based on disability. The complaints covered all aspects of a person's daily existence, from housing to employment, to transportation and to education, to architectural and communication accessibility. One woman called because her landlord would not widen the bathroom door to allow passage of a wheelchair. She was forced to crawl on the floor every time she wanted to use the bathroom facilities. Another woman displayed fresh burns on arms from reaching over a hot stove, burners. Her landlord would not provide her with a stove which had front-mounted controls.

Another man cannot get back into his building unassisted because the landlord will not install power opener on the entrance door.

Another man was nearly forced out of his long-time residence when a new landlord decided he did not like tenants with wheelchairs.

We regularly talk to individuals who have been forced to turn down job offers or have been fired or have otherwise left jobs because they could not arrange reliable transportation.

A young man with cerebral palsy was fired from his job as an elevator operator when his employer was told by a so-called rehab professional that it was unsafe for people with CP to work around electricity.

We can also go beyond individual cases for proof that disability-based discrimination still exists. We know from recent surveys that nearly 1 million people in Massachusetts have a disability. Half of them have not graduated from high school, nearly twice the percentage of the population as a whole. Half of the working aged individuals with disabilities are not even in the labor force, twice the percentage of the population as a whole, despite the Massachusetts unemployment level is under 3 percent. The majority of them have incomes below the poverty line, half again as many as the total population. Over 50,000 live in homes having one or more architectural barriers.

[The prepared statement of Speed Davis follows:]

AMERICANS WITH DISABILITIES ACT OF 1988

TESTIMONY OF SPEED DAVIS
ASSISTANT DIRECTOR, OFFICE OF HANDICAPPED AFFAIRS
BOSTON, MASSACHUSETTS

OCTOBER 24, 1988

I am Speed Davis, Assistant Director of the Massachusetts Office of Handicapped Affairs and I thank you for the opportunity to speak today. I am here today to represent our director, Jim Gleich, who is a staunch supporter of the Americans with Disabilities Act of 1988.

OHA is a statewide civil rights agency for persons with disabilities across the Commonwealth. We report directly to the office of the Governor. The list of our accomplishments and of the Commonwealth, is a long one.

The list includes:

1. Issuance by Governor Michael Dukakis in 1984 of an Executive Order that embodies the principles of the Americans with Disabilities Act.
2. Establishment and enforcement of a strong statewide architectural access code.
3. Passage of laws prohibiting discrimination against persons with disabilities in employment and public accommodations.
4. Implementation of the nation's first comprehensive health insurance program for children and adults who have disabilities.
5. Establishment of the nation's first program to provide continuing education and training to disabled youth who are losing their entitlement to special education.
6. Establishing the nation's first special education program guaranteeing the rights of children with

BEST COPY AVAILABLE

disabilities to a free and appropriate public education in the least restrictive environment. This program became the model for Public Law 94 - 142, the federal Education for All Children Act.

The list goes on, but the message is clear: Massachusetts, which served as the cradle of liberty for the soon-to-be-born United States of America, has continued to provide leadership in protecting unalienable rights of all individuals to "Life, Liberty, and the pursuit of Happiness."

However, in spite of the progressive record of the Commonwealth, OHA daily receives confirmation that discrimination based on disability continues to occur. Last year, our Client Services Program received over 5,000 complaints that reflected some sort of discrimination based on disability from people with disabilities. The complaints covered all aspects of a person's daily existence, from housing and employment, to transportaiton and education, and to architectural and communication accessibility.

One woman called because her landlord wouldn't widen the bathroom door to allow passage of her wheelchair. She was forced to crawl on the floor everytime she wanted to use the bathroom facilities. Another woman displayed burns on her arms from reaching over hot stove controls. Her landlord would not provide her with a stove which had front mounted controls. Another man can't get back into his building unassisted because the landlord won't install a power opener on the entrance door. A man was nearly forced from his long-time residence when a new landlord decided he didn't want any tenants who used wheelchairs.

We regularly talk to individuals who have been forced to turn down job offers, or who have been fired, or who otherwise left jobs because they couldn't arrange reliable transportation. A young man with cerebral palsy was fired from his job as an elevator operator when his employer was told by a so-called rehabilitation professional that it was unsafe for people with CP to work around electricity.

We can also go beyond individual cases for proof that disability-based discrimination still exists. We know from recent surveys that nearly one million people in Massachusetts have a disability. Half of them have not graduated from high school, nearly twice the percentage of the population as a whole. Half of the working age individuals with disabilities are not even in the labor force, twice the percentage of the population as a whole, despite the fact that the Massachusetts unemployment level is under 3%. A majority of them have incomes below the poverty line, half again as many as the total population. Over 50,000 live in homes having one or more architectural barriers.

We don't have to look far to understand why people with disabilities are in such desperate straights. Since the time of Christ, and probably before, people with disabilities have been systematically denied the opportunity to take control of their own destinies. The dominant religion of the times have preached a gospel of charity and paternalism toward people with disabilities. We were portrayed as unfortunate, helpless individuals who needed looking after by our more fortunate bretheren. This attitude still exists today, as exemplified by the Jerry Lewis Telethon. No wonder they don't think we can do the job!

But that is beginning to change. Those of us with disabilities are beginning to demand that attitudes and practices change, that we gain control of our lives. The Americans with Disabilities Act of 1988 exemplifies the change. The Act was drafted by disabled people, for disabled people. It recognizes the broad pattern of discrimination which exists today, and proposes a broad range of measures to correct the problem.

But, best of all, it establishes, once and for all, that equal opportunity for people with disabilities is no longer the "charitable, kind" thing to do: it is a right, guaranteed by the same constitution that guarantees the rights of blacks, Asians, women, and all other groups that are not part of the power establishment. For too long we have not only not been able to sit in the front of the bus, we haven't been able to even get on the bus! For too long, we have not only not been able to use the "white" bathroom, we haven't been able to use any public bathrooms. This bill will change that.

The Americans with Disabilities Act will remove physical and attitudinal barriers that confront us. It will give control of our lives to us. It will move us from being objects of charitable acts to being self-determining individuals living in dignified independence.

The management and staff of the Office of Handicaped Affairs is committed to passage of the Americans with Disabilities Act of 1988 as a reaffirmation and extension of the progress we have made in Massachusetts. We will work long and hard for its passage.

In closing, I thank the House Committee on Select Education for coming to New England and listening to our stories. We have heard ample proof today that discrimination based on disability flourishes. Together we can, and must, put an end to it.

Mr. OWENS. Thank you, Mr. Davis. We have run out of time. Mr. Brooks.

STATEMENT OF JAMES BROOKS, PARALEGAL, DISABILITY LAW CENTER

Mr. BROOKS. Thank you for the opportunity of testifying here. My name is James Brooks. I am a paralegal at the Disability Law Center. We provide legal services to disabled people.

The significance of this legislation exists at different levels. For those of us who work at the Disability Law Center, this particular bill will afford our clients another level or layer of protection when all other recourse has failed.

I firmly believe that as an individual who faces discrimination on a day-to-day level, there can never be too much protection. One cannot put a price tag on freedom.

Day in and day out, we see clients whose lives will probably have been profoundly changed if this bill had existed. For instance, we have had an elderly couple who are mentally ill and were seeking a home interest loan. However, due to discriminatory attitudes, they were denied that loan. Or there was a homeless person with AIDS who was being denied public housing due to people's primitive values towards people with AIDS and due to the refusal to perceive this person as being part of the disability community.

Although we were successful in advocating for that elderly couple and that homeless person with AIDS, I cannot help but wonder if we would have —if we had already had a civil rights bill in place, would those two cases of injustice have existed.

In preparing this last night, a friend of mine called who is a disabled friend of mine and we talked about the real meaning of this whole thing. The real meaning beyond the fact of getting up and relating horror story after horror story about what it is to live day to day and face oppression. And she told me something very significant which I will want to pass on. She said that what this bill really means is that a person in a wheelchair will not have to, when they need to get on a train, have to go down an elevator that is usually not working, unsafe or smells. Or they will not have to, when they cannot get on a train, have to wait two hours for a cab that will not stop because the driver thinks it is too inconvenient to put you in his cab. Or for a person who when they complete their college education or their high school education has nowhere to turn and feels that the only recourse is to commit suicide. That is what this legislation really means.

Mr. OWENS. Thank you, Mr. Brooks.

Ms. Blake.

STATEMENT OF ELEANOR BLAKE, FITCHBURG, MA

Ms. BLAKE. Congressman Owens, committee members and all those present, good afternoon. My name is Eleanor Elizabeth Crow Blake, better known as Betsy. I am a victim of manic depression. I am a mental health advocate and I am a graduate student in rehabilitation counseling, specializing in psychiatric rehabilitation at Boston University.

As a mentally ill person, I have been discriminated in all areas of life, including socially. First of all, I live in poverty. This is because I need to get graduate training in order to be qualified for my chosen profession, yet, I cannot go to school and work, too, due to the amount of stress that would be placed on me and, thus, endanger my mental health. I have been discriminated against in the work place. I have often filled out job applications which ask the illegal question, "Have you ever had an emotional illness?" That has nothing to do with whether or not you can perform the job.

Gaps in work history is one of the biggest nemeses for mental health clients. In a job interview, I was repeatedly asked about these gaps. One time the interviewer pursued it with extreme, very annoying persistence, even though I told her that I would rather not talk about it. She kept saying, "It will not affect your chances to get hired." Finally, I gave in. I did not get the job.

I had another problem with my most recent employer, an activities director at a local nursing home. I was hired as an activities assistant. During that time, I never divulged the fact that I was mentally ill or what medications I was taking, fearing I would not get or retain the job. But after a year, my medication was reduced and changed. And I became actively mentally ill, again. I had been a success at the job, but my supervisor kept saying over and over: "Why didn't you tell me? Why didn't you tell me what medications you were taking?" Again, this was done obnoxiously.

It soon became clear by insinuations and stalling that I would not be rehired.

From 1981 to 1986, I was majoring in human services at Fitchburg State College. The human services major policy is that a person has to be quote/unquote, psychologically fit in order to graduate from their program. I had a straight A average both in the program and in general, but because I had to leave the college for hospitalization in our local state hospital, I was deemed not quote/unquote, psychologically fit, and bounced from the program. There was also talk of preventing me from graduating from college at all. But I spoke out and was allowed to. I had to switch my major and therefore take additional courses. I graduated in 1987, summa cum laude with a grade point average of 3.82.

Of course, in most cases of discrimination in work or education, there is no proof. There never is any proof, but the result is the same. I have a lot more to say, but I will give it in my report.

[The prepared statement of Eleanor C. Blake follows:]

ELEANOR "BETSEY" C. BLAKE

OCTOBER 24, 1988

TESTIMONY FOR THE CONGRESSIONAL HEARING
ON THE AMERICANS WITH DISABILITIES ACT OF 1988
BOSTON, MASSACHUSETTS

Congressman Owens, Committee Members, and all those present, Good Evening.

My name is Eleanor Elizabeth Crow Blake, better known as Betsey. I am a victim of manic-depression, a physical, genetic chemical imbalance of the brain. I am an active Mental Health Advocate who has served on the national, state, regional, and local levels. I am an Elected Representative (two from each state) for The National Mental Health Consumer Association and Treasurer of The Empowerment Sponsoring Committee, helping to support M*POWER, a statewide organization run by and for mental health consumers. I am doing well as a graduate student in Rehabilitation Counseling, specializing in Psychiatric Rehabilitation, at Boston University. This program is nationally recognized. I also have an extensive work history.

As a mentally ill person, I have been discriminated against in all areas of life, including socially. First of all, I live in poverty. This is because I need to get graduate training in order to be qualified for my chosen profession, Mental Health Advocate. Yet I cannot go to school and work too, due to the amount of stress it would place on me and thus endanger my mental health.

I have been discriminated against in the workplace. I have often filled out job applications which asked the illegal question, "Have you ever had an emotional illness?" That has nothing to do with whether or not you can perform the job. Gaps in work history is one of the biggest nemeses for mental health clients. In job interview, I was repeatedly asked about these gaps. One time, the interviwer pursued it with extreme, very annoying persistence, even though I told her that I would rather not talk about it. She kept saying, "It will not affect your chances to get hired." Finally I gave in. I did not get the job.

I had another problem with my most recent employer, an Activities Director at a local nursing home; I was hired as an Activities Assistant. During that time I never divulged the fact that I was mentally ill, or what medications I was taking, fearing that I would not get or retain the job. But after a year my medication was reduced and changed and I became actively mentally ill again. I had been a success at the job, but my supervisor kept saying over and over,"Why didn't you tell me? Why didn't you tell me what medications you were taking?" Again, this was done obnoxiously. It soon became clear, by insinuations and stalling, that I would not be rehired.

From 1981 to 1986 I was majoring in Human Services at Fitchburg State College. The Human Services major policy is that a person has to be "psychologically fit" in order to graduate from their program. I had a straight A average, both in the program and in general, but because I had to leave the college for

BEST COPY AVAILABLE

hospitalization to our local state hospital, I was deemed not "psychologically fit," and bounced from the program. There was also talk of preventing me from graduating from college AT ALL. But I spoke out and was allowed to. I had to switch my major and therefore take additional courses. I graduated in 1987 summa cum laude with a grade point average of 3.82.

Of course, in most cases of discrimination in work or education, 'there is no "proof." There never is any "proof." But the end result is the same. Qualifications don't matter. Readiness and willingness to do the work don't matter. Proven academic talent or performance doesn't matter.

I experienced the most grievous and heinous discrimination of all as a patient at Worcester State hospital, nine times between 1980 and 1988, for periods of time ranging from two weeks to two months. Worcester State has a federal lawsuit against it, which I am involved in and has never been completely resolved.

Allow me to read from my testimony of June 9, 1988, for the state hearing investigating the many recent deaths, and abuse and neglect at Worcester State Hospital.

To Lose Yourself

Our inquiry today is into the many recent actual deaths at Worcester State; but let us not forget the Living Death that patients go through there every day.

During the time I spent at Worcester State Hospital, I consistently received minimal, custodial, neglectful, abusive, or no care. My human rights were often violated. Much of this poor treatment was due not only to poor training, but to poor attitudes on the part of the staff. Let me describe a few "situations" I and others throughout the hospital had to endure. I was punished not because I met the supposed benchmark of being a physical harm to myself or others, but because attendants perceived me as an irritant.

Firstly: repeated, unecessary seclusions, often for endless hours (sometimes missing meals), usually with nothing in the cold room except ceramic-tiled walls (which are great for people who do want to hurt themselves), no handle on the inside of the door, which was often locked with virtually no monitoring, and no means of communication. Prisoners in this respect had it better than we, for they always had access to toilet facilities, whereas in our seclusion rooms there were none, causing at best an unpleasant situation.

I have been repeatedly restrained with four-point restraints - which means that you are splayed and your arms and legs are tied to the four corners of a bed - straightjackets, and straightjackets combined with four-point restraints.

I was also routinely forcibly injected with extremely sedating medications. The typical method for doing this was for six attendants to grab and restrain me, even when I agreed, while a nurse jabbed the needle into my rear end. This caused an excruciating pain. I was most often severely overmedicated into a stupor, and many different medications were tried on me. I began to feel like a human guinea pig. Improper dosages and types of medications were given to me upon several discharges, almost sending me back to the hospital.

T.V. and smoking were the only planned activities on 3A, until recently the admission ward for the Fitchburg-Leominster Unit. Smoking was encouraged as free cigarettes were handed to the patients. Ventilation was poor, so the air on the ward assumed a smoke-filled haze. T.V. was on all day from 6 A.M. to midnight, a constant annoyance and source of anger for many, including me.

At least prisoners have the right to fresh air and sunshine, whereas we mental health patients had to "earn" it through the privelege system. Thus, many patients vegetated for weeks on end in smoke-filled wards, never experiencing these precious, health-giving rights.

I can honestly say that virtually *never* did I hear an attendant or any other staff member use a common sense or caring approach when a patient was in trouble, for example, putting an arm around the person and saying, "What's wrong?", or even, "How can I help you?" Instead, we were locked up, had a Mayday called on us, etc. In fact, believe it or not, I was informed by a staff member that the attendants had been specifically told *not* to speak with the patients. Indeed, staff seldom interacted at all with patients, except to punish them.

The worst and certainly the most shocking thing that happened while I was there was a brutal rape. The men and women are all on one ward with no doors or security between them. A young man who was a repeat offender rapist came onto Ward 3A and, according to what an attendant later told me, wanted to rape a woman badly and therefore specifically asked the attendants to watch out for him. But they didn't. At suppertime he entered one of the seclusion rooms where an older woman had been placed, again not monitored by staff, and raped her. When she ran down the hall, wailing and totally confused, her nightgown soaked with blood, I knew the sharp fear of being where I was. The police came and said angrily, "We'll get him this time," while taking many photos of the evidence. To what avail. Less than two months later, while walking with my husband Bob in Fitchburg, I saw the rapist nearby, sporting a teenage girl on either arm.

Worcester State Hospital literally gave me terrifying nightmares, yet what I have described is only the tip of the iceberg. These personal experiences dehumanized, degraded, and humiliated me. Perhaps these problems might have been easier for me to deal with if I had been informed of my legal rights, as the hospital claims to do, but in actuality never does.

The conditions and atmosphere at Worcester State during the time that I have been there have been unmistakably unhealthy, oppressive, and stultifying. In terms of where our tax dollars are going, a staff member informed me that presently money is being put into the building, but not treatment or consulting. I would venture to say that such conditions exist in many other state hospitals across the country; some are probably even worse.

The notion of a hospital is a great one: to cure, and to help people beome well and whole again. But, somehow, the concept of the hospital for the mentally ill has become lost, and confused with the notion of prison. Conditions in prison are better in some ways than in many mental hospitals. For we mentally ill have committed NO CRIME. Most state mental hospitals are based on a system of reward and punishment, not care or health. If you behave in the way that the staff wants, you are rewarded. If you do not, you are punished. It is a system geared for the convenience and expediencey of the staff.

It is hard enough to deal with a devastating illness which, for me and too many, has robbed us of our young adulthood. Add to all this the abusive, often cruel, attitudes and treatment many of us have received at the hands of unscrupulous state hospitals, and the burden is almost too much to bear.

We hurt enough as it is. Stop imprisoning us, and help us! Let's start with the treatments of LOVE and CARE.

Thank you for your time, and listening.

Mr. **Owens**. Thank you very much. Please submit your written testimony.

It has been a long day, Mr. Griffin, and you are the final panelist.

Mr. **Griffin**. Mr. Owens, there you have it. There you have it. There is nothing more I can say. Our people are dying. Our people crying. Our people are beginning to get mad. And our people have a dream. And our people expect that the promise of the Constitution will be kept for people with disabilities. And I thank you for your contribution today for keeping that promise and make a commitment on behalf of us all to work with you in the future to keep that promise.

In May, people with disabilities from all over this country recognized your unique courage and compassion and since May, when we met in Washington and I met you there, you have done nothing but to further validate and bear out our faith and confidence and appreciation in you and the subcommittee as a partner in our struggle to make the dream of the Constitution come true for people with disabilities.

Since May, I have been carrying this around for you. And, today, I am going to give it to you. I thank you, again, on behalf of everyone here today and the thousands of people who were not able to come here today but who will join with me and with you in our fight next year to pass the Americans With Disabilities Act.

[Presents plaque.]

[Applause.]

Mr. **Owens**. Thank you very much.

We very much appreciate your faith in the whole process of government. We pledge ourselves to do everything possible to deliver, to make sure this bill is passed as it is. Thank you very much. The hearing is now adjourned.

[Whereupon, at 5:37 p.m., the subcommittee was adjourned.]

[Additional material being maintained in subcommittee files was submitted by the following: Audet, Patty; Blanchette-Fine, Christine E., Groton, CT; Bob and Crew; Cobb, Polyxane S., Cambridge, MA; Comegys, Addie and Brock, Wenham, MA: Cordrey, Joseph; Cordeiro, Antone; Ekizian, Charles Milton; Finnerty, Cheryl A., Fall River, MA; Hoff, Joseph K.: Higgins, Andrea (advocate) and Ross, Jim (executive director), Community Partnerships, Inc.; Kaiser, Nolan Dr., professor of philosophy, Central Michigan Unviersity; Mann, Marie, Lowell, MA; McBride, R.K., Lisbon, CT; O'Dell, Jonathan; Oliber, Zackary R., Somerset, MA; Sapei, Sue; Sawzin, Martin, Brookline, MA; Shea, Margaret, Massachusetts Nurses Association; Small, William E., Jr., Mansfield, MA; Smith, Eleanor O., resident, Hillsborough County Nursing Home, Goffston, NH; Strause, David C.; Wallace, Kim D., Augusta branch manager, Alpha One Center for Independent Living; Wallin, Jean, executive director, Community Services Council of Merrimack County; Anonymous No. 1; Anonymous No. 2; and Anonymous No. 3.]

JOINT HEARING ON H.R. 2273, THE AMERICANS WITH DISABILITIES ACT OF 1989

TUESDAY, JULY 18, 1989

House of Representatives,
Subcommittees on Select Education
and Employment Opportunities,
Committee on Education and Labor,
Washington, DC.

The subcommittees met, pursuant to notice, at 9:35 a.m. in Room 2175, Rayburn House Office Building, Hon. Major R. Owens [Chairman] presiding.

Members present: Representatives Martinez, Payne, Hayes, Jontz, Mfume, Hoyer, Bartlett, Gunderson, Ballenger, Smith, and Grandy.

Staff present: Maria Cuprill, Gary Granofsky, Wanser Green, Pat Laird, Laurence Peters, Bob Tate, Eric Jensen, Robert Terry Deshler, Michelle Beck, Pat Morrissey, and Randy Johnson.

Chairman Owens. The joint hearing of the Subcommittee on Select Education and the Subcommittee on Employment Opportunities will come to order.

I will read a portion of my opening statement. The complete statement will be entered into the record.

Chairman Owens. All over the world, from the townships of South Africa and the shipyards of Poland, to the students in Tiananmen Square in China, people who aspire to a better life look to the image of American democracy as their guiding star.

As Americans, it is our duty to work harder to guarantee that this image more and more becomes reality. At the same time, let us also work harder to maintain our leadership role, to extend the parameters of our democracy, to expand the scope of civil rights and human rights enjoyed by all of our citizens.

Today our immediate focus is on the launching of a comprehensive effort to reaffirm, expand, and more explicitly, delineate the rights of American citizens with disabilities. When we resolve to fully use the Federal Government's authority and resources to better protect and expand the rights of any group, we stimulate the processes of the empowerment within that group.

The release and recognition of new skills, talents, and new leadership will greatly enrich the fabric of our society. The nation's wealth of human resources will be greatly increased by this empowerment of people with disabilities.

A civilized and moral government which is also seeking to enhance its own self-interest must strive to maximize the opportunities for educational development, equal access and productive employment of all of its citizens.

This Americans with Disabilities Act is a far-reaching and complex legislative initiative. Many parts of the Act will require lengthy, technical discussions. At subsequent hearings, we will review formidable concepts of proposals.

Our purpose today, however, is to emphasize the fact that this Bill is first and foremost a civil rights initiative, a human rights initiative. There are many who will oppose this Act and condemn its basic thrust as being too far-reaching and too great a burden for government.

We must remember that conservatives of this same kind oppose the protection of the rights of laborers, they opposed Equal Rights for Women. They fought furiously against full civil rights for African Americans.

Disabilities Right's leaders understand that their struggle would be no less. Greater than all of the physical barriers are the barriers of entrenched attitudes and the silent insistence that people with disabilities should be grateful for minimal government protection and assistance.

The parallels with the civil rights movement constitute similarities that do not frighten, but instead, inspire the 43 million strong community of people with disabilities residing in every state and spread through every congressional district in the nation.

Forty-three million citizens in democratic America do not need to beg for anything. The Americans with Disabilities Act is the product of a new movement within the disability community. The spirit of the revolution of deaf students at Gallaudet University in the spring of 1988 is embodied in this Act.

This is a document which does not beg. Strong demands are made here; a noble trumpet is sounded here. In the months ahead as we fight for the passage of this long overdue legislation, we welcome the enlistment of all the soldiers who march under the rainbow banner of human rights.

The power, the solidarity, the technical assistance, the negotiating skills, and the ability to inspire; these qualities from all who have contributed to the legacy of civil rights and human rights must now come to the aid of the last of those who have been left out.

With the effect of assembly to support these forces, we have no doubt that this legislation can be passed. We shall overcome.

[The prepared statement of Hon. Major R. Owens follows:]

OPENING STATEMENT OF MAJOR R. OWENS, CHAIRMAN
SUBCOMMITTEE ON SELECT EDUCATION
JOINT HEARING ON THE AMERICANS WITH DISABILITIES ACT
JULY 18, 1989

ONE HUNDRED AND SEVENTY-EIGHT YEARS FOLLOWING THE BIRTH OF OUR NATION, AND AFTER TREMENDOUS STRUGGLE, TURMOIL, SUFFERING, AND THE QUIET AND NOT SO QUIET VIOLENCE THAT CHARACTERIZES THE OPPRESSION OF A MINORITY GROUP, OUR COUNTRY PASSED LEGISLATION ESTABLISHING THE CIVIL RIGHTS OF AFRICAN AMERICANS AND OTHER MINORITY GROUPS. NOW, TWENTY-FIVE YEARS AFTER THE PASSAGE OF THE CIVIL RIGHTS ACT OF 1964, 43 MILLION AMERICANS WITH DISABILITIES ARE DEMANDING THAT THEY, TOO, BE GRANTED FULL CIVIL RIGHTS PROTECTIONS UNDER THE LAW.

THERE ARE MANY PARALLELS TO BE DRAWN BETWEEN THE STRUGGLE FOR CIVIL RIGHTS FOR PERSONS WITH DISABILITIES AND PAST CIVIL RIGHTS STRUGGLES. THEY ARE FUELED BY A SIMILAR BELIEF IN THE AMERICAN DREAM THAT MARTIN LUTHER KING EXPRESSED BEST WHEN IN A 1961 COMMENCEMENT ADDRESS HE REMINDED HIS AUDIENCE: "I CAN NEVER BE WHAT I OUGHT TO BE UNTIL YOU ARE WHAT YOU OUGHT TO BE. YOU CAN NEVER BE WHAT YOU OUGHT TO BE UNTIL I AM WHAT I OUGHT TO BE. THIS IS THE WAY THE WORLD IS MADE. I DIDN'T MAKE IT THAT WAY, BUT THIS IS THE INTERRELATEED STRUCTURE OF REALITY. JOHN DONNE CAUGHT IT A FEW

CENTURIES AGO AND COULD CRY OUT, 'NO MAN IS AN ISLAND ENTIRE OF ITSELF; EVERY MAN IS A PIECE OF THE CONTINENT, A PART OF THE MAIN ...ANY MAN'S DEALTH DIMINISHES ME, BECAUSE I AM INVOLVED IN MANKIND, AND THEREFORE NEVER SEND TO KNOW FOR WHOM THE BELL TOLLS; IT TOLLS FOR THEE.' IF WE ARE TO REALIZE THE AMERICAN DREAM WE MUST CULTIVATE THIS WORLD PERSPECTIVE."

H.R. 2273, THE AMERICANS WITH DISABILITIES ACT OF 1989, REPRESENTS A COMPREHENSIVE APPROACH TO ALLOWING MILLIONS OF DISABLED AMERICANS TO ENTER THE MAINSTREAM OF AMERICAN LIFE. NO PIECE OF DISABILITY LEGISLATION THE CONGRESS HAS EVER CONSIDERED WOULD APPROACH THE IMPACT WHICH THE AMERICANS WITH DISABILITIES ACT WOULD HAVE IN ESTABLISHING A NATIONAL COMMITMENT TO THE KINDS OF CIVIL RIGHTS PROTECTIONS ENJOYED BY OTHER MINORITY GROUPS AND WHICH WE TAKE TO BE FUNDAMENTAL TO FULL CITIZENSHIP RIGHTS.

UNDER CURRENT LAW, SECTION 504 OF THE REHABILITATION ACT OF 1973 PRECLUDES RECIPIENTS OF FEDERAL FUNDS, EXECUTIVE BRANCH AGENCIES, AND THE POSTAL SERVICE FROM DISRIMINATING AGAINST INDIVIDUALS WITH DISABILITIES. THE RESULTANT GAPS LEFT IN OUR NATION'S CIVIL RIGHTS UMBRELLA LEAVE MILLIONS OF DISABLED AMERICANS WITHOUT LEGAL PROTECTIONS SO THAT THEY ARE VULNERABLE TO EXCLUSION FROM EMPLOYMENT OPPORTUNITIES, ACCESS TO PUBLIC ACCOMMODATIONS AND TELECOMMUNICATIONS NETWORKS, AND TRANSPORTATION SYSTEMS.

THOSE DISABLED AMERICANS WHO SUCCEED IN ENTERING THE MAINSTREAM DO SO MORE IN SPITE OF, NOT BECAUSE OF, THE LEVEL OF SOCIETAL WISDOM IN ENABLING THEM TO LIVE FULLY IN OUR SOCIETY. ORDINARY CITIZENS ARE SURPRISED TO LEARN THAT PEOPLE WITH DISABILITIES DO NOT HAVE FULL CIVIL RIGHTS PROTECTIONS IN THIS COUNTRY. WE HAVE THE OPPORTUNITY IN THIS CONGRESS TO PUT THE UNITED STATES GOVERNMENT ON RECORD AS HAVING MADE AN UNEQUIVOCAL COMMITMENT: THAT NO LONGER IN THIS SOCIETY WILL WE INJURE OUR FELLOW DISABLED CITIZENS AND OURSELVES; THAT NO LONGER WILL WE ROB OURSELVES OF THE CONTRIBUTIONS TO CIVIC AND ECONOMIC LIFE WHICH 43 MILLION DISABLED AMERICANS HAVE TO OFFER; THAT NO LONGER WILL WE TOLERATE THE INJUSTICE AND WASTED HUMAN POTENTIAL THAT AMERICANS WITH DISABILITIES SUFFER BECAUSE WE DO NOT PROVIDE THEM WITH THE CIVIL RIGHTS PROTECTIONS WE UNDERSTAND AS NECESSARY FOR ALL OUR CITIZENS.

AT ISSUE IS WHETHER WE WILL RESPOND TO THE CHALLENGES WE FACE BY MAINTAINING AND IMPROVING THE QUALITY OF OUR LIFE AND OUR STANDARD OF LIVING, OR WHETHER WE WILL WILT IN THE FACE OF THESE CHALLANGES. I BELIEVE THAT WE CAN AND THAT WE WILL SUCCESSFULLY TACKLE THESE CHALLANGES ONLY TO THE EXTENT THAT WE TREASURE ALL HUMAN LIFE IN OUR SOCIETY, THAT WE CREATE A SOCIETY GEARED TO THE FULL ENHANCEMENT OF THE HUMAN POTENTIAL OF ALL OF OUR CITIZENS, THAT WE EXPAND HOPE AND CREATE OPPORTUNITY FOR INDIVIDUALS INSTEAD OF PURSUING POLICIES WHICH IMPLICITY REGARD MANY HUMAN LIVES AS

DISPOSABLE. WE NEED TO HAVE EVERYONE PULLING TOGETHER AND CONTRIBUTING IN WHATEVER WAY THEY ARE ABLE IF WE ARE GOING TO THRIVE IN THE DIFFICULT TIMES THAT LIE AHEAD.

FOR 43 MILLION AMERICANS, WE CAN BEGIN TO UNLOCK DOORS OF HOPE AND OPPORTUNITY AND DIGNITY THROUGH PASSAGE OF A STRONG AND EFFECTIVE AMERICANS WITH DISABILITIES ACT. IN DOING SO, WE RESPECT AND HONOR THE GIFTS, TALENTS, AND CONTRIBUTIONS THAT PEOPLE WITH DISABILITIES ALL HAVE TO MAKE IE WE ONLY REMOVE THE BARRIERS AND SIMPLY LET THEM LIVE THE FREEST, THE MOST INDEPENDENT, THE MOST DIGNIFIED, AND THE MOST SOCIAL LIVES THEY CAN LIVE.

THIS IS LEGISLATION THAT A MEMBER OF CONGRESS CAN SUPPORT WITH HIS HEAD EQUALLY AS WITH HIS HEART. YOU DON'T NEED TO BELIEVE, AS I DO, THAT DISCRIMINATION AGAINST PEOPLE WITH DISABILITIES IS MORALLY WRONG AND HAS NO PLACE IN OUR SOCIETY OR ITS LAWS, IN ORDER TO SUPPORT THIS LEGISLATION. YOU DON'T EVEN NEED TO BELIEVE IN A COMPASSIONATE AND JUST SOCIETY FOR ALL OF OUR CITIZENS, AS I DO, TO VOTE FOR THE ADA BILL. THE FEDERAL GOVERNMENT SPENDS ONE IN TWELVE TAX DOLLARS ON PROGRAMS FOR PEOPLE WITH DISABILITIES EVEN AS EIGHT MILLION OF OUR DISABLED CITIZENS NOT IN THE WORK FORCE WANT TO ENTER IT. AS THE BABY BOOM GENERATION AGES, SMALLER POOLS OF AVAILABLE LABOR MEAN THAT EMPLOYERS ALREADY ARE TURNING INCREASINGLY TO PEOPLE WITH DISABILITIES TO FILL THEIR MANPOWER REQUIREMENTS. THE DEMOGRAPHIC TRENDS ARE UNMISTAKEABLY

CLEAR; THE CURRENT DESPERATION ON THE PART OF MANY EMPLOYERS FOR QUALIFIED WORKERS IS LIKELY TO BE EXACERBATED IN THE COMING YEARS AS THE REPORT, OPPORTUNITY 2000, PRODUCED BY THE LABOR DEPARTMENT, INDICATES.

VICTOR HUGO ONCE SAID THAT THERE IS NOTHING MORE POWERFUL IN ALL THE WORLD THAN AN IDEA WHOSE TIME HAS COME. THE AMERICANS WITH DISABILITIES ACT IS INDEED SUCH AN IDEA--IT DESERVES SPEEDY PASSAGE.

Chairman OWENS. I yield to the chairman of the Employment Opportunities Subcommittee, Mr. Martinez, for an opening statement.

Mr. MARTINEZ. Mr. Chairman, I have a statement that I would like entered into the record in its entirety. I am anxious to hear from our colleague, Mr. Payne, who is representing Ron Dellums, and, of course, the Rev. Jesse Jackson.

Let me simply say that the issue is not new before us. It has been before us for a couple of sessions now. Hopefully this time we will have more success in passing a bill out. Protecting Americans with disabilities in the private sector and in the private work place, sharing equal access to all people, is something that all Americans should really be striving for.

The opposition to bills like this and to civil rights in general is obviously resistance to change simply because doing it the old way means that the control remains in the hands of a few. I think that there is always a fear from those who forget that their success was due to the fact that there was opportunity provided for them and that that opportunity was not hampered in any way and after they became successful. These few people really didn't want to really reach down and bring anybody along because it might mean that there would be competition for their jobs, I think.

This kind of short sighted thinking doesn't belong in the mainstream of America anymore and it certainly will not enhance opportunities to pull other people into the mainstream. I think we need to realize that this kind of shortsighted thinking really burdens society with supportive payment to people who are discriminated against without a means for self-sufficiency. Their plight is worse than the traditional minority groups in that people with disabilities oftentimes find themselves in that age old bind that handicapped people are not capable of accomplishing what a fully functional person can.

Well, I have news for you. Some people who are physically handicapped regard that as physical challenge rather than handicapped and have been able to accomplish a lot more than people with their full capability. The world is full of examples of that and I don't have to list them here today, but let me say that if we are going to move forward and truly be a country of opportunity for everyone, we need to pass this legislation.

We need to do the things that we haven't done in the past years because there are too many people of conscience out there that are not going to sit idly by while Congress sits and fiddles while Rome burns.

Thank you, Mr. Chairman.

[The prepared statement of Hon. Matthew Martinez follows:]

STATEMENT OF CHAIRMAN MATTHEW G. MARTINEZ, JOINT HEARING ON THE AMERICAN DISABILITIES ACT OF 1989, HR.2273, WITH THE SUBCOMMITTEE ON SELECT EDUCATION, TUESDAY, JULY 18, 1989, 9:30 2175 RAYBURN

THANK YOU CHAIRMAN OWENS.

IT IS INDEED MY PLEASURE TO CO-CHAIR THIS HEARING TODAY ON THE AMERICAN DISABILITIES ACT. I WOULD LIKE TO THINK THAT OUR COMMITTEE IS TAKING THE LEAD ON THIS VITAL LEGISLATION, AND WILL BE THE FIRST COMMITTEE TO MOVE THE BILL ALONG IN CONGRESS.

PROTECTING AMERICANS WITH DISABILITIES IN THE PRIVATE SECTOR WORKPLACE AND ASSURING EQUAL ACCESS TO PUBLIC SERVICES AND ACCOMODATIONS IS A CIVIL RIGHTS PRIORITY WHOSE TIME HAS COME.

LIKE ANY OTHER PART OF OUR SOCIETY, FAILURE TO HARNESS THE FULL TALENTS OF OUR DISABLED CITIZENS, ROBS OUR NATION OF A PRODUCTIVE AND ENTHUSIASTIC HUMAN RESOURCE BASE. THIS NOT ONLY BURDENS SOCIETY WITH SUPPORT PAYMENTS, BUT PERPETUATES A HORRIBLE TRAGEDY OF DESTROYING THE LIVES AND ASPIRATIONS OF INDIVIDUALS WHO SEEK ONLY SELF-SUFFICIENCY AND TO JOIN MAINSTREAM SOCIETY.

THE PRIMARY RIGHTS AND ENFRANCHISEMENT WE ADDRESS TODAY IN THIS LEGISLATION, ARE TO GUARANTEE EQUAL ACCESS TO A GROUP OF CITIZENS WHO HAVE BEEN DENIED THEIR OPPORTUNITY TO ACHIEVE THE AMERICAN DREAM. THEY EXPECT NO MORE NOR NO LESS. WE SHOULD NOT STAND IN THE DOORWAY TO THEIR WANTS.

I LOOK FORWARD TO HEARING FROM OUR ESTEEMED GUESTS TODAY.

Chairman **Owens**. Mr. Gunderson, the ranking member of the Employment Opportunities.

Mr. **Gunderson**. Thank you, Mr. Chairman. First, I want to ask unanimous consent to insert a full statement into the record.

I simply want this morning to share with everyone a personal experience which I think is indicative of the reason that this legislation is, and ought to be, in front of not only these two committees, but the Congress at the present time. Many of you know that I happen to be a member of the Board of Trustees of Gallaudet University. It has been a great honor and privilege. As part of my working with the hearing impaired community, I felt it was important that I provide employment for one of these people in my office.

So, earlier this year, I hired a hearing impaired woman to work in my office. I was back in Wisconsin visiting with my father at the time and indicated to him that I had just hired a deaf woman to work in my office.

My father's response was, "Well, what can she do?" Now, the truth is, in all due respect to all of the staff sitting in this room, she is one of the few people in my office who is not distracted constantly by conversation. I would suggest she probably is a more efficient worker than most of the people in my office, but I think those innocent honest words by my father are indicative of the challenges facing the handicapped community as they seek full employment and participation in today's society.

Obviously the legislation in front of us is significant in its scope and its breath. Obviously, there are some areas where the language has produced some controversy, some questions over the technical intent. I have no doubt between our committee and the other committees that will look at this legislation, we can work those things out.

So, let's start out on a bipartisan commitment to a bipartisan solution to give every handicapped person full opportunities we now enjoy. Thank you.

[The prepared statement of Hon. Steve Gunderson follows:]

Remarks by the Honorable Steve Gunderson (R-WI)

AMERICANS WITH DISABILITIES ACT

Joint Hearing
Subcommittee on Employment Opportunities
Subcommittee on Select Education

July 18, 1989

Mr. Chairman, this morning's proceedings mark the commencement of a journey long overdue. For some time we have been making pledges and promises of our desire to empower the disabled community. Now it is time for us to deliver. Our deliberations will measure our commitment to this important task, and I look forward to working with you in the same spirit that has marked our past deliberations.

As with most discussions we undertake, it is the aim of today's hearing to begin rectifying a wrong and to fill a need in mainstreet U.S.A. I personally believe that some action needs to be taken; that we need to further displace the barriers which prohibit mainstreaming of disabled persons in our society.

There are few things more appropriate for us to do, Mr. Chairman, than to create an environment in which people can empower themselves and realize their dreams. I am reminded of the importance of this cause as I recall the struggle to overcome fears and to realize hopes within the deaf community that were demonstrated in the appointment of Gallaudet University's first deaf president.

The problem that marked Gallaudet's history prior to the appointment of I. King Jordan a year and a half ago pervades America. Our society has been, and in some sense continues to be, insensitive. Whether intended or unintended, insensitivity to culture and situation, and to one's predicament and past history, leads ultimately to the suppression of one's talents and to the oppression of one's God given rights. This should not and cannot be tolerated.

I look forward to today's discussion. Hopefully this morning's witnesses can be candid with us and share new insights. However, while harboring great hopes that our efforts will bear fruit and that we will indeed provide disabled persons the ability to become even more independent and productive, I am concerned about the scope and the ambiguity of the legislation currently framing our discussions. The "Americans with Disabilities Act", while positive in intent, now must be considered fully and carefully prior to enactment into law.

First and foremost I am concerned about pro-litigation and anti-education tilt. I am aware of claims that education is not enough, but concepts such as "potential discrimination," "undue burden," and "reasonable accomodation" are unclear and in need of clarification.

Attention also needs to be given to the costs of proposed legislation. We need to substantiate both the cost of lost tax revenues and increased transfer payments when individuals with disabilities are not accomodated. And we need to equate in the cost of accomodating such persons. Furthermore, I believe we would do well to re-examine the impact of this legislation upon small businesses and rural and small municipalities.

Finally, as we continue this dialogue we must stress consistency with past initiatives. The scope of public accomodation under the present legislation is, in my opinion, unrealistic. Of a similar quixotic shade is the inclusion of "drug-abusers" as disabled persons.

In sum, I am dedicated to legislation that will mainstream disabled persons and help them empower themselves. It is my hope that that legislation will be the "Americans with Disabilities Act." I pledged my willingness to work for an acceptable bill with Mr. Coehlo, and I will continue to work with the bill's new sponsor.

Thank you.

Mr. OWENS. Are there any more opening statements by members? We will proceed then with the statement from the chairman of the Congressional Black Caucus which usually does not support legislation or endorse legislation so far in advance.

However, because of the special nature of this legislation that parallels the civil rights movement, a request was made for their endorsement. I would like to note that all members of the Congressional Black Caucus are on the bill as co-sponsors. Chairman Ron Dellums has sent a statement of support which will be offered by a member of our subcommittee, Mr. Donald Payne.

STATEMENT OF HON. DONALD M. PAYNE, A REPRESENTATIVE IN CONGRESS FROM THE STATE OF NEW JERSEY

Mr. PAYNE. Thank you very much, Mr. Chairman, and to Chairman Martinez. Before I give my statement, I might also mention, similar to Mr. Goodling, that I recently checked into a hotel and the hotel was all booked up, but the front desk manager said that there was only one room left and he apologized that it was a room for handicapped people.

So, once again, we see the stigmatization. We see the fact that people still have a way of making separate other people. The room was an adequate room. As a matter of fact, the room was more desirable than another room, but for this person to have to indicate with an apology that this is a handicapped person's room, I think, once again, shows the uphill battle that we have in this nation.

To our colleagues, Chairman Owens, and Chairman Martinez, the Congressional Black Caucus is pleased to offer testimony before this joint hearing on H.R. 2273, the Americans with Disabilities Act of 1989.

We salute your leadership on this most critical of issues for we come as proponents of a movement, as patriots in this struggle for decency and human dignity. As a member of the House Subcommittee on Select Education, it is an honor and special privilege to have been asked to make this presentation on behalf of the Congressional Black Caucus.

Twenty-five years ago, the Congress of the United States gave America a vehicle which changed the course of history. The passage of the 1964 Civil Rights Act made justice and morality the cornerstones of American democracy. Today we begin another trek toward equality.

Many have traveled a tortuous road in coming to this moment and on their behalf this Congress shall make critical decisions which will determine the quality of their lives far into the future.

This institution stands on the threshold of infinite possibilities, and we must not be reactive nor have historians write that we sat at the tail end of this struggle for justice. Rather, it is our duty and the commitment of the Congressional Black Caucus to champion and challenge this Congress to protect and advance the rights of those who some define by their disabilities—yet whose abilities we know have no bounds.

Those who sit in this room, who face the constant challenges of disabilities have an absolute understanding of what it means to be "at-risk." Let us not build hurdles to imperil their future by our failure to enact this legislation.

We, the members of the Congressional Black Caucus state here our unanimous and unequivocal support for the passage of this Civil Right act for Disabled Americans. We affirm our mutual kinship and interdependence as cohabitants of this land and we pledge to work toward the immediate passage of these guarantees.

As beneficiaries of the 1964 Civil Rights Act, we understand the legacy that comes with an appreciation for the universality of the human condition and the sharing of a common destiny. While the will of the majority prevails, circumstances forge a special alliance among those who have suffered injustice.

As African-Americans we have learned never to be intimidated because one is in the minority on an issue which you know to be right. This lesson we repeat for those who join us as advocates in seeking passage of these civil rights measures.

We sit before you today on behalf of those who cannot stand to implore justice, who cannot speak to demand equality, who cannot hear discrimination, and who cannot see their oppressor.

We must again place America on the right side of history with the passage of this omnibus civil rights statute that prohibits discrimination against individuals with disabilities—imposing guarantees and requiring enforcement in the private sector, all public services, public accommodations, transportation; and telecommunications.

Such a victory is won by a coalition beginning with one person with vision and commitment. As members of the Congressional Black Caucus, even in the most painful circumstances, we have seen ordinary people become catalysts for extraordinary movements.

An illiterate Black slave named Frederick Douglass learned to read and write and became a world acclaimed poet, orator, and statesman. A poor Alabama seamstress named Rosa Parks fueled the entire civil rights movement in America when she refused to sit in the back of a bus.

A small group of unrelenting warriors captured the eye of the nation in bringing disability rights and Gallaudet University onto the front pages of the world press. I am especially proud to sit before you today as the most recent member of the 65 Afro-Americans to have been elected to serve the United States Congress in the history of this nation.

Those who know the Congressional Black Caucus understand our collective mandate to serve, and our covenant to fight for justice and equality. This, too, is our battle.

The witnesses who will follow this presentation are the real experts. Their courage inspires us, and their will challenges the conscience of this Congress. We as members of the Congressional Black Caucus are not draftees, but enlistees in this mission to create a mutually supportive partnership with government, the private sector, labor and the courts to empower—with full rights and privileges—this nation's disabled citizens. To this end we pledge our allegiance.

Thank you, Mr. Chairman.

CONGRESSIONAL BLACK CAUCUS TESTIMONY

In support of the

"AMERICANS WITH DISABILITIES ACT OF 1989"

Joint Hearing

House Subcommittee on Select Education
and
House Subcommittee on Employment Opportunities

July 18, 1989
2175 Rayburn HOB

(Delivered by Congressman Donald M. Payne)

The Congressional Black Caucus is a Legislative Service Organization of the United States Congress

To our colleagues Chairman Owens and Chairman Martinez, The Congressional Black Caucus is pleased to offer testimony before this joint hearing on H.R. 2273 - The American's With Disabilities Act of 1989. We salute your leadership on this most crucial of issues, for we come as proponents of a movement -- as patriots in this struggle for decency and human dignity. As a Member of the House Subcommittee on Select Education it is an honor and special privilege to have been asked to make this presentation on behalf of the Congressional Black Caucus.

Twenty-five years ago, the Congress of the United States gave America a vehicle which changed the course of history. The passage of the 1964 Civil Rights Act made justice and morality the cornerstones of American democracy. Today we begin another trek toward equality.

Many have traveled a tortuous road in coming to this moment and on their behalf this Congress shall make critical decisions which will determine the quality of their lives far into the future.

This institution stands on the threshold of infinite possibility, and we must not be reactive nor have historians write that we sat at the tail end of this struggle for justice. Rather, it is our duty and the commitment of the Congressional Black Caucus to champion and challenge this Congress to protect and advance the rights of those who some would define by their disabilities - yet whose abilities we know have no bounds.

Those who sit in this room, who face the constant challenges of disabilities have an absolute understanding of what it means to be "at-risk". Let us not build hurdles to imperil their future by our failure to enact this legislation. We, the Members of the Congressional Black Caucus state here our unanimous and unequivocal support for the passage of this Civil Rights Act for Disabled Americans. We affirm our mutual kinship and interdependence as cohabitants of this land and we pledge to work toward the immediate passage of these guarantees.

As beneficiaries of the 1964 Civil Rights Act, we understand the legacy that comes with an appreciation for the universality of the human condition and the sharing of a common destiny. While the will of the majority prevails, circumstances forge a special alliance among those who have suffered injustice.

As African-Americans we have learned never to be intimidated because one is in the minority on an issue which you know to be right. This lesson we repeat for those who join us as advocates in seeking passage of these civil rights measures.

We sit before you today on behalf of those who cannot stand to implore justice, who cannot speak to demand equality, who cannot hear discrimination, and who cannot see their oppressor.

We must again place America on the right side of history with the passage of this omnibus civil rights statute that prohibits discrimination against individuals with disabilities -- imposing guarantees and requiring enforcement in the private sector, all public services, public accommodations, transportation; and telecommunications.

Such a victory is won by a coalition beginning with one person with vision and commitment. As Members of the Congressional Black Caucus, even in the most painful circumstances, we have seen ordinary people become catalysts for extraordinary movements. An illiterate Black slave named Frederick Douglass learned to read and write and became a world acclaimed poet, orator, and statesman. A poor Alabama seamstress named Rosa Parks fueled the entire civil rights movement in America when she refused to sit in the back of a bus.

And a small group of unrelenting warriors captured the eye of the nation in bringing disability rights and Gallaudet University onto the front pages of the world press. I am especially proud to sit before you today as the most recent of 65 African-Americans to have been elected to serve in the United States Congress in the history of this nation. Those who know the Congressional Black Caucus understand our collective mandate to serve, and our covenant to fight for justice and equality. This too is our battle.

The witnesses who will follow this presentation are the real experts. Their courage inspires us, and their will challenges the conscience of this Congress. We as Members of the Congressional Black Caucus are not draftees, but enlistees in this mission to create a mutually supportive partnership with government, the private sector, labor and the courts to empower -- with full rights and privileges -- this nation's disabled citizens. To this end we pledge our allegiance.

Mr. OWENS. Thank you, Mr. Payne. Before we proceed to our first witness, I would like to note that this particular bill has—four subcommittees of the House of Representatives have jurisdiction over this bill and it will be very difficult to pass the bill unless we have a great deal of coordination and support from our leadership.

The chairman of the Democratic Caucus Steny Hoyer, has volunteered to provide that coordination. He is here this morning and will have to leave. I yield to him for a statement.

Mr. HOYER. Thank you very much, Mr. Chairman. I am pleased to join you and Mr. Martinez in this committee, and Mr. Gunderson in very strong support of this legislation.

Congressman Payne has made an excellent statement as did Mr. Gunderson and yourself and Mr. Martinez. As you know, our former Majority Whip, Tony Coelho, was the principal sponsor in the House of Representatives of this legislation. Upon his resignation, he asked me to work with all of you to ensure the careful and prompt consideration of this legislation.

I have a prepared statement, Mr. Chairman, that I would like included in the record. I believe this to be "the" major civil rights legislation of the 101st Congress. There is no doubt about that. There are 43 million Americans who face discrimination.

Our country in the last 20 years has stated in emphatic terms that it is our policy not to discriminate against any Americans. Notwithstanding that annunciation of policy, the tragic fact for America, not only for those who are discriminated against, but for those who have lost the full services of those 43 million Americans, is that we do discriminate.

A full two-thirds of the disabled are unemployed. In a time when America is challenged both at home and abroad, that is unacceptable. So from the most practical of standpoints, Mr. Chairman, we need to overcome this discrimination, whether it is in employment, public facilities, transportation, telecommunications, whatever it might be.

I want to pledge to you, Mr. Chairman—or to the chairmen, Mr. Martinez and Mr. Owens and this committee that we will work very, very hard following up on the work of this committee and the other subcommittees of jurisdiction to see that this matter is passed just as soon as possible, while I understand Mr. Gunderson's point that there are technical, perhaps corrections, improvements that may be made in this bill.

I was at a town meeting last night, Mr. Chairman, and a victim of cerebral palsy attended with a family member and their plea was not to allow this bill to be corrected or amended to the extent that it became less protective than state's statutes that now exist and that, in fact, it might be a step backward and not forward.

I know the distinguished witness from whom we are about to hear, my good friend Jesse Jackson, will say that there are always those who want to temporize in the face of discrimination.

It is far too late for that and I would hope that we would move quickly and decisively to protect the rights, not only of those 43 million Americans, but, that too, as a policy of our country utilize their talents, their energy and their commitment to the fullest possible extent.

Thank you very much, Mr. Chairman, for allowing me to participate.

[The prepared statement of Hon. Steny Hoyer follows:]

STATEMENT OF THE HONORABLE STENY H. HOYER
JULY 18, 1989
BEFORE THE HOUSE COMMITTEE ON EDUCATION AND LABOR
SUBCOMMITTEE ON SELECT EDUCATION
AND
SUBCOMMITTEE ON EMPLOYMENT OPPORTUNITIES

MR. CHAIRMAN, AS YOU KNOW, SINCE CONGRESSMAN TONY COELHO'S RESIGNATION FROM THE HOUSE OF REPRESENTATIVES, I HAVE TAKEN OVER AS ONE OF THE LEAD SPONSORS OF H.R. 2273, THE AMERICAN WITH DISABILITIES ACT. I WOULD LIKE TO COMMEND BOTH SUBCOMMITTEE CHAIRMEN, CHAIRMAN MAJOR OWENS AND CHAIRMAN MATTHEW MARTINEZ, AS WELL AS CHAIRMAN GUS HAWKINS, FOR HOLDING TODAY'S HEARINGS ON H.R. 2273 AND BEGINNING THE COMMITTEE'S CONSIDERATION OF THIS MEASURE.

THE AMERICANS WITH DISABILITIES ACT WOULD GUARANTEE THAT THE PERSON WITH EPILEPSY WOULD NOT BE IMMEDIATELY DISMISSED FOR CONSIDERATION FROM A JOB SOLELY ON THE BASIS OF HIS DISABILITY, AND THAT THE PARALYZED VETERAN, WHO HAS ALREADY GIVEN MORE TO HIS COUNTRY THAN WE CAN ASK, WOULD HAVE ACCESSIBLE TRANSPORTATION TO GET TO WORK.

MR. CHAIRMAN, THE ADA IS BASED ON THE RECOMMENDATIONS OF THE NATIONAL COUNCIL ON DISABILITY. AFTER EXTENSIVE AND EXHAUSTIVE STUDY AND REVIEW, THE FIFTEEN MEMBER COUNCIL, APPOINTED BY PRESIDENT RONALD REAGAN, FOUND THAT AMERICANS WITH DISABILITIES FACE DISCRIMINATION IN ALMOST EVERY ASPECT OF THEIR LIVES INCLUDING, EMPLOYMENT, HOUSING, TRANSPORTATION, COMMUNICATIONS, AND RECREATION.

MR. CHAIRMAN, THE COSTS TO OUR NATION OF THIS DISCRIMINATION ARE TREMENDOUS. IN ADDITION TO THE LOSS OF THE PRODUCTIVE TALENTS AND CONTRIBUTIONS OF THESE AMERICANS, OUR NATION IS SPENDING ALMOST $170 BILLION ON MAINTAINING THE DEPENDENCY OF THE DISABLED. A STUDY BY RUTGERS UNIVERSITY SHOWED THAT THE FEDERAL GOVERNMENT ALONE SPENDS UP TO $75 BILLION ANNUALLY ON SUCH MAINTENANCE. THESE FUNDS WOULD BE AVAILABLE FOR OTHER NATIONAL PRIORITIES IF THE DISABLED, WHO ARE BARRED FROM WORKING BECAUSE OF THE BARRIERS OF DISCRIMINATION, WERE ABLE TO LEAD PRODUCTIVE LIVES.

H.R. 2273 WILL ENSURE BASIC CIVIL RIGHTS FOR 43 MILLION DISABLED AMERICANS, BY PROHIBITING DISCRIMINATION AGAINST INDIVIDUALS WITH DISABILITIES IN EMPLOYMENT, IN PUBLIC SERVICES, PUBLIC ACCOMMODATIONS, TRANSPORTATION AND TELECOMMUNICATIONS. THE AMERICANS WITH DISABILITIES ACT, WHICH WAS INTRODUCED A SHORT WHILE AGO, ON MAY 9, IS ALREADY COSPONSORED BY 195 OF OUR COLLEAGUES IN THE HOUSE.

THE IMPORTANCE, NECESSITY AND URGENCY OF THE AMERICANS WITH DISABILITIES ACT CANNOT BE OVEREMPHASIZED. I DO NOT BELIEVE THAT OUR GOVERNMENT SHOULD DO EVERYTHING FOR ITS CITIZENS, OR BE ALL THINGS TO ALL AMERICANS. HOWEVER, I DO BELIEVE THAT ONE OF THE FUNDAMENTAL PRINCIPLES ON WHICH OUR NATION WAS FOUNDED IS THAT ALL AMERICANS SHOULD HAVE AN EQUAL OPPORTUNITY TO LIVE IN OUR SOCIETY AND TO LIVE PRODUCTIVE LIVES.

IF AN INDIVIDUAL CHOOSES NOT TO MAKE THE MOST OF HIS OR HER TALENTS, THEN SO BE IT. BUT IN AMERICA, ONE MUST NOT BE DENIED AN OPPORTUNITY BECAUSE OF IGNORANCE OR PREJUDICE.

A 1987 LOU HARRIS SURVEY FOUND THAT 72 PERCENT OF THE TOP MANAGERS IN AMERICA FEEL THAT DISABLED AMERICANS ENCOUNTER DISCRIMINATION WHICH KEEPS THEM FROM EMPLOYMENT. AND THE FACT IS, THAT THE DISABLED WANT TO WORK. ALTHOUGH TWO-THIRDS OF ALL DISABLED AMERICANS BETWEEN THE AGE OF 16 AND 64 ARE UNEMPLOYED, SIXTY-SIX PERCENT OF THE NON-WORKING DISABLED AMERICANS SAY THEY WANT TO WORK.

H.R. 2273 IS A REASONABLE AND EFFECTIVE RESPONSE TO THIS DISCRIMINATION AND PARALLELS THE SUCCESSFUL MODEL USED BY THE FEDERAL GOVERNMENT IN ELIMINATING DISCRIMINATION BASED ON DISABILITY IN FEDERALLY-FUNDED ACTIVITIES.

MR. CHAIRMAN, TWENTY-FIVE YEARS HAVE PASSED SINCE THE ENACTMENT OF THE CIVIL RIGHTS ACT. WE ARE NOW MORE THAN READY TO EXTEND CIVIL RIGHTS PROTECTIONS TO DISABLED AMERICANS. I FIRMLY BELIEVE THE ADA IS ONE OF THE MOST IMPORTANT BILLS OF THE 101ST CONGRESS AND I LOOK FORWARD TO WORKING WITH YOU AND THE MEMBERS OF THE COMMITTEE ON THIS HISTORIC LEGISLATION.

Mr. **Bartlett**. Would the gentlemen yield?

Mr. **Owens**. Mr. Bartlett.

Mr. **Bartlett**. Mr. Chairman, I don't have an opening statement at this time because I know Reverend Jackson is on a timetable and I'll forego for that, but I do want to say while Mr. Hoyer is here that, in fact, this legislation does enjoy bipartisan support as far as its intent.

It is far too early and I know the gentlemen didn't intend to say that, to adopt a no compromise or no change kind of policy to legislation that this is the first hearing for. I want to make two points with regard to that.

I look forward to working with Mr. Hoyer, as well as Mr. Owens and others. First, there is broad bipartisan support beginning with the President of the United States for legislation of this type for the first time in the history of this country to adopt a prohibition against discrimination against persons with disabilities.

But secondly, there has to be a bipartisan commitment to do it right, to adopt legislation that accomplishes what we say we want to accomplish, to take the speeches and the commitment that we all have and convert that into legislative language that, in fact, maximizes the positive impact of this type of legislation and minimizes the disruption that could otherwise occur to persons with disabilities.

So, I look forward to working with the gentlemen in drafting the legislation the way that we all intend to have it drafted and to working through each line by line of the legislation to make sure that we accomplish what we set out to accomplish. I thank the chairman.

Mr. **Owens**. Thank you. Our first witness is quite well-known and he wears many hats, but I think it is important to note here that as a former presidential candidate in both his campaigns in 1984 and in 1988, he gave very high visibility to the community of people with disabilities, very high visibility and very great participation in that campaign.

We are pleased to welcome Reverend Jesse Jackson, the president of the National Rainbow Coalition.

STATEMENT OF REVEREND JESSE JACKSON, PRESIDENT, NATIONAL RAINBOW COALITION

Reverend **Jackson**. Chairman Owens and members of the committee, let me express to you my gratitude for giving me the opportunity and the privilege to address this committee today and the speaker of this most critical moral issues of our time.

The eyes and hearts and hopes of Americans have, over the past several months, been focused on Chinese students and their struggle for dignity and democracy. As I watched their struggle, heard their eloquence, and understood their place on the right side of history, I was reminded of another group of students who fought for what they believed in, another group of students who led in the fight for justice.

I thought of the students at Gallaudet College here in Washington, DC. I am told that the hearing impaired refer to the struggle at Gallaudet as "our Selma." I support the Americans with Disabilities Act, the ADA bill, because I believe in civil rights, because I believe in human dignity. From Selma to Gallaudet is a straight line—the line of justice.

If there is to be any modification, it ought to be the Differently Abilities Act. All of us have some ability and their simply different abilities. I devoted much of my life to fighting for civil rights. It is that devotion that brings me before this subcommittee today.

Mr. Chairman, members of Congress, we all know that the fight for the Civil Rights Act of 1964 was long and hard. The triumph was great, but the struggle is not over. There is more work to be done and the ADA represents an important step.

There are now tens of millions of Americans who lack basic civil rights protections, men and women who can be turned away from a lunch counter, who can be refused a hotel room, who can be cast out for no reason other than ignorance and fear.

Americans with disabilities do not receive the protection of the Civil Rights Act of 1964, and the ADA would right that wrong. Work places will become accessible, opening the opportunity of participation and accomplishment to millions of Americans.

We spend $170 billion a year on disabled adults—too much of it is spent maintaining dependency and activity. Public accommodations, transportation, and telecommunications would no longer be unfairly and unjustly denied to disabled Americans. When we open work places, we empower men and women; we also save money.

Fewer dollars will be spent maintaining dependency; more dollars will come in from taxpaying workers, and that is one of the key issues—empowerment and participation for minorities benefit all Americans.

We know that integrating our society increases our moral integrity as a nation. We must also remember it strengthens us in practical terms. When the deaf can communicate more freely, through TDD devices, we all benefit from what they have to say. When a woman in a wheelchair can work instead of remaining locked into a second class existence, we all win.

When people with AIDS are guaranteed basic civil rights, we all benefit. That is what the AIDS Commission understood when it called the ADA "model" legislation—civil rights literally protect the public health.

The support for this bill is widespread; the Leadership Conference on Civil Rights leads the list. They understand that as long as any civil right is abridged, no civil right is secure.

We have seen many try to turn back the clock on civil rights. The Supreme Court has now thrown obstacles in the way of decades of progress. This bill offers us a chance to just say no to injustice. This bill offers us a chance to make our country stronger.

Romanticized versions of the pre-civil rights past have made this country weaker—too many young Americans have grown up knowing too little of the struggle and triumphs of the civil rights movement.

We have a chance to turn away from this "nightmare recast as dream" approach to history. We have a chance to continue to open up our nation, a chance to continue to "form a more perfect union."

We have a chance to pay real tribute to our flag. How does the Pledge of Allegiance conclude? "And to the nation, for which it stands—one nation, under God, indivisible, with liberty and justice for all."

For all. Not just for White male landowners, not just for the conventionally abled, not just for the HIV negative, not just for the English speaking, "Liberty and justice for all."

Doctor King made it clear to Rosa Parks that it was better to walk in dignity than ride in shame, and for some real sense in many ways, for some people, race is a handicap. Our sex is a handicap. Our class is a handicap. Alienage is a handicap.

I say, "let freedom ring for all Americans." History has since given us a glimpse of how much better still it is to ride in dignity. The Americans with Disabilities Act will fulfill this dream for millions more Americans. We should all be proud to work for this landmark legislation.

I support this bill for the differently able. None of us are perfect. We possess high and lows on the chart of efficiency and capabilities. I think of President Franklin D. Roosevelt in a wheelchair.

His contributions: he stood America paradoxic on its feet from a wheelchair. Reagan put us on back from a horse standing upright. We must tie people's rights to their humanity, their character and their will to serve, not to their eyes, their legs and their arms.

Stevie Wonder, no eyesight, but insight, a will to serve and character, and it is cost efficient the idea about building some extra passage ways or making some extra provisions. We should never again in our right mind discuss making America available for all the people and speak, of course.

I looked this morning and saw that flying "Batmobile," "Stealth Bomber," a half billion dollars each and we would debate access to people in a wheelchair. The S&L ripoff, $200 billion; the morally disabled; the HUD scandal, $2 billion and rising, the morally disabled.

I say let us reinvest in America; bridges are falling every day. Let's reinvest in Americans. People are falling; let all of us stand together.

Thank you very much.

[The prepared statement of Reverend Jesse Jackson follows:]

Statement of
Reverend Jesse Jackson
President
National Rainbow Coalition

before the

Committee on Education and Labor
Subcommittee on Select Education

July 18, 1989

Statement of Reverend Jesse Jackson

The eyes and hearts and hopes of Americans have, over the past several months, been focussed on Chinese students, and their struggle for dignity and democracy. As I watched their struggle, heard their eloquence, and understood their place on the right side of history, I was reminded of another group of students who fought for what they believed in, another group of students who led in the fight for justice.

I thought of the students at Gallaudet College here in Washington D.C..

I am told that the hearing impaired refer to the struggle at Gallaudet as "our Selma."

I support the Americans with Disabilities Act, the ADA bill, because I believe in civil rights, because I believe in human dignity. From Selma to Gallaudet is a straight line -- the line of justice.

Statement of Reverend Jackson

I have devoted much of my life to fighting for civil rights; it is that devotion that brings me before this subcommittee today. Mr. Chairman, members of Congress, we all know that the fight for the Civil Rights Act of 1964 was long and hard. The triumph was great. But the struggle is not over.

There is more work to be done, and the ADA represents an important step.

There are now tens of millions of Americans who lack basic civil rights protections. Men and women who can be turned away from a lunch counter, who can be refused a hotel room, who can be cast out for no reason other than ignorance and fear.

Americans with disabilities do not receive the protection of the Civil Rights Act of 1964, and the ADA would right that wrong.

1292

Statement of Reverend Jackson

Workplaces will become accessible, opening the opportunity of participation and accomplishment to millions of Americans. We spend $170 billion a year on disabled adults -- too much of it is spent maintaining dependency and activity.

Public accommodations, transportation, and telecommunications would no longer be unfairly and unjustly denied to disabled Americans.

When we open workplaces, we empower men and women -- we also save money.

Fewer dollars will be spent maintaining dependency-- more dollars will come in from taxpaying workers.

And that is one of the key lessons -- empowerment and participation for minorities benefit all Americans.

We know that integrating our society increases our moral integrity as a nation -- we must also remember it strengthens us in practical terms.

When the deaf can communicate more freely, through TDD devices, we all benefit from what they have to say.

Statement of Reverend Jackson

When a woman in a wheel chair can work instead of remain locked into a second class existence, we all win.

When people with AIDS are guaranteed basic civil rights, we all benefit. That is what the AIDS Commission understood when it called the ADA "model" legislation--civil rights literally protect the public health.

The support for this bill is widespread -- the Leadership Conference on Civil Rights leads the list.

They understand that as long as any civil right is abridged, no civil right is secure.

We have seen many try to turn back the clock on civil rights. The Supreme Court has now thrown obstacles in the way of decades of progress.

This bill offers us a chance to just say no to injustice.

This bill offers us a chance to make our country stronger.

Statement of Reverend Jackson

Romanticized versions of the pre-civil rights past have made this country weaker -- too many young Americans have grown up knowing too little of the struggle and triumphs of the civil rights movement.

We have a chance to turn away from this "nightmare recast as dream" approach to history. We have a chance to continue to open up our nation, a chance to continue to "form a more perfect union."

We have a chance to pay real tribute to our flag. How does the Pledge of Allegiance conclude?

"And to the nation, for which it stands -- one nation, under God, indivisible, with liberty and justice for all."

For all. Not just for white male landowners. Not just for the conventionally abled. Not just for the HIV negative. Not just for the English speaking. "Liberty and justice for all."

Statement of Reverend Jackson

Doctor King made it clear to Rosa Parks that it was better to walk in dignity than ride in shame.

History has since given us a glimpse of how much better still it is to ride in dignity.

The Americans with Disability Act will fulfill this dream for millions more Americans -- we should all be proud to work for this landmark legislation.

Thank you.

-30-

Chairman **Owens**. Thank you, Reverend Jackson. I yield to my co-chairman, Mr. Martinez, for questions.

Mr. **Martinez**. Yes, I am not too sure I need to ask questions after that dynamic statement, but maybe we can enter into a dialogue because I think that we should talk about some of the things that might cost us the ability to move ahead expeditiously with this and we need to move ahead expeditiously now.

It has been several years that the rights of the handicapped have been debated and I can remember since first coming into Congress some seven years ago, that we were talking about doing something about it then.

Seven years later, we still haven't done it adequately and I think it is time that we need to move ahead, but you know, you were talking about people that are handicapped one way or another, I am not sure that we are not all handicapped in one way or another as you point out, except maybe if you are endowed by the grace of God with some special talent or some special ability of some kind that sets you apart and gives you preferential treatment in the world. But even then, I am not too sure that even the people who are that way are not handicapped in some other way. We are all somehow handicapped.

We talked earlier, and Mr. Gunderson talked about the individual that he hired in his office who was deaf, about the issues I think we all have had the experience of hiring someone at some point in time in that regard, and I don't think we should stand on our laurels and pat ourselves on the back or break our arm patting ourselves on the back for doing that. It is not doing anything that is extraordinary, I believe.

It is doing something that you normally should do if you thought right. The fact is that we hired a blind person into our office and we never gave it much thought. After working with us a year, he proved his merits to so many people that he was offered being the admissions director of a university at twice the salary we were paying him.

We couldn't much hold him back at that, but he was an individual that was sightless, but I think he saw much farther than many of us with sight. Working with him in that year, we became aware of his insight, as well as far-sightedness into the problems and situations that confront us on a daily basis in our office and was able to resolve many of the problems that we had there with constituents we had.

I think that deaf people hear beyond just the words. They hear the sentiments and feelings that many of us don't hear. But, what I really need to talk to you about is something that Mr. Bartlett said: "this is a bipartisan bill, but we have to do it right." You know so many times—and this is no reference to Mr. Bartlett himself, as I have sat with him now for seven years and know that he is very sincere in his desire to do the right thing—that "do it right" bit gets to mean that it doesn't cost me anything and it doesn't disturb the status quo.

I know that in your travels and your talking to people all over the country when you were running for the presidency, that you encountered opinions and ideas and opposition to the things we are trying to do. You have seen firsthand that some people oppose people being treated equally in any way or providing the opportunity for them to have access to mainstream society despite the Constitution saying, "all people are created equal." But, we know that they are not, because people do not live by that.

All people should be treated equally under the law. We are not saying that the strong and the swift shouldn't win the race; they should, but there are all kinds of races that people can win, and they can do it with different talents as you described.

What I think we need to talk about here is how do we overcome the narrow-minded thinking, the tunnel vision thinking, that exists in many places on this Hill and many places in our society. People just won't open their eyes to see that when they hire on people with disabilities give them an opportunity, and allow them to succeed, that we all succeed and benefit by it and because as citizens they become less of a liability to society.

There are so many cases in which we have been so shortsighted in government that when we hold forth to people opportunity to become what we call "self-sufficient or independent," we sometimes take away the very tools that they need to become self-sufficient and independent. This is done in the name of cost, without realizing that paying the cost now, in the long run brings us back dollars.

There have been other programs like Job Corps and the JPTA and a lot of the training programs that have brought back to us a $1.40, $1.75 for every dollar invested by the Federal Government. And yet, we can't get these short-sighted, penny-pinching people to see. What is it? What do we need to do?

Reverend JACKSON. Well, what we are looking at is a deficit in our character. We are looking at the impact of the sin or arrogance and contempt for other people. The only moral justification for looking down on someone is you are going to stop to pick them up.

We have been in this contradiction from the very founding of our country. After all, when the constitution was written, everybody was handicapped except White male landowners. Even White males who didn't own land couldn't vote. Their mothers and wives and daughters and aunts, White women couldn't vote.

African Americans were considered three-fifths human; just a little higher than animals, a little lower than people, three-fifths of the human beings in the constitution. Native Americans couldn't live. All of America was handicapped except the aristocracy. The struggle has been to open the aristocracy, those who taught democracy, but looking for a king.

This is a democracy; bottom up, people out. It will cost to build the necessary facilities to let people in. It will cost more to lock them out. It will cost us morally. It will cost us money as well.

Democracy does not guarantee success. It guarantees opportunity and we are talking about people's opportunity being denied based upon base of some physical situation and I say let's accommodate.

I would say that we who would be blessed to walk upright, must behave upright and treat physically disabled people as if they were our mother or our father or our son or our daughter, and tragedy should not have to strike to the depths of our humanity to be touched and our humanity come alive.

Mr. **Martinez**. Thank you, Mr. Jackson. Let me ask you just one last question. One of the things that we have to be constantly aware of here is what the political climate is in order to have success with any particular piece of legislation.

Even though it was tough back in the '60s during the civil rights marches and everything else and the demonstrations, there was enough political pressure and enough political sense that we did the right thing. Recently with the Supreme Court decision that had been made, I think we are going backwards.

Do you believe we have enough political sensitivity on the Hill here to really enfranchise these people?

Reverend **Jackson**. Well, what we did in the '60s was when we sought judicial remedy and couldn't get it and sought legislative remedy and couldn't get it, we then hit the streets and so maybe, Congress can get a better view of physical disabled or different abled people, get up about a thousand up and down these halls in their chairs and about ten thousand coming down the highway and the drama of that might make up come alive.

I am convinced that if people cannot get legislative remedy, they must otherwise redrift their grievances through mass demonstrations. We will not allow this narrow view of America an opportunity to, in fact, roll back the clock and blow up the graves of the martyrs who made the new America possible.

So, whether we come in wheelchairs or combat without shoes, we will not as a nation go back; we must go forward, and I say affirming the humanity, the differently abled is the way of going forward.

Mr. **Martinez**. Thank you. Thank you, Mr. Chairman.

Mr. **Owens**. The co-chairman and I did agree on an informal five-minute rule for each member. Mr. Bartlett.

Mr. **Bartlett**. Thank you, Mr. Chairman. I found myself in agreement with a good deal of what Reverend Jackson said and very much appreciate his testimony. I particularly agree with two items. One is that, in fact, if we pass legislation like this that empowers people to be able to control their own lives, there will be a cost savings to the Federal Government and that is true as we give people the chance to be independent to provide for their own employment, their own income, their own housing, their own transportation, that, in fact, would save the taxpayers substantial sums from the alternatives.

Secondly, it is an empowerment issue. It is an opportunity to write legislation that will empower people to be able to control their own lives. I do have a specific question on the legislation. As I said earlier, I think that we should go through the legislation line by line to determine that we pass exactly what we intend to pass, not creating unintended negative consequences and not changing something for the negative, but accomplishing the mission.

My question is on the section that deals with drug and alcohol abusers as defined in the current section code of Section 504 for persons with disabilities.

The legislation, Reverend Jackson, only provides one exception for an employer to be able to deny employment to someone who is a current abuser of alcohol or drugs—by an alcohol, liquor, or drug abuser, and that is, if that person would pose a direct, words of the bill, a direct threat to the property or safety of others in the work place or in the program. My question is, in your judgment, should there be other exceptions, that is, should employers be able to deny employment to persons who are current abusers of alcohol or illegal drugs if, in fact, for other reasons, if the employer, for example, wants to maintain a drug free work place?

A classic example: Should a stockbrokerage house on Wall Street be able to make it a condition of employment that their stockbrokers not do cocaine on their lunch hour even though it is not going to impair their health or safety of others in the work place?

Reverend **Jackson**. The victims of alcohol and drug abuse take focus away from people who, in fact, are drug free, who otherwise need grants, who otherwise need scholarships, who otherwise need opportunity, who otherwise need extra counseling.

I would hate to see the meat of this proposition be lost in the extremities of that situation. I take the position that those who are on coke, or crack or heroin, they need to get well. That is the first issue there and you know we decry now the growing impact of drugs.

We have not yet attempted to put a price tag to what it is going to cost to get people well and that becomes significant to me, but I would hope that the message that you raise that we would not—as I look at the people who are sitting here today, some of whom are deaf, some of whom are otherwise in wheelchairs who are ready to go right now and become Congress people and be senators and soon able to be vice president under this arrangement.

Let's focus on all these possibilities out here and not get caught up, it seems to me, Mr. Bartlett, on the extremities. I think in some of those situations, it is almost case by case. Some people who are really drug and alcohol abusers are not capable of working because they cannot stay awake long enough.

Mr. **Bartlett**. Reverend Jackson, I am not sure I understand your response. It is in the bill. I mean, the bill says that an employer cannot maintain a drug-free work place unless it impairs the property or safety in the work place.

I agree with you. It is one case, it is an extreme case. I also concur that those drug and alcohol addicts should not be placed into the same categories as those with physical and mental impairments, but they are in the bill. That is the problem, so would you change the bill?

Reverend **Jackson**. I assume that you and Mr. Owens and Mr. Martinez would deal with the ramifications—by the way, we are losing 360,000 thousand people a year to smoking cigarettes, more than they were losing to alcohol, and coke, crack and heroin combined and so that seems to me to be an issue kind onto itself and I would hope that we would not allow that issue and its debate to, in fact, water down the honest-to-God, the real needs of people who otherwise are looked upon in ways that are not right and not kind.

Let me say this to you, Mr. Chairman, in closing. Another reason why this cost efficient is important, many people have disabilities, impairments that start in the womb and early detection in their formative years can go through substantial correction.

If a woman has prenatal care for nine months, even a city like New York will cost less than a thousand dollars for nine months. Without prenatal care, a low-birth weight baby, and what could by then become an impaired baby, cost up to $2 thousand a day, usually minimum 20 weeks in the hospital.

Add to that any other kind of physical complication, you are looking at maybe $3 thousand a day for 20 weeks and then maybe some adjustment for the rest of their lives. That prenatal care and that early detection and that support in people's formative years will, in fact, save us money and make us stronger and make us more productive.

Mr. **Bartlett**. Mr. Chairman, I would hope that perhaps we can deal with this section of the law without debating it. I look forward to that and thank the Reverend for his testimony.

Reverend **Jackson**. Thank you.

Chairman **Owens**. Mr. Hayes?

Mr. **Hayes**. Thank you, Mr. Chairman. I am going to be very brief. I want to commend, though, my colleague, Payne, and my constituent, Reverend Jesse Jackson, for what has been excellent testimony. I do want to sound a word of warning.

This distinctly is not one of the legislative priorities before the 101st Congress unless we make it that. It appears to me that much more interest is going to be focused in the direction of trying to undue the recent Supreme Court decision in relation to desecration of the flag which I am opposed to too, but this is high on the legislative agenda as you might understand and the press is helping to mode it in that direction.

The other thing that tends to take priority, as you might have noticed yesterday, that the stealth bomber got, I think, ten thousand feet into the air, so we have to justify spending that if we do.

Reverend **Jackson**. Batmobile.

Mr. **Hayes**. Batmobile, at $500 million for that kind of thing and then, I think, our chairman here, Owens, has mentioned another thing. We caught up in what could become a legislative quagmire over jurisdiction at which subcommittee has jurisdiction over this piece of legislation.

I raise these kinds of things only to indicate, as you said, Reverend Jackson, we have to develop sensitivity to this issue. It is not known, not among many of our colleagues in Congress and I would hope that we understand that what you suggested that we had to do in the '60s as a course of action to develop the kind of interest and attention to this kind of necessity for this kind of legislative issue by marching if necessary, doing whatever is necessary to make it a priority of this Congress.

I just want to close by saying that as we spread democracy abroad, and spend so much time talking about the right to life versus choice, we had better understand that people with handicaps who are already here, certainly have a right to life and some of the millions that we spend abroad could very well be used in this country to support this kind of legislation.

I just wanted to close with that statement.

Chairman **Owens**. Mr. Grandy?

Mr. **Grandy**. Thank you, Mr. Chairman. Reverend Jackson, let me just say that I find myself in complete concurrence with my colleague from Chicago. I think that this Congress is better served by discussing, debating, and implementing this piece of legislation than tearing ourselves apart over an issue such as flag burning and things of that nature, because I think this will have an immediate and lasting dividend whereas the other may merely just subdivide into other forms of debate.

Because I would like to see this legislation put on a fast track and I would like to see the consensus formed over the method as well as the intent, I would like to hear your definitions of two areas of concern under the general title of discrimination that have given some some pause over this legislation.

One is anticipatory discrimination; the other is unintentional discrimination. Categories of unclarity that are causing particularly people in the business community to wonder what this means, how they are subject to litigation, how these can be clarified. Could you give this Committee your definition of those two?

Reverend Jackson. Well, I suppose a bill of particulars shouldn't be drawn up. Now, here is what I mean. I remember when we were marching for the right to vote in Selma, and we were challenged by the Congress to write the bill explaining how it works.

We were doing the marching and taking the risk; we thought the Congress could at least write up the bill of particulars. In a sense that there are things you can anticipate. We know that we need riding ramps for public transportation; you can anticipate that, that the people need access to buildings for work or living. We can anticipate that.

The schools need to accommodate this reality. We can anticipate that, so that they are given a number of needs that we know must be served based upon diverse categories of different abilities and needs that people have and if you, in fact, build a new building and are not taking this into account, you structure people out.

It seems to me you then are moving into murky water, given what the law would, in fact, represent. I would think that would be in the realms of one might call anticipation. I also think that anticipation should not be so negative. For example, we may have given more access for fewer dropouts among the differently able.

We might have far less, far fewer people who will engage in crack and cocaine and killing people. We may, in fact, have more mileage out of people who otherwise are not distracted by the coke, the crack, the killing. I said that because that is the number one threat that lies on our streets today and so there may be a factor of dedication, if you will, the laws of compensation here that is greater than we have ever even discussed.

I think it should not just be anticipation in the negative, but also anticipation in the productive and anticipation in the positive. What was the other point?

Mr. Grandy. Unintentional discrimination which is also covered by this legislation.

Reverend Jackson. Well, that is the murky one, you know, where if you now file a suit based upon discrimination, you cannot just deal with the fact, you must prove intent which requires heart surgery which is illegal.

That is a very tricky business proving intent. You go to a situation where you have all physically abled people and no differently abled people there, the effect is that directly or indirectly, they have been locked out. If you go there and it is all male, all one race, you assume others have been locked out, and now you must prove intent.

That is one of the damaging aspects of these Supreme Court rulings. For example, if you had filed as a plaintiff, as a plaintiff of race or sex or disabled suit two months ago, it would have cost about $5 thousand. Now, it would cost about a $100 thousand, and you cannot recover fees for expert witnesses in the process.

If it is a class action, it would have cost $50 thousand; now it will cost $500 thousand to a million dollars which means that under these rulings is that civil rights then become more distant and more expensive and less likely.

We are very vulnerable as a nation based upon these recent decisions and so whether you are female or African American or Hispanic or physically differently abled a worker, we now find ourselves with another set of struggles and we must prove not only that we can raise the money for the suit, but prove intent which is much more difficult to prove.

Mr. **Grandy**. The reason I raise this question is because when you are talking about anticipatory discrimination in housing, you have a case there and that has been reflected in some of our fair housing statutes, but I see two concepts that seem to be in vague contradiction to one another that may produce an unnecessary fury of lawsuits and hardships for the disabled in this bill.

Take a case where you have unintentional discrimination on one side, and undue hardship on the other side. For example, use the instance where a theater has taken a section of its auditorium to accommodate the handicapped—let's say they have earpieces for people who are hearing impaired; let's say they have wider aisles—are they unintentionally discriminating because they have only adapted a portion of their theater or does the person who owns the theater have the claim under undue hardship to say, "If I take out more seats to make more spaces and to spend x amount of dollars, I will be forced to close this facility."

Do you see what I am saying? There are areas of ambiguity here that I think we want to get cleared up before this bill goes to the floor and I would like——

Reverend **Jackson**. I would certainly hope that in the more private sessions with the leaderships, the representatives of the physically differently abled communities and members of this Committee, those kinds of extremities will be ironed out.

My fear is that if the press has only the most extreme and the most negative, they will so dignity that until they will wipe out the means, people who were caught in the broad middle. So, where there may be ambiguity, let's have clarity and where there may be contradictions, let's iron them out and where there may be some confusion, then again, let us get clarity, but I would hope to think if we have the will to do the right thing, just the will to do the right thing, then we will do the right thing.

Mr. **Grandy**. Well, let me just say, I concur with you totally on your quest for clarity because I think the greater the clarity, the more the good faith on both sides and I think that is what is going to drive this piece of legislation. Thank you, Mr. Chairman. Thank you, Reverend Jackson.

Chairman **Owens**. Mr. Hoyer?

Mr. HOYER. Thank you very much, Mr. Chairman. First let me say, I appreciate the observations made by Mr. Grandy, the gentleman from Iowa. There is, of course, language in the current, as I understand, Rehabilitation Act which deals with this and, of course, the language itself was an attempt to meet the problem that is raised by the gentleman from Iowa of a theater owner, et cetera.

How much is enough, how much meets the burden, I think Reverend Jackson is correct. I think we will be able to work on those if we work in good faith and I think everybody will work on this matter with good faith. But, if we accommodate too much in the framework of the language of the bill, we will then articulate a right without a remedy, and I think that that is what we have to protect against.

Now, Reverend, let me ask you a question. You mentioned in your testimony—I am sure I know the answer, but dealing with public accommodations; restaurants, and hotels, obviously the bill goes further than that and it is my assumption that although you referenced those, you referenced them as examples.

Other, for instance, places of critical public accommodations: banks, savings and loan, cleaners, shoes repair stores, all sorts of accommodations which are critical for us to utilize in our daily lives are also included. I presume that you agree with the bill's incorporating and including those areas as well, although you referenced as, I think, solely examples, restaurants and hotels.

Reverend JACKSON. I do.

Mr. HOYER. Mr. Chairman, I have a number of other questions. I will be talking to Reverend Jackson and Donald Payne in the caucus on this and am very interested in hearing the following witnesses and I will pass on other questions.

Chairman OWENS. Thank you. I appreciate your patience, Reverend Jackson. We just have two more members. I know you have a time problem, but, Mr. Smith.

Mr. SMITH. I will be brief given the time constraints. Reverend Jackson, I want to thank you for being here and joining others and thank you for your presence. As a co-sponsor of this bill, I wanted to have an opportunity to clarify what I mean by "getting it right." One is that we produce a bill that passes this Congress in this session and two, that we produce a bill that delivers the dream and is not found wanting one, two, or five years down the road.

I appreciate very much what I think I have heard you say today. Sometimes you confound us, those of us with poor understanding because we ask you what we think is a good rational question and you tell us a story back and you have to listen to the story to get the answer.

As I have listened, what I have heard you say is "use your common sense; don't get sidetracked; understand where the gains are and lock them in; look for the extreme cases and solve them if you can, if you can't put them aside and work on them next year. Use your heads." Have I got it? I am just a simple kid from Vermont.

Reverend JACKSON. Use your heads and use your hearts. We might call it "common sense." The broad base of people may be deaf, and then today's technology is getting to be accommodated.

The broad base may be on a wheelchair and need an access, but all of these persons have the will to study, to learn, to work, to be productive.

There may be some very extreme cases and somehow we must have the judgment to put them in extreme category, but in the meantime, do not hold up the broad flow of Americans who are locked out and then looked down upon in negative and unkind ways because we have not affirmed their humanity.

To me, if nothing else comes out of this but an affirmation of the dignity of people, this affirmative dignity, the long ways beyond what we are now.

Mr. SMITH. Thank you very much.

Mr. OWENS. Mr. Mfume and then Mr. Jontz—I didn't see you come back.

Mr. MFUME. Thank you very much. I want to preface my remarks by commending both you and Congressman Martinez for convening this joint hearing. It goes without saying that those of us here, both on this panel and those in the audience, obviously understand and believe in the merits of this.

You have brought a special sensitivity to it in this Congress and I commend you for that. I think it is fair to say that all of my colleagues appreciate it.

Reverend Jackson, as a co-sponsor of this legislation, it is particularly a good feeling for me to see you at the forefront of this and to point out that you just didn't get there yesterday, that has been a priority for you for a number of years, that you kept it on the national agenda when we were concerned with others things and that your presence here today is just an affirmation of a long going commitment that you brought to this issue.

I would also say that it is through the simple eloquence of your example that the inspiration that many of those in this room with disabilities feel, perhaps, can be kindled and those of us with disabilities who are unaware of them so that we understand that we have a special sort of rendering and a special mission, as you indicated earlier, to affirm the dignity and the worth of all human beings.

One of the saddest things I witnessed is to argue on behalf of the disabled in this nation and to hear people tell me that it is not important, only to find out a month or year or ten years later, that through a twist of fate that they themselves have become or developed a disability or someone in their family and then they become sensitive to this issue.

It reminds me of the man who lived to be a hundred who 99 years sinned without remorse and in the 100th year decided to be born again. While we rejoiced in his salvation, we agonized at the loss opportunity of those 99 years.

Congressman Hayes raised a very important point. Unfortunately, with a great deal of sadness, it is true that this issue is not a priority before this Congress and that those of us who have worked long and hard and who have supported the efforts of Congressman Owens on this year after year, really have to make it one.

That is why it is so very important that you yourself are here, that Congressman Payne has decided to speak on behalf of the caucus, that other members of the body who have an understanding of what we must do, must move beyond point "a" to point "b" and I would simply urge, Mr. Chairman, that you make a special commitment along with the chairman of the Democratic caucus, Mr. Hoyer, who has indicated through his presence today and his statement, a very strong willingness to bring this before the Congress of the United States "this" year and to make it a priority in this session. We must move ahead and do that and rededicate and pledge ourselves to doing that so that it doesn't get lost in the shuffle that takes place around here in November when everybody wants to leave while people who really want their dignity affirmed by this body and this nation have to suffer under the strange and twisted way that we do business sometimes.

So, I again, want to thank you, Reverend, for appearing here and thank you, Mr. Chairman, for convening this hearing.

Reverend JACKSON. Mr. Chairman, the matters that he raises of the Congress' priorities dealing with ethics and corruption and priorities and bailout, non-created by physically different abled people. There is a HUD scandal of $2 billion plus the cutback on this budget; it was created by the morally disabled who walked upright.

There is a $200 billion S&L bailout. It was not created by the people in wheelchairs or people who were deaf. If there is this flying batmobile without a mission and a heavy price tag, that was not created by the people who are differently able, who may in wheelchairs or have some other motor transportation, so they should not bear the burden of the collapse and ethics and corruption and misplaced priorities.

It seems to me that one redeeming feature of this Congress could be to assert. We might say that Congress could not stop the Supreme Court for making these decisions, to set back our rights for workers, women and historical minorities, but the Congress cannot say the Supreme Court is stopping this legislation.

It ought to affirm this legislation while it wants—fighting for civil rights restoration for the rights that have been lost during the session of this past court.

Chairman OWENS. One last question. Mr. Jontz just returned.

Mr. JONTZ. Mr. Chairman, I have no questions. Both witnesses have very eloquent statements and have been very generous with their time and I want to thank them.

Chairman OWENS. Again, I want to thank you, Reverend Jackson, for taking time out of your busy schedule to help us launch this very important bill.

Our next panel of witnesses consist of Mr. Justin Dart, Jr.; Ms. Sandra Parrino; Brother Philip Nelan and Mr. Joseph Rauh. I neglected to say before that we welcome the submission of any additional answers or statements in reply to the questions by Reverend Jackson in the future and we will hold the record open for such submissions.

Mr. Joseph Rauh, from the Leadership Conference on Civil Rights, has a time problem and for that reason we are going to let Mr. Rauh begin and ask that he accept written questions at a later date since he won't have the time to stay for questions from the members of the Committee.

You may begin, Mr. Rauh.

STATEMENTS OF MR. JOSEPH RAUH, LEADERSHIP CONFERENCE ON CIVIL RIGHTS; JUSTIN DART, JR., CHAIRMAN, TASK FORCE ON THE RIGHTS AND EMPOWERMENT OF AMERICANS WITH DISABILITIES; MS. SANDRA PARRINO, CHAIRWOMAN, NATIONAL COUNCIL ON DISABILITY; AND BROTHER PHILIP NELAN, DIRECTOR, HANDICAPPED EMPLOYMENT PROGRAM, NATIONAL RESTAURANT ASSOCIATION

Mr. RAUH. Thank you, Mr. Chairman, and you are very kind to accommodate my time problem.

Mr. Chairman and members of the subcommittees, my name is Joseph L. Rauh, Jr. I am the Counsel to the Leadership Conference on Civil Rights, a coalition of 180 national organizations representing minorities, women, persons with disabilities, older Americans, labor, religious groups, and minority businesses and professionals.

On behalf of the Conference, I want to do two things: thank you for allowing us the opportunity to testify today and tell you that we have never had such unanimity on issues as we have today behind this most important bill and if it doesn't have a priority in Congress is wrong not the bill.

Now, let me just say a word from the heart. I have been in the civil rights movement for going on half a century and the thing that has mattered the most to me is the ripple effect of the civil rights movement.

What we did was to turn the law upside down for Blacks. We turned it from segregation and discrimination to barring segregation and discrimination, but the wonderful thing that happened in America was the ripple effect of that.

You can go back to 1941 when President Roosevelt signed the first executive order against discrimination. That was an order that was caused by Blacks. A. Philip Randolph threatened to march on Washington, but looks at its ripple effect. President Roosevelt realized that polls were being discriminated against.

That is where you got discrimination barred against national origin. Then what happened in '64 in Title VII. That was just to be race, color, or creed and the sex discrimination was added in '64. Then in '75, the Voting Rights Act was broadened to include Hispanics; 504 for disabled people is a direct copy of Title Six of the '64 law.

The great thing about the civil rights revolution for Blacks is that it hasn't been limited that way, that it has created America where all is discrimination. This is one of the final acts in building a country where there is no discrimination, where all people who have wrongful discriminations are going to be protected and we say in the Leadership Conference, we want this bill.

We started out as a bill really to help Blacks. It started back in 1950, but now almost forty years later, the effect of that has been felt all over the United States. We have got one last job to do and that is the priority here.

The ADA which extends civil rights protections to 30 to 43 million Americans with disabilities is a historic measure. It is a 25th anniversary of the Civil Rights Act and this bill will help complete the job. The ADA embodies the principals of non-discrimination and equal opportunity which our country embraced in 1964.

Persons with disabilities, like racial and ethic minorities and women have been subject to a long history of exclusion and segregation based on stereo types, misconceptions, and prejudices. In fact, disability often places an additional burden on these already disenfranchised groups.

Disability knows no race, class, age or sex. Persons with disabilities are members of racial and ethnic minorities and women. They are children and ethnics and elders and this is a minority group that any of us can join at any time and I can say for myself, I started out with discrimination on being Jewish and then found discrimination on being elderly and now I find discrimination on being disabled.

It all works together, dear friends, and we have got to do this job this year while there is chance. We have the administration, we have the leadership; if we can't do it, it is our fault. I include myself in that. If we cannot find words to solve the problems that have been raised—they are problems; nobody challenges that there are problems—if we can't find the right words to solve these problems, it is your fault and my fault too.

Our society has viewed people with disabilities as inferior and has developed without consideration of their needs. Being disabled has meant far more than having a physical or mental impairment. It has meant being shut in and shut out.

During the ADA hearings in the Senate, a Black Vietnam veteran testified about returning home in a wheelchair. He couldn't get to his apartment without his elderly grandmother carrying him. He couldn't go anywhere alone because of inaccessible streets and transportation, and he couldn't get a job because of stereotypes about his abilities, or more correctly, presumptions of inabilities.

He said that he learned that he was not welcome in the country he had fought for. This experience is unacceptable in a just society and that is really what the flag salute case is all about, not about an emblem, but about the fact that it will fly much more beautifully over this country when all discrimination against any of its citizens are stopped.

The ADA is a pronouncement that our society will no longer tolerate lost potential. We will no longer judge people by their disabilities, but by their disabilities. We will no longer design a society which excludes, but one that includes. The ADA is vision of the future which must be embraced by all who believe in the principle of equality on which this country is based.

The ADA is a well thought-out, well reasoned piece of legislation and it is moderate. It represents a compromise which considers the interest of all aspects of society. In employment, the ADA extends Section 504 of the 1973 Rehabilitation Act to the same entities that are covered by Title VII.

Every government and private study on this subject has documented pervasive bias by employers against hiring persons which disabilities. This is not an anti-employer thing. There is so many employers that want to do the right thing. We had this in every single situation in the civil rights case.

Employers wanted to do the right thing, but other people were getting ahead of them and they were doing the wrong thing. If you make a law on what has to be done, that law is going to be obeyed, and let me tell you that I think you will find employers want a rule that they can follow just as much as everyone else.

Now, I recognize the time problem and I am going to put the whole statement in the record, but I would like just to go ahead for a few more minutes with part of the statement that I consider so important.

Persons with disabilities are also excluded from employment because they need modifications in order to perform the job. The Section 504 concept of reasonable accommodations is incorporated in the ADA. An employer is not required to provide an accommodation which would result in an "undue hardship."

In sum, the employment provisions of the ADA reflect sound public policy, to allow persons with disabilities to contribute their skills, to become taxpayers and not to force qualified people who want to work and who can work onto the welfare rolls.

In the area of public accommodations, the ADA prohibits all types of businesses from excluding persons with disabilities, a practice which is still all too common today. This exclusion is based on discomfort, revulsion or misconceptions about what disabled persons can or should do.

When there is no outright exclusions, persons with disabilities are excluded by architectural and communication barriers in the past. These barriers were not built with the intent to keep persons with disabilities out but the effect was the same—exclusion. The ADA does not require existing buildings to be made accessible unless it can be done easily, without much difficulty or expense—a modest requirement.

However, the ADA makes a strong commitment to an accessible future. New commercial buildings are required to be build in a manner that is "readily accessible to and usable by" persons with disabilities.

It is one thing to tolerate past neglect of the needs of the persons with disabilities, it would be another thing to entirely to perpetuate that neglect into the future. Accessible design does not cost more money—the human costs of inaccessible design are tremendous. Our society must open its doors to all.

This view of the future is reflected in the requirement that new buses must be accessible to persons with disabilities. Transportation is basic to all other rights—if you can't get anywhere, you can't work or participate in the life of the community.

The literal imprisonment of millions of disabled people because of an inaccessible transit system is a national disgrace. The ADA, again, takes a moderate approach to this problem. It does not require all current buses to the accessible—it simply requires that new buses must be accessible.

To allow otherwise is to compound a problem, not help solve it. The future envisioned by the ADA is one where transportation is a right of all members of our society.

Finally, 25 years of experience in the area of civil rights has taught us that a right without a remedy is no right at all. The ADA incorporates remedies currently available in civil rights laws. An injunction to discontinue a discriminatory practice is little solace to a person who has already been harmed by the discrimination.

Fairness demands that victims of discrimination be compensated for the harm they have suffered, and punitive damages are sometimes necessary to stop a willful violator from continuing to discriminate. Without the possibility of punitive damages, willful violations may be cost-effective.

Finally, Mr. Chairman, the ADA must become law of our nation if we are to continue our commitment to equal opportunity. Citizens with disabilities have been shut out long enough. The ADA opens the doors of America to the millions of men, women, and children of all races and ethnicities who have disabilities and who have waited long enough to be extended the same rights as we all take for granted.

The Leadership Conference urges quick pages of the ADA—the most important disability civil rights legislation of our time. The flag will fly with more beauty over a nation that has finished the job against discrimination. Please, please, do it this year while the time is ripe and when we can feel that what started as a revolution on behalf of former slaves has now brought fair treatment to all Americans.

Thank you and thank you for letting me to go on because I do have the time problem, sir.

Statement of the Leadership Conference on Civil Rights Supporting the Americans with Disabilities Act

Joseph L. Rauh, Jr., Counsel

July 18, 1989

Mr. Chairman and members of the Committee, my name is Joseph L. Rauh, Jr. I am the Counsel to the Leadership Conference on Civil Rights, a coalition of 180 national organizations representing minorities, women, persons with disabilities, older Americans, labor, religious groups, and minority businesses and professionals. On behalf of the Conference, I want to thank the Committee for allowing us the opportunity to testify today.

I am proud to be here today to represent the Leadership Conference on Civil Rights in support of the Americans with Disabilities Act (ADA). The ADA which extends civil rights protections to 43 millions Americans with disabilities is, indeed, an historic measure. On the 25th anniversary of the 1964 Civil Rights Act, this legislation is long overdue. The ADA embodies the principles of non-discrimination and equal opportunity which our country embraced in 1964.

"Equality In a Free, Plural, Democratic Society"

BEST COPY AVAILABLE

Persons with disabilities, like racial and ethnic minorities and women, have been subject to a long history of exclusion and segregation based on stereotypes, misconceptions and prejudice. In fact, disability often places an additional burden on these already disenfranchised groups. Disability knows no race, class, age or sex bounds. Persons with disabilities are members of racial and ethnic minorities and women. They are children and elders. And this is a minority group that any of us can join at any time. The members of LCCR recognize that the ADA is for all of us.

Our society has viewed people with disabilities as inferior and has developed without consideration of their needs. Being disabled has meant far more than having a physical or mental impairment, it has meant being shut-in and shut-out. During the ADA hearings in the Senate, a black Viet Nam veteran testified about returning home in a wheelchair. He couldn't get to his apartment without his elderly grandmother carrying him. He couldn't go anywhere alone because of inaccessible streets and transportation. And he couldn't get a job because of stereotypes about his abilities, or more correctly presumptions of inabilities. He said that he learned that he was not welcome in the country he had fought for. This experience is unacceptable in a just society.

The ADA is a pronouncement that our society will no longer tolerate lost potential--that we will no longer judge people by their disabilities, but by their abilities--that we will no longer design a society which excludes, but one that includes. The ADA is a vision of the future which must be embraced by all who believe in the principle of "equality" on which this country is based.

The ADA is a well thought-out, well reasoned piece of legislation, and it is moderate. It represents a compromise which considers the interests of all aspects of society. In employment, the ADA extends Section 504 of the 1973 Rehabilitation Act to the same entities that are covered by Title VII.

Every government and private study on the subject has documented pervasive bias by employers against hiring persons with disabilities. This bias is based on misconceptions and unfounded fears. Employers, like other members of the general public, see disabilities and not abilities. The ADA would assure that disabled people are judged as individuals on their merit by eliminating bias in the selection procedure. Employers could no longer bar classes of disabled people because of stereotypes, a practice that is widespread today. Many employers simply refuse to consider persons with a variety of disabilities. For example, many employers refuse to hire persons with epilepsy, even though at least 85% are seizure-free through medication. Others refuse to hire persons with a history of cancer. No disability is immune from stereotypes. Where there is no outright exclusion, persons with disabilities are disqualified because of job qualifications which bear no relationship to the performance of the job. The ADA would require that job qualifications are, in fact, necessary to the performance of the job.

Persons with disabilities are also excluded from employment because they need modifications in order to perform the job. The Section 504 concept of reasonable accommodations is incorporated in the ADA. An employer is not required to provide an accommodation which would result in an "undue burden." In sum, the employment provisions of the ADA reflect sound public policy--to allow persons with disabilities to contribute their skills--to become tax payers and not to force qualified people who want to work and who can work onto the welfare rolls.

In the area of public accommodations, the ADA prohibits businessess from excluding persons with disabilities, a practice which is still all too common today. This exclusion is based on discomfort, revulsion or misconceptions about what disabled persons can or should do. When there is no outright exclusion, persons with disabilities are excluded by architectural and communication barriers.

In the past, these barriers were not built with the intent to keep persons with disabilities out but the effect was the same--exclusion. The ADA does not require existing buildings to be made accessible unless it can be done easily, without much difficulty or expense--a modest requirement. However, the ADA makes a strong commitment to an accessible future. New commercial buildings are required to be built in a manner that is "readily accessible to and usable by" persons with disabilities. It is one thing to tolerate past neglect of the needs of persons with disabilities, it would be another thing entirely to perpetuate that neglect into the future. Accessible design does not cost more money--the human costs of inaccessible design are tremendous. Our society must open its doors to all.

This view of the future is reflected in the requirement that new buses must be accessible to persons with disabilities. Transportation is basic to all other rights--if you can't get anywhere you can't work or participate in the life of the community. The literal imprisonment of millions of disabled people because of an inaccessible transit system is a national disgrace. The ADA, again, takes a moderate approach to this problem. It does not require all current buses to be accessible--it simply requires that new buses must be accessible. To allow otherwise is to compound a problem, not help solve it. The future envisioned by the ADA is one where transportation is a right of all members of our society.

Finally, twenty-five years' of experience in the area of civil rights has taught us that a right without a remedy is no right at all. The ADA incorporates remedies currently available in civil rights laws. An injunction to discontinue a discriminatory practice is little solace to a person who has already been harmed by the discrimination. Fairness demands that victims of discrimination be compensated for the harm they have suffered. And punitive damages are sometimes necessary to stop a willful violator from continuing to discriminate. Without the possibility of punitive damages willful violations may be cost-effective.

The ADA must become the law of our nation if we are to continue our commitment to equal opportunity. Citizens with disabilities have been shut out long enough. The ADA opens the doors of America to the millions of men, women and children of all races and ethnicities who have disabilities and who have waited long enough to be extended the same rights we all take for granted. LCCR urges quick passage of the ADA--the most important disability civil rights legislation of our time.

Thank you.

######

Chairman **Owens**. Thank you very much, Mr. Rauh. We salute your long years of fighting discrimination. We understand that you have a representative, Ms. Feldblum, who will stay and answer questions later.

Mr. **Rauh**. That is correct. She will take my seat.

Chairman **Owens**. Welcome, Ms. Feldblum, to the table.

Mr. **Rauh**. Thank you very much, sir, and thank the members of the Committee.

Chairman **Owens**. Our next witness is Mr. Justin Dart, Jr.

Mr. **Dart**. Mr. Chairman, it is an honor to——

Mr. **Bartlett**. Mr. Dart—Mr. Chairman, before Mr. Dart goes on, I would like to take note that Mr. Dart is a long time friend of mine and a fellow Texan and we Texans do tend to stick together, so I want to vouch for Justin Dart, Jr., as a long time advocate for independence and independent living and he does so from a Texas perspective and I hope that doesn't bother anyone on the Committee, but I like it.

Chairman **Owens**. Not at all. We hope you stick with him as we develop this bill.

Mr. **Dart**. Thank you. Mr. Chairman, it is an honor to appear today before your distinguished committees. My fellow members of the disability community and I commend you and your colleagues for empowering people with disabilities through the unprecedented establishment of the Task Force on the rights and empowerment of Americans with disabilities composed of 35 outstanding Americans who are authentic representatives of every major disability constituency.

It has been a real privilege and a pleasure to work with you and your magnificent staff and I would also like to take the opportunity to say that I am equally happy and honored to be here today with my distinguished fellow Texas, Congressman Steve Bartlett who for many years, I have known as a foremost supporter of the independence and the productive independence of people with disabilities.

I am also honored to set at the table today with my distinguished colleague, Sandra Parrino, the chairperson of the National Council on Disability, who has been a stalwart leader for ADA since the time when it was only a concept.

Mr. Chairman, I submit our written statement for the record. I address you today not simply as chairperson of a task force, but also as an active Republican, a fiscal conservative and above all, an advocate for the principles of individual responsibility, individual productivity and individual rights which have made America brave.

Mr. Chairman, it is absolutely imperative for the integrity and for the prosperity of this nation that the Americans with Disabilities Act become law. During the past 15 months, I have personally presided at 63 public forums on ADA, at least one in every state and I have made 88 presentations at numerous other gatherings.

I heard and saw things in those forums that shook me to the foundations of my being. Thousands of persons with disabilities and their advocates provided overwhelming evidence of massive discrimination and segregation in all aspects of life and I submit several thousand documents to you, Mr. Chairman, and they are piled up over there in a number of boxes.

Chairman OWENS. Without objection, they will be noted for the record.

Mr. DART. There is blatant infringement of personal rights. There is the most extreme isolation, unemployment, poverty, psychological abuse and physical deprivation experienced by any segment of our society. The Task Force concludes that these problems will never even begin to be solved until this nation makes a clear, enforceable statement of law that people with disabilities have the same inalienable rights as other people.

The Task Force has found united disability community support for the Americans with Disabilities Act. Of more than 23,000 persons with disabilities and their advocates attending my ADA related presentations, not one single individual expressed opposition to the Act.

Every major disability constituency organization that I know of supports the passage of ADA. As an American, I am proud that 243 distinguished member of the House and of the Senate have co-sponsored ADA. As an American, I am proud that the President of the United States has on numerous occasions pledged his support for the protection of the rights of people with disabilities and that the Attorney General has called for the passage this year of a bipartisan version of ADA.

However, there has been opposition to ADA by sincere, well-meaning persons who perhaps have not had an opportunity to review all of the evidence in depth. Cost. Is ADA affordable? While we all agree that equality is not contingent on economic expediency, we also agree that there is always the responsibility to implement equality as affordably as possible.

As a former CEO of both large and small enterprises, employing persons with severe disabilities and constructing accessible facilities, I know that ADA is affordable for business and that ADA is good business and this is not simply my personal opinion. Every significant requirement of ADA is now being implemented successfully by progressive, public and private entities somewhere.

The National Council on Disability, 15 distinguished Reagan appointed Republicans ably led by my esteemed colleague, Sandra Parrino, studied the problems of people with disabilities for more than three years. They concluded that the cost of discrimination far exceeds the cost of eliminating it.

After consulting with people with disabilities and their advocates throughout the nation, the council wrote the original Americans with Disabilities Act and unanimously recommended it to the President and to the Congress.

Mr. Chairman, cost and physical responsibility provide the strongest possible arguments for the Americans with Disabilities Act. ADA is an authentic issue for conservatives. It is the status quo discrimination and segregation that are unaffordable, that are preventing persons with disabilities from becoming self-reliant and that are driving us inevitably toward the economic and moral disasters of giant, paternalistic welfare bureaucracies, businesses, families, taxpayers, are already paying unaffordable and rapidly escalating billions in public and private funds to maintain ever increasing millions of potentially productive Americans in unjust, unwanted dependency.

As with the issues of drugs, competitive productivity and the national debt, we must summon the courage and the self-discipline of our pioneer forefathers. We must modify obsolete and self-indulgent practices. We must defer instant ratifications in favor of responsible maximally productive democracy.

We must not, once again, by our refusal to fulfill our responsibilities pass unconscionable, social, and financial burdens to our children. The economic and moral greatness of America is based on providing equal opportunity to way after way of previous oppressed and dependent groups, providing such opportunity to Americans with disabilities will result in yet another period of dynamic growth in the productivity, prosperity, quality of life, and international moral leadership of this nation.

Mr. Chairman, we have given you thousands of documents, but no document can express the impact of disability on the life, the self-image of a human being, of a family. My mother, my brother, and my niece lost their will to live and their lives to the horror of disability discrimination.

My beloved daughter with MS lives in paralyzing terror of the rejection she faces every day and hundreds of thousands of other American families have their own experience of tragedy. A California woman, a mother, a TV director before becoming disabled speaks for unseen millions and I quote as she wrote to the Task Force.

"We can go just so long, constantly reaching dead ends. I am broke, degraded and angry. I have attempted suicide three times. I know hundreds. Most of us tried, but which way and where can we go? What and who can we be? If I were understood, I would have something to live for."

Mr. Chairman, distinguished members of the Congress, Mr. President, give us something to live for. We appeal to you not for more welfare, not for more segregation in nursing homes, but to be recognized as equal human beings, to have equal opportunity to succeed or to fail in the productive mainstream of society.

Mr. Chairman, the eyes of history are upon us. Like the founders of our nation who launched a worldwide democratic revolution, we face a decision which will shape human cultural. We have a profound responsibility not only to 43 million Americans with disabilities, but also to hundreds of millions of the earth's most disadvantaged in this and in future generations.

We cannot betray these people. Like our founding fathers, we must find the inspiration to rise above the traditional limitations of ego, personal animosities, in short range, economic and political expediency. We must unite Republicans, Democrats, Conservatives, Liberals to act, to act with responsibility to the foundational values of America and to the future of human being.

Mr. Chairman, Congressman, I will do anything, literally anything, to cooperate with you to prevent my grandchildren and yours from being subjected to the purgatory of subhuman existence which my mother and my brother could not face.

The Americans with Disabilities Act must be passed. Of course, in a form that does not impose unnecessary burdens on anyone, but certainly, in a form that lays the foundation for full equality because partial equality is not equality. Partial equality is simply guarantees more discrimination, more segregation, more social welfare, and more public and private debt.

Now is the time for those who believe in the great moral and economic principles of American democracy to keep the sacred pledge of liberty and justice for all.

I thank you.

TESTIMONY PRESENTED BY JUSTIN DART, CHAIRPERSON OF THE TASK FORCE ON THE RIGHTS AND EMPOWERMENT OF AMERICANS WITH DISABILITIES, BEFORE THE JOINT HEARING OF THE HOUSE SUBCOMMITTEES ON SELECT EDUCATION AND EMPLOYMENT OPPORTUNITIES ON THE AMERICANS WITH DISABILITIES ACT OF 1989, JULY 18, 1989.

MR. CHAIRMAN, IT IS AN HONOR TO APPEAR BEFORE THESE DISTINGUISHED COMMITTEES, WHICH HAVE GIVEN STAUNCH SUPPORT TO AMERICANS WITH DISABILITIES OVER THE YEARS. I BELIEVE THAT I SPEAK FOR ALL OF MY FELLOW MEMBERS OF THE DISABILITY COMMUNITY WHEN I COMMEND YOU FOR YOUR PERSONAL LEADERSHIP IN ADVOCATING FOR OUR RIGHTS. WE ALSO COMMEND YOU AND YOUR COLLEAGUES FOR EMPOWERING PEOPLE WITH DISABILITIES THROUGH THE UNPRECEDENTED ESTABLISHMENT OF THIS TASK FORCE - COMPOSED OF 35 OUTSTANDING AMERICANS WHO ARE AUTHENTIC REPRESENTATIVES OF VIRTUALLY EVERY MAJOR DISABILITY CONSTITUENCY. IT HAS BEEN A PRIVILEGE AND A PLEASURE TO WORK WITH YOU, MARIA CUPRILL, BOB TATE, PAT MORRISSEY AND THE OTHER VERY CAPABLE MEMBERS OF YOUR STAFFS.

I SPEAK TODAY AS CHAIRPERSON OF THE TASK FORCE ON THE RIGHTS AND EMPOWERMENT OF AMERICANS WITH DISABILITIES, TO GIVE OUR REPORT ON THE MOST IMPORTANT DISABILITY-RELATED LEGISLATION IN THE HISTORY OF THIS NATION, THE AMERICANS WITH DISABILITIES ACT.

AMERICANS WITH DISABILITIES

DISABILITY HAS BECOME A MAJOR FACTOR IN THE LIVES OF ALL THE MEMBERS OF OUR SOCIETY. PRESENTLY THERE ARE AN ESTIMATED 43 MILLION AMERICANS WITH DISABILITIES. THIS FIGURE IS INCREASING RAPIDLY AS MODERN MEDICAL SCIENCE ENABLES MORE AND MORE PEOPLE TO SURVIVE PREVIOUSLY FATAL BIRTH DEFECTS, INJURIES AND ILLNESSES AND TO LIVE MANY POTENTIALLY PRODUCTIVE AND HAPPY YEARS WITH SIGNIFICANT DISABILITIES. THESE DISABILITIES RESULT FROM NUMEROUS PHYSICAL AND MENTAL CONDITIONS, INCLUDING THE NORMAL PROCESS OF AGING AND IMPAIRMENTS OF VISION, SPEECH, HEARING, LEARNING, INTELLECTUAL FUNCTION AND MOBILITY. ALTHOUGH NOT ALL CHRONIC ILLNESS IS DISABLING, MUCH DISABILITY IS A CONSEQUENCE OF DISEASES OF THE CIRCULATORY, RESPIRATORY, URINARY, NEUROLOGICAL, SKELETAL, MUSCULAR, GLANDULAR, DERMATOLOGICAL, AND DIGESTIVE SYSTEMS; OF ARTHRITIS, CEREBRAL PALSY, EPILEPSY, DIABETES, MENTAL ILLNESS, CANCER, TRAUMATIC BRAIN INJURY, MULTIPLE SCLEROSIS, MUSCULAR DYSTROPHY, AIDS, AUTISM, ALLERGIES, AND MANY OTHER DISORDERS. SOME RESEARCHERS ESTIMATE THAT THE PROPORTION OF OUR POPULATION WITH DISABILITIES, NOW MORE THAN 15%, WILL DOUBLE WITHIN THE NEXT 30-50 YEARS. IT IS HIGHLY PROBABLE THAT ANY PERSON BORN IN 1989 WILL EXPERIENCE AT LEAST TEMPORARY DISABILITY DURING HIS OR HER LIFETIME. IT IS VIRTUALLY CERTAIN THAT ONE OR MORE MEMBERS OF ALMOST EVERY AMERICAN FAMILY WILL BECOME DISABLED.

ALTHOUGH THIS DRAMATIC INCREASE IN THE LIFE SPAN REPRESENTS AN HISTORIC ENLARGEMENT OF THE HUMAN POTENTIAL, OUR CULTURE HAS NOT YET MODIFIED ITS PRACTICES TO FULFILL THAT POTENTIAL, OR EVEN TO MEET THE BASIC LIFE SUPPORT REQUIREMENTS CREATED BY THE NEW CHARACTERISTICS OF ITS MEMBERS. MAJOR PROBLEMS HAVE DEVELOPED.

THE TASK FORCE

IN THIS CONTEXT, THE TASK FORCE ON THE RIGHTS AND EMPOWERMENT OF AMERICANS WITH DISABILITIES WAS ESTABLISHED ON MAY 2, 1988, BY CONGRESSMAN MAJOR R. OWENS, CHAIRMAN OF THE HOUSE SUBCOMMITTEE ON SELECT EDUCATION. COMPOSED OF 34 DISTINGUISHED REPRESENTATIVES OF MAJOR SEGMENTS OF THE DISABILITY COMMUNITY, THE TASK FORCE IS MANDATED TO COLLECT INFORMATION AND TO MAKE RECOMMENDATIONS WHICH WILL ASSIST CONGRESS AS IT CONSIDERS THE HISTORIC AMERICANS WITH DISABILITIES ACT, AND OTHER LEGISLATION DESIGNED TO IMPLEMENT THE RIGHTS OF AMERICA'S CITIZENS WITH DISABILITIES.

THE TASK FORCE WISHES TO ACKNOWLEDGE THE MAGNIFICENT SUPPORT IT HAS RECEIVED FROM NUMEROUS MEMBERS OF CONGRESS, PARTICULARLY TASK FORCE FOUNDER CONGRESSMAN MAJOR OWENS AND THE MEMBERS OF THE HOUSE SUBCOMMITTEE ON SELECT EDUCATION, SENATORS TOM HARKIN AND LOWELL WEICKER AND THE MEMBERS OF THE SENATE SUBCOMMITTEE ON THE HANDICAPPED, AND ALL THE SPONSORS OF THE CIVIL RIGHTS RESTORATION ACT, THE FAIR HOUSING ACT AMENDMENTS OF 1988, THE TECHNOLOGY-RELATED ASSISTANCE FOR INDIVIDUALS WITH DISABILITIES ACT AND THE AMERICANS WITH DISABILITIES ACT.

THE TASK FORCE HAS NO PUBLIC FUNDING OR PRIVATE GRANTS. PARTICULAR RECOGNITION IS DUE TASK FORCE MEMBERS, STAFF AND VOLUNTEERS, AND THE LITERALLY THOUSANDS OF PATRIOTIC CITIZENS AND ORGANIZATIONS IN EVERY STATE AND TERRITORY WHO HAVE CONTRIBUTED SERVICES, MONEY AND TIME TO MAKE THE DEMOCRATIC SYSTEM WORK.

FINDINGS

THE MEMBERS OF THE TASK FORCE, THE ORGANIZATIONS WITH WHICH THEY ARE AFFILIATED AND MORE THAN 8,000 PERSONS WITH DISABILITIES, FAMILIES, ADVOCATES AND SERVICE PROVIDERS ATTENDING 63 TASK FORCE FORUMS IN 50 STATES AND TWO CONGRESSIONAL HEARINGS HAVE PRODUCED

OVERWHELMING VERBAL AND WRITTEN EVIDENCE THAT:

- ALTHOUGH AMERICA HAS RECORDED GREAT PROGRESS IN THE AREA OF DISABILITY DURING THE PAST FEW DECADES, OUR SOCIETY IS STILL INFECTED BY THE ANCIENT, NOW ALMOST SUBCONSCIOUS ASSUMPTION THAT PEOPLE WITH DISABILITIES ARE LESS THAN FULLY HUMAN AND THEREFORE ARE NOT FULLY ELIGIBLE FOR THE OPPORTUNITIES, SERVICES AND SUPPORT SYSTEMS WHICH ARE AVAILABLE TO OTHER PEOPLE AS A MATTER OF RIGHT. THE RESULT IS MASSIVE, SOCIETY-WIDE DISCRIMINATION.

- MILLIONS OF OUR CITIZENS WITH DISABILITIES SUFFER UNCONSCIONABLE INFRINGEMENT OF THEIR HUMAN RIGHTS. THEY ARE SUBJECTED TO DE FACTO GUARDIANSHIP, DETENTION, AND CONFISCATION OF PROPERTY WITHOUT DUE PROCESS OF LAW. THEY ARE OFTEN DENIED ESSENTIAL LIFE SUPPORT SERVICES. THEY SUFFER FREQUENT HUMILIATION AND REJECTION, AS WELL AS PHYSICAL AND PSYCHOLOGICAL DEPRIVATION AND ABUSE. THEY ARE OFTEN UNREASONABLY EXCLUDED FROM SIGNIFICANT OPPORTUNITIES FOR SOCIAL PARTICIPATION, INCLUDING ACCESS TO PUBLIC AND PRIVATE FACILITIES, EDUCATION, EMPLOYMENT, HOUSING, TRANSPORTATION, COMMUNICATIONS AND RECREATION.

- PIONEER MEDICAL, EDUCATIONAL, REHABILITATION AND INDEPENDENT LIVING SERVICES DESIGNED TO ENABLE PEOPLE WITH DISABILITIES TO PARTICIPATE FULLY IN THE PRODUCTIVE MAINSTREAM OF SOCIETY HAVE PROVEN TO BE EFFECTIVE AND PROFITABLE. HOWEVER, IN SPITE OF THE VALIANT EFFORTS OF THE CONGRESS AND OF MANY DEDICATED SERVICE PROVIDERS, THESE PROMISING PROGRAMS HAVE BEEN SEVERELY LIMITED BY TRADITIONAL DISCRIMINATION. THEY HAVE BEEN UNDERFUNDED, FRAGMENTED, UNCOORDINATED, AND CONTINUALLY CONSTRAINED BY OBSOLETE ATTITUDES AND INACCESSIBLE ENVIRONMENTS. THE NEEDS OF THE MAJORITY OF PEOPLE WITH DISABILITIES ARE NOT BEING MET.

- BLOCKED BY DISCRIMINATORY PRACTICES FROM FULFILLING THEIR PRODUCTIVE POTENTIAL, 43 MILLION AMERICANS WITH DISABILITIES FORM THIS NATION'S MOST IMPOVERISHED LARGE MINORITY. THEY RECEIVE THE LEAST EDUCATION. THEY HAVE THE LOWEST INCOMES AND AMONG THE HIGHEST RATES OF UNEMPLOYMENT, SUBSTANDARD HOUSING, HOMELESSNESS, SUICIDE AND PREVENTABLE ILLNESS AND DEATH.

- A CALIFORNIA WOMAN WITH A HEAD INJURY WRITES:

"I HAD BEEN A CPA, AND WAS A PRODUCER & DIRECTOR FOR CNN AND PBS IN LONDON UP UNTIL ACCIDENT, JUNE 1987. NOW NOTHING. MY CHILDREN ARE HURT, FRUSTRATED AND CONFUSED. WHAT WILL HAPPEN TO THEIR MOTHER THAT WAS SUCCESSFUL, INTELLIGENT, HAPPY, LOVING, GIVING?

I'VE BEEN FLOUNDERING AND SEARCHING LONG ENOUGH. WE CAN GO JUST SO LONG CONSTANTLY REACHING DEAD ENDS. I'M BROKE, DEGRADED AND

ANGRY. HAVE ATTEMPTED SUICIDE THREE TIMES. I KNOW HUNDREDS. MOST OF US TRIED, BUT WHICH WAY AND WHERE DO WE GO? WHERE CAN WE LIVE? WHAT AND WHO CAN WE BE? IF I WERE UNDERSTOOD, CARED FOR, EDUCATED FOR A NEW LIFE AND CAREER, I WOULD HAVE SOMETHING TO LIVE FOR.

WHO HAS THE DEPTH, DETERMINATION, INTUITION, PLAN TO HELP US?"

- ON DECEMBER 28, 1988, IN TACOMA, WASHINGTON, TWO YEAR OLD DYLAN DAY AND HIS GRANDFATHER HOLLIS DAY WERE FOUND SHOT TO DEATH, AN APPARENT MURDER-SUICIDE. ACCORDING TO THE CHILD'S MOTHER, HER FATHER HAD BEEN "VERY, VERY CONCERNED ABOUT MY CHILD'S CONDITION." DYLAN HAD "A MILD FORM OF CEREBRAL PALSY, AND WAS CONSIDERED TO BE DEVELOPMENTALLY DISABLED." MR. DAY, A RETIRED COMPANY PRESIDENT, COULD NOT BEAR THE THOUGHT THAT HIS DAUGHTER AND GRANDSON WOULD HAVE TO FACE THE DEVASTATING LIFETIME OF DISCRIMINATION AND DEPRIVATION THAT HE FORESAW FOR THEM.

- A WOMAN IN CALIFORNIA WHO IS BLIND WROTE TO THE TASK FORCE: "I AM A TRAINED NEWS REPORTER AND HAVE BEEN APPLYING FOR JOBS AT RADIO STATIONS THROUGHOUT THE COUNTRY. I HAVE BEEN REPEATEDLY TOLD THAT I AM THE MOST QUALIFIED CANDIDATE, BUT SINCE THERE HAS NEVER BEEN A BLIND REPORTER BEFORE, THEY CANNOT HIRE ME. I WOULD LIKE THE CHANCE TO SUCCEED OR FAIL BASED ON MY ABILITY AS A REPORTER RATHER THAN MY LACK OF VISION."

- A SERVICE PROVIDER TO HEARING IMPAIRED PEOPLE IN ILLINOIS TESTIFIED: "WE HAVE CLIENTS WHO ARE ADMITTED TO HOSPITALS, UNDERGO SURGERY, AND ARE RELEASED WITHOUT THE BENEFIT OF A SIGN LANGUAGE INTERPRETER TO RECEIVE INFORMATION CRITICAL TO THEIR HEALTH. WE HAVE CLIENTS WHO HAVE BEEN ARRESTED AND HELD IN JAIL OVER NIGHT WITHOUT EVER KNOWING THEIR RIGHTS NOR WHAT THEY ARE BEING HELD FOR. WE HAVE CLIENTS WHOSE CHILDREN HAVE BEEN TAKEN AWAY FROM THEM AND TOLD TO GET PARENT INFORMATION, BUT HAVE NO PLACE TO GO BECAUSE THE SERVICES ARE NOT ACCESSIBLE. WHAT CHANCE DO THEY EVER HAVE TO GET THEIR CHILDREN BACK?"

223 YEARS AFTER OUR FOUNDING FATHERS DECLARED THAT ALL MEN "ARE ENDOWED BY THEIR CREATOR WITH CERTAIN UNALIENABLE RIGHTS," 25 YEARS AFTER THE CIVIL RIGHTS ACT OF 1964, AMERICANS WITH DISABILITIES STILL DO NOT ENJOY THE COMPREHENSIVE PROTECTION AGAINST DISCRIMINATION WHICH HAVE BEEN PROVIDED TO ALL OTHER MAJOR MINORITIES. EXISTING LAWS PROVIDING FOR PARTIAL RIGHTS ARE VERY POORLY IMPLEMENTED AND ENFORCED.

THE TASK FORCE CONCLUDES THAT:

DISABILITY HAS BECOME A NORMAL CHARACTERISTIC OF HUMAN EXPERIENCE. MOST PEOPLE WITH DISABILITIES HAVE THE POTENTIAL TO BECOME FULLY

PRODUCTIVE PARTICIPANTS IN THE MAINSTREAM OF SOCIETY. VIRTUALLY ALL PEOPLE WITH DISABILITIES HAVE THE POTENTIAL TO BECOME MORE SELF-RELIANT, AND TO CONTRIBUTE TO THE PRODUCTIVITY AND QUALITY OF LIFE OF THOSE AROUND THEM. HOWEVER THIS VAST HUMAN POTENTIAL IS BEING SEVERELY SUPPRESSED BY TRADITIONAL DISCRIMINATION, RESULTING IN UNCONSCIONABLE INJUSTICE TO INDIVIDUALS, AND UNAFFORDABLE ECONOMIC AND MORAL BURDENS FOR THE NATION.

AMERICANS WITH DISABILITIES WILL NEVER BE ABLE TO FULFILL THEIR POTENTIAL TO BECOME FULLY CONTRIBUTING, PRODUCTIVE CITIZENS OF THE FIRST CLASS UNTIL THIS NATION EMPOWERS THEM BY TAKING DECISIVE ACTION TO ELIMINATE DISCRIMINATORY PRACTICES AND THE FALSE ASSUMPTIONS ON WHICH THOSE PRACTICES ARE BASED. HISTORY DEMONSTRATES THAT THIS CAN ONLY BE DONE THROUGH A FIRM, ENFORCEABLE STATEMENT OF LAW THAT PEOPLE WITH DISABILITIES HAVE THE SAME INALIENABLE RIGHTS AS OTHER PEOPLE, AND THAT HENCEFORTH THEY ARE TO BE ACCORDED EQUAL OPPORTUNITY IN ALL ASPECTS OF LIFE.

THE TASK FORCE URGES:

- THAT CONGRESS TAKE PROMPT ACTION TO CONSIDER AND TO PASS THE AMERICANS WITH DISABILITIES ACT OF 1989, WITH VIGILANCE THAT THE PRINCIPLE OF EQUALITY NOT BE COMPROMISED. THE FINAL PRODUCT OF THE LEGISLATIVE PROCESS MUST ENSURE THE PROTECTION AND ENFORCEMENT OF THE CIVIL RIGHTS OF ALL PEOPLE WITH DISABILITIES TO PARTICIPATE FULLY AND EQUALLY IN THE MAINSTREAM OF SOCIETY.

- THAT THE PRESIDENT AND THE EXECUTIVE BRANCH PROVIDE VIGOROUS PUBLIC AND ADMINISTRATIVE LEADERSHIP ON BEHALF OF THE PASSAGE AND THE IMPLEMENTATION OF THE AMERICANS WITH DISABILITIES ACT.

- THAT ALL CITIZENS WHO LOVE JUSTICE ADVOCATE FOR THE ENACTMENT OF THE AMERICANS WITH DISABILITIES ACT, AND TAKE DECISIVE ACTION TO MAKE THE RIGHTS WHICH ADA MANDATES REAL IN THEIR HOMES AND COMMUNITIES.

SUPPORT AND CONCERNS

THE AMERICANS WITH DISABILITIES ACT HAS BEEN ENDORSED SPECIFICALLY OR IN PRINCIPLE BY THE LEADERS OF BOTH MAJOR POLITICAL PARTIES: PRESIDENT BUSH, VICE PRESIDENT QUAYLE AND GOVERNOR DUKAKIS, AND BY MORE THAN ONE HUNDRED AND FIFTY DISTINGUISHED MEMBERS OF THE LAST CONGRESS. IT HAS BEEN ENDORSED BY INDIVIDUALS AND ORGANIZATIONS REPRESENTING EVERY MAJOR SEGMENT OF THE DISABILITY COMMUNITY. OF THE LITERALLY THOUSANDS OF PEOPLE WITH DISABILITIES, THEIR FAMILIES, SERVICE PROVIDERS AND ADVOCATES PRESENTING EVIDENCE TO THE TASK FORCE, NOT ONE INDIVIDUAL EXPRESSED OPPOSITION TO ADA.

HOWEVER CONCERNS HAVE BEEN EXPRESSED BY PERSONS AND GROUPS UNFAMILIAR WITH OUR PROBLEMS AND POTENTIAL, WHO FEAR THAT PROVISIONS OF ADA MIGHT NEGATIVELY IMPACT THEIR INTERESTS.

THE TASK FORCE BELIEVES THAT THE MAJORITY OF THESE CONCERNS, ALTHOUGH SINCERELY HELD AND WELL MEANING, ARE BASED LARGELY ON TRADITIONAL ASSUMPTIONS AND LACK OF INFORMATION.

MOST OFTEN EXPRESSED IS CONCERN ABOUT THE COST OF IMPLEMENTING ADA. DOES ADA IMPOSE UNAFFORDABLE ECONOMIC BURDENS ON THE NATION?

EQUALITY UNAFFORDABLE IN AMERICA? WOULD THIS QUESTION BE ASKED ABOUT BLACK, HISPANIC OR JEWISH PEOPLE? THE VERY EXISTENCE OF THE QUESTION REVEALS THE EXTENT TO WHICH ANCIENT ASSUMPTIONS ABOUT DISABILITY HAVE BEEN INTERNALIZED. THE VERY QUESTION IS INCONSISTENT WITH THE PRINCIPLES SET OUT IN THE DECLARATION OF INDEPENDENCE, THE CONSTITUTION AND THE PLEDGE OF ALLEGIANCE TO THE FLAG. THE VERY QUESTION DEMONSTRATES DRAMATICALLY THE ABSOLUTE NECESSITY FOR A NATIONAL MANDATE OF EQUALITY.

NOT SINCE THE ABOLITION OF SLAVERY HAVE AMERICANS BEEN DENIED EQUALITY FOR ECONOMIC REASONS. THE PRINCIPLE OF EQUALITY IS NOT NEGOTIABLE IN THE UNITED STATES OF AMERICA.

ADA IS NOT ONLY AFFORDABLE, WE CANNOT AFFORD NOT TO HAVE IT.

IT IS THE STATUS QUO THAT IS UNAFFORDABLE. IT IS THE OBSOLETE STATUS QUO PRACTICES OF DISCRIMINATION AND SEGREGATION THAT ARE PREVENTING PERSONS WITH DISABILITIES FROM BEING PRODUCTIVE, AND ARE DRIVING US INEVITABLY TOWARD THE ECONOMIC AND MORAL DISASTERS OF GIANT PATERNALISTIC WELFARE BUREAUCRACIES. WE ARE ALREADY PAYING UNAFFORDABLE BILLIONS IN PUBLIC AND PRIVATE FUNDS TO MAINTAIN MILLIONS OF POTENTIALLY PRODUCTIVE AMERICANS IN UNJUST, UNWANTED WELFARE DEPENDENCY. FEDERAL, STATE AND LOCAL GOVERNMENTS ARE ESTIMATED TO SPEND WELL OVER $100 BILLION ANNUALLY. EXPENDITURES BY PRIVATE INDIVIDUALS AND ORGANIZATIONS AND LOST TAXES AND PRODUCTIVITY, PROBABLY TOTAL AT LEAST ANOTHER 200 BILLION. THOUSANDS OF FAMILIES ARE BANKRUPTED ANNUALLY. AND THESE MASSIVE COSTS ARE ESCALATING EXPLOSIVELY WITH THE RAPIDLY INCREASING POPULATION OF CITIZENS, ESPECIALLY ELDERLY PERSONS, WITH SIGNIFICANT PHYSICAL AND MENTAL IMPAIRMENTS.

BUT WON'T ADA REQUIRE MASSIVE EXPENDITURES BY GOVERNMENT AND THE PRIVATE SECTOR? HOW CAN WE AFFORD SUCH EXPENDITURES NOW, IN A TIME OF PROPOSED BUDGET CUTS BY GOVERNMENT, AND INCREASING COSTS FOR BUSINESS AND INDIVIDUALS?

EQUALITY DOES REQUIRE A RECOGNITION OF COMPETING EQUITIES AND A BALANCING OF INTERESTS. ADA HAS BEEN WRITTEN ON PRINCIPLES OF FAIRNESS TO THE ADVANTAGED AS WELL AS TO THE DISADVANTAGED.

WHILE IT IS TRUE THAT EQUAL OPPORTUNITY FOR PEOPLE WITH DISABILITIES WILL REQUIRE CERTAIN INITIAL COSTS, INCREASED GOVERNMENT SPENDING TO IMPLEMENT ADA WILL BE MINIMAL, LIMITED PRINCIPALLY TO ENFORCEMENT ENTITIES WHICH ALREADY EXIST. THE PRIVATE SECTOR WILL NOT BE REQUIRED TO SPEND ENORMOUS SUMS ON INSTANT TOTAL RENOVATIONS OF EXISTING FACILITIES, BUT RATHER TO MAKE REASONABLE EFFORTS TO MAKE SUCH FACILITIES ACCESSIBLE, AND TO ACCOMMODATE EMPLOYEES WITH DISABILITIES. MAJOR EMPHASIS IS GIVEN TO CREATING NEW FACILITIES AND SYSTEMS THAT WILL BE COMPLETELY ACCESSIBLE. WITH APPROPRIATE PLANNING, THIS WILL, IN MOST CASES, REQUIRE ONLY MODESTLY INCREASED INVESTMENTS SPREAD OVER A REASONABLE PERIOD OF TIME.

WHAT WILL BE NECESSARY IS NOT GREAT INCREASES IN SPENDING, BUT RATHER CREATIVE, COURAGEOUS ACTION TO CHANGE TRADITIONAL PRACTICES, AND TO REALLOCATE PUBLIC AND PRIVATE RESOURCES FROM PROCESSES THAT FORCE SEGREGATION AND DEPENDENCE TO PROCESSES THAT PRODUCE PRODUCTIVE INVOLVEMENT IN THE MAINSTREAM OF SOCIETY. JUST AS THE PREVENTION OF DRUG ABUSE COSTS LESS IN THE LONG RUN THAN ITS CURE, SO WILL THE PREVENTION OF THE DEPENDENCY OF PEOPLE WITH DISABILITIES COST LESS THAN THE PUBLIC AND PRIVATE COSTS OF ITS CONSEQUENCES.

THE PAYMENTS AND REALLOCATIONS REQUIRED BY ADA WILL NOT BE OVERHEAD COSTS, BUT WILL CONSTITUTE THE TYPE OF INVESTMENTS THAT HAVE ALREADY PROVEN TO BE PROFITABLE TO EVERY CITIZEN, AND TO THE NATION AS A WHOLE.

THE APPROPRIATE QUESTION IN REGARD TO THE ECONOMIC IMPACT OF ADA IS NOT "HOW MUCH WILL IT COST?," OR EVEN "HOW MUCH WILL IT SAVE?," BUT RATHER, "HOW MUCH WILL IT PROFIT THE NATION IN THE LONG RUN?" THE PROBABLE ANSWER IS, "HUNDREDS OF BILLIONS."

DOES ADA INITIATE AN AGENDA WHEREBY PEOPLE WITH DISABILITIES WILL BE ENTITLED TO GOVERNMENT SOLUTIONS FOR ALL THEIR PROBLEMS?

CERTAINLY NOT. THAT IS NOT ONLY UNDESIRABLE, IT IS IMPOSSIBLE. PROBLEMS ARE SOLVED BY THE CITIZENS THEMSELVES, OR THEY ARE NOT SOLVED AT ALL. INDEED, RESPONSIBILITY FOR IMPLEMENTING ADA ON A DAY-TO-DAY BASIS WOULD LIE PRINCIPALLY WITH THE PRIVATE SECTOR, BUT GOVERNMENT IS INESCAPABLY RESPONSIBLE TO PROVIDE LEADERSHIP WHICH RESULTS IN CITIZEN SOLUTIONS. ADA AUTHORIZES GOVERNMENT AT SEVERAL LEVELS TO PROVIDE THAT LEADERSHIP TO END DISCRIMINATION.

WILL ADA REQUIRE EMPLOYERS TO EMPLOY UNQUALIFIED PEOPLE?

ADA SPECIFICALLY STATES THAT EMPLOYERS WILL NOT BE REQUIRED TO EMPLOY UNQUALIFIED PERSONS. HOWEVER THEY WOULD BE REQUIRED TO MAKE REASONABLE ACCOMMODATIONS FOR QUALIFIED CANDIDATES WITH DISABILITIES.

SUMMARY.

EVER INCREASING MILLIONS OF AMERICANS WITH DISABILITIES SUFFER MASSIVE DISCRIMINATION IN ALL ASPECTS OF SOCIAL PROCESS WHICH CONDEMNS THEM TO LIFETIMES OF SEGREGATION, POVERTY AND UNPRODUCTIVE DEPENDENCY ON PUBLIC AND PRIVATE WELFARE. THIS IS MORALLY INTOLERABLE AND ECONOMICALLY DISASTROUS.

ADA WILL NOT SOLVE ALL OF THE PROBLEMS OF AMERICANS WITH DISABILITIES, BUT IT IS AN ESSENTIAL FOUNDATION FOR ALL OPTIMAL SOLUTIONS. BECAUSE UNTIL WE ELIMINATE THE INSIDIOUS ASSUMPTION THAT PEOPLE WITH DISABILITIES ARE LESS THAN FULLY HUMAN, AND ESTABLISH THE CONCEPT AND PRACTICE OF THEIR EQUALITY, THERE WILL BE NO MORE THAN TOKEN ACTION TO ENABLE THEM TO PARTICIPATE FULLY IN THE PRODUCTIVE MAINSTREAM OF SOCIETY.

THE ECONOMIC AND MORAL GREATNESS OF AMERICA IS BASED ON A HISTORY OF EXTENDING EQUAL OPPORTUNITY TO WAVE AFTER WAVE OF PREVIOUSLY OPPRESSED AND DEPENDENT GROUPS. PROVIDING SUCH OPPORTUNITY TO AMERICANS WITH DISABILITIES WILL RESULT IN YET ANOTHER PERIOD OF DYNAMIC GROWTH IN THE PRODUCTIVITY, PROSPERITY AND QUALITY OF LIFE OF THE NATION. IT WILL REINFORCE AMERICA'S TRADITIONAL LEADERSHIP FOR DEMOCRACY AND HUMAN RIGHTS THROUGHOUT THE WORLD.

THE TASK FORCE URGES ALL WHO BELIEVE IN THE DREAM OF LIBERTY AND JUSTICE FOR ALL TO UNITE IN SUPPORT OF THE IMMEDIATE ENACTMENT AND THE VIGOROUS IMPLEMENTATION OF THE AMERICANS WITH DISABILITIES ACT.

Chairman **Owens**. Thank you, Mr. Dart. I have noted that without objection the documents that you have submitted will be received, reviewed and properly annotated.

We salute your travelling across all the states and gathering this tremendous detailed documentation of human misery caused by the absence of the kind of bill that we are considering here today. We definitely appreciate what you have done so far, and look forward to working with you in the future.

Our next witness is Ms. Sandra Parrino, the chairperson of the National Council on Disability. Ms. Parrino.

Ms. **Parrino**. Good morning, Mr. Chairman, and distinguished members of the Committee.

My name is Sandy Parrino. It is an honor to be invited to testify today before the House Subcommittee on Select Education on this, your first day of hearings on H.R. 2273, the "Americans with Disabilities Act of 1989."

I am, in private life, a mother of two children with significant disabilities. I am, in public life, the Chairperson of the National Council on Disability, an independent Federal agency whose board is comprised of 15 knowledgeable persons, including persons with disabilities, parents, and experts on disability service programs.

All of us are appointed by the President and confirmed by the Senate. We are an independent Federal agency with a statutory mandate to analyze issues related to public policy affecting Americans with disabilities and to make recommendations.

The major thrust of our efforts is towards eliminating barriers which prevent persons with disabilities from full participation in the mainstream of American life. The National Council on Disability has not been timid in its efforts in both originating and spearheading the Americans with Disabilities Act. We first recommended this legislation in the report entitled "Toward Independence" that was submitted to the President and Congress in 1986.

In our 1988 report to the President and Congress, "On the Threshold of Independence," we submitted draft legislation of the "Americans With Disabilities Act." As you know, this was the legislation introduced in the 100th Congress. H.R. 2273, which you have before you today, represents the second generation of the "Americans With Disabilities Act."

The National Council is heartened by the progress of the Americans With Disabilities Act in the 101st Congress. On the Senate side, the leadership of Senator Harkin, Chairman of the Subcommittee on the Handicapped, has been key in bringing the bill close to full committee consideration.

The initiative taken by President Bush, Attorney General Thornburgh, White House staff and others in the administration has been an essential component of the momentum that is building toward enactment. We are pleased that the House is beginning legislative consideration of the bill, and we look forward, Mr. Chairman and Subcommittee members, to your leadership as we move through the legislative process.

While this piece of legislation that you have before you today is not the exact piece the National Council originally drafted, the intentions are the same. Flexibility, but also persistence are most essential in accomplishing our goals.

We believe the quotation that President Reagan had on his desk says it best, "There is no limit to how far you can go and how much you can accomplish, if you don't care who gets the credit."

The goal that we all share is the removal of attitudinal, architectural and communication barriers in employment, transportation, public accommodations and telecommunications which denies persons with disabilities an equal opportunity to contribute to and benefit from the richness of the American society.

Before proceeding to give you a sense of the Council's perspective in developing the legislation, I would like to share with you a recent experience of the Council's and a recommendation which has grown out of that experience.

As you know, Mr. Chairman, the National Council has been participating in the dialogue surrounding the legislative progress of the ADA. As many others have been doing, we too have been combing through the many detailed provisions of the current bill, analyzing specific phrases, constructing case law history and pondering the precise meaning and impact of the various statutory requirements.

As we have engaged in this process, we began to wonder what it was going to be like for businesses, government entities, and other organizations which would be held accountable under the bill to try to figure out precisely what their responsibilities were in order to comply.

If we, as the originators of the legislation and persons knowledgeable about disability policy, needed to expend such energy understanding the legislation, what sort of position would they be in?

Most employers today have no experience with accommodating a job for a person with a disability. Where are they to turn for information, for knowledge and for assistance in their efforts to ensure that that they are doing what needs to be done?

We recommend that you consider adding a technical assistance provision to the legislation so that those responsible for complying with the legislation will be able to understand and receive guidance in how they are to fulfill their responsibility.

History shows us that technical assistance can be a powerful and effective tool for educating and enabling compliance. The technical assistance available in the mid 1970's, upon enactment of our current civil rights statute for persons with disabilities, Section 504 of the Rehabilitation Act, was considered especially valuable as it often provided recipients with practical solutions to difficult problems such as developing physical accessibility in older buildings and accommodating services for persons with sensory impairments.

There are many ways to construct a technical assistance package to accompany this legislation and the Council is currently exploring a number of alternatives. There are numerous existing organizations and networks with expertise in the technical aspects of accommodation for persons with disabilities which should be utilized in such an effort.

The Council will be happy to work with this subcommittee and any other representatives who might be interested in such a provision or additional legislation. Mr. Chairman, the intention in drafting the original ADA was to offer constructive, realistic and fiscally sound policy to enhance independence and productivity of people with disabilities, and to ensure that Americans with disabilities would no longer be second class citizens.

The Americans With Disabilities Act of 1989 is not only important to over 43 million citizens with disabilities, it is also, as I will illustrate a bit later, of the highest importance to our nation.

From the person who becomes quadriplegic as the result of a football injury to the infant with spina bifida in a hospital crib, from rapidly growing numbers of senior citizens to 75,000 Vietnam veterans the basic nugget of truth is that, due to discriminatory practices, persons with disabilities continue to suffer from the highest rates of unemployment and poverty compared to any other group of Americans.

Americans with disabilities have less access to decent schooling, housing, employment, health care and transportation than any other persons in this country, including non-citizens.

ADA is critically important because its provisions are shaped to break the chains that bind many of the millions of persons with disabilities into a bondage of unjust, unwanted dependency on families, charity and social welfare. This dependency is a major and totally unnecessary contributor to public deficits and private expenditures.

These hearings will provide you with a vital source of information to assess the scope and meaning of the "Americans With Disabilities Act of 1989." On behalf of the millions of citizens with disabilities, I ask you to keep in mind that for decades people with disabilities have been waiting.

For decades people with disabilities have seen laws enacted by their elected representatives that prohibit discrimination for other groups of individuals. For decades, Americans with disabilities, have had to live with the realization that there are no similarly effective laws to protect them.

Today, I am proud to say, there is an emerging group-consciousness on the part of Americans with disabilities, their families, friends and advocates. This consciousness represents a mounting political activism. The over 43 million Americans are our nation's largest and no longer silent minority.

Martin Luther King had a dream and we have a vision. Dr. King dreamed of an America where people are judged not by the color of their skin, but by the content of their character. ADA's vision is of an America where persons are judged by their abilities, not their disabilities.

In "Toward Independence," our 1986 report to Congress, our vision was to shape responsible legislation by which Federal disincentives and barriers to employment are removed so that disabled Americans can go to work.

In the 1984 report to Congress by the Rehabilitation Services Administration, it was indicated that for every $1 spend to return a disabled person to work, $18 were returned to the tax base upon their placement. This would include not only taxes paid by the individual, but money saved from the removal of public expenditures.

The majority of persons with disabilities "not working" said they want to work. The Louis Harris poll which we sponsored in 1985, indicated that persons with disabilities in the work place are rated "good" to "excellent" by an overwhelming majority of their employers.

Disability does not mean incompetence. The perception that persons with disabilities are dependent by nature is the result of discriminatory attitudes, not the result of disability.

America cannot afford to discard citizens with disabilities. In a nation with a labor shortage, two-thirds of all disabled Americans between the ages of 16 and 64 years of age are not working. The two words "not working" are perhaps the truest definition of what it means to be disabled in America today.

As Louis Harris discovered in the poll commissioned by the Council, people with disabilities want to become involved in their communities as taxpaying contributors. It is contrary to sound principles of fiscal responsibility to spend billions of Federal tax dollars to relegate people with disabilities to positions of dependency upon public support.

People with disabilities represent America's greatest untapped resource of individuals who want to work. As we all know, in America, jobs are a major sources of status, dignity, and self-esteem. "What do you do?" is a conversational staple. To contribute to society and support yourself is a cherished precept of our American vision.

ADA sweeps into obsolescence those obstacles that limit opportunity, promote discrimination, prevent integration, restrict choice and frustrate self-help for Americans with disabilities.

Advancing age, economic circumstances, illness, and accident will someday, according to reputable statistics, put most of us in the category of a person with a disability. We are all potential beneficiaries of the ADA.

The goals espoused in the Americans with Disabilities Act are economically practical as well as morally correct and humanely necessary. The ADA is legislation that does away with troubling historical echoes, echoes that are no longer tolerable in a society committed to equal opportunity for all its citizens.

Esteemed members of Congress, in closing, I wish to relay a message from our National Council on Disability and the over 43 million Americans with disabilities. For decades, we have retained a faith in the reformability and adaptability of our government.

For decades we have been told to have patience, but patience is not an inexhaustible commodity. People with disabilities have waited long enough. America has waited long enough. The Americans with Disabilities Act must be enacted now.

The vision of equality for 43 million of Americans with disabilities now rests with you.

Thank you for this opportunity to testify. The National Council on Disability looks forward to working with you on this most important piece of legislation.

In our 1988 report to the President and the Congress, On the Threshold of Independence, we submitted draft legislation of the Americans With Disabilities Act (ADA). As you know this was the legislation introduced in the 100th Congress. H.R. 2273, which you have before you today represents the second generation of the Americans With Disabilities Act (ADA).

The National Council is heartened by the progress on the Americans With Disabilities Act (ADA) in the 101st Congress. On the Senate side, the leadership of Senator Harkin, Chairman of the Subcommittee on the Handicapped, has been key in bringing the bill close to full committee consideration. The initiative taken by President Bush, Attorney General Thornburgh, White House staff and others in the Administration has been an essential component of the momentum that is building toward enactment. We are pleased that the House is beginning legislative consideration of the bill, and we look forward, Mr. Chairman and Subcommittee members, to your leadership as we move through the legislative process.

While this piece of legislation that you have before you today is not the exact same piece the National Council originally drafted, the intentions are the same. Flexibility, but also persistence is most essential in accomplishment of our goals. We believe the quotation that President Reagan had on his desk says it best, "There is no limit to how far you can go or how much you can accomplish, if you don't care who gets the credit."

The goal that we all share is the removal of attitudinal, architectural and communication barriers in employment, transportation, public accommodations and telecommunications which denies persons with disabilities an equal opportunity to contribute to and benefit from the richness of the American society.

Before proceeding to give you a sense of the Council's perspective in developing the legislation, I would like to share with you a recent experience of the Council's and a recommendation which has grown out of that experience.

As you know, Mr. Chairman, the National Council has been participating in the dialogue surrounding the legislative progress of the ADA. As many others have been doing, we too have been combing through the many detailed provisions of the current bill, analyzing specific phrases, constructing case law history and pondering the precise meaning and impact of the various statutory requirements. As we have engaged in this process, we began to wonder what it was going to be like for businesses, government entities, and other organizations which would be held accountable under the bill to try to figure out precisely what their responsibilities were in order to comply. If we, as the originators of the legislation and persons knowledgable about disability policy, needed to expend such energy understanding the legislation, what sort of position would they be in?

Most employers today have no experience with accommodating a job for a person with a disability. Where are they to turn for information, for knowledge and for assistance in their efforts to ensure that they comply with this legislation? How are they to know they are doing what needs to be done?

We recommend that you consider adding a technical assistance provision to the legislation so that those responsible for complying with the legislation will be able to understand and receive guidance in how they are to fulfill their responsibility. History shows us that technical assistance can be a powerful and effective tool for educating and enabling compliance. The technical assistance available in the mid 1970's, upon enactment of our current civil rights statute for persons with disabilities, Section 504 of the Rehabilitation Act, was considered especially valuable as it often provided recipients with practical solutions to difficult problems such as developing physical accessibility in older buildings and accommodating services for persons with sensory impairments.

There are many ways to construct a technical assistance package to accompany this legislation and the Council is currently exploring a number of alternatives. There are numerous existing organizations and networks with expertise in the technical aspects of accommodation for disabilities which should be utilized in such an effort. We would be happy to work with this Subcommittee and any other Representatives who might be interested in such a provision or additional legislation.

Mr. Chairman, the intention in drafting the original ADA was to offer constructive, realistic and fiscally sound policy to enhance independence and productivity of people with disabilities, and to ensure that Americans with disabilities would no longer be second class citizens.

The Americans With Disabilities Act of 1989 (ADA) is not only important to the over 43 million citizens with disabilities, it is also, as I will illustrate a bit later, of the highest importance to our nation. From the person who becomes quadriplegic as the result of a football injury to the infant with spina bifida in a hospital crib; from rapidly growing numbers of senior citizens to 75,000 Vietnam veterans the basic nugget of truth is that, due to discriminatory practices, persons with disabilities continue to suffer from the highest rates of unemployment and poverty compare to any other group of Americans. Americans with disabilities have less access to decent schooling, housing, employment, health care and transportation than any other persons in this country, including non-citizens.

ADA is critically important because its provisions are shaped to break the chains that bind many of the millions of persons with disabilities into a bondage of unjust, unwanted dependency on families, charity and social welfare. This dependency is a major and totally unnecessary contributor to public deficits and private expenditures.

These hearings will provide you with a vital source of information to assess the scope and meaning of the Americans With Disabilities Act of 1989 (ADA). On behalf of the millions of citizens with disabilities, I ask you to keep in mind that for decades people with disabilities have been waiting. For decades people with disabilities have seen laws enacted by their elected representatives that prohibit discrimination for other groups of individuals. For decades, Americans with disabilities, have had to live with the realization that there are no similarly effective laws to protect them.

Today, I am proud to say, there is an emerging group-consciousness on the part of Americans with disabilities, their families, friends and advocates. This consciousness represents a mounting political activism.

The over 43 million Americans our nation's largest and no longer silent minority.

Martin Luther King had a dream. We have a vision. Dr. King dreamed of an America where people are judged not by the color of their skin, but by the content of their character. ADA's vision is of an America where persons are judged by their abilities, not their disabilities.

In Toward Independence, our 1986 report to Congress our vision was to shape responsible legislation by which Federal disincentives and barriers to employment are removed so that disabled Americans can go to work.

In the 1984 report to Congress by the Rehabilitation Services Administration, it was indicated that for every $1 spent to return a disabled person to work, $18 were returned to the tax base upon their placement. This would include not only taxes paid by the individual, but money saved from the removal of public expenditures.

The majority of persons with disabilities "not working" said they want to work. The Louis Harris poll which we sponsored in 1985, indicated that persons with disabilities in the workplace are rated "good" to "excellent" by an overwhelming majority of their employers. Disability does not mean incompetence. The perception that persons with disabilities are dependent by nature is the result of discriminatory attitudes, not the result of disability.

America cannot afford to discard citizens with disabilities. In a nation with a labor shortage, two-thirds of all disabled Americans between the ages of 16 and 64 years age are not working. No one demographic group under 65 has such a small proportion working. The two words "not working" are perhaps the truest definition of what it means to be disabled in America today.

As Louis Harris discovered in the poll commissioned by the Council in 1985, people with disabilities want to become involved in their communities as taxpaying contributors.

It is contrary to sound principles of fiscal responsibility to spend billions of Federal tax dollars to relegate people with disabilities to positions of dependency upon public support.

People with disabilities represent America's greatest untapped resource of individuals who want to work. As we all know, in America, jobs are a major source of status, dignity, and self-esteem. "What do you do?" is often a conversational staple. To contribute to society and support yourself is a cherished precept of our American vision.

ADA sweeps into obsolescence those obstacles that limit opportunity, promote discrimination, prevent integration, restrict choice and frustrate self-help for working-aged Americans with disabilities who are unemployed.

Advancing age, economic circumstances, illness, and accident will someday, according to reputable statistics, put most of us, in the category of a person with a disability. We are all potential beneficiaries of the ADA.

The goals espoused in the Americans with Disabilities Act are economically practical as well as morally correct and humanely necessary. The ADA is legislation that does away troubling historical echoes, echoes that are no longer tolerable in a society committed to equal opportunity for all its citizens.

Esteemed members of Congress, in closing, I wish to relay a message from our National Council on Disability and the over 43 million Americans with disabilities. For decades, we have retained a faith in the reformability and adaptability of our Government. For decades we have been told to have patience, but patience is not an inexhaustible commodity. People with disabilities have waited long enough. America has waited long enough. The Americans with Disabilities Act (ADA)must be enacted now.

The vision of equality for 43 million of Americans with disabilities now rests with you.

Thank you for this opportunity to testify. The National Council on Disability looks forward to working with you on this most important piece of legislation.

Chairman **Owens**. Thank you. Brother Philip Nelan, the representative of the National Restaurant Association.

Brother **Nelan**. Thank you, Mr. Chairman, and distinguished members of the Committee. It is an honor to appear before your committee to state an overview of the National Restaurant Association's program for promoting the employment of people with disabilities.

I am Brother Philip Nelan, Director of Handicapped Employment Services for the National Restaurant Association's project with Industry. I have been associated with this program since its inception 11 years ago. I am a member of the Order of Brothers of the Christian Schools, and for 9 years earlier in my career, served as president of Manhattan College in New York.

During the last 11 years, the National Restaurant Association has promoted a program to encourage the industry to look to the benefit of employing persons with disabilities. The program, on the one hand, aims to provide employers with willing and qualified workers to fill plentiful jobs in this era of relatively low unemployment rates.

The program, on the other hand, gives a fair chance to people with physical and mental disabilities to fill jobs they are qualified for and to find in work a basis for greater independence and an incentive to sense their human dignity.

In this effort, our program takes us into close relationships with many organizations serving disabled persons such as the National Rehabilitation Association, the National Association of Rehabilitation Facilities, the National Association of Retarded Citizens, the newly forming coalition of organizations serving deaf people, sponsored by the National Technical Institute for the Deaf in Rochester, New York, and Goodwill Industries, Easter Seals, and so on.

State vocational rehabilitation offices are our primary contacts for disseminating information about foodservice job-openings within the state. In addition more than 400 private training agencies form a second line of resources for discovering qualified workers. We have supplied promotional and educational materials to induce these agencies to develop curricula in foodservice for their disabled trainees.

To discover job-openings, we have conducted pollings of the National Restaurant Association's memberships, the high volume independents, the chains, franchisees, and in the May issue of "Restaurants USA," with a circulation of 27,000, we supplied a tear-out reply mailer, a request form for information about rehabilitation training and placement.

These efforts have returned thousands of job opportunities for the impaired and have established firmer relationships between the training services for disabled people and the industry.

Aside from the well-known programs of the Marriott Corporation and McDonald's Corporation to recruit and train workers from pools of disabled people, other foodservice organizations have likewise adopted policies to attract this untraditional sector of the population into their labor forces.

Among them we should cite some samples of industry programs in which we have had a role in developing: Kentucky Fried Chicken. It has made formal effort to link its 7500 units to the training programs of the Association of Rehabilitation Facilities in 26 states.

Pizza Huts' unique plan to hire 2000 persons with impairments in these three current years by linking its 6600 units with local sources of employees with disabilities.

The Imperial Hotels, a franchisee of 50 various hotels in 23 states recently adopted a program through the office of the vice president for Human Resources to relate the managers and training programs in their areas.

Lettuce Leaf, a small chain, only 9 years old, in Missouri, has maintained a policy to hire developmentally disabled of whom its president writes, "All of these young persons are wonderful. They are reliable—constantly on the job."

Radisson Hotels promoted and have carried out a well-defined policy to employ persons with disabilities through the office of vice president for Human Resources.

Arby's of South Florida through its regional office has found alliance with the Florida Vocational Rehabilitation Services to recruit employees for its 26 units.

Friendly's Restaurants actively initiated a company-wide program and succeeds in engaging the managers of its 840 units along the eastern seaboard to employ persons with disabilities.

ARA Service, a huge conglomerate of hospitality services in restaurants, institutions and business offices, employing 120,000, is now compiling an instructional guide on all sources of potential employees including the disabled to inform its management.

General Mills Restaurant Corporation, finds for its Red Lobster and Olive Garden restaurants that rehabilitation training and placement services are available resources to fill their job openings.

Walt Disney World Swan at Lake Buena Vista is currently recruiting 800 persons with the assistance of the Florida Vocational Rehabilitation Services for its labor force in its new operation to open November first.

So our liaison program between the public and private sectors links foodservice operators, both large and small, including single unit owners, throughout the country to the sources of employees among organizations serving persons with disabilities.

Having access to public and private vocational training services, the employer finds potential resources of productive and loyal workers. Ideally, through training program counselors, the employer knows beforehand the potentials, skills, attitudes, backgrounds of these people.

Employers enjoy a new alliance through the professional counselor who makes job analyses and select qualified candidates who will succeed in performing the specific jobs.

The only available data on the number of people with impairments newly employed annually in the foodservice industry is compiled by the Statistical Division of the Rehabilitation Services Administration at the Department of Education.

The Division receives annual reports of the rehabilitated and job placed who are subsidized under state vocational rehabilitation services, which, in turn, are 80 percent subsidized by Federal funding.

A constant national total of rehabilitated employees placed in private industry yearly is about 220,000. Of that number placed in 1980, 5.8 percent were competitively employed by the hospitality industry.

In succeeding years to 1985, the latest year of complete record, the percentage increased by annual increments to 7.3 percent. Since then, the percentage has probably climbed to above 9 percent, representing upwards of 20,000 finding employment in the hospitality industry.

An additional number not subsidized by public funding but trained and placed each year in foodservice jobs by private agencies is unknown. Meanwhile, the demand by the hospitality industry for additional workers gradually grows acute in today's tight labor market.

At the same time, the generally accepted data says that six to eight million persons with disabilities are of working age, and at least two-thirds of them may qualify and want to work, but cannot for lack of training and the necessary assistance. Incidentally, this population is not counted in the national unemployment rate.

Today 8.5 million persons are employed in the food service industry, grossing $227 billion in 1988 and having a growth rate annually of six to seven percent. The total employed will increase to 11.4 million workers by the year 2000.

According to the Labor Department forecasts, an increase of 2.9 million new job openings will occur, owing to growth alone. Of these, about one million cooks, bakers, and other workers in food preparation will be needed.

Another 1.2 millions persons will be required to fill added service occupations, such as hosts, hostesses, waiters, waitresses, counter attendants, cashiers, bartenders, et cetera; an additional 700,000 will find positions as managers, accountants and for other administrative functions.

These predicted increases in the foodservice labor force refer only to new positions that growth will create in the next ten years. At the same time, another million and more positions will be vacated by retirees and other turnovers.

Ample job opportunities at all levels exist in the industry for people with disabilities. Marriott Hotels Corporation exemplifies the industry's ability to absorb into its labor force people with various types and severity of disabilities.

In Winchester, New York, the laundry is operated by deaf people; a chef's helper at the Marriott Marquis, New York City, is totally deaf, and the manager of the sales office is blind. Taco Bell, Hayward, California, has given a 21-year old autistic/schizophrenic his first job, now assistant to the cook, after his training at Eden Express, a private retail-training operation, where another deaf and learning disabled person trained and at 37 years of age has his first job.

This facility successfully trains and places upward of 40 retarded and mentally restored persons a year. McDonald's has such success with training and employing persons with severe disabilities that an advanced position of job coach has been created in the system.

Totally blind and legally blind people are employed in stores at various locations in Denver, Pittsburgh, Minnesota, and San Diego.

In St. Louis, a severely afflicted cerebral palsied person is employed; in De Kalb, Illinois, a half dozen deaf persons have performed jobs for years; a brain-damaged victim of an accident with use of only one arm and restricted speech is in a unit in Chicago. The key to the successes of the severely disabled is the ongoing services and follow-up by the job coach.

Other dramatic and less dramatic instances of employment in the industry are happening across the country despite the pressures, broken hours and other disincentives that the work entails, especially in entry level positions, but they do offer first entry into the world of work for many and opportunity for advances by persons with impairments in accord with their abilities and the training preparation they have received.

Mr. Chairman, I would like to offer three observations at this point: one, constraints on Federal funding over the past eight to ten years have limited the number of handicapped persons placed by government subsidized vocational rehabilitation services to a level substantially lower than required to meet the needs of this population.

Two, the number and characteristics of disabled workers assisted by privately funded agencies is unknown but should be researched so that congress has a clearer picture of the existing problems and solutions.

Three, the enactment of civil rights-type legislation such as the Americans with Disabilities Act will not be particularly helpful to millions of handicapped people if it is not accompanied by an increase in the resources necessary to train and place these individuals in suitable jobs.

On this final point, Mr. Chairman, there is justifiable concern on the part of employers that the ADA legislation now pending before this committee is so broadly written as to override certain elements of common sense. For example, to what extent is an employer expected to modify or add to his facilities to accommodate a disabled worker?

Do countertops where food is prepared have to be lowered to a level accessible to someone in a wheelchair? Additionally, there are several areas within the legislation which conflict with the requirements of existing legislation, such as the requirements of maintaining a "drug free workplace" and existing requirements under Sections 503 and 504 of the Rehabilitation Act of 1973.

Mr. Chairman, I was told that the purpose of today's testimony was to hear from an industry that is very aggressive in promoting the employment of citizens with physical and mental limitations.

However, I would be remiss if I did not note that there are significant problems with this legislation as introduced. Fortunately, the vast majority of these concerns are problems encountered when we take a public policy and attempt to place it into an operational context. Simple drafting alternations will surface for many of these problems.

My simple point here is that the restaurant industry has been providing jobs to thousands of disabled workers each year and we know the potential for offering even greater employment opportunities in the future is enormous.

Adequate availability of training and placement services is our biggest obstacle—not the need for special facilities and equipment.

I did not come today prepared to comment in any detail on the ADA legislation, Mr. Chairman, but I want to assure you that the National Restaurant Association stands prepared to offer you the benefit of its experience as an employer of thousands of disabled workers in crafting a bill that is beneficial and workable for employers and the employees you are seeking to help.

Thank you.

[The prepared statement of Brother Philip Nelan follows:]

STATEMENT OF
BROTHER PHILIP NELAN, F.S.C.
DIRECTOR, PROJECTS WITH INDUSTRY
NATIONAL RESTAURANT ASSOCIATION

BEFORE THE

HOUSE EDUCATION AND LABOR COMMITTEE'S
SUBCOMMITTEE ON SELECT EDUCATION

July 18, 1989

Good morning, Mr. Chairman and Members of the Committee, I am Brother Philip Nelan, Director of Handicapped Employment Services for the National Restaurant Association's Projects with Industry Program. I have been associated with this program since its inception, eleven (11) years ago. I am a member of the Order of Brothers of the Christian Schools and, for nine (9) years earlier in my career, served as President of Manhattan College.

During the last eleven years, The National Restaurant Association has promoted a program to encourage the industry to look to the benefit of employing persons with disabilities. The program, on the one hand, aims to provide employers with willing and qualified workers to fill plentiful jobs in this era of relatively low unemployment rates. The program, on the other hand, gives a fair chance to people with physical or mental disabilities to fill jobs they are qualified for and to find in work a basis for greater independence and an incentive to sense their human dignity.

In this effort, our program takes us into close relationships with many organizations serving disabled persons such as the the National Rehabilitation Association, the National Association of Rehabilitation Facilities, the National Association of Retarded Citizens, the newly forming coalition of organizations serving deaf people, sponsored by the National Technical Institute for the Deaf (Rochester, N.Y.), and Goodwill Industries, Easter Seal.

State vocational rehabilitation offices are our primary contacts for disseminating information about foodservice job-openings within the state. In addition more than 400 private training agencies form a second line of resources for discovering qualified workers. We have supplied promotional and educational materials to induce these agencies to develop curricula in foodservice for their disabled trainees.

To discover job-openings, we have conducted pollings of the National Restaurant Association's membership, the high volume independents, the chains, franchisees, and in the May issue of Restaurants USA with a circulation of 27,000, we supplied a tear-out reply mailer, a request-form for information about rehabilitiation training and placement. These efforts have returned thousands of job opportunities for the impaired and have established firmer relationships between the training services for disabled people and the industry.

Aside from the well-known programs of the Marriott Corporation and McDonald's Corporation to recruit and train workers from pools of disabled people, other foodservice organizations have likewise adopted policies to attract this untraditional sector of the population into their labor forces.

Among them we should cite some samples of industry programs in which we have had a role in developing:

- Kentucky Fried Chicken's formal effort to link its 7500 units to the training programs of the Association of Rehabilitation Facilities in 26 states.
- Pizza Huts' unique plan to hire 2000 persons with impairments in these three current years by linking its 6600 units with local sources of employees with disabilities.
- The Imperial Hotels, a franchisee of 50 various hotels in 23 states recently adopted a program through the office of the Vice President for Human Resources to relate the managers and training programs in their areas.
- Lettuce Leaf, a small chain, only 9 years old, in Missouri, has maintained a policy to hire developmentally disabled of whom its president writes, "All of these young persons are wonderful. They are reliable...constantly on the job."
- Radisson Hotels promoted and have carried out a well-defined policy to employ persons with disabilities through the office of Vice President for Human Resources.
- Arby's of So. Florida through its regional office has found alliance with the Florida Vocational Rehabilitation Services to recruit employees for its 26 units.
- Friendly's Restaurants actively initiated a company-wide program and succeeds in engaging the managers of its 840 units along the eastern seaboard to employ persons with disabilities.

- ARA Service, a huge conglomerate of hospitality services in restaurants, institutions and business offices, employing 120,000, is now compiling an instructional guide on all sources of potential employees including the disabled for its management.
- General Mills Restaurant Corporation, finds for its Red Lobster and Olive Garden restaurants that rehabilitation training and placement services are available resources to fill their job openings.
- Walt Disney World Swan at Lake Buena Vista is currently recruiting 800 persons with the assistance of the Florida Vocational Rehabilitation Services for its labor force in its new operation to open November first.

So our liaison program between the public and private sectors links foodservice operators, both large and small, including single unit owners, throughout the country to the sources of employees among organizations serving persons with disabilities.

Having access to public and private vocational training services, the employer finds potential resources of productive and loyal workers. Ideally, through training program counselors, the employer knows beforehand the potentials, skills, attitudes, backgrounds of these people. Employers enjoy a new alliance through professional counselors of rehabilitative services who make job analyses and select qualified candidates who will succeed in performing specific jobs.

The only available data on the number of people with impairments newly employed annually in the foodservice industry is compiled by the Statistical Division of the Rehabilitation Services Administration at the Department of Education.

The Division receives annual reports of the rehabilitated and job placed who are subsidized under state vocational rehabilitation services, which, in turn, are 80% subsidized by the federal government. A constant national total of rehabilitated employees placed in private industry yearly is about 220,000. Of that number placed in 1980, 5.8% were competitively employed by the hospitality industry. In succeeding years to 1985, the latest year of complete record, the percentage increased by annual increments to 7.3%. Since then the percentage has probably climbed to above 9%, representing upwards of 20,000 finding employment in the hospitality industry.

An additional number not subsidized by public funding but trained and placed each year in foodservice jobs by private agencies is unknown.

Meanwhile, the demand by the hospitality industry for additional workers gradually grows acute in today's tight labor market.

At the same time, the generally accepted data says that 6-8 million persons with disabilities are of working age, and at least two-thirds of them may qualify and want to work, but cannot for lack of training and the necessary assistance. Incidentally, this population is not counted in the national unemployment rate.

Today 8.5 million persons are employed in the food service industry, grossing $227 billion in 1988 and having a growth rate annually of 6 to 7 percent. The total employed will increase to 11.4 million workers by the year 2000. According to the Labor Department forecasts, an increase of 2.9 million new job-openings will occur, owing to growth alone. Of these, about one million cooks, bakers, and other workers in food preparation will be needed; another 1.2 million more persons will be required to fill added service occupations, such as hosts, hostesses, waiters, waitresses, counter attendants, cashiers, bartenders, etc.; an additional 700,000 will find positions as managers, accountants and for other administrative functions.

These predicted increases in the foodservice labor force refer only to new positions that growth will create in the next 10 years. At the same time another million and more positions will be vacated by retirees and other turnovers.

Ample job opportunities at all levels exist in the industry for people with disabilities. Marriott Hotels Corporation exemplifies the industry's ability to asborb into its labor force people with various types and severity of disabilities:

in Westchester, N.Y., the laundry is operated by deaf people; a chef's helper at the Marriott Marquis, N.Y.C., is totally deaf, and the manager of the sales office is blind. Taco Bell, Hayward, California, has given a 21-year old autistic/schizaphrenic his first job, now assistant cook, after his training at Eden Express, a private retail-training operation, where another deaf and learning disabled person trained and at 37 years of age has his first job. This facility successfully trains and places upward of 40 retarded and mentally restored persons a year.

McDonald's has such success with training and employing persons with severe disabilities that an advanced position of job coach has been created in the system. Totally blind and legally blind people are employed in stores at various locations in Denver, Pittsburgh, Minnesota, and San Diego. In St. Louis, a severely afflicted cerebral palsied person is employed; in De Kalb, Illinois, a half dozen deaf persons have performed jobs for years; a brain-damaged victim of an accident with use of only one arm and restricted speech is in a unit in Chicago. The key to the successes of the severely disabled is the ongoing services and followup by the job coach.

Other dramatic and less dramatic instances of employment in the industry are happening across the country despite the pressures, broken hours and other disincentives that this work entails, especially in entry level positions. But they do offer first entry into the world of work for many and opportunity for advances by persons with impairments in accord with their abilities and the training preparation they receive.

Mr. Chairman, I would like to offer you three observations at this point: One, constraints on federal funding over the past eight or ten years have limited the number of handicapped workers placed by government subsidized vocational rehabilitation services to a level substantially lower than required to meet the needs of this population; two, the number and characteristics of disabled workers assisted by privately funded agencies is unknown but should be researched so that Congress has a clearer picture of the existing problems and solutions; and, three, the enactment of civil rights-type legislation such as the Americans With Disabilities Act will not be particularly helpful to millions of handicapped people if it is not accompanied by an increase in the resources necessary to train and place these individuals in suitable jobs.

On this final point, Mr. Chairman, there is justifiable concern on the part of employers that the ADA legislation now pending before this Committee is so broadly written as to override certain elements of common sense. For example, to what extent is an employer expected to modify or add to his facilities to accommodate disabled workers? Do countertops where food is prepared have to be lowered to a level accessible to someone in a wheelchair?

Additionally, there are several areas within the legislation which conflict with requirements of existing legislation, the requirements of maintaining a "drug free workplace" and existing requirements under sections 503 and 504 of the Rehabilitation Act of 1973.

Mr. Chairman, I was told that the purpose of today's testimony was to hear from an industry that is very aggressive in promoting the employment of citizens with physical and mental limitations. However, I would be remiss if I did not note that there are significant problems with this legislation as introduced. Fortunately, the vast majority of these concerns are problems encountered when we take a public policy and attempt to place it into an operational context. Simple drafting alterations will surface for many of these problems. I am not prepared to violate the wishes of the Committee and speak to these today; however, I wish to submit for the record a document prepared by a broad based business group which addresses several of the areas of concern businesses have with the legislation drafted.

My simple point here is that the restaurant industry has been providing jobs to thousands of disabled workers each year and we know the potential for offering even greater employment opportunities in the future is enormous. Adequate availability of training and placement services is our biggest obstacle--not the need for special facilities and equipment.

I did not come today prepared to comment in any detail on the ADA legislation, Mr. Chairman, but I want to assure you that the National Restaurant Association stands prepared to offer you the benefit of its experience as an employer of thousands of disabled workers in crafting a bill that is beneficial and workable both for employers and the employees you are seeking to help.

Chairman **Owens**. Thank you, Brother Nelan. Questions, Mr. Smith?

Mr. **Smith**. Thank you very much, Mr. Chairman. I have a question for Brother Nelan and it really has to do with the resources that the National Restaurant Association or the individual employers had to draw on as they embarked on this journey of including differently able people. Could you talk a little bit about what kind of information do you gave in terms of who, what drove the decision to get involved and then two, how did the industry collectively or the individual components of the industry resource the decision?

Brother **Nelan**. I am not sure I can answer the first part of your question as to how the industry got involved, but the resources that are there are, of course, the Organization of the National Restaurant Association which is national and the state associations which are affiliated with the National Restaurant Association.

It is a great membership which includes the leading chains of leading organizations of food services across the country and also, of course, so many of local owners. The objective of the association in this program is an educational program to involve, and to first of all, to instruct and open the way to understanding the possibilities of finding in the resources of the trained persons with disabilities new and permanent employees.

We go about this by a constant effort to inform by circulation of information to the industry through every means that is available through the public relations, through the various offices throughout the country and through pollings as I mentioned of chains, and franchise as we have the information to gain to them.

Mr. **Smith**. Thank you. I guess my concern as I heard actually two different people call for technical assistance and resource assistance and I am sure that that is going to be necessary and I will underscore that. I am just sure that that is going to be a necessary part of this bill.

At the same time, it strikes me that if we can write clean legislation with clear definitions that is responsive to the human situation that we are trying to rectify or improve and the reality of the world that you and others represent, if we can get our definitions right, that, in fact, an enormous amount of the, if you will, the solutions, the adaptations, the right answers are going to come from inside the different sectors of the economy as they learn from differently abled people.

I think we need to be careful about the kind of wisdom that we place with governmental agencies in terms of just what good technical or resources assistance is because I have seen a lot of cases where the difference between the ability to reach and the ability to grasp was made by whether or not the legislation was well written.

I want to make sure we get to the grasp in this one.

Brother **Nelan**. Yes, I am sure that the National Restaurant Association will cooperate to the fullest in developing such materials or insights and backgrounds that will aid in the clarification of the legislation.

Mr. **Smith**. Thank you.

Chairman **Owens**. Mr. Bartlett.

Mr. **Bartlett**. Thank you, Mr. Chairman. Mr. Chairman, I do have a number of specific questions. I will try to go through them fairly fast. If I run out of time and another member comes in that wants to ask some questions, if you would let me know.

First, my question of the civil rights leadership conference and I am going through the bill and listened carefully to the testimony, Ms. Feldblum, of your predecessor. On the subject of reasonable accommodation, it seems to me that what I heard the testimony to say was that reasonable accommodation should apply to new facilities and not necessarily to retrofitting existing facilities, as I understand the testimony.

My question is in the opening title of the bill on page six and seven, beginning with the paragraph at the bottom of the page. The overriding definition of the bill for all of the title seems to take a different approach and seems to define reasonable accommodation to include making existing—I am quoting from the bill—"making existing facilities used by employees readily accessible to and usable by individuals"—implying all individuals, but at least saying individuals with disabilities.

I wonder if you could tell us, is it the intent then of the Leadership Conference to make reasonable accommodation more in line with the current definition of reasonable accommodation under, for example, the Civil Rights Act of 1986 and to make reasonable accommodation a limiting factor or is it the intent of the Leadership Conference to stick with what seems to be in the opening title of the bill and that is, readily accessible, all facilities including existing facilities.

Can you clarify that for us?

Ms. **Feldblum**. I think you might be confusing two aspects of the bill. There is a requirement that new buildings be constructed in a physical, accessible way. One would not use the term "reasonable accommodation" to apply to that area. That is certainly a provision of the bill that you saw from the testimony, looking to the future, any new building you should build physically accessible.

The concept of reasonable accommodation which is in here on the page which you referred to, is a concept of reasonable accommodation that exist under Section 504 right now and it is that concept that is carried over directly into this bill.

That concept is one that comes out usually in the area of employment. Often people with disabilities want to be treated just the same as everybody else. That is the gist of the testimony that you have heard today. However, also what you heard today is that sometimes a person with a disability needs some modification, either some modification in the physical area or some modification in terms of a policy or device in order to then do the essential functions of the job.

The concept that exists under Section 504 is that an employer has a responsibility to make a reasonable accommodation to a person with a disability, be it a physical accommodation, be it a modification of a policy, so long as that accommodation does not impose an undue hardship on the employer and that is the basic concept within 504 as to what would be an undue hardship.

Mr. **Bartlett**. Ms. Feldblum, I do pretty well understand that. The title of the bill that I referred to does not mention the word "undue hardship." It says, "making existing facilities used by employees readily accessible to and usable by individual with disabilities."

Now, my question then is it—leaving aside the drafting, is it then the Leadership Conference's position that it should be an undue hardship test or another way, that it should follow the current Section 504 or the Civil Rights Act or are you seeking a more stringent test?

Ms. **Feldblum**. We are not seeking a more stringent test. The intent of the bill is that the definition of reasonable accommodation be read in conjunction with the provision of the bill that describes reasonable accommodation which is on page 13 to 14 of your bill.

The failure to make a reasonable accommodation unless a can demonstrate that the accommodation would impose an undue hardship, so in direct response to your question, you are correct that the definition of reasonable accommodation must be read, obviously, in conjunction with the requirement of providing reasonable accommodation and that should be very clear.

Mr. **Bartlett**. Well, if this Committee were to seek ways to make certain that it is more clear, I suppose then that would be acceptable to the Leadership Conference.

Ms. **Feldblum**. That is fine to make it clear that it is consistent with pages 13 and 14.

Mr. **Bartlett**. So, it is not your position that the existing facilities—that the bill should be as it seems to be on page 7, that all existing facilities should be readily accessible too, without limitation?

Ms. **Feldblum**. I think the misunderstanding here is the fact that reasonable accommodation——

Mr. **Bartlett**. I am not misunderstanding; I am reading.

Ms. **Feldblum**. No, no, but I mean the misunderstanding the reading might be that the term "reasonable accommodation" is used only in the context of employment, only in Title II.

I wouldn't want you to hear that the concept of undue hardship should be carried over in any way to Title IV which is the concept of building new facilities accessible. The term "reasonable accommodation" never appears in Title IV. It is a term that is used simply in Title——

Mr. **Bartlett**. Ms. Feldblum, I don't want to get into a drafting argument with you, but reading from the bill, it states Section III in the preliminary findings and purposes, as used in this Act, reasonable accommodations shall include all existing facilities readily accessible as used in this Act.

So, I just want to make sure that the intent then is to not go beyond the current Civil Rights Act of 1986 or the current—I am sorry, the current Civil Rights Act, the Grove City case that we passed in 1988 or Section 504, is not to go beyond that for purposes of private employers.

Ms. **Feldblum**. It does not go beyond Section 504 in the area of employment in all of the places where reasonable accommodation is used. Please do not misunderstand that statement to mean that Title IV, which deals with new construction and making existing facilities readily achievable obviously applies to anything that comes under the definition of a public accommodation.

With that statement, I don't think we have any problem in saying an employment that is consistent with Section 504 is concept of reasonable accommodation.

Mr. **Bartlett**. The other part to reasonable accommodation in the opening section of the bill seems to list a series of job restructuring items. I want to go back and compare that again to the Civil Rights Act, the Grove City bill which is also applicable. Would it be your decision—the list in paragraph b on page seven would seem to be a relatively broad in a not particularly limiting list.

Let me say what I am saying. It says it doesn't seem to have any limitation on accommodations that could be required. For example, it would seem to require part-time or modified work schedules. So far, so good, and I think a part-time, modified work schedule is often a way in which an employer makes an accommodation, but there are some employment situations, many, perhaps, in which a part-time or modified work schedule, in fact, imposes an undue hardship on the other employees or the customers or the employer.

Would it be the Leadership's intent then to have some kind of limiting language for undue hardship or other kind of limitation or would you seek a requirement for part-time or modified work schedule, for example, or reassignment without limitation?

Ms. **Feldblum**. I think this, in fact, is perhaps a drafting issue as you noted. As I said before, this is simply a definition of reasonable accommodation which must be read in conjunction with the actual requirement, the reasonable accommodation which does say, you don't have to do the accommodation, be it the job restructuring or anything else on the list if it were to impose an undue hardship and I think this sort of a classic way in which one drafts a bill, just set out the construction of the prohibition and then you have a definition section.

Obviously, it is intended to be read with the provision of the bill itself. So, the answer to that is yes, it is intended to be read with that.

Mr. **Bartlett**. So, it is your intent to make certain that it does have a modification to it?

Ms. **Feldblum**. That is the way it is in the bill.

Mr. **Bartlett**. I understand. Number two, I want to make sure I understand again the intent of the testimony and then I will go back and look at the bill again. It is your intent that the Leadership Conference's intent that only new buses would be required to be wheelchair accessible and not require a retrofitting of existing buses. Is that accurate?

Ms. **Feldblum**. It is not a retrofitting requirement in existing buses. It is new buses and buses that are completely remanufactured.

Mr. **Bartlett**. I know, but what period—how long would purchasing of new buses be to accommodate, would it be immediately upon the enactment of the bill, that any new buses would have to have a lift?

Ms. **Feldblum**. There was no time requirement as to when you have to buy new buses. It is simply if and when one buys new buses, those buses have to be accessible.

Mr. **Bartlett**. Third, the bill seems to have—in the employment section—a limitation which is disturbing to me, in Title II which seems to place a—on page 11 at the bottom of the page, section b—seems to have an exception for employees of individuals who are elected to public office, including without limitation, all the personal staff or an appointee to public policy making or immediate advisor.

I assume all of that is everyone. That is disturbing to me. Does the Leadership Conference endorse that exception that Congress would not be required to eliminate discrimination in their own employment practices?

Ms. **Feldblum**. I don't know if I can speak officially for the entire Leadership Conference at the moment, but I think I could say to you that if an amendment was offered to delete that exception, that the Leadership Conference would be in support of that.

That is an exception that is currently in Title VII, but is what it is based on, but I believe——

Mr. **Bartlett**. Maybe we will delete it from Title VII too.

Ms. **Feldblum**. I don't think the Leadership Conference would have an argument with that.

Mr. **Bartlett**. So, you would regard that as an improvement in the legislation. Mr. Dart, and Mr. Nelan, as a follow-up if you would like, tell me, if you were writing the bill with regard to drug abusers and alcohol abusers, how would you structure the ability of, just in laymen's terms, how would you structure the ability of an employer to deny employment to users of either abusers of alcohol or users of illegal drugs.

Would you give an employer the right to deny employment to someone who uses illegal drugs or abuses alcohol or would you require that it only be if it poses a threat to the health and safety of other workers in the work place? Mr. Dart?

Mr. **Dart**. Mr. Congressman, if you will pardon me, I would like to preface my answer with another statement that my colleague, Ms. Sandra Parrino, asked me to apologize to the chairman that she had to leave in order to meet a very high level person in this government about ADA and a person whose schedule did not accommodate another time, another——

Mr. **Bartlett**. Another group of high leveled persons, I suppose.

Mr. **Dart**. Yes, certainly. You got me there. I am not an attorney. I am not a bill writer and I really am not sure I can answer your question adequately, Mr. Congressman. Any answer which I would give, of course, would have to be from myself personally and not for the Task Force, which I represent, but it is my understanding that no employer under the act would be required to employ anyone who was unfairly unqualified to do the job and I could certainly envision circumstances under which substance abuse would render somebody not qualified to do almost any job.

I am not really—if I understand the bill correctly and that is what it means, and it is simply would imply that one is not allowed to discriminate against a person with disabilities, simply on the unproven allegation or suspicion that the person might be a drug abuser or an alcohol abuser that if I were drafting it, I maybe would draft it in the same way.

Mr. **Bartlett**. Let me pose—we now get when we draft a bill, you get down to very specific instances and many persons with disabilities tell me, again, without trying to make it reference the bill because we do have bill writers that can draft it the right way.

Many persons with disabilities tell me that they object to being lumped in as a category with chronic drug abusers, persons who do cocaine on their lunch hour or smoke pot in the back of the restaurant as they are cleaning up. That doesn't seem to them to be in the same category as other persons with disabilities that that the bill is designed to get to.

So, the bill is currently drafted so that it would say that an employer could only have a no-drug policy if it poses—it seems to anyway—not hiring someone who is a drug abuser if it poses a direct threat to the health and safety of the work place.

That is, in the back of a restaurant, for example, when you are cleaning up, that is relatively difficult to prove. My question is, should we draft it that way or should we make certain that what we mean is that an employer who has a policy—I will pose it differently—should an employer be allowed to have a policy that says, "I am not going to hire someone who is a user of illegal drugs?"

Mr. **Dart**. I certainly am oppose to the use of illegal drugs personally and I assume that all the members of my Task Force are, but I was not aware that the Act would force an employer to employ a person who was probably doing something against the law or who was probably an alcohol abuser to the extent that they would not be able to perform the functions of the job.

Mr. **Bartlett**. I understand.

Ms. **Feldblum**. Mr. Congressman, can I just add a clarification. From the legal prospective, I think that there is often a misunderstanding that because one qualification standard was put forward as an example, and I am just repeating that Mr. Dart's analysis is, in fact, correct, from now the legal prospective.

There is an example that someone would pose a direct threat, for example, to the health and safety property of others is an example of a qualifications standard that an employer can use. However, it is simply an example. Employers still can have all other types of qualification standards such as Mr. Dart said that an employee must be able to do his or her job effectively, must be able to comply with all the other requirements of the employer in terms of being qualified for the job.

Those qualification standards could be applied to everybody, all people with or without disabilities and all people with disabilities including people who are drug addicts or alcoholics. I mean, it is also important to clarify for the record that the bill is not inconsistent with, for example, the drug free work place which allows employers to have a rule that drugs or alcohol may not be consumed on the work place.

What is in this bill here is what has been is what has been under Section 504 for years. Under Section 504, you can have a requirement that someone not use illegal drugs at the work place and there would be no recourse under either Section 504 or this bill, so I am just lending a legal clarification to the——

Mr. **Bartlett**. Let me say—I know the chairman may want to go to the next round—let me say, what I want to avoid here and in subsequent hearings, what I want to encourage is an acknowledgement that this is the first hearing. I know many of us, including the three of you have been involved in discussions and in drafting and redrafting, but there is—as we approach the bill, there is no reason for any of us, including me, to be defensive about every semicolon in the bill.

There is no act yet. We haven't drafted it, so I am not attacking the act because there is no act. We have a hearing as to how to draft what we intend. The bill does seem to make in this case an exception if it is direct health and safety.

There does seem to be in the rest of the bill no provision to say as a qualification standard that an employer would be allowed to say, "I choose not to hire anyone who uses illegal drugs." There doesn't seem to be that permission in this bill. Perhaps we can draft it in a way that does give that permission—the chairman may be hurrying me alone, but——

Chairman OWENS. I really want to make a comment after Mr. Dart.

Mr. DART. If I could, Congressman Bartlett, just clarify my answer and make it more direct that as a former businessman and employer, I certainly would not approve of any law that I thought would force or encourage business people or anybody else to employ persons who were breaking the law and who were probably drug abusers.

It was my understanding that this bill does not do this.

Mr. BARTLETT. I yield to the chairman.

Chairman OWENS. We are going to be, as has been pointed out, discussing numerous aspects of this bill in great detail and this will come up again and again. I just must comment as it has come up several times this morning. An alcoholic or drug abuser must identify himself as being a person with a disability, it seems to me, before the law applies to him.

Persons who have gone to court and been mandated to participate in a drug treatment program need jobs; they are identified as being in a drug treatment program; they are not breaking the law now, but they certainly broke the law when they were mandated to be put into the drug treatment program.

I do not think they should be denied a job, but they are identified as persons with a disability, just as alcoholics who are not seeking treatment certainly deserve no protection under this law. They have not identified themselves as being persons with a disability.

They don't own up to it. If they are drinking at the back of a store, doing drugs in the back of the restaurant, they certainly don't fall in the category of this bill. It seems to me that they have to come forward and identify themselves and there are things that go along with that identification.

That may be the way we will have to clarify the law, one direction we can move in terms of clarifying the law. I thank the gentleman for yielding his time.

Mr. BARTLETT. I thank the gentleman. I think the chairman is correct. I think that there are some ways to draft this legislation so that we are certain that it says what we intend and there is a distinction between a current user or abuser of illegal drugs or abuser of alcohol and there is a distinction in someone who is a past user or abuser, and has, in fact, the disability of having been an addict or is a recovering addict and I think that we can draft it that way.

I want to be certain that we do and I think that we have a ways to go, but with people of goodwill we can and that does relate to the Leadership's testimony in which the Leadership's written testimony called for a quick passage of legislation.

I would add a second requirement and that is, it be a quick and thoughtful passage of the legislation. We only get one chance at this. This subcommittee under Major Owens' leadership has written some excellent pieces of legislation in the last years in consolidation with other subcommittees.

Permanent authorization is streamlining of Section 1619. We had the chance we knew to permanently authorize Section 1619 and we can do that anytime, but we only had one chance to streamline it right and this subcommittee took its time to make sure we did it right.

We had a dozen chances to do it wrong, but this subcommittee persisted until we had the right bill, early childhood intervention. This subcommittee persisted until we did it right and I think we have our work cut out for us. I think we have a good blueprint, a good beginning and a ways to go.

Mr. Chairman, I have some additional questions, but I do have one additional question that I would like to pose to all three of the panel and then I will talk to them all later or submit them for the record of the others and that is the remedy section.

Is it—I ask of all three—there are generally two types of remedies that we could impose and this bill seems to impose both types. One is the remedy through the classic civil rights EEOC kind of administrative action in which you filed a complaint with EEOC or some administrative board says, stop, we find that to be discriminatory. You can't do it; don't do it anymore and if you do it, we are going to file either an injunction or some kind of a penalty or we are going to fine you; that is one type.

The other type which is also included in this bill which is somewhat disturbing is legal action through courts, jury trials, monetary damages and specifically U.S. Code 1981. Now, I would like your judgment as to whether you believe that invoking U.S. Code 1981 in addition to administrative remedies is necessary in all cases and should be left in the mainstream of the remedies in this bill or whether it should be deleted or whether it should be limited only to more owners kinds of cases or extreme cases.

Mr. Dart, have you thought about how would you like to see the bill structured in terms of those two types of remedies, court challenges, Federal court, jury trials, monetary awards versus the administrative remedies?

Mr. DART. Well, again, I am speaking for myself personally and again, I am not an attorney, but I would like to say that in my public forums throughout the nation, the issue of enforcement of present disability rights, legislation and disability services, legislation and regulation was probably the largest issue that came up and there was a reflection that enforcement was not in any way adequate and that the remedies were not adequate.

Now, I am not an attorney. I could not sit here and say that I think that the way the law is written is the only way that it could be written in order to have remedies, but I do know and that we have overwhelming evidence that a right without a remedy is not a right and I think that there has to be ways that people with disability, most of whom are poor, can afford to have a lawyer and that that attorney will have some incentive to represent that person to implement their rights, not only under the present Act, but for all disability rights.

Mr. **Bartlett**. Ms. Feldblum?

Ms. **Feldblum**. Yes, actually, to follow-up. As you of course know, the EEOC which is the administrative agency enforcing Title VII, there was also a private right of action under Title VII that one can go into court and also enforce one's right in courts and that is, of course, is basic in all the civil rights laws even where there is an administrative mechanism, there was always also a private right of action to enforce one's rights in courts, as Mr. Dart said, so that there was a remedy as well as a right.

Once you get into court, of course, it is important that you have the panoply of remedies in order to achieve the vindication of that right which includes not only the remedies of injunction, back pay, front pay, remedies that you would be getting under Title VII, but if, for example, you were a Black person who has been discriminated against or a Jew or an Arab, you can also get damages for the harm that has been done.

Mr. **Bartlett**. That raises then two specific questions. Should you be required to go to EEOC first before you go to court or should you be allowed to go straight to Federal courts?

Ms. **Feldblum**. Well, under Title VII, one goes to EEOC if one is suing under Title VII. Of course, if one chooses, if one has been discriminated against on the basis of race or ethnicity, one does not have to go to EEOC; one can file a claim in court under Section 1981.

However, if you were filing under Title VII, one does have to go to EEOC first through the administrative process.

Mr. **Bartlett**. When we pass this legislation, should we require that someone use their administrative remedies first before they go to court or should we allow them to go straight to court without making use of the administrative remedies?

Ms. **Feldblum**. At this point, the bill parallels what would be available to people who have been discriminated on the basis of race, or ethnicity which would allow them to go into court if they chose to do that.

Mr. **Bartlett**. Should we also allow that for unintentional discrimination in addition to intentional discrimination, in your opinion?

Ms. **Feldblum**. Unintentional, I know, had been raised before. That is a basic concept within Section 504, has been throughout the time, and, therefore, it is incorporated within the ADA as well. There should be a difference in terms of one's ability to go into court and vindicate one's rights, whether it is intentional discrimination or some set of neutral room that has had an adverse effect.

Under Section 1981, one would not get damages for something that had a desperate impact and I think that was the intent of this legislation.

Mr. **Bartlett**. It is eliminate the damages, but not the injunctive relief for unintentional discrimination. Is that what you are saying?

Ms. **Feldblum**. Correct, yes.

Mr. **Bartlett**. Brother Nelan, do you have a response then to the——

Brother **Nelan**. I feel that I have no confidence in this field of making these distinctions, but it would seem to me from common sense, that it would be better to have administrative remedies before going to the full panoply of jury and all of the rest.

Mr. **Bartlett**. Brother Nelan, you said in your testimony that in your opinion, there were some specific problems with the ADA that you and others in the business community you have worked with have identified, not in the concept of '88 but in the drafting.

I know that you had shared earlier, but it was not part of your testimony, a draft of a document entitled "Concerns with the Americans with Disabilities Act, the Disability Rights Working Group." Would that be a draft that this subcommittee could use to sort of walk through some of the issues that you have found?

Brother **Nelan**. Yes, I would like to submit that draft.

Mr. **Bartlett**. I would ask unanimous consent that that draft be submitted as part of this record, Mr. Chairman.

Chairman **Owens**. Without objection, it will be accepted. I would like to ask the Leadership Conference to take a look at it and submit any comments on it also.

[The material follows:]

DISABILITY RIGHTS WORKING GROUP

Working Paper #1

Concerns with the Americans With Disabilities Act

INTRODUCTION

The Americans with Disabilities Act, introduced on May 9, 1989, is comprehensive legislation whose expressed objective is to extend the same protections against discrimination enjoyed by other protected groups to those with disabilities.

Though supportive of many of the concepts embodied in the ADA, the Disability Rights Working Group -- a coalition of businesses and trade associations -- is opposed to the ADA in its present form. Discussions have been held with representatives of the disability community, Congress and the Administration in an effort to fashion legislation we can all embrace. However, unless changes are made, particularly in the area of remedies, the Group will seek to defeat S. 933/H.R. 2273.

CONCERNS WITH LEGISLATION

Listed below are summaries highlighting some of the Group's concerns with the ADA, all of which have been communicated to the parties. There are two levels of concern with the legislation: first, the issues relating to enforcement and remedies; and second, all others. We have made it clear that resolution of the former is absolutely essential to further negotiation, without which the Group will seek defeat of the bills. That should not, however, be interpreted to mean that resolving the threshold concerns alone would be acceptable.

THRESHOLD ISSUES

Enforcement/Remedies. In addition to the remedies, administrative procedures and defenses available under Title VII of the Civil Rights Act of 1964 -- for which there is an extensive body of law and successful experience regarding cases alleging discrimination based on race, sex, religion and national origin -- the ADA, in §205, provides a second, separate track of enforcement that would permit a jury trial, and punitive and compensatory damages, *i.e.*, pain and suffering. The second track must eliminated.

Anticipatory Discrimination. Section 205 of the ADA would also provide relief to individuals who believe they ''are about to be'' discriminated against. Such speculative complaints and attendant litigation are not permitted in any other civil rights in employment legislation and should be eliminated from the ADA.

GENERIC ISSUES

Enforcement Duplication/Consistency with Rehabilitation Act. A significant number of employers are currently subject to Sections 503 and/or 504 of the Rehabilitation Act of 1973, as amended, that prohibit discrimination against persons with disabilities. The ADA would impose additional, in some cases, conflicting obligations on these employers. The ADA is silent as to situations where employers are faced with inconsistent standards and duplicative enforcement by various federal agencies. Compliance with Section 503 or 504 standards should be deemed to be in compliance with the ADA.

Failure versus Refusal to Act. The lack of distinction between intentional and unintentional discrimination will penalize employers for inadvertent errors in their attempts to abide by new, affirmative obligations imposed by the ADA. Discrimination should be defined as ''refusal'' or ''willful failure'' to act.

Reasonable Accommodation and Undue Burden. As defined in §1, there is no limitation on the lengths to which one must go to provide reasonable accommodation, though it is limited in §101 (b) (Defenses) as not requiring an ''undue burden,'' which itself is undefined. In the absence of the definition, does this connote that ''undue burden'' means anything that threatens a firm's existence? Further, under §202(b)(2), it would be discriminatory not to hire an individual on the basis of the need for reasonable accommodation, not limited in this context by a defense of ''undue burden.'' Thus, an employer could not offer the defense of undue burden in response to an allegation of refusal of hire because on the need for reasonable accommodation. In order

BEST COPY AVAILABLE

that employers and others understand the bounds of their obligations, reasonable accommodation should be defined not to require fundamental alterations or result in undue financial or administrative burdens and include a definition of "undue burden." Codification of relevant Section 504 regulations and additional information regarding obligations would provide needed guidance.

Incentives. While it is argued that, as a civil rights law, the costs attendant to compliance with the ADA are irrelevant, no other civil rights statute requires a private employer, who is not a federal contractor or grantee, to expend substantial resources on affirmatively accommodating a protected class. In some instances, the costs will be significant and burdensome, particularly on smaller businesses. As introduced, the ADA contains no incentive to encourage and assist employers to make expenditures to increase opportunities for individuals with disabilities. The tax deduction of $35,000/year permitted under §190 of the Internal Revenue Code for removal of achitectural barriers should be increased and expanded to defray the costs incurred in providing reasonable accommodation or auxiliary aids and services that would be required by the ADA.

TITLE I – GENERAL PROHIBITIONS

Drug/Alcohol Abuse. The bill, in §101(b)(2)(A), appears to limit an employer's ability to adopt and implement a drug-free workplace policy by protecting current abusers of alcohol/illegal substances except where it can be demonstrated that such use constitutes a direct threat to property and/or safety. In view of federal and Congressional policy on drug-free workplaces, this provision should be revised to eliminate current contradictions, to clarify that nothing in the ADA is intended to protect current abusers, and to protect the right of employers to implement "zero-tolerance" policies concerning substance abuse.

Overlap Between Titles I and II. It is unclear what additional burdens are imposed on employers in Title I which are not included in Title II which governs the employment relationship. As currently constructed, drafters of the ADA have lifted regulations implementing Section 504 (which are targeted to federal grant recipients) and simply added the term "job" so that they now would apply to employment. In doing so, new, broad and ambiguous terms are used that have no historical interpretation. When, for example, is one job considered "as effective as" another? The term "job" should be deleted wherever it appears in Title I and it should be made clear that employment discrimination is controlled exclusively by Title II.

Discrimination by Assistance. The ADA would hold an employer or other entity liable if the recipient of its charity or assistance discriminates on the basis of disability, whether or not there is knowledge of such discrimination. Section 101(a)(1)(E) should be amended to reflect that such act is illegal only where the provider knows of the discrimination.

Discrimination Based on Association. The ADA would make it illegal to discriminate against an individual because of the "relationship to, or association of, that individual or entity with another individual with a disability." This is unparalled in civil rights law and will invite frivolous lawsuits requiring employers to prove a negative, *i.e.*, that they weren't aware of the association. Section 101(a)(5) should be deleted.

Discrimination in Benefits. As drafted, Title I creates incredible new liabilities for employers if they provide disabled persons with a benefit which is "less effective than" or "is different or separate" from that provided to others (*e.g.*, §101(a)(1)(C) & (D)). Group health insurance benefits, which are offered under the same terms and conditions to all employees, may still be "less effective" or "separate or different" for a person with disabilities. Employers should only be obligated to offer the same benefits package to all employees, whether or not they are disabled. To require otherwise, *e.g.*, provide specific medical coverage or purchase medical insurance with pre-existing condition waivers, would be prohibitively expensive and result in insurance companies being unable to provide and/or underwrite group health policies.

Good Faith Efforts. Despite their good faith efforts, employers will be placed in a "Catch 22" position by the conflicting requirements of §101(a)(1)(d) -- provide "different or separate" programs/activities that are "as effective as [those] provided to others" -- and §101(a)(3) -- a disabled person "shall not be denied the opportunity to participate in such programs or activities that are not separate or different." There should be recognition in the ADA of employer good faith efforts to make accommodations to those with disabilities. It is a well recognized concept under current civil rights law and should be incorporated in the ADA.

Consistency with Existing Law. Section 101(a)(4) seems to adopt the adverse impact theory for proving discrimination against persons with disabilities. It is not clear whether the authors intend to follow or overturn *Alexander v. Choate* as it relates to application of the adverse impact theory of discrimination. The Committee Report should indicate the intent of authors to follow *Choate*, in which Supreme Court Justice Marshall discussed the appropriate application of adverse impact theory.

Defenses. The inclusion in Title I of defenses would seem to limit the defenses that would otherwise be available under the Act. There is a adequate body of law under the Civil Rights and Rehabilitation Acts concerning the defenses available to an employer in cases of discrimination and §101(b)(1) should be deleted. Title II should be amended to provide that the defenses, as well as the procedures and remedies, of the Civil Rights Act of 1964 apply in actions brought under the ADA.

TITLE II – EMPLOYMENT

Coverage. The ADA imposes substantial new burdens on employers, particularly for smaller employers. Coverage under Title II should be phased-in, as it was with the Civil Rights Act of 1964, over a five-year period with the threshold starting at 100 employees the first year and dropping each year. This same approach should be employed with regard to Title IV to provide a reasonable time to make changes to physical and procedural barriers.

Discrimination. The definition of discrimination in §202(a) is inconsistent with that in Section 504. To conform the ADA, an employment action is not discriminatory against an ''otherwise'' qualified individual unless it is ''solely'' based on an individual's disability. The term ''solely'' appears in Section 504 itself. Its absence in the ADA will be interpreted by the courts as a deliberate change in the law.

Job Applications. Section 202(a) uses a new term, ''job application procedures,'' which differs from the language found in regulations issued under Section 504 concerning the application process, ''processing applications for employment.'' Absent some specific reason for changing the language of Section 504 regulations, this raises questions about whether it will require something other than the Rehabilitation Act. This is particularly important because under Section 503, employers are required to follow certain procedures that permit an applicant with a disability to identify themself to the employer and to discuss the possible need for an accommodation. The new wording suggests that the ADA might prohibit or limit these same procedures.

Selection Criteria. Section 202(b) goes beyond Section 504 regulations by limiting an employer's use of qualification standards, tests, etc., that ''identify'' individuals with disabilities, such as physicals, even if the identification doesn't lead to an adverse employment decision. The word ''identify'' must be deleted. Use existing Section 504 language to permit use of selection criteria but insure that the criteria don't discriminate against individuals solely on the basis of their disability unless the criteria are job-related.

Notice. Section 203 requires notices to be ''posted.'' This is somewhat problematic, for example, for a vision impaired person. The requirement that notice be provided in accessible formats would allow flexibility to use the best means available.

TITLE IV – PUBLIC ACCOMMODATIONS AND SERVICES OPERATED BY PRIVATE ENTERPRISES

Public Accommodations. As defined in §401(1)(A)(II), a public accommodation includes ''potential places of employment.'' Since there is no limitation based on employment size in Title IV, the definition would extend almost universal coverage to the requirement of accessibility. As with Title II, the scope should be phased-in consistent with the scope of the Civil Rights Act and the ADA as introduced in the 100th Congress.

Readily Achievable. Section 402(b)(4)(A) & (B) introduces a new and undefined term not found in existing law, ''readily achievable.'' A definition of readily achievable should be added to §401.

Retrofitting Existing Structures. Under §402(b)(5), there is no threshold as to when an existing structure must be retrofitted, a process -- limited only by structural impracticability -- that is prohibitively expensive and for which existing tax code provisions (§190) only allow a deduction of $35,000 per year. Further, there is no indication to whom the liability for retrofitting accrues, *i.e.*, the lessee or lessor, and the time-frame of one year for changes is unrealistic. It is unreasonable to require the retrofit of structures that were originally built to code unless the requirement is limited to instances where renovations of a certain magnitude, *e.g.*, 50% of building value, are contemplated. Section 190 of the Internal Revenue Code should be revised, not only in terms of the dollar maximum but also expanded to include all expenditures associated with accommodating those with disabilities.. Finally, a realistic phase-in period must be established together with placing responsibility for retrofitting on the building owner.

Transportation. The requirement that all new vehicles with capacity in excess of 12 passengers be fully accessible ignores reality and fails to provide for paratransit. In most instances, the situations addressed are services such as hotel to airport limos which can readily accommodate the needs of the disabled through on-demand paratransit. Section 402(b)(7)(B) should be eliminated.

Public Transportation. The requirements of §403 to make all intercity transportation fully accessible are not based on any demonstrated need and are unwarranted. Rather than preordain the demise of this sector of the transportation industry, the Department of Transportation or some other agency of the executive or legislative branch of government should be directed to first determine if there is a need that is not currently being met.

Standards. Section 404(c) requires the Architectural and Transportation Barriers Compliance Board to establish minimum guidelines and requirements for accessibility standards. In the spirit of building on experience under Section 504, the standards should not impose greater obligations than those contained in standards issued by the American National Standards Institute (ANSI A117.1) and be consistent with Section 504 requirements at 45 CFR 84.23.

Enforcement. As with the enforcement mechanism under Title II, the remedies available under Title IV, §405, should be limited to those available to other protected classes, *i.e.*, Civil Rights Act of 1964 and Rehabilitation Act of 1973.

TITLE VI – MISCELLANEOUS PROVISIONS

Effective Date. As set forth in §606 of the ADA, the Act would become effective on date of enactment and provide no time for employers and other entities to familiarize themselves with its provisions. The Act should have a delay in the effective date of one year and provide for education and technical assistance programs.

Insurance Underwriting. In its present form, the ADA does not directly address insurance and questions or ambiguity may arise regarding its application to the insurance industry, particularly as it concerns employee benefit plans. Section 601 should be amended to make clear that the intent of Congress is not to disrupt the current nature of insurance underwriting. Specifically, the new subsection would (1) clarify that insurers could continue to sell to and underwrite individuals applying for life/health insurance on an individual basis, and (2) reflect, as does the Age Discrimination in Employment Act, the need for employers to establish and observe the terms of employee benefit plans so long as the plans are not a subterfuge to evade the terms of the ADA.

July 1989

DISABILITY RIGHTS WORKING GROUP

Issue Paper #2

THE ADA ENFORCEMENT PROCESS

The enforcement provision in the proposed ADA has been the subject of much criticism because of the manner in which claims of discrimination would be resolved. The focus of the criticism has been the fact that the ADA would incorporate, by reference, the "procedures and remedies" of Section 1981, a post-civil war act aimed at prohibiting and punishing race discrimination.

Unlike the equal employment opportunity laws passed during the past 25 years, Section 1981 was not specifically designed to deal with issues of employment discrimination. Incorporating the procedures and remedies of that statute into the enforcement section of the ADA would create a law which differs in three significant ways from modern EEO laws.

First, Section 1981 provides for litigation as the initial step in resolving a dispute. This is different from modern EEO laws which generally require a litigant to first proceed through an administrative process in an effort to promote voluntary resolution of the matter, with lawsuit being the avenue of last resort.

Second, Section 1981 provides for an award of damages which goes well beyond the back pay damages common to employment discrimination cases under modern laws such as Title VII of the Civil Rights Act of 1964, which prohibits discrimination on the basis of race, sex, national origin, and religion. This potential for *windfall damages* tends to discourage litigants from accepting reasonable settlement offers, and it encourages lawyers and their clients to take their chance at trial in the hope of winning a million dollar verdict.

Finally, once in court, Section 1981 provides the option for a *jury trial*, unlike Title VII, which provides for trial before a judge in cases alleging employment discrimination.

THE COURT HOUSE IS THE FIRST STOP

By including section 1981 procedures in the ADA, the drafters provide individuals with a means of circumventing the administrative process which has been critical to the success of Title VII of the Civil Rights Act of 1964, believed by many to be the most effective employment discrimination law on the books. The "procedures" under Section 1981 are simple: A person needs only to walk into the court house and file a lawsuit. This approach is in sharp contrast to Title VII which requires litigants to at least give the administrative process a chance to resolve the dispute before it becomes a lawsuit. The Title VII procedures are built upon the practical notion that the primary intent of an EEO law is the creation of employment opportunities. Thus, under Title VII it is considered preferable to resolve disputes through a prompt, fair conciliation which leads to a job opportunity than to resolve matters through a lawsuit which, years after the incident, provides a windfall monetary verdict as a way of punishing the employer.

THE TRIAL AS A LOTTERY

Recent news reports have highlighted the fact that in certain states plaintiffs are now selling shares to those who wish to "invest" in the lawsuit in the hope of sharing in the plaintiff's verdict or settlement award. The ADA, by including Section 1981 procedures and remedies, would promote a similar "lottery" or "windfall" attitude with respect to litigation of disability discrimination claims.

The Section 1981 remedies would allow a litigant to win a full range of compensatory damages -- such as an award of money for pain and suffering -- as well as punitive damages, designed solely for the purpose of punishing the employer.

Typically, in awarding such damages, the attorney seeking a large damage award asks the jury to envision the injury the plaintiff has had to endure and to then try to calculate a sum that will adequately compensate

- Over -

the individual for that injury. The jury may then be asked to award punitive damages, based upon the defendant's overall net worth. The results can be staggering. In a well-publicized case several years ago in Colorado, a jury returned a $17 million verdict against a large retailer in an age discrimination case. That decision was subsequently overturned on appeal. But, nonetheless, it demonstrates the "sky is the limit" attitude which compensatory and punitive damages can bring to employment discrimination lawsuits.

The simple availablility of such damages, and the mere possibility of such a windfall award, is a significant factor long before the case reaches the trial stage. The potential for a windfall encourages the litigant and his or her attorney to reject reasonable settlement offers in favor of "taking a shot" at the brass ring and winning millions of dollars. This is in contrast to the Title VII approach which focuses on creating employment opportunities and providing back pay for an individual who was the victim of illegal discrimination.

SYMPATHY/PREJUDICE IN THE COURTROOM

Under Section 1981 procedures, the case may be decided, and the damages may be awarded by a jury, rather than a judge. While our society recognizes the value which a jury can bring to the process of deciding lawsuits, it is also recognized that in certain situations the facts before a jury can have an emotional impact so strong that it is likely to interfere with the jury's deliberations and prejudice one of the litigants. Clearly, in the area of disability cases, the potential for such prejudice is high. In this area of the law, plaintiffs obviously will be individuals with disabilities. Is it realistic to think that jurors will be able to decide the case without being affected one way of the other by the fact? The only sensible approach is the approach followed by Title VII. In those cases where the parties are unable to work out their differences through the administrative process and end up in court, such decisions are best left to judges who can better view the facts without any cloud of sympathy for or prejudice against the litigants.

The Honorable Major R. Owens
Chairperson
Subcommittee on Select Education
Committee on Education and Labor
U.S. House of Representatives
Washington, D.C. 20515

Dear Representative Owens:

Thank you for giving the Leadership Conference on Civil Rights the opportunity to testify on behalf of H.R. 2273, the Americans with Disabilities Act (ADA). As you requested, we are attaching a response to the Working Paper prepared by the Disability Rights Working Group on the ADA, entered into the record during the hearing.

In its Working Paper, the Disability Rights Working Group (DRWG) presented two threshold concerns, the resolution of which it identified as essential to any further consideration of the bill, four generic concerns to the ADA overall, and twenty-two concerns specific to different titles within the ADA. Each of those concerns are addressed below. In cases in which the compromise ADA bill, endorsed by President Bush and passed by the Senate last week, directly addressed the concern raised, that fact has been noted in the response. We believe you will find that all concerns have been adequately met.

THRESHOLD ISSUES

1. DRWG concern: The ADA includes not only those remedies available under Title VII, but also includes provisions for jury trials and compensatory and punitive damages. These latter provisions must be eliminated.

Response: The ADA, as introduced in the House of Representatives, included remedies similar to those available to people who have been discriminated against on the basis of race or ethnicity. Those remedies, as incorporated in

"Equality In a Free, Plural, Democratic Society"

Title VII of the Civil Rights Act of 1964 and section 1981 of the Civil Rights Act of 1866, included both injunctive relief and jury trials and monetary damages. The ADA simply incorporated similar relief for people with disabilities.

Because of the concerns raised in this area, however, the compromise bill passed by the Senate and endorsed by President Bush (henceforth "the compromise bill") directly addressed this issue. In the compromise bill, the ADA incorporates the remedies of Title VII for purposes of the employment section of the bill. This change meets the concern raised by the business groups.

2. DRWG concern: The ADA provides relief to individuals who believe they are "about to be" discriminated against. These types of "speculative complaints" are not allowed in other civil rights employment laws and should be eliminated from the ADA.

Response: This concern reflects a misunderstanding of the "about to be discriminated against" provision within the ADA. This provision never allowed plaintiffs to present completely "speculative complaints" for which there was no basis. To the contrary, this provision was derived from case law under Title VII, which incorporates the basic concept of anticipatory discrimination and which establishes specific, strict standards that plaintiffs must meet to prove such discrimination.

In any event, in order to address this clear misunderstanding, the compromise bill deleted the term "about to be discriminated against" in the employment section. The accompanying Senate Committee Report explained that, because the case law under Title VII already provided protection against the type of discrimination with which the ADA was concerned (without including any specific statutory provision to that effect), there was no need to include such a specific provision in the employment section. This change meets the concern of the business community.

GENERIC ISSUES

1. DRWG concern: A significant number of employers are already subject to section 503 and 504 of the Rehabilitation Act of 1973. The ADA would impose additional, conflicting obligations on such employers.

Response: This is a misplaced concern. In the employment area, the ADA imposes similar requirements to those imposed under section 504, not conflicting requirements. It is section 503, which governs federal contractors, which imposes an additional requirement--that of affirmative action, which is not a component of the ADA. Such employers can easily comply with the basic ADA requirements, and then continue to comply with the additional affirmative action requirements of section 503, when those apply.

2. *DRWG concern*: The "lack of distinction between intentional and unintentional discrimination" in the ADA will penalize employers for "inadvertent errors" when they try to abide by the new obligations of the ADA. The ADA should cover only "wilful failure" to act.

Response: This concern reflects a misunderstanding of the ADA, and of Section 504 on which it is modeled. Section 504 does not make any distinction between "intentional and unintentional discrimination." Indeed, one of the Supreme Court.cases dealing with Section 504 (*Alexander v. Choate*, 469 U.S. 287 (1985)) expressly noted that discrimination against people with disabilities often did not derive from a "wilful" or "malicious" desire to discriminate, but rather was derived from "thoughtlessness" and "benign neglect." The Court noted that, in order to ensure that the protections of Section 504 did not "ring hollow," Congress intended to cover more than just intentional discrimination. Limiting the ADA to cases in which there is a "wilful failure" to act would remove basic substantive protections that have long been in place under Section 504.

3. *DRWG concern*: There is not sufficient guidance in the ADA regarding the scope and limits of "reasonable accommodation" and "undue burden." The relevant Section 504 regulations should be codified in the law.

Response: The ADA draws directly on the language and standards of Section 504, which offer guidance on the scope and limits of "reasonable accommodation" and "undue hardship" or "undue burden." For example, contrary to the DRWG's assertion in its Working Paper, the provision of reasonable accommodation in the ADA *is* expressly limited to those accommodations that would not impose an undue hardship.

In light of concerns raised by the business community, however, the compromise bill expressly codifies Section 504 regulations defining "undue hardship," in order to give yet further guidance to covered entities.

4. *DRWG concern*: There are not sufficient incentives in the ADA to help entities comply with the law. The tax deduction of $35,000/year permitted under the Internal Revenue Code for removal of architectural barriers should be expanded.

Response: The issue of providing financial assistance to businesses who make changes for physical access is, and should be, separate from establishing in the law the basic civil rights for people with disabilities. For example, Section 504 of the Rehabilitation Act did not provide *extra* financial assistance when it established its requirements. The $35,000/year deduction currently in the tax code is an excellent start for addressing the separate issue of providing assistance to business owners. The Leadership Conference would be happy to work with the business community in exploring other incentives that could be incorporated in future legislation.

The Disability Rights Working Group also listed a number of specific concerns within each title of the ADA. Almost all of these issues were addressed in the compromise bill.

TITLE I--GENERAL PROHIBITIONS

1. Drug/Alcohol Abuse: The compromise bill provides that individuals who are currently using illegal drugs are excluded from the definition of an individual with a "disability" under the ADA. Thus, the ADA presents no impediment to the efforts of employers to establish "zero-tolerance" workplaces. The bill also provides that employers may prohibit the use of alcohol in the workplace, may require that employees not be under the influence of alcohol at the workplace, and may hold individuals who abuse alcohol to the same performance standards as other employees.

2. Overlap Between Titles I and II: The compromise bill deletes Title I and incorporates the relevant provisions of Title I into the remaining titles. This removes any alleged concerns regarding "new, broad and ambiguous" terms that have "no historical interpretation," and creates self-contained titles that are clear and consistent.

3. Discrimination by Assistance: The compromise bill deletes the provision creating liability for assistance to entities that discriminate. The bill adopts the clearer provision of the Section 504 regulations which prohibit methods of administration that "perpetuate the discrimination of others who are subject to common administrative control."

4. Discrimination Based on Association: The compromise bill clarifies that the prohibition of discrimination against those who associate with people with disabilities is limited to situations where the covered entity knows about both the disability and the association. This is identical to the provision that was included last year in the Fair Housing Amendments Act of 1988.

5. Discrimination in Benefits: The compromise bill includes a specific provision stating that nothing in the ADA prohibits or

restricts insurers and employers from offering health plans that are based on traditional underwriting risks and classifying risks. Thus, insurance companies and employers can continue to offer plans that include pre-existing condition clauses and specified medical coverage.

6. Good Faith Efforts: The two allegedly "conflicting" requirements of Title I described by the DRWG have been deleted in the employment section of the compromise bill.

7. Consistency with Existing Law: As requested by the DRWG, the Senate Committee Report explicitly notes that the ADA adopts the disparate impact standard of Section 504, as enunciated by the Supreme Court in Alexander v. Choate, 469 U.S. 287 (1985). See Senate Committee Report, p. 30.

8. Defenses: Under the compromise bill, the defenses section has been deleted from Title I (together with the rest of the title). The defense provision in the employment section has been modified to clarify that the defense listed does not preclude other traditional, legitimate defenses (for example, the defense that a particular job does not exist).

TITLE II--EMPLOYMENT

1. Coverage: The compromise bill adopts a phase-in period as requested by the Administration and the business community. The employment section of the bill does not become effective until 2 years after enactment. Employers with 25 or more employers are covered at that time; there is an additional phase-in period of two more years before employers with 15 or more employees are covered.

2. Discrimination: The Senate Committee Report clarifies that the ADA is simply following the experience of Section 504 regulations and case law in removing the word "solely" from the legislation. See Senate Committee Report, p. 44.

3. Job Applications: The term "job application procedures" covers the same procedures that are currently covered under Section 504. This term, as well as others in this provision, are derived directly from Title VII.

4. Selection Criteria: The compromise bill deletes use of the word "identify" and directly incorporates provisions from existing Section 504 regulations.

5. Notice: The compromise bill provides that notice be posted

"in an accessible format" to applicants and employees, thus giving employers flexibility with regard to individuals who have vision impairments.

TITLE IV--PUBLIC ACCOMMODATIONS

1. Public Accommodations: The term "potential place of employment" has been deleted from the definition of a "public accommodation" in the compromise bill. The term appears only with regard to new construction, to cover, for example, commercial buildings that do not yet have identified tenants at the time of construction.

2. Readily Achievable: At the request of the Administration and the business community a definition of "readily achievable" is included in the compromise bill. Under this definition, removal of architectural or communication barriers is "readily achievable" if it is "easily accomplishable and able to be carried out without much difficulty or expense."

3. Retrofitting Existing Structures: The only retrofitting of existing structures required under the ADA is that which is "readily achievable"--which, as noted above, is now defined in the bill. The compromise bill also further defines the requirements of accessibility when facilities undergo major alterations and renovations.

4. Transportation: The provision regarding purchase, by public accommodations, of new vehicles that can carry in excess of 12 passengers has been modified in the compromise bill to take into account the concerns of the business community. The new provision covers vehicles that can carry in excess of 16 passengers and incorporates a program access element.

5. Public Transportation: The need for accessible public transportation has been demonstrated throughout the process of this bill, through countless letters and testimony. The Bush Administration has stated its strong support for this particular provision of the bill.

6. Standards: It is expected that the Architectural and Transportation Barriers Compliance Board will use and build upon existing federal standards, to the extent they are consistent with the ADA.

7. Enforcement: For the public accommodation section of the ADA, as requested by the Administration and the business community, the compromise bill incorporates the enforcement section of Title II of the Civil Rights Act of 1964, together with pattern or practice suits brought by the Attorney General. Private plaintiffs are not permitted to seek monetary damages.

TITLE VI--MISCELLANEOUS PROVISIONS

1. Effective Date: The compromise bill changes the effective date of the ADA. The employment section becomes effective 24 months after enactment; the public services and the public accommodations sections become effective 18 months after enactment.

2. Insurance Underwriting: The compromise bill includes a specific provision clarifying that the ADA is not intended to disrupt the current nature of insurance underwriting.

We hope these responses will be useful to the Committee as it proceeds to consider H.R. 2273, the Americans with Disabilities Act. As you can see, all of the concerns raised by the Disability Rights Working Group can be dealt with through clarifying language. None of the concerns address the core protections of the bill, which remain in the compromise bill adopted by the Senate.

We look forward to working with you as you move forward with this historic piece of legislation extending protection for people with disabilities.

Sincerely,

Chai R. Feldblum, Esq.
on behalf of the
Leadership Conference
on Civil Rights

Mr. Bartlett. Mr. Chairman, I would also say that it would be of great help to me if the Leadership Conference would submit both to the subcommittee and submit to me either verbally or in writing or just some set of commentary on how you would see those objections or those concerns planning out.

Mr. Chairman, it has been a very helpful hearing and I very much appreciate the chairman's additional time that he offered me.

Chairman Owens. You do have copies?

Ms. Feldblum. Yes, I do.

Chairman Owens. Thank you. Mr. Jontz.

Mr. Bartlett. Mr. Chairman, I also would ask unanimous consent to enter my opening statement which I didn't give into the record.

Chairman Owens. Without objection, so ordered.

Mr. Jontz. Thank you, Mr. Chairman. I want to thank each of you for your helpful statements this morning. Mr. Dart, you noted in your testimony that there has been some opposition expressed to ADA. Perhaps some of the opposition which has been expressed or may be expressed as the result, would be the result of misunderstandings about the bill.

Can you identify for the subcommittee any misunderstandings that you see or hear that would be helpful for us to be aware of, some points that may be raised that you feel are the result of misunderstandings that we should be alert to?

Mr. Dart. One that I have heard is the fear that many existing businesses and especially small businesses maybe owned by families would be forced to do very expensive total renovations of their establishment which would, in effect, put them out of business and, of course, the bill does not require anything of that nature.

It requires new facilities to be accessible and very reasonable and modest changes to be made in present current facilities, present existing facilities, but I find that the major—what I view as the major misunderstanding of the effect of the bill is that which I addressed in my testimony, the fear of massive cost which I think is the fear of the unknown and I would like to state in that regard, that I have now on three occasions sat down with distinguished Task Forces of conservatives and independents, and liberals, Republicans, Democrats for the first time in Texas and now twice on the national level, in situations where some very conservative businessman and economist sat down and studied this issue over a period of months or years and I cannot think of a single individual among that group, including in Texas, the budget director under the Clement's administration.

As you know, Governor Clements was not widely thought to be a spendthrift liberal and his budget director was the vice chair of a task force which I chair and it took him—he was a Ph.D. in economics and he was very conservative and he was sort of the David Stockman of the Clements Administration—it took him about two weeks to become a fan and a total supporter of disability rights because he saw the economists of it and I really believe that the cost factor is the largest area of misunderstanding based on principally unfair, the unknown, because as a businessman, I have made many, many of the accommodations required by ADA and I know other businessmen who have made the public entities and it is simply just good business.

It doesn't cost a lot of money. It results in profit and goodwill and other factors that are not only totally affordable, but totally affordable.

Mr. JONTZ. Thank you. I wonder if I might ask Ms. Feldblum if she would identify any other misconceptions about the legislation that we ought to be alert to.

Ms. FELDBLUM. I think the one that I would identify is really almost a follow up, one that has just been said. I think you will often hear—you have heard it today—that there are things that seem to be new and different and undefined in the bill that it is going to be hard to be understand, hard to implement.

I think one of the basic approaches of this bill is that it does follow from the basic concepts, regulations and caselaw of Section 504 which has been in practice for fifteen years and is very well understood.

It is not an undefined quality drafted bill. It is a very well defined, clearly drafted bill based on the experience of Section 504, so I think that anytime that you hear from someone, this is not defined and I don't understand it, it is worth asking the follow-up questions, "what words don't you understand?" and I think often you will find that those are the words that have been used for fifteen years in Section 504 with very clear guidelines and without a problem for employers such as those who have been under Section 504, those who have done it on their own. I think that is the main thing.

Mr. JONTZ. Thank you very much. Thank you, Mr. Chairman.

Chairman OWENS. Thank you. I would like to ask Mr. Dart if he would take a few minutes to describe the types of materials that are contained in these boxes. I asked that they be placed up here so that the members of the committee and the audience could see the tremendous results of your work on the task force.

I would like for you to take a few minutes to describe the kinds of things that are contained in these boxes?

Mr. DART. These are letters from people with disabilities describing in answer to the call of the Task Force. They are describing discrimination that they have experienced generally and usually expressing their advocacy for solutions specifically to Americans with Disabilities Act.

These are some petitions, a good number of several hundred probably petitions and not several hundred signatures, several hundred petitions of individuals supporting the Americans with Disabilities Act. There are discrimination dairies where people have kept a dairy over a period of time, listing specific discrimination that they have experienced and there are tapes, videotapes, audio tapes with similar evidence.

Chairman OWENS. Again, I would think that in the process of answering some of the detailed questions as we move forward to perfect this bill, much of this material will be useful.

I will direct my staff to certainly make it available to all of the members of the committee. We do intend to index it in a way that would make it fairly easy to use.

Again, I want to thank Mr. Dart for that effort. Finally, I would like to ask any member of the panel if there is any final comment they would like to make as we go forward; not just comments about the bill, but also the process, and about the fact that we have deliberately—in response to the leadership and the disabilities rights community—placed a great deal of emphasis today on the parallel between this effort to pass this bill and the efforts that were launched in the '60s with the civil rights movement.

As we move forward in that process, I welcome any insights, comments, recommendations you have on process as well as on the substance of the bill.

Mr. **DART**. Mr. Chairman, I think that I have pretty well covered what I would like to recommend in my statement. I would like to repeat my congratulations to you and my deepest respect for you on your support for the rights and the empowerment of people with disabilities.

It has been a real privilege to work with you and your magnificent staff, Bob Tate, Maria Cuprill, Pat Laird and others over the past fifteen months.

Chairman **OWENS**. Ms. Feldblum?

Ms. **FELDBLUM**. I would just like to actually repeat what has been said often here this morning already, that people with disabilities do not have the right to be free of discrimination in all areas of society today and the way that people have the right to be free of discrimination because of current laws on the base of race, religion, national origin and et cetera.

It would be critical that this Congress very quickly pass this bill that would finally give that right to people with disabilities.

Chairman **OWENS**. Brother Nelan?

Brother **NELAN**. We feel that the expansion of the civil rights bill to the disability community is really morally correct and we must do all to support it, but truly, though, we find that there are ambiguities in the bill, certain areas that are not clear and certain impositions upon employers as it is drafted, but we feel too that certainly it is going to all be ironed out by the Congress before the bill is enacted.

Mr. **OWENS**. I want to thank all of you for being excellent witnesses. You heard from the chairman of the Democratic caucus, a commitment of the leadership in the House of Representatives to move this bill rapidly.

Come and go with us. We have begun this morning and we look forward to the passage of this legislation. Again, thank you very much.

The joint hearing is now ended.

[Whereupon, the subcommittee hearing ended at 12:30 p.m.]

[Additional material submitted for the record follows.]

REMARKS OF THE HONORABLE STEVE BARTLETT
BEFORE
THE JOINT HEARING OF THE SUBCOMMITTEES ON
SELECT EDUCATION
AND
EMPLOYMENT OPPORTUNITIES
ON CIVIL RIGHTS FOR
INDIVIDUALS WITH DISABILITIES
JULY 18, 1989

Mr. Chairman, I believe there is universal support for extending the civil rights of individuals with disabilities. The current debate centers around **how** -- primarily how fast and in what terms. My statement includes three areas of comment:

> *a review of the record to date on the Americans with Disabilities Act of 1989 (ADA);*
>
> *second, an outline of some concerns that have surfaced;*
>
> *and third, observations on the implications of our failure tc attend to these concerns.*

The Record

The National Council on Disability

The record for extending the civil rights of persons with disabilities has been building rapidly in the last two years. Mrs. Parrino, Chair of the National Council on Disability and Council Members deserve credit, recognition, and thanks for drafting the first Americans with Disabilities Act introduced by Mr. Coelho and Senator Weicker in April of last year, and for beginning the educational process that must accompany such legislation.

The Task Force on the Rights and Empowerment of People with Disabilities

Chairman Owens, in May of last year, asked Justin Dart to Chair the Task Force on the Rights and Empowerment of People with Disabilities. Mr. Dart held public forums in every State, Guam, and Puerto Rico, and heard about the need for the legislation from over 8,000 people with disabilities. Mr. Dart's efforts have clearly established the social, moral, and economic imperative for extending the civil rights of those with disabilities. This imperative was dramatically reinforced and captured on video tape by the joint House-Senate Hearing on the ADA last September.

This Congress

In this Congress progress continues. Early in May of this year, Republican Leader Michel, my colleague Bill Goodling, and I wrote to Mr. Coelho expressing our willingness to work with him toward developing a bipartisan ADA bill. An ADA bill was introduced by Mr. Coelho and Senator Harkin on May 9, 1989, and although the bill did not reflect specific input from a large number of House Republicans, Mr. Coelho did agree to work with us to take a bipartisan bill to the House Floor. The first meeting toward this end was scheduled for May 31, 1989, but was indefinitely postponed with Mr. Coehlo's decision to resign. It is my understanding that Mr. Hoyer, Mr. Bonier, and Mr. Mineta have assumed Mr. Coelho's role in facilitating passage of an ADA on which there would be broad consensus. I look forward to working with our Democrat colleagues to make this happen. I know the business community has the same interest.

The Evolution of Civil Rights for Those with Disabilities

Attention to comprehensive civil rights as a matter of National policy began with the enactment of the Civil Rights Act of 1964. This Act, although it did not protect those with disabilities, laid the ground work, gave us the principles and experiences, that led to the enactment of title V of the Rehabilitation Act of 1973, which prohibits discrimination on the basis of handicap by Federal Agencies, recipients of Federal grant funds, and Federal contractors. And thus, just as the Civil Rights Act of 1964 influenced the shaping of title V of the Rehabilitation Act, so should our experience with title V influence our crafting of the ADA to extend civil rights in the private sector for those with disabilities.

Thirty-five States have legislation which prohibits discrimination against and promotes accessibility by those with disabilities, that to varying degrees impact on the private sector. It is important that new Federal policy that would set the acceptable standard for providing civil rights to those with disabilities, take into account such State variation, and provide reasonable and effective ways of achieving nationwide consistency given the scope of the ADA -- private sector employment, services, transportation, public accommodations, and telecommunications, as well as areas of the public sector not now covered by Federal statutes.

President Bush strongly supports the extention of civil rights of individuals with disabilities, and Attorney General Thornburgh, in a recent Senate hearing, reiterated the President's commitment to achieve bipartisan consensus on the ADA.

Concerns

I understand that we are here today to begin the House record on the need to extend the civil rights of individuals with disabilities through legislation, and to establish such legislation as a moral imperative of equal importance to the Civil Rights Act of 1964. May I respectfully suggest that such a parallel between the ADA and the 1964 Act has been drawn and broadly endorsed already. *At issues is not the intent, but the method.*

The issues that have emerged as problematic can be resolved in and with good faith, especially if we keep the central purpose of the legislation in focus -- **ensuring civil rights of the *individual* with disabilities**.

Such an end can be achieved if we accept that establishing such rights:

> includes statutory language which is clear as to its application and its relationship to other laws; and
>
> reflects the recognition that civil rights laws for those with disabilities, by their very nature, impose requirements and burdens that are unique, and therefore should be accompanied by incentives, accommodations, and penalties that are economically viable and effective for ***those who must comply as well as for those who may benefit.***

The ADA as currently drafted does not meet these criteria. I hope the witnesses today will help us explore and establish some practical guidance for ensuring that the final version of the ADA meets such criteria.

Implications

The ADA, as introduced, includes novel legal concepts and ambiguous terms that will cause confusion and promote litigation.

It does not allow for different levels of penalties for intentional and unintentional discrimination.

In employment discrimination cases it allows access to jury trials which could result in substantial monetary awards.

The ADA fails to address the impact of its provisions on other State and Federal laws that prohibit discrimination on the basis of disability.

The ADA mandates a substantial degree of immediate compliance without time for education or preparation.

It fails to provide a flexible waiver system or alternative service system option to accommodate entities that are small in size and the sole source of certain types of service, especially in the area of transportation.

It has been widely viewed to be inconsistent with the drug-free workplace requirements that were enacted last year.

Will the ADA in its present form encourage employers to hire people with disabilities and provide them with reasonable accommodation, or will this version of the ADA cause employers to avoid hiring those with disabilities?

If the ADA is enacted, without amendment, will it take many years to clarify and thus undermine the expectations of those it is intended to benefit? The impact of the current version of the ADA on the individual with disabilities who --

> wants a job,
>
> seeks access to the full range of leisure time activities,
>
> expects to be able to visit any doctor of his or her choice,
>
> wants fully accessible public transportation, and
>
> wants to be able to use the telephone any time and any where --

will not be established by the law, but by the courts in which the principal beneficiaries will be attorneys.

We have it within our power to ensure that the ADA will not cause employers to avoid hiring people with disabilities. We have it within our power to ensure that such individuals will not have to wait for courts to define the extent and conditions of their civil rights. Reasonable methods of correcting the problems with the ADA are available and warranted -- clarifications of terms and conditions, and inclusion of reasonable penalties, phase-ins and waivers.

Conclusion

Since joining Congress in 1983, I have had a sustained interest in promoting increased opportunities of and independence for persons with disabilities. My legislative record is a concrete reflection of that interest. I intend to work for the expansion of civil rights for individuals with disabilities. However, given the unique requirements that must accompany such rights, consideration must be given to their impact on society as a whole. I am fully committed to educating that society and holding it accountable for the civil rights due to individuals with disabilities, but I am equally committed to working for laws that do not turn society away from those with disabilities through the use of excessively punitive penalties, unclear standards and conditions, or requirements that offer no flexibility, incentives, or relief in certain circumstances.

Thank you, Mr. Chairman.

Nick Rahall

REMARKS
HONORABLE NICK J RAHALL, II (D-WV)

JOINT HEARING, SUBCOMMITTEES ON SELECT EDUCATION
AND EMPLOYMENT OPPORTUNTIES

RE: H.R. 2273, AMERICANS WITH DISABILITIES ACT
TUESDAY, JULY 18TH, 1989

Thank you Mr Chairman for this opportunity to say a few words on behalf of the Americans With Disabilities Act.

I was a cosponsor of the ADA bill last year, and am pleased to cosponsor the modified ADA during this Congress.

This bill has come to be known a the "BILL OF RIGHTS" for the Disabled, and when enacted will finally permit 43 million disenfranchised Amerians to participate in everything this great nation has to offer.

Imagine! A bill to allow the hearing and speech impaired to use telephones in such a way that they, in times of danger, can actually dial 911 like the rest of us!

What a pity that it takes special legislation to make this into a reality.

Imagine a bill that will, if enacted, put millions of the disabled to work, and make them proud, contribuiting, taxpaying citizens -- instead of living off the dole because some folks would rather they were out of sight and out of mind.

What a pity that such legislation is necessary in this day and time, more than 20 years after the so-called Civil Rights Statutes were enacted.

Imagine a bill that will require restaurants to serve people in wheelchairs and with other disabilities, equally as they serve others.

Imagine a bill to require business and public transportation to accommodate

BEST COPY AVAILABLE

the disabled among us, in the work place and on buses, planes and trains.

What a pity that it takes special legislation, in this year of 1989, to make sure that this is so.

Just imagine, if this bill is enacted, all new buildings to be constructed in the future, including theaters, supermarkets, churches, medical offices and shops, would have to be accessible to the disabled.

What a pity that it requires Congressional action to open the doors that you and I take so for granted, for 43 million Americans who thought just being American was all that was necessary - until they were disabled.

It is time -- not just to unlock the doors of discrimination, but to take them off their hinges and toss them aside.

Are there provisions in this bill that many disagree with -- including the President and the Attorney General of the United States -- the answer is "yes," but they still uphold and support its intent.

Are there those that say it is too costly? Yes, but since when has equality for all Americans been a question of Cost?

And speaking of costs, how much a year have America's taxpayers been paying to keep the disabled out of our workforce, and out of our restaurants and other public places, and off transportation, and without the ability to communicate even in life-threatening situations?

They have been paying billions a year in lost profits that might have been generated by having 43 million more Americans clamoring for a spot in the work place, paying taxes and yes, turning into the very consumers that business spends so much time and money wooing.

They have been paying billions of dollars for food, clothing, shelter, medical and other basic services so that disabled persons would be kept on welfare and out of everybody's way; anything goes and nothing is too expensive to stop their clamoring for jobs and other human rights.

What a pity.

Disabled Americans, Mr. Chairman, do not want to be on the dole. They don't want our charity. They want equal rights to jobs, to transportation, to public places and services, and to be able to communicate with others.

From what I have read recently, in newsletters and other publications, it appears that a great wave of opposition is gathering like a storm on the horizon - and businesses great and small are making dire predictions as to the unconscionable costs, and how it will drive them out of business and into the bankruptcy courts if they have to defend themselves against this legislation should it pass and the disabled of America begin to demand their equal rights.

I firmly believe, Mr. Chairman, that we can surely reach agreement on this legislation in a spirit of compromise and comity, so that it poses no threat to anyone, but that it does pose an opportunity for all of us to reach out and embrace disabled Americans, and welcome them to the mainstream of American life.

Brother Philip Nelan
Director of Handicapped Services
Projects for Industry Program
National Restaurant Association
1200 Seventeenth Street, N.W.
Washington, DC 20036

Dear Brother Philip:

Thank you for appearing before the Subcommittee to testify with regard to the employment of the disabled in the restaurant industry and the Americans with Disabilities Act.

Your comments and prepared statement will become an important part of the hearing record. Unfortunately, the questioning of your panel was somewhat abbreviated. I would, therefore, appreciate your responding, in writing, to the following two questions by August 2, 1989, the date the hearing record is due to close:

(1) Your industry obviously has had a great deal of experience--and success--in employment of the disabled. What kinds of problems, if any, has the industry encountered and dealt with in bringing the disabled into the workforce?

(2) You noted in the closing pages of your testimony that "civil rights-type legislation such as the Americans with Disabilities Act will not be particularly helpful to millions of handicapped people if it is not accompanied by an increase in the resources necessary to train and place these individuals in suitable jobs." Please expand on this point. Who would you suggest should provide this increase? What level of resources are you talking about, and what exact purpose would they be put?

Answers to Questions

1. What problems to you encounter in promoting the program?

The vastness of the hospitality industries precludes bringing the program for employing workers with disabilities to all but segments of the industry, significant as they are, except for continuous vigorous promotion of the program. The ideal aim is to have established firm relationships between the industry and all its parts and public and private training agencies.

The size and complications of corporate organizations in many instances prevent eliciting response for inaugurating programs from the important echelons of administration. Where corporate policy from the top down has embraced the program, still the appropriate personnel, managers, etc. in lower echelons must be ready to implement it.

Problems of these kinds multiply as efforts reach to involving franchisees, identifying them and making contact with the franchisee. Though the membership of the Association forms the care of the industry and is "informed" by publications, seminars, and through organizational channels, a large segment of the 650,000 food and beverage units remain to be converted.

On the side of rehabilitation services, whether public or private, training programs for job-placement counselors need constant renenforcement. In response to inquiries about approaching industry, we have published a "how-to" pamphlet, Marketing Placements and distributed 20,000; they are still in demand.

Great organizations in the training sector stand for the most part independently: -- state vocational rehabilitation services, Association of Rehabilitation Facilities, National Association of Retarded Citizens, and hundreds of local training agencies. Stronger coalitions in local areas among them with the state divisional offices to coordinate training and placement would give industry better means of contact with sources of workers and probably create bonds of relations.

For purposes of evaluation, a means of discovering the actual numbers of disabled persons placed annually in various industries nationally through both the public and private training/placement programs needs to be created.

RSA's efforts at setting up evaluation "standards" and "indicators" need to look closely into industry's participation in PWI. The same overall "standards" and "indicators" for direct training and placement are not compatible with industry's liaison role.

2. What would you suggest this program do to increase training and placement in competitive employment of persons with disabilities?

The 6 to 8 million persons with impairments of working age, not trained and a large percentage not working, indicates that better and expanded programs already existing should be tremendously enhanced.

Projects With Industry directly targarts employment of persons with disabilities. In its twenty year history the program has minimal federal funding, totalling about $4 million in 1968 to about $17 million FY 1990. Yet it has been a most cost-effective program that statistics show for every dollar spent $18 is earned and taxable. This item of the budget, if increased by increments annually to $100 million would make considerable impact upon unemployed disabled people and would enhance state vocational rehabilitation services.

In an increase of the annual budget to $100 million incrementally would allow a set-aside of a percentage to invite industry initiatives and leadership in undertaking the PWI program in replication of the National Restaurant Association's demonstration these last eleven years. Among such industry associations, the following might be in perspective:

Food Marketing Association
Retailer Owner Cooperatives
American Hotel-Motel Association
Single Unit Supermarket Operations
Travelers Institute of America Association
Supermarket Grocery and Convenience Stores
Drug Stores and Chains

General Merchandising/Variety Chains &
Specialty Stores
Specialty Stores (Women's, Men's Children's
Wear)
Department Stores
Home Furnishings

To be more effective such replicated entities might form a collaborating organization, such as the National Association of Industries for the Employment of Persons with Disabilities, and would have as starters other currently conducted industry PWI programs by Electronic Industry Foundation, The International Association of Machinists Airspace Workers, AFL-CIO's Human Resources Development Institute, American Horticultural Training Association, IBM Corporation.

Development of multiple industries' roles in the PWI program appears to be a very promising resource from which to tackle the problem of untrained/unemployed millions of people with disabilities.

Other federal programs which are effective in the employment of mentally and physically disabled persons are: Section 190 of the Internal Revenue Code; it should be expanded to include not only the costs of removing physical barriers, but also include expenses to provide essential equipment for persons to perform the job.

Also, the Target Job Tax Credit (TJTC) Act should be enacted for longer periods than a single year, if not permanently, to give employers a consistent incentive to hire people with disabilities.

Too, the Job Training Partnership Act in its current revisions should make more inclusive provisions for training persons with disabilities.

Out of existing state vocational rehabilitation services, provisions for training job-coach counselors, might be introduced. This body of professionals would be very helpful to small businesses in overseeing the disabled person successfully qualifying for the job.

3. Could you expand a little on your concerns about elements in the ADA as it now stands.

Our concerns are summarized in the submitted copy of Working Paper #1 of the Disability Rights Working Group.

McDonald's Corporation demonstrates through its well-developed hiring practices that the scope of 504 affords thorough protection to persons with disabilities in the workplace. Existing requirements under 504 raise no concerns to the employer and need no further prescriptions of law to secure persons with disabilities against discrimination by an employer. In light of McDonald's non-concerns experiences for years in successfully hiring persons with all sorts of disabilities, may we supplement the National Restaurant

Association's testimony by presenting a copy of McJobs: Opening New Doors for Disabled People. The book is a comprehensive guide to McDonald's management. It presents McDonald's philosophy in hiring and the substance for a thorough orientation and methodology for training McJobs candidates under a job-coach.

Also submitted herewith are copies of the National Restaurant Association's pamphlet, Marketing Placements, addressed to job-placement counselors of disabled job-seekers.

The Honorable Major R. Owens
Chairperson
Subcommittee on Select Education
Committee on Education and Labor
U.S. House of Representatives
Washington, D.C. 20515

Dear Representative Owens:

In our September 11th letter, we responded to the concerns raised by the Disability Rights Working Group in its Working Paper regarding H.R. 2273, the Americans with Disabilities Act (ADA). As you requested, we are also responding to two additional questions addressed to Brother Philip Nelan of the National Restaurant Association by Representative Steve Bartlett.

Representative Bartlett's first question concerned the type of experience and success the restaurant industry had had in bringing disabled people into the workforce. Brother Nelan responded by discussing, among other things, the need for ensuring that personnel and managers at different echelons implement corporate policy, and the need for stronger coalitions in local areas among different programs and agencies to coordinate training and placement.

We agree that effective implementation of policies regarding hiring of individuals with disabilities, and coalition building, are important elements of an effective employment program. Indeed, we believe that passage of the ADA will be helpful in ensuring that forward-looking corporate policies regarding hiring of people with disabilities will be effectively implemented by personnel at all levels. In addition, we believe passage of the ADA can be helpful in supporting coalition building among different agencies and programs, as they all work together to enforce and implement the new law.

39th ANNUAL MEETING • MAY 9, 1989 • WASHINGTON, D.C.
"Equality In a Free, Plural, Democratic Society"

BEST COPY AVAILABLE

Representative Bartlett's second question focused on what type and level of resources would be useful in training and placing people with disabilities in various jobs. Brother Nelan responded that the Projects with Industry (PWI) program should receive annual federal funding of $100 million, that industries should be encouraged to contribute to and replicate the PWI project, that Section 190 of the Internal Revenue Code should be expanded to include expenses for providing reasonable accommodation, that the Target Job Tax Credit should be enacted for longer periods than one year, and that the Job Training Partnership Act should incorporate more inclusive provisions for training people with disabilities.

The Leadership Conference on Civil Rights does not currently have an official position on each of these particular suggestions. We do believe that efforts should be made to enable people of all minorities, including people with disabilities, to achieve their full employment potential. The suggestions offered by Brother Nelan appear to follow this basic principle, although we have not analyzed each one in depth.

We hope these responses are useful to you and the Committee as you continue your important work on this major piece of legislation.

Sincerely,

Chai R. Feldblum

Representative Major Owens, Chairman
Subcommittee on Select Education
House Office Building
Washington, DC 20515

Dear Mr. Owens:

Thank you for co-sponsoring the Americans with Disabilities Act, HR 2273. Passage of this Act will help ensure the civil rights of people with disabilities.

Attached is testimony to the Subcommittee on Select Education.

Sincerely,

Alice Sporar

TESTIMONY ON THE AMERICANS WITH DISABILITIES ACT - HR 2273

The Americans with Disabilities Act, HR 2273, would prohibit discrimination toward people with disabilities in both the public and private sectors in the areas of employment, housing, public accomodations, transportation, and communications. The Act would strengthen existing laws, outline compliance guidelines, and provide enforcement procedures.

Presently, people with disabilities have no legal recourse when they are discriminated against in the private sector. A movie theater can refuse to sell a ticket on the basis of disability. An employer can refuse a job to a qualified person, or pay that person less, on the basis of disability. Buildings continue to be built without access to disabled people even though there is no additional cost to design buildings for all people.

Personally, I know of a developmentally disabled man who has worked for a religious institution for over twenty years at a wage barely above the minimum wage. Others in the same position make more money. The man is afraid of retaliation if he complains.

I have been told that I could not enter a certain movie theater if I didn't transfer from my wheelchair to a regular seat. In an emergency, without my wheelchair, I wouldn't be able to exit the theater.

When traveling across the country last year, it took two hours to find an accessible lavatory.

A hotel where I planned to stay had no ramp to the eight inch curb. There I sat, unable to enter the hotel.

1767 Longwood Cleveland, OH 44124

When I was interested in purchasing a mobile home, I told the mobile home park manager that I needed to install a porch lift or a ramp. I was told there were no homes for sale at that time. A few minutes later, I called anonymously and asked if there were any homes for sale and was told that there were.

When I was ready to start high school, I wanted to attend a private school, only to be told that the halls weren't wide enough to accomodate a wheelchair!

Ohio has a civil rights law which prohibits some types of discrimination, but many states do not, and discriminatory practices continue to keep people with disabilities out of the mainstream of society.

Passage of the Americans with Disabilities Act without compromising amendments is vitally important in order to ensure the basic civil rights of people with disabilities.

FIELD HEARING ON AMERICANS WITH DISABILITIES ACT

MONDAY, AUGUST 28, 1989

House of Representatives,
Subcommittee on Select Education,
Committee on Education and Labor,
Houston, TX.

The subcommittee met, pursuant to notice, at 9:00 a.m., in the Gymnasium, Metropolitan Multiservice Center, Houston, Texas, Hon. Major Owens [Chairman] presiding.

Members present: Representatives Owens, Bartlett, and Payne.

Staff present: Maria Cuprill, Bob Tate and Randy Johnson.

Mr. Owens. Please be seated.

The hearing of the Subcommittee on Select Education of the Education and Labor Committee is now in session.

I yield to Mr. Bartlett for an opening statement.

Mr. Bartlett. Thank you, Mr. Chairman. I appreciate the courtesy of letting me open, and I want to welcome everyone here. I do have an opening statement and some observations about both the legislation and the likely prohibition of discrimination against persons with disabilities in this legislative session before Congress. That prohibition is long overdue, and I want to begin with a statement that I do support the passage of legislation that prohibits discrimination against person with disabilities.

[Applause.]

It should have been done some time ago. It can be done during this session of the Congress, and can be done in some very specific legislation. And it is long overdue that we extend civil right protections to persons with disabilities.

There have been known enforceable actions in a couple of sessions of Congress, and I would like to list them. There have been laws examined that have been congressional in nature and have not been a result of anyone in particular advocating legislation. That, frankly, has not been a part of the problem.

But there has been problems in Congress and there have been problems in Washington, and that is why I think it is especially significant that we are having a field hearing. We ought to have more of them, and particularly we are having a field hearing in Houston to learn some details of the need for that legislation and the specifics of that legislation and what should be in the legislation.

There has been legislation introduced in this session of Congress in the House of Representatives, as well as in 1988. Some of the specifics of that legislation in the House version that has been introduced. I have read the information and looked at the impact, I have had some real problems with it. But I have to tell you that as of today that legislation has come a long way.

I believe that the goal of the legislation should be to prohibit discrimination, should be to provide remedies for people and should not be to invite lawsuits or class actions or other kinds of damages, but simply to allow people to be independent to get jobs, to go to a restaurant, to go to movies, to have transportation, and to have housing.

There are a lot of people who are responsible for us being here today and for being able to say that in fact there will be civil rights legislation for persons with disabilities this session.

They include my colleague who has come to Texas for this the first field hearing on the ADA, and the first hearing since the Senate passed its legislation in the subcommittee shortly before we adjourned, Major Owens of New York. He has been a real champion in this legislation, a real hero, and will be so as we proceed.

Likewise, I have to say that one of the other heros, as yet somewhat unsung, has been the President of the United States, a fellow Texan and a Houstonian. President Bush committed to this legislation during the campaign, and more significantly, the day before he was sworn in as President of the United States, in January of this year. He has instructed his White House staff to directly negotiate the terms of the legislation to the point that it is now negotiated to a point that he had endorsed, and the legislation has moved through the subcommittee of the Senate.

I particularly want, just on a personal note, I know so many people here and I have worked with so many here, but I do want to single out the individual who has been instrumental in organizing this hearing and making certain that this committee of Congress hears from the diversity of the disability groups and the diversity of the employment, the accommodations and transportation and the telecommunication industries here today, and that is Lex Frieden.

[Applause.]

Lex is the premier organizer for this event, and for disability actions over the course of the last several years in this country. I would like on a personal level acknowledge that in many ways Lex was the originator and author of legislation which I had introduced a few years ago and which did get passed to streamline and authorize Section 1619 of the Social Security Act. Lex, through the National Council on the Handicapped, helped to draft the original legislation for that, and subsequently has helped to draft and provide the impetus to the legislation that I also believe will pass this session, and that is to extend 1619 privileges to SSDI recipients, and that also will pass this session of Congress, largely thanks to many of you as well as to Lex Frieden to this particular subcommittee.

The witnesses that are going to testify here today have been very much of a part of a process. And thus, their testimony is quite significant. What they have to say, Mr. Chairman, is important for two reasons.

First, the witness list are witnesses who speak from experience, from real world experience in dealing with these issues. And second, these witnesses will speak on the issue of potential impact of the ADA on local governments and communities and employers.

The debate over the ADA has, until this month, given little attention to this issue except for public transit. Beginning with this hearing, now that the legislation is in a form that will likely move through Congress, we will focus on the substance and the specifics of precisely what the legislation says, what it should say, because we are going to write it in the law. And so we will focus on substance thoughtfully and specifically so that the intent of the ADA will be converted into reality.

And one more acknowledgement, Mr. Chairman, some are represented here, but I would also like to acknowledge that the original ADA civil rights protection legislation was drafted some years ago by the National Council on Disabilities. Mrs. Sandra Parrino, who has testified before our subcommittee in Washington, as well as Kent Wadren, who is here, were quite instrumental in drafting that legislation several years ago and obtaining the original authorship by Mr. Coehlo from California, and Senator Weicker of Connecticut.

Mr. Chairman, during the course of the hearing, I will be asking a number of questions of the witnesses—how they believe the legislation should work, in an ideal world what should be the remedies, what should be the provisions and what should be the level of specificity.

I do want to say to the witnesses that if I ask a question of which you are not knowledgeable, just say so, and we are accustomed to that in Congress. We members of Congress are knowledgeable on a whole lot of things. That is why we ask so many questions.

But I do want to emphasize that the legislation that I think we will end up considering will be similar to the legislation that was passed by the Senate subcommittee, a legislation that was negotiated in large part between the White House and Congress over the course of the last several months.

And one last, I would suggest, at least in my mind, that there should be three basic principles for whatever legislation that we end up with.

In addition, the first principle is that we should pass it in this session of Congress. It is long overdue and it is a good way to begin the 1990s; the three principles.

The first principle should be, it should be a principle of promoting independent living. This is not legislation, nor should it be, designed to increase public benefits. Independent living such as increasing the opportunities for private employment, for transportation, the right of people to be able to enjoy life, the right to buy a meal in a restaurant, to use the bus, the train or plane, and to use the various facilities that are available to the rest of the world.

Second, the legislation should track existing laws that already work. We have a whole body of disability legislation on the book and civil rights legislation such as the 1964 Civil Rights Act of 1964. The Title VII of the 1964 Civil Rights Act works well with regard to employment. It is a well established body of law, and as much as possible we should track those remedies in that law because everyone knows what it means and what it does.

We should also, as much as possible, track Section 504 and Section 503 that apply to recipients of Federal money.

And third, the remedies for legislation should be simple, should be easy to understand, and should be non-litigious. They should convert discrimination into opportunity. The goal should be to end discrimination rather than to provide large amounts of lawsuits or punishment for wrongdoings.

The goal is to eliminate discrimination and to provide people opportunities to move into mainstream life, particularly in employment and accommodations, and that should be the be goal also of the remedies.

Mr. Chairman, I do appreciate the extra time for some degree of elaboration. I am looking forward to a very productive hearing. And as a Texan, I want to welcome you from New York, and Mr. Payne from New Jersey, here today. We do like our Texas hospitality. I understand that you also very much enjoyed the Houston Astros, and I will be sure not to tell the Mets or the Yankees of your enjoyment of that game.

Thank you, Mr. Chairman.

[The prepared statement of Hon. Steve Bartlett follows.]

OPENING STATEMENT
OF THE HONORABLE STEVE BARTLETT
BEFORE
THE SUBCOMMITTEE ON SELECT EDUCATION
FIELD HEARING ON
THE AMERICANS WITH DISABILITIES ACT OF 1989
HOUSTON, TEXAS

AUGUST 28, 1989

Mr. Chairman, I welcome this opportunity to participate in a hearing on the Americans with Disabilities Act, especially here in Houston among old friends and fellow Texans who share my commitment to civil rights for individuals with disabilities.

These Texans know first hand the personal and societial consequences of such rights -- both when extended and when denied. This building is an excellent example of the consequences of rights extended. Recent action of the Houson transit authorities to purchase new buses that are fully accessible is another example. My good friend Lex Frieden and many others have been pushing Houston, and the rest of Texas to become a model for the rest of the country.

In this process they have learned and taught others that civil rights take concrete actions -- actions that not only change the environment, but open the mind.

The witnesses who will testify today have been part of the process. What they have to say is important for two reasons. First, they will speak from experience. Second, these witnesses will speak on the issue of the potential impact of the ADA on local goverments and communities. The debate over the ADA thus far has given little attention to this issue, except for public transit. We need to focus on substance -- clearly, thoughtful, and specifically so that intent underlying the ADA can become law this year.

I believe there is universal support for extending the civil rights of individuals with disabilities. The current debate centers around **how** -- primarily how fast and in what terms. My statement includes three areas of comment:

a review of the record to date on the Americans with Disabilities Act of 1989 (ADA);

second, an outline of some concerns that have surfaced;
and third, observations on the implications of our failure to attend to these concerns.

The Record

The National Council on Disability

The record for extending the civil rights of persons with disabilities has been building rapidly in the last two years. Mrs. Parrino, Chair of the National Council on Disability and Council Members deserve credit, recognition, and thanks for drafting the first Americans with Disabilities Act introduced by Mr. Coelho and Senator Weicker in April of last year, and for beginning the educational process that must accompany such legislation.

The Task Force on the Rights and Empowerment of People with Disabilities

Chairman Owens, in May of last year, asked Justin Dart to Chair the Task Force on the Rights and Empowerment of People with Disabilities. Mr. Dart held public forums in every State, Guam, and Puerto Rico, and heard about the need for the legislation from over 8,000 people with disabilities. Mr. Dart's efforts have clearly established the social, moral, and economic imperative for extending the civil rights of those with disabilities. This imperative was dramatically reinforced and captured on video tape by the joint House-Senate Hearing on the ADA last September.

This Congress

In this Congress progress continues. Early in May of this year, the Republican Leader, Mr. Michel and I wrote to Mr. Coelho expressing our willingness to work with him toward developing a bipartisan ADA bill. An ADA bill was introduced by Mr. Coelho and Senator Harkin on May 9, 1989.

House action on the ADA has been slow; first because four committees have joint jurisdiction over the legislation, and second, because of Mr. Coelho's resignation. We have had two hearings in the House before today, but neither concentrated on the specific substance of the ADA, but rather its general intent.

The Senate had four hearings on the bill, and began working closely with the President in July on a bipartisan version of the ADA. The President and Senators achieved consensus, and in late July, an amended ADA bill was unanimously reported out of the Senate Human Resources Committee.

4

The Evolution of Civil Rights for Those with Disabilities

Attention to comprehensive civil rights as a matter of National policy began with the enactment of the Civil Rights Act of 1964. This Act, although it did not protect those with disabilities, laid the ground work and gave us the principles and experiences, that led to the enactment of title V of the Rehabilitation Act of 1973, which prohibits discrimination on the basis of handicap by Federal Agencies, recipients of Federal grant funds, and Federal contractors. And thus, just as the Civil Rights Act of 1964 influenced the shaping of title V of the Rehabilitation Act, so should our experience with title V influence our crafting of the ADA to extend civil rights in the private sector for those with disabilities.

Thirty-five States, including Texas, have legislation which prohibits discrimination against and promotes accessibility by those with disabilities. These State laws to varying degrees impact on the private sector. It is important that new Federal policy that would set the acceptable standard for providing civil rights to those with disabilities, take into account such State variation, and provide reasonable and effective ways of achieving nationwide consistency given the scope of the ADA -- private sector employment, services, transportation, public accommodations, and telecommunications, as well as areas of the public sector which to a large extent is already covered by other Federal statutes.

Thus, as we set about drafting the final version of the ADA, we should strive to develop standards that are as much as possible uniform or at least consistent, so that none of us needs to spend time in court in order to clarify what such standards mean in the real world away from Washington, D.C.

I will work for such standards and I will work to ensure that they apply to the Congress og the United States!

Concerns

Many concerns have been raised about the meaning of specific concepts in the ADA. Fortunately a great number have been resolved in thw bill marked up by the Senate. To expedite consideration of the ADA in the House, I believe strongly that the House should address the remaining issues that were not resolved by negotiations between the Senate and the President.

These remaining issues can be resolved in and with good faith, especially if we keep the central purpose of the legislation in focus -- **ensuring civil rights of the *individual* with disabilities**.

Such an end can be achieved if we accept that establishing such rights:

> includes statutory language which is clear as to its meaning and its effect on other laws; and
>
> reflects the recognition that civil rights laws for those with disabilities, by their very nature, impose requirements and burdens that are unique, and therefore should be accompanied by incentives, accommodations, and penalties that are economically viable and effective for ***those who must comply as well as for those who may benefit***.

The ADA as currently drafted, as well as amended by the Senate, does not meet these criteria. I hope the witnesses today will help us explore and establish some practical guidance for ensuring that the final version of the ADA does meet such criteria.

Implications

The ADA as amended by the Senate, still includes legal concepts and ambiguous terms that will cause confusion and promote litigation, such as "readily achievable" and the use of the phrase "potential places of employment" in the part of the bill dealing with public accommodation. Quite simply, what do these terms mean to an individual with a disability or to those in business? Unless further clarified, they do not ensure rights, but such terms do increase legal liabilities.

The ADA, as amended, still does not allow for different consideration and treatment for intentional and unintentional discrimination, especially in employment. I believe that employers that knowly discriminate on the basis of disability should face graver consequences than those that do not.

The ADA, as amended, fails to address the impact of its provisions on other State and Federal laws that prohibit discrimination on the basis of disability. Thus, the ADA, as amended, would allow the possibility of multiple law suits, based on differing standards, using the same set of facts.

The ADA fails to provide a flexible waiver system or alternative service system option to accommodate entities that are small in-size and the sole source of certain types of service, especially in the area of transportation.

At this point we need to ask ourselves some bottom line questions.

Will the ADA in its present form encourage employers to hire people with disabilities and provide them with reasonable accommodation, or will the ADA cause employers to avoid hiring those with disabilities?

If the ADA is enacted, without further amendment, will it take many years to clarify and thus undermine the expectations of those it is intended to benefit? The impact of the current version of the ADA on the individual with disabilities who --

> wants a job,
>
> seeks access to the full range of leisure time activities,
>
> expects to be able to visit any doctor of his or her choice,
>
> wants fully accessible public transportation, and
>
> wants to be able to use the telephone any time and any where --

will not be established by the law, but by the courts in which the principal beneficiaries will be attorneys.

We have it within our power to ensure that the ADA will not cause employers to avoid hiring people with disabilities. We have it within our power to ensure that such individuals will not have to wait for courts to define the extent and conditions of their civil rights. Reasonable methods of correcting the problems with the ADA are available and warranted -- clarifications of terms and conditions, and inclusion of reasonable penalties, phase-ins and waivers. And on these latter points -- phase-ins and waivers -these can be constructed in such a way that they are time -limited and conditional, and not limitless and automatic.

Conclusion

Since joining Congress in 1983, I have had a sustained interest in promoting increased opportunities of and independence for persons with disabilities. My legislative record is a concrete reflection of that interest. I intend to work for the expansion of civil rights for individuals with disabilities. However, given the unique requirements that must accompany such rights, consideration must be given to their impact on society as a whole. I am fully committed to educating that society and holding it accountable for the civil rights due to individuals with disabilities, but I am equally committed to working for laws that do not turn society away from those with disabilities through the use of unclear standards and conditions, or requirements that offer no flexibility, incentives, or relief in certain circumstances.

Thank you, Mr. Chairman.

Mr. **Owens**. Thank you, Mr. Bartlett.

Before commencing the opening statement, I would like to point out to the audience that hearings of this committee seldom begin as the one began today, and we certainly appreciate the very special acknowledgment expressed in that opening. We understand that the the trumpet fanfare was written for this special occasion. We do appreciate that, as we appreciate the tremendous amount of hospitality that has been shown to members of the subcommittee.

We also understand that this hearing is a part of a larger event which is called a celebration. That is also very unusual and we appreciate that.

I am pleased to respond to the invitation of the Houston community to hold this Subcommittee on Select Education hearing here today on H.R. 2273, The Americans with Disabilities Act of 1989. This is the second time we have held a field hearing on this bill outside of Washington.

During the first field hearing in Boston, Massachusetts, we heard testimony from over 90 witnesses. And although it is not part of the plan to hear from as many witnesses today, it is important that we continue to extend the geographical participation base of this bill in order that the subcommittee can respond to the national dimensions of the proposed legislation.

All over the world—from the townships of South Africa and the shipyards of Poland to the students in Tianeman Square in China—people who aspire to a better life look to the image of American democracy as their guiding star. As Americans, it is our duty to work harder to guarantee that this image more and more becomes reality. At the same time, we must work harder to maintain our leadership role, to continually extend the parameters of our democracy, to expand the scope of civil and human rights enjoyed by all of our citizens.

The American civil rights movement is not an historical curiosity but a living, active force in our democracy that has allowed the Americans With Disabilities Act to come to full fruition. Whenever we resolve to fully use the Federal Government's authority and resources to better protect and expand the rights of any group, we stimulate the processes of empowerment within that group.

The release and recognition of new skills and new talents and new leadership will greatly enrich the fabric of our entire society. The nation's wealth of human resources will be greatly increased by this empowerment of people with disabilities.

The parallels with the civil rights movement constitute similarities that do not frighten, but instead inspire the 43 million strong community of people with disabilities residing in every state and spread through every congressional district in the nation. Forty-three million citizens in democratic America do not need to beg for anything.

The Americans with Disabilities Act is a product of a new movement within the disability community. The spirit of revolution of deaf students at Gallaudet University is embodied in this act. This is a noble document which does not beg. Strong demands are made here. A noble trumpet is sounded in this act.

I want to congratulate the President and the Democratic leadership for their wisdom in forging a bipartisan bill. Our task now is to enrich and supplement what has been done. Today, we will be hearing about the progressive efforts of the Houston community in promoting greater access for all citizens and the relationship between these activities and the proposals set forth in the Americans for Disabilities Act.

We had hoped to have Congressman Mickey Leland in attendance at this morning's hearing when it was first planned. He was a true champion of human rights who fought for opportunity, hope, dignity and freedom for all people everywhere in the world. We mourn his loss as well as the loss of the other dedicated people who died in the ill-fated humanitarian mission to Ethiopia.

I would like to conclude by thanking the citizens of Houston again for their kind hospitality. I would especially like to recognize the contribution of—and associate my remark with the remarks of Congressman Bartlett—about Dr. Lex Frieden, former Executive Director of the National Council on the Handicapped, under whose direction the council issued the report, "Toward Independence," which led to the comprehensive legislation embodied in the Americans with Disabilities Act. I also want to recognize the tremendous efforts of the disability community, and all others, who helped to organize this hearing.

I would like to further acknowledge the presence of another great Texan, who is associated with the effort to promote this bill. He is probably the champion or the super volunteer in all of America, Justin Dart.

[Applause.]

Justin Dart is the chairman of the Task Force on the Rights and the Problem of the American Disabilities. Justin Dart, using his own resources, conducted hearings in all of the states on this piece of legislation. We want to congratulate Mr. Dart on his recent appointment by the President to chair the President's Committee on Employment of People with Disabilities.

[The prepared statement of Hon. Major R. Owens follows:]

OPENING STATEMENT
OF
MAJOR R. OWENS, CHAIRMAN
SUBCOMMITTEE ON SELECT EDUCATION
AUGUST 28, 1989

I AM PLEASED TO RESPOND TO THE INVITATION OF THE HOUSTON COMMUNITY TO HOLD THIS SUBCOMMITTEE ON SELECT EDUCATION HEARING HERE TODAY ON H.R. 2273, "THE AMERICANS WITH DISABILITIES ACT OF 1989." THIS IS THE SECOND TIME WE HAVE HELD A HEARING ON THIS BILL OUTSIDE OF WASHINGTON. DURING THE FIRST FIELD HEARING IN BOSTON, MASSACHUSETTS, WE HEARD TESTIMONY FROM OVER 90 WITNESSES, AND ALTHOUGH IT IS NOT PART OF THE PLAN TO HEAR FROM AS MANY WITNESSES TODAY, IT IS IMPORTANT THAT WE CONTINUE TO EXTEND THE GEOGRAPHICAL PARTICIPATION BASE OF THIS BILL IN ORDER THAT THE SUBCOMITTEE CAN RESPOND TO THE NATIONAL DIMENSIONS OF THE PROPOSED LEGISLATION.

ALL OVER THE WORLD -- FROM THE TOWNSHIPS OF SOUTH AFRICA AND THE SHIPYARDS OF POLAND TO THE STUDENTS OF TIANEMEN SQUARE IN CHINA -- PEOPLE WHO ASPIRE TO A BETTER LIFE LOOK TO THE IMAGE OF AMERICAN DEMOCRACY AS THEIR GUIDING STAR. AS AMERICANS, IT IS OUR DUTY TO WORK HARDER TO GUARANTEE THAT THIS IMAGE MORE AND MORE BECOMES REALITY. AT THE SAME TIME, WE MUST WORK HARDER TO MAINTAIN OUR LEADERSHIP ROLE, TO EXTEND THE PARAMETERS OF OUR DEMOCRACY, TO EXPAND THE SCOPE OF CIVIL AND HUMAN RIGHTS ENJOYED BY ALL OF OUR CITIZENS.

THE AMERICAN CIVIL RIGHTS MOVEMENT IS NOT AN HISTORICAL CURIOSITY BUT A LIVING, ACTIVE FORCE IN OUR DEMOCRACY THAT HAS ALLOWED THE AMERICANS WITH DISABILITIES ACT TO COME TO FRUITION. WHENEVER WE RESOLVE TO FULLY USE THE FEDERAL GOVERNMENT'S AUTHORITY AND RESOURCES TO BETTER PROTECT AND EXPAND THE RIGHTS OF ANY GROUP, WE STIMULATE THE PROCESSES OF EMPOWERMENT WITHIN THAT GROUP. THE RELEASE AND RECOGNITION OF NEW SKILLS AND TALENTS AND NEW LEADERSHIP WILL GREATLY ENRICH THE FABRIC OF OUR SOCIETY. THE NATION'S WEALTH OF HUMAN RESOURCES WILL BE GREATLY INCREASED BY THIS EMPOWERMENT OF PEOPLE WITH DISABILITIES.

THE PARALLELS WITH THE CIVIL RIGHTS MOVEMENT CONSTITUTE SIMILARITIES THAT DO NOT FRIGHTEN, BUT INSTEAD INSPIRE THE FORTY-THREE MILLION STRONG COMMUNITY OF PEOPLE WITH DISABILITIES RESIDING IN EVERY STATE AND SPREAD THROUGH EVERY CONGRESSIONAL DISTRICT IN THE NATION. FORTY-THREE MILLION CITIZENS IN DEMOCRATIC AMERICA DO NOT NEED TO BEG FOR ANYTHING.

THE AMERICANS WITH DISABILITIES ACT IS A PRODUCT OF A NEW MOVEMENT WITHIN THE DISABILITY COMMUNITY. THE SPIRIT OF REVOLUTION OF DEAF STUDENTS AT GALLAUDET UNIVERSITY IS EMBODIED IN THE ACT. THIS IS A NOBLE DOCUMENT WHICH DOES NOT BEG. STRONG DEMANDS ARE MADE HERE. A NOBLE TRUMPET IS SOUNDED HERE.

I WANT TO CONGRATULATE THE PRESIDENT AND DEMOCRATIC LEADERSHIP FOR THEIR WISDOM IN FORGING A BIPARTISAN BILL. OUR TASK NOW IS TO ENRICH AND SUPPLEMENT WHAT HAS BEEN DONE. TODAY, WE WILL BE HEARING ABOUT THE PROGRESSIVE EFFORTS OF THE HOUSTON COMMUNITY IN PROMOTING GREATER ACCESS FOR ALL CITIZENS AND THE RELATIONSHIP BETWEEN THESE ACTIVITIES AND THE PROPOSALS SET FORTH IN THE AMERICANS WITH DISABILITIES ACT.

WE HAD HOPED TO HAVE CONGRESSMAN MICKEY LELAND IN ATTENDANCE AT THIS MORNING'S HEARING. HE WAS A TRUE CHAMPION OF HUMAN RIGHTS WHO FOUGHT FOR OPPORTUNITY, HOPE, DIGNITY AND FREEDOM FOR ALL PEOPLES. WE MOURN HIS LOSS AS WELL AS THE LOSS OF THE OTHER DEDICATED PEOPLE WHO DIED IN THE ILL-FATED HUMANITARIAN MISSION TO ETHIOPIA.

I WOULD LIKE TO CONCLUDE BY THANKING THE CITIZENS OF HOUSTON FOR THEIR KIND HOSPITALITY. I WOULD ESPECIALLY LIKE TO RECOGNIZE THE CONTRIBUTION OF DR. LEX FRIEDEN, FORMER EXECUTIVE DIRECTOR OF THE NATIONAL COUNCIL ON THE HANDICAPPED, UNDER WHOSE DIRECTION THE COUNCIL ISSUED THE REPORT, "TOWARD INDEPENDENCE," WHICH LED TO THE COMPREHENSIVE LEGISLATION EMBODIED IN THE AMERICANS WITH DISABILITIES ACT. I ALSO WANT TO RECOGNIZE THE TREMENDOUS EFFORTS OF THE DISABILITY COMMUNITY, AND ALL OTHERS, WHO HELPED ORGANIZE THIS HEARING.

Mr. **Owens**. I yield to Mr. Payne for an opening statement.

Mr. **Payne**. Thank you very much, Mr. Chairman. I am pleased to be here with you and Mr. Bartlett today to hear testimony from persons here who we consider to be experts in the area of civil rights of American with disabilities.

As a member of the Select Committee on Education, I would also like to thank our witnesses for coming, and I would like to congratulate the people of Houston and this region for taking time and effort to be here this morning to show your strong support for this very important legislation.

Twenty-five years ago Congress gave America a vehicle to change the course of history. With the passage of the Civil Rights Act of 1964, America could for the first time honestly acclaim an affirmative move toward justice and truth and democracy. Today, we take another step toward that foundation.

As we are charged with the task of making a critical decision that determine the quality of life for the majority, it is also our duty to protect the rights of the minority, those who society has defined by disabilities, yet whose abilities we know have no bounds. We must not hurtles to further imperil their future by our failure to enact this legislation, but a firm or unanimous and unconditional support this civil rights bill for disabled citizens.

The enactment of the 1964 Civil Rights Act gave a great opportunity for many minorities in this nation. Victory is often won by a coalition that begins with one person with a commitment, with a vision. During the history of our nation, we have seen ordinary people rise to become a catalyst for extraordinary movements. And illiterate slave named Frederick Douglas learned to read and write and became a world acclaimed poet, or to a statements. A poor Alabama seamstress named Rosa Parks fueled the civil rights movement by her desire for simple justice. And in a like manner, the small group of warriors captured the hearts and minds of this nation by bringing disability acts and rights in the Gallaudet University to the front page of the world press. Their courage inspired us, and their strong wills now challenge the 101st Congress.

As members of Congress, our role is to create a mutually supportive partnership of government, the private sector, labor and in courts to empower with full rights and privileges the nation's disability and disabled. And our pledge is to deliver to those citizens a nation that can truly claim liberty and justice for all.

Thank you very much, Mr. Chairman.

[The prepared statement of Hon. Donald M. Payne follows:]

Americans with Disabilities Act (Houston, TX)
Donald M. Payne (Page 14,15)
August 28, 1989

Mr. Chairman. I am pleased to be here with you and Mr. Bartlett today to hear testimony from persons whom we all consider to be experts in the area of civil rights for disabled persons. As a member of the Subcommittee on Select Education, I would like to thank our witnesses for attending, and add a congratulatory note to the city of Houston for coming out in support for this legislation.

Twenty-five years ago, Congress gave America a vehicle that changed the course of history. With the passage of the Civil Rights Act of 1964, America could, for the first time, honestly proclaim justice and morality as the cornerstones of its democracy. Today we take another step towards securing the foundation of liberty.

As we are charged with the task of making the critical decisions that determine the quality of life for the majority, it is also our duty to protect the rights of the minority -- those who society has defined by their disabilities; yet whose abilities we know have no bounds. As representatives of all the people, we must not build hurdles that further imperil their future by failing to enact this legislation. But, we must affirm unanimous and unconditional support for this civil rights bill for disabled citizens. We stand at the threshold of infinite opportunities, and must, therefore, become proactive, not reactive.

As a beneficiary of the 1964 Civil Rights Act, I understand the legacy that comes with an appreciation for the human condition and the sharing of a common destiny. As an African-American, I have learned never to be intimidated because one is in the minority on an issue which you know to be correct. Though the will of the majority may seem to prevail, circumstances occur that forge a special alliance among those who have suffered an injustice. It is a lesson that I repeat to you here today, it is a lesson that I shall never forget.

Victory is often won by a coalition bound by a commitment to a vision. Even in the most painful instances, we have seen ordinary people rise to become a catalyst for extraordinary movements. An illiterate slave named Frederick Douglas learned to read and write and became a world acclaimed poet, orator and statesman. A poor Alabama seamstress named Rosa Parks fueled the civil rights movement by her desire for simple justice. And, a small group of unrelenting warriors captured the hearts and minds of the nation by bringing disability rights and Gallaudet University to the front pages of the world's press. Their courage inspired us, and their strong wills now challenge the 101st Congress.

As members of this Congress, our collective mission, then, is to serve their interest; our covenant is to fight for their access to equality. Our goal is to create a mutually supportive partnership with government, the private sector, labor and the courts to empower -- with full rights and privileges-- the nation's disabled community. And our pledge is to deliver to those citizens a nation that can truly proclaim " liberty and justice for all." Thank you.

Mr. OWENS. Thank you, Mr. Payne.

Our first panel consists of the Honorable Kathryn J. Whitmire, the Mayor of the City of Houston; Dr. Nikki R. Van Hightower, the treasurer of Harris County; Dr. Melody Ellis, the President of the Board of Education of the Houston Independent School District.

Please be seated.

Your Honor, we understand that you have a time problem so we will take your testimony and maybe ask you a few questions, and allow you to leave at that point. I did try to come over to shake your hand because I wanted to shake the hands of one of the legendary mayors of America, but your constituency had called you out just as I arrived to shake your hand. You had to go away. But I do want to acknowledge the fact that we are pleased that you have taken time out to come to this hearing and you may proceed.

STATEMENT OF KATHRYN J. WHITMIRE, MAYOR, CITY OF HOUSTON

Ms. WHITMIRE. Thank you, Mr. Chairman. I want to give you a very warm welcome to our city on behalf of the citizens, and also to welcome Mr. Payne and Mr. Bartlett, who is a very good friend of ours from our neighboring city to the north. We are all very pleased that you have chosen to hold this hearing in our community, and I am especially proud that the deliberations of the Americans with Disabilities Act of 1989 are taking place in the City of Houston in a city facility whose primary purpose is to serve the disabled community of Houston.

I want to tell you just a little bit about this facility. We call it the Metropolitan Multiservice Center, and it was opened just about a year ago to serve the disabled community in our city. And it currently houses 18 organizations serving the disabled. Included amongst them are the Texas Head Injury Foundation, the Houston Chapter; the Southwest Wheelchair Athletic Association; Greater Houston Athletic Association for the Physically Disabled; Texas Rehabilitation Commission; Houston Council for the Blind; and numerous other organizations that serve the disabled community in this city.

We felt that this would be a step forward to provide this city facility as a focal point for serving the needs of the disabled in this city. I believe that the City of Houston has recognized the significant value of the disabled community in this city and has taken some steps to see that disabled people in Houston have equal opportunities.

Within city government, when we passed the Affirmative Action Program for Equal Employment and Equal Opportunity, we included, of course, the disabled community in the provision of that ordinance, and we feel that that affirmative action program has served to benefit the City of Houston, because it has encouraged our various city departments and organizations to employ the very capable disabled individuals within our community.

As a result of that ordinance, we have provided special telephone receivers for hearing-impaired employees, and special equipment for visually-impaired employees, and have in some cases made schedule changes to meet the needs of the disabled employees. We believe that not only are we taking some steps to provide employment opportunities, but even more importantly, we are availing ourselves of some very hard working employees who serve the community very well and we are very proud of that fact.

We have given some attention to the needs for independent living, the needs for a barrier-free environment, which I must has not been an easy assignment. However, in 1986, our city council did vote to amend our building codes so that newly constructed buildings in this city would be accessible to the disabled.

We feel that much work is obviously left to be done in this regard, but I believe that this community is committed to the creation of a barrier-free environment for our disabled community. We think this is going to be one of the more difficult parts of achieving our commitment to the disabled community.

I should mention also the important role that our police department and fire department have played in this city in trying to provide better services to the disabled community; specifically, programs developed within our police department to better serve the hearing-impaired community. The telephone systems that have been installed in our dispatching units to also serve the hearing impaired community, we believe, have improved the emergency services provided to those citizens and the two teletype machines installed at our fire alarm building to assist the hearing impaired have furthered that cause as well.

A little bit later you will be hearing from Bob Lanier, the chairman of the Metropolitan Transit Authority, about the significant steps that Metro is taking to deal with the very important transportation needs of the disabled community.

I would sum up our believe that we need to provide opportunities for the disabled community in this city, and we hope that the legislation that we are sure you will adopt this year will have as its focus the need for opportunity and the recognition of the tremendous value to society that is provided by the disabled community.

In spite of the work that our city has done and that a number of other cities have done, I know you are familiar with the Census Bureau report showing that full-time employment amongst the disabled community is declining. And we are extremely concerned about that fact, and look forward to the steps that you are going to take to recommend to us and to other cities across the nation further efforts that we might make to see that more members of the disabled community do have the opportunity for full-time gainful employment, because I think that that is the bottom line when it comes to having a high quality life in a barrier-free environment is that opportunity for employment.

Again, I appreciate your coming to Houston to hold hearings on this very important legislation. As you can see, there is tremendous interest in this community in the work that you have undertaken, and we thank you for your commitment, and welcome you to our city.

Mr. Owens. Thank you Mayor Whitmire. And I wonder if you could take just one brief question from each one of us.

Ms. Whitmire. Certainly.

Mr. Owens. I would like to thank you for your very positive statement on behalf of yourself. But I wonder, can you, as a leader among the mayors of America, make any statement about their position as a group? I have heard grumblings that certain municipalities are very opposed to some of the things that we have in this bill. I would like a statement from you, if that is possible, concerning how the majority of your colleagues see this.

Ms. WHITMIRE. Well, in my role as President of the United States Conference of Mayors, I can report to you that our conference has adopted resolutions in support of civil rights legislation that would provide for opportunities for the disabled. And I think that you will find that my colleagues across America are generally very sensitive to the needs for these opportunities to be provided and supportive of your steps to adopt legislation.

Mr. OWENS. Thank you very much.

Mr. Bartlett?

Mr. BARTLETT. Thank you, Mr. Chairman.

As a fellow Texan and also as a Dallasite, I want to welcome personally the mayor that I consider to be one of the two best mayors in the State of Texas.

Mayor, I want to ask you just one question and also make at least one comment which I plan to ask Bob Lanier later.

The question is, could you elaborate for me on the City of Houston's ordinance against discrimination of persons with disabilities?

Does it only apply to city government or do you also extend that to contractors with the city, or does it also extend to the private sector?

Ms. WHITMIRE. The ordinance that we have adopted is a part of our city affirmative action ordinance, and it is aimed at municipal employment. It does not regulate the private sector.

Mr. BARTLETT. So it only provides for municipal employment.

Ms. WHITMIRE. That is correct.

Mr. BARTLETT. Has it worked pretty well?

Ms. WHITMIRE. We felt that it has worked. We have a number of disabled employees who are currently working for the City of Houston and doing a very good job. And we feel that having that ordinance on the books has helped us increase that effort.

Mr. BARTLETT. What remedy generally does a person have if they feel they have been discriminated against for employment purposes in the City of Houston? Other than calling you at home, what other steps?

Ms. WHITMIRE. Of course.

Well, actually, as a part of my office, I have an Affirmative Action Division of the Mayor's Office which hears complaints or grievances from any employee who has felt that they have been discriminated against under the affirmative action ordinance, and that does include disabled employees.

We do try to resolve those grievances internally since they are reported to my office and all of the various departments have their accountability to my office as well.

Mr. BARTLETT. So it's a resolution of matters that attempts to resolve the issues——

Ms. WHITMIRE. That is correct.

Mr. BARTLETT. Also, I am going to ask this of Bob Lanier when he comes later. One of the issues in both the Senate and the House bill will be whether to expand the requirements of Section 504 for purposes of voting transit. One of the provisions in the Senate bill would be to require both an area transit system as well as lifts or mainsteaming, mainlining. I do not know that that is necessarily bad, but it does change the terms of Section 504 as it is now with some additional requirements. And I do want you to be aware of that, and you may want to have somebody on your staff take a look at it and decide whether you think that is exactly the right way it ought to be or some other mechanism.

Ms. WHITMIRE. Mr. Lanier has paid quite a bit of attention to these issues recently, and I think I will defer to him to answer your question. He may be prepared to answer it today.

Mr. BARTLETT. Thank you.

Mr. OWENS. Thank you.

Mr. Payne?

Mr. PAYNE. Yes, Ms. Mayor, I was just marveling at this beautiful facility and having recently come from a municipality, I am aware that municipal governments generally have a high priority for education and other issues that affect the community. I am curious to know, however, where did the funding come for this facility, and is it matched by the municipal government?

Ms. WHITMIRE. Yes, you are very correct in talking about the financial limitations on city governments that we are all very aware of today and Dr. Ellis is going to speak about the financial limitations on the educational system. Fortunately, those do not come from our city tax dollars.

But the capital construction funds for this facility were provided by the Federal Government. All of you can take some pride in the fact that it was the Community Development Block Grant Program, which is a very good program, that did allow us to make the decision to use those dollars for the construction funds for this building.

It is operated, however, with our general fund, property tax-supported budget.

Mr. PAYNE. Well, I would certainly like to compliment you for using the funds as you did. Many times we find local officials using the money where it will have the greatest impact on reducing the city expenditures, and therefore, holding down the tax rates. Again, I would certainly like to compliment you on getting a Community Development Block Grant for this purpose.

Ms. WHITMIRE. Thank you very much.

Again, welcome you all to Houston and thank you for choosing this city for the hearings.

Mr. OWENS. Thank you again.

Our next witness is Dr. Nikki Van Hightower, Treasurer of Harris County.

STATEMENT OF NIKKI VAN HIGHTOWER, TREASURER, HARRIS COUNTY

Ms. VAN HIGHTOWER. Thank you, Chairperson Owens and Congressperson Bartlett and Payne. I appreciate the opportunity to be invited to testify this morning. It is a great pleasure. And also to voice my support for passage of the House bill versions of the Americans with Disabilities Act.

I believe that this bill takes us closer to an ideal inherent n our democratic values that our institutions and organizations should allow all people to participate on an equal footing. Regretfully, our ideals are not always practiced without some impetus from our institutions of government.

The National Council on the Handicapped estimates that there are between 20 and 50 million persons with disabilities in this country. The figure of 35 million is the most commonly used estimate. Whatever the exact number, we know that it is sizable. I contend, however, that these statistics do not begin to reflect the number of us who would benefit from this legislation. In fact, it is hard to imagine the circumstances of anyone who would not benefit from it.

I say this for several reasons. First, there is not a person living today who could not potentially become disabled. Each time we encounter a person who has sight, hearing or other types of impaired functioning, we should know that that impairment could just as easily be ours, or it might be ours at a later date.

We live in a fast-paced world over which we, as individuals, have relatively little control. Survival in this society demands that we sometimes take risks with our safety. Those risks are in our homes, our work places, our transportation systems, our medical treatments, and even now in the most intimate aspect of our lives—our choice of a sexual partner.

Furthermore, most of us will experience temporary disability and will be assisted by the requirements of this bill. For example, when I was 15 years old living in my home in Montana, I sprained my ankle in a skiing accident. I had to miss over one week of schooling because I could not manage the stairs at the school and no elevators were available. Examples such as this and worse occur millions of times a year in America. Passage of this bill would help to lessen the burden of temporary as well as permanent disabilities.

When considering the merits of this bill, we need to ask, is it not in the best interest of society and the self-interest of every individual, to provide for our own self-reliance as much as is humanly possible?

The issue involved here, however, is even greater than the fact that passage of this bill will benefit all Americans through increased assessibility and barrier-free accommodations. It says something about who we are in our society.

Policies that allow for discrimination endorse some highly repugnant ideas. They endorse the idea that we will not tolerate human differences, that we will abandon those who do not measure up to some arbitrary level of physical perfection. They endorse the idea that we will prey on others' misfortune in order to gain personal advantage or make ourselves feel superior.

Most families would gladly make whatever sacrifices and adjustments are necessary to allow their loved ones to participate as active members of the community. Should we expect less from our institutions and organizations that are made up of simply different configurations of family members?

On the other hand, policies that eliminate the barriers to gaining the most from our diversity, add to our richness as individuals and as a community. I speak from experience on this issue. The hiring of disabled workers has always had a positive effect on fellow workers and on the overall work environment.

I presently have an employee in the Harris County Treasurer's Office who is wheelchair-bound—a victim of polio. The presence of Debbie, and I would like to point her out because she is here this morning—Debbie, there you are. The presence of Debbie, who is an outstanding worker, is a lesson to us all that disabilities need not be disabling. It is the legal, physical and cultural barriers that disable all of us.

Debbie's disability happens to be physical, so it is easy to witness how effectively she overcomes it. We are privileged to see her courage, her creativity and her indomitable spirit. The entire staff benefits from working with Debbie. And I, for one, feel most fortunate for the opportunity.

It is disturbing to think that if our Harris County Administration Building had been inaccessible, or if Debbie had encountered prejudice against her disability when she first interviewed for a job, our county would have been deprived of her skills and she might not have been able to be the productive worker that she is today. What a tragedy that would have been.

What a tragedy it presently is for many of our disabled citizens. According to a recent Census Bureau study, disabled people have been losing ground in finding employment during the last decade. Earnings fell for this population. As usual, the impact of prejudice is greater on women who already suffer from gender discrimination. The average earnings of disabled women is almost half that of disabled men.

The Americans with Disabilities Act makes a great deal of sense and is long overdue. It is reasonable in its requirements and its timetables for implementation. Employers with fewer than 15 employees are exempted, and that is the same standard used for other Federal laws covering employers.

In terms of costs, studies have shown that the majority of accommodations for employees with disabilities are less than $50. The cost of making new or renovated structures accessible is less than 1 percent of the total cost of construction.

As the former director of a not-for-profit social service center, I personally have been through such a renovation, adding accommodations for the disabled. The additional costs were not more than 1 percent of the total construction, and probably less. If a small organization such as the Houston Area Women's Center can make these modifications, certainly large profit-making entities can do so as well.

This bill will not impose great hardships on our county governments. Title II of HB2273 prohibits discrimination against a qualified individual with a disability. However, county governments are already prohibited from such discrimination under state law. State law also imposes a duty on county governments to make reasonable accommodations for employees with disabilities.

The provisions of Title III requiring that public services be made accessible to persons with disabilities is already effectively covered by Section 504 of the Rehabilitation Act of 1973. Persons with disabilities are entitled to the full use and enjoyment of all public facilities in the State of Texas.

Passage and compliance with the Americans with Disabilities Act involves, as much as anything, a change in perspectives. It involves moving from a perspective wherein exclusion is tolerable to one where it is intolerable.

Imposed artificial barriers create artificial disabilities. As we eliminate the barriers, we eliminate the disabilities. We may be surprised at how minor the limitations are of those we classify as disabled when the artificial barriers are removed. In many cases they are probably little more than the invisible disabilities each one of us carriers around from day to day, but which we refuse to recognize.

For all of these reasons, I strongly support passage of the Americans with Disabilities Act.

Thank you very much.

[The prepared statement of Dr. Nikki R. Van Hightower follows:]

Nikki R. Van Hightower
Harris County Treasurer

TESTIMONY ON THE AMERICANS WITH DISABILITIES ACT
HR2273, S933

By
NIKKI R. VAN HIGHTOWER
HARRIS COUNTY TREASURER

TO BE PRESENTED ON AUGUST 28, 1989
TO THE SUBCOMMITTEE ON SELECT EDUCATION
OF THE HOUSE COMMITTEE ON EDUCATION AND LABOR

1001 Preston • Suite 652 • Houston, Texas 77002 • (713) 221-5120

Nikki R. Van Hightower
Harris County Treasurer

SUBCOMMITTEE CHAIRPERSON MAJOR OWENS AND COMMITTEE MEMBERS:

THANK YOU FOR THE HONOR OF BEING INVITED TO TESTIFY AT THIS HEARING AND FOR THE OPPORTUNITY TO VOICE MY SUPPORT FOR PASSAGE OF THE HOUSE BILL VERSION OF THE AMERICANS WITH DISABILITIES ACT.

THIS BILL TAKES US CLOSER TO AN IDEAL INHERENT IN OUR DEMOCRATIC VALUES THAT OUR INSTITUTIONS AND ORGANIZATIONS SHOULD ALLOW ALL PEOPLE TO PARTICIPATE ON AN EQUAL FOOTING. REGRETFULLY, OUR IDEALS ARE NOT ALWAYS PRACTICED WITHOUT SOME IMPETUS BY OUR INSTITUTIONS OF GOVERNMENT.

THE NATIONAL COUNCIL ON THE HANDICAPPED ESTIMATES THAT THERE ARE BETWEEN 20 AND 50 MILLION PERSONS WITH DISABILITIES IN THIS COUNTRY., THE FIGURE OF 35 MILLION IS THE MOST COMMONLY USED ESTIMATE. WHATEVER THE EXACT NUMBER, WE KNOW THAT IT IS SIZABLE. I CONTEND, HOWEVER, THAT THESE STATISTICS DO NOT BEGIN TO REFLECT THE NUMBERS OF US WHO WOULD BENEFIT FROM THIS LEGISLATION. IN FACT, IT IS HARD TO IMAGINE THE CIRCUMSTANCES OF ANYONE WHO WOULD NOT.

1001 Preston • Suite 652 • Houston, Texas 77002 • (713) 221-5120

I SAY THIS FOR SEVERAL REASONS: FIRST, THERE IS NOT A PERSON LIVING TODAY WHO COULD NOT POTENTIALLY BECOME DISABLED. EACH TIME WE ENCOUNTER A PERSON WHO HAS SIGHT, HEARING OR OTHER TYPES OF IMPAIRED FUNCTIONING, WE SHOULD KNOW THAT THAT IMPAIRMENT COULD JUST AS EASILY BE OURS.

WE LIVE IN A FAST-PACED WORLD OVER WHICH WE, AS INDIVIDUALS, HAVE RELATIVELY LITTLE CONTROL. SURVIVAL IN THIS SOCIETY DEMANDS THAT WE SOMETIMES TAKE RISKS WITH OUR SAFETY. THOSE RISKS ARE IN OUR HOMES, WORKPLACES, TRANSPORTATION SYSTEMS, MEDICAL TREATMENTS, EVEN NOW IN THE MOST INTIMATE ASPECTS OF OUR LIVES, -- OUR CHOICE OF A SEXUAL PARTNER.

FURTHERMORE, MOST OF US WILL EXPERIENCE TEMPORARY DISABILITIES AND WILL BE ASSISTED BY THE REQUIREMENTS OF THIS BILL. FOR EXAMPLE, I REMEMBER WHEN I WAS FIFTEEN YEARS OLD LIVING IN MY HOME IN MONTANA AND I SPRAINED MY ANKLE IN A SKIING ACCIDENT. I HAD TO MISS OVER ONE WEEK OF SCHOOLING BECAUSE I COULD NOT MANAGE THE STAIRS AT THE SCHOOL AND NO ELEVATORS WERE AVAILABLE. EXAMPLES SUCH AS THIS AND WORSE OCCUR MILLIONS OF TIMES A YEAR IN AMERICA. PASSAGE OF THIS BILL WOULD HELP TO LESSEN THE BURDEN OF TEMPORARY AS WELL AS PERMANENT DISABILITIES.

WHEN CONSIDERING THE MERITS OF THIS BILL, WE NEED TO ASK, IS IT NOT IN THE BEST INTEREST OF SOCIETY AND THE SELF-INTEREST OF EVERY INDIVIDUAL, TO PROVIDE FOR OUR SELF-RELIANCE AS MUCH AS IS HUMANLY POSSIBLE?

THE ISSUE INVOLVED HERE, HOWEVER, IS EVEN GREATER THAN THE FACT THAT PASSAGE OF THIS BILL WILL BENEFIT ALL AMERICANS THROUGH INCREASED ACCESSIBILITY AND BARRIER-FREE ACCOMMODATIONS. IT SAYS SOMETHING ABOUT WHO WE ARE AS A SOCIETY.

POLICIES THAT ALLOW FOR DISCRIMINATION ENDORSE SOME HIGHLY REPUGNANT IDEAS. THEY ENDORSE THE IDEA THAT WE WILL NOT TOLERATE HUMAN DIFFERENCES, THAT WE WILL ABANDON THOSE WHO DO NOT MEASURE UP TO SOME ARBITRARY LEVEL OF PHYSICAL PERFECTION. THEY ENDORSE THE IDEA THAT WE WILL PREY ON OTHERS' MISFORTUNES IN ORDER TO GAIN PERSONAL ADVANTAGE AND TO MAKE OURSELVES FEEL SUPERIOR.

MOST FAMILIES WOULD GLADLY MAKE WHATEVER SACRIFICES AND ADJUSTMENTS THAT ARE NECESSARY TO ALLOW THEIR LOVED ONES TO PARTICIPATE AS ACTIVE MEMBERS OF THE COMMUNITY. SHOULD WE EXPECT LESS FROM OUR INSTITUTIONS AND ORGANIZATIONS THAT ARE MADE UP OF DIFFERENT CONFIGURATIONS OF FAMILY MEMBERS?

ON THE OTHER HAND, POLICIES THAT ELIMINATE THE BARRIERS TO GAINING THE MOST FROM OUR DIVERSITY, ADD TO OUR RICHNESS AS INDIVIDUALS AND AS A COMMUNITY. I SPEAK FROM EXPERIENCE ON THIS ISSUE. THE HIRING OF DISABLED WORKERS HAS ALWAYS HAD A POSITIVE EFFECT ON FELLOW WORKERS AND THE OVERALL WORK ENVIRONMENT.

I PRESENTLY HAVE AN EMPLOYEE IN THE HARRIS COUNTY TREASURER'S OFFICE WHO IS WHEELCHAIR-BOUND -- A VICTIM OF POLIO. THE PRESENCE OF DEBBIE, WHO IS AN OUTSTANDING WORKER, IS A LESSON TO US ALL THAT DISABILITIES NEED NOT BE DISABLING. IT IS THE LEGAL, PHYSICAL AND CULTURAL BARRIERS THAT DISABLE ALL OF US.

DEBBIE'S DISABILITY HAPPENS TO BE PHYSICAL, SO IT IS EASY TO WITNESS HOW EFFECTIVELY SHE OVERCOMES IT. WE ARE PRIVILEGED TO SEE HER COURAGE, HER CREATIVITY AND HER INDOMITABLE SPIRIT. THE ENTIRE STAFF BENEFITS FROM WORKING WITH DEBBIE. I, FOR ONE, FEEL MOST FORTUNATE FOR THE OPPORTUNITY.

IT IS DISTURBING TO THINK THAT IF OUR HARRIS COUNTY ADMINISTRATION BUILDING WAS INACCESSIBLE OR IF DEBBIE HAD ENCOUNTERED PREJUDICE AGAINST HER DISABILITY WHEN SHE FIRST INTERVIEWED FOR A JOB, OUR COUNTY WOULD HAVE BEEN DEPRIVED OF HER SKILLS AND SHE MIGHT HAVE NOT BEEN ABLE TO BE THE PRODUCTIVE WORKER THAT SHE IS TODAY. WHAT A TRAGEDY THAT WOULD HAVE BEEN.

WHAT A TRAGEDY IT PRESENTLY IS FOR MANY OF OUR DISABLED CITIZENS. ACCORDING TO A RECENT CENSUS BUREAU STUDY, DISABLED PEOPLE HAVE BEEN LOSING GROUND IN FINDING EMPLOYMENT DURING THE LAST DECADE. EARNINGS FELL FOR THIS POPULATION. AS USUAL THE IMPACT OF PREJUDICE IS GREATER ON WOMEN WHO ALREADY SUFFER FROM GENDER DISCRIMINATION. THE AVERAGE EARNINGS OF DISABLED WOMEN IS ALMOST HALF THAT OF DISABLED MEN.

THE AMERICANS WITH DISABILITIES ACT MAKES A GREAT DEAL OF SENSE AND IS LONG OVERDUE. IT IS REASONABLE IN ITS REQUIREMENTS AND ITS TIMETABLES FOR IMPLEMENTATION. EMPLOYERS WITH LESS THAN 15 EMPLOYEES ARE EXEMPTED WHICH IS THE SAME STANDARD USED FOR OTHER FEDERAL LAWS COVERING EMPLOYERS.

IN TERMS OF COSTS, STUDIES HAVE SHOWN THAT THE MAJORITY OF ACCOMMODATIONS FOR EMPLOYEES WITH DISABILITIES ARE LESS THAN $50. THE COST OF MAKING NEW OR RENOVATED STRUCTURES ACCESSIBLE IS LESS THAN 1% OF THE TOTAL COST OF CONSTRUCTION. AS THE FORMER DIRECTOR OF A NOT-FOR-PROFIT SOCIAL SERVICE CENTER, I PERSONALLY HAVE BEEN THROUGH SUCH A RENOVATION, ADDING ACCOMMODATIONS FOR THE DISABLED. THE ADDITIONAL COSTS WERE NOT MORE THAN 1% OF THE TOTAL CONSTRUCTION AND PROBABLY LESS. IF A SMALL ORGANIZATION SUCH AS THE HOUSTON AREA WOMEN'S CENTER CAN MAKE THESE MODIFICATIONS, CERTAINLY LARGE PROFIT-MAKING ENTITIES CAN DO SO AS WELL.

THIS BILL WILL NOT IMPOSE GREAT HARDSHIPS ON OUR COUNTY GOVERNMENTS. TITLE II OF HB2273 PROHIBITS DESCRIMINATION AGAINST A QUALIFIED INDIVIDUAL WITH A DISABILITY. HOWEVER, COUNTY GOVERNMENTS ARE ALREADY PROHIBITED FROM SUCH DISCRIMINATION UNDER STATE LAW. (TEX. REV. CIV. STAT. ANN. ART 5221K, VERNON 1987). STATE LAW ALSO IMPOSES A DUTY ON COUNTY GOVERNMENTS TO MAKE REASONABLE ACCOMMODATIONS FOR EMPLOYEES WITH DISABILITIES.

THE PROVISIONS OF TITLE III REQUIRING THAT PUBLIC SERVICES BE MADE ACCESSIBLE TO PERSONS WITH DISABILITIES IS ALREADY EFFECTIVELY COVERED BY SECTION 504 OF THE REHABILITATION ACT OF 1973 (29 U.S.C. 794). FURTHERMORE, UNDER STATE LAW, (TEX. HUM. RES. CODE 121.001 ET SEQ. VERNON 1980), PERSONS WITH DISABILITIES ARE ENTITLED TO THE FULL USE AND ENJOYMENT OF ALL PUBLIC FACILITIES IN THE STATE OF TEXAS.

PASSAGE AND COMPLIANCE WITH THE AMERICANS WITH DISABILITIES ACT INVOLVES, AS MUCH AS ANYTHING, A CHANGE IN PERSPECTIVE. IT INVOLVES MOVING FROM A PERSPECTIVE WHEREIN EXCLUSION IS TOLERABLE TO ONE WHERE IT IS INTOLERABLE.

IMPOSED, ARTIFICIAL BARRIERS CREATE ARTIFICIAL DISABILITIES. AS WE ELIMINATE THE BARRIERS, WE ELIMINATE THE DISABILITIES. WE MAY BE SURPRISED AT HOW MINOR THE LIMITATIONS ARE OF THOSE WE CLASSIFY AS DISABLED WHEN THE ARTIFICIAL BARRIERS ARE REMOVED. IN MANY CASES THEY ARE PROBABLY LITTLE MORE THAN THE INVISIBLE DISABILITIES EACH ONE OF US CARRIES AROUND FROM DAY TO DAY BUT WHICH WE REFUSE TO RECOGNIZE.

FOR ALL OF THESE REASONS, I STRONGLY SUPPORT PASSAGE OF THE AMERICANS WITH DISABILITIES ACT.

Mr. OWENS. Thank you.

[Applause.]

We will now take the testimony of Melody Ellis, the President of the Board of Education, Houston Independent School District.

STATEMENT OF MELODY ELLIS, PRESIDENT, BOARD OF EDUCATION, HOUSTON INDEPENDENT SCHOOL DISTRICT

Ms. ELLIS. I would like to thank you for the opportunity to appear before you today. I am here in support of H.R. 2273, the Americans with Disabilities Bill of 1989.

The Houston Independent School District provides services for over 23,000 students who have been identified as qualifying for one or more of the 12 disability conditions defined by the Federal and state regulations.

Our district provides services through funds from local revenues, as well as those funds from state and Federal sources. Our district provides services to students with disabilities through resource programs on every campus, and we have 233 campuses currently.

Our district provides specialized programs for students who need more intensive instruction throughout our city to ensure that students are served at their home schools, or on campuses relatively near to their homes.

Our district provides teachers and related service personnel through 16 community agencies, and 16 hospitals. Our district provides services for students who require special services in their homes through our home-bound programs.

In addition, we have arranged our class sizes to give virtually individualized attention to the disabled student. In addition, we have a part-time employment situations at one of our high school.

This overview merely covers the effort through 1st through 12th grades. It represents the district's effort to keep faith with a disabled community in Houston.

However, this is just a beginning. The graduate of our program faces enormous barriers to gaining full access to employment, housing, transportation, extrication, and opportunities that able-bodied persons take for granted.

H.R. 2273 establishes a clear and comprehensive prohibition of discrimination on the basis of disability. For too long our society has not taken cognizance of our disabled citizens. This bill seeks to remedy that by prohibiting discrimination in employment, public housing, extrication, transportation, communications, recreation, institutionalization, health services, voting and access to public services.

It gives legal recourse to persons with disabilities. It is legislation whose time has come.

On another note, I want you to know that in March of this year our school district passed a $197 million bond issue to improve our facilities. And as a part of that facility improvement program, we are going to make sure that all of our schools are accessible to every student.

[Applause.]

[The prepared statement of Melody G. Ellis follows:]

Testimony of Melody G. Ellis, Ed.D., President
Board of Education
Houston Independent School District
before the Committee on Education and Labor
Houston, Texas, Monday, August 28, 1989
Houston Metropolitan Multi-Service Center for the Handicapped
1475 West Gray, Houston, Texas 77019 .

I am here in support of HR2273, the Americans With Disabilities Bill of 1989.

The Houston Independent School District provides services for over 23,000 students who have been identified as qualifying for one or more of the twelve disability conditions defined by federal and state regulations.

Our district provides services through funds from local revenues, as well as through funds from state and federal sources.

Our district provides services to students with disabilities through resource programs on every campus.

Our district provides specialized programs for students who need more intensive instruction throughout our city to ensure that students are served at their home schools, or on a campus relatively near to their homes.

Our district provides teachers and related service personnel through sixteen community agencies, and sixteen hospitals.

Our district provides services for students who require special services in their homes through our home-bound programs.

In addition, we have arranged our class sizes to giv. virtually individualized attention to the disabled student.

In addition, we have a part-time employment situation at one of our high schools which has been dubbed the "Sheltered Workshop."

This overview merely covers the effort from the 1st through 12th grade. It represents the district's effort to keep faith with a disabled community in Houston.

However, this is just a beginning. The graduate of our program faces enormous barriers to gaining full access to employment, housing, transportation, extrication, and opportunities that able-bodied persons take for granted.

HR22173 establishes a clear and comprehensive prohibition of discrimination on the basis of disability. For too long, our society has not taken cognizance of our disabled citizens. This bill seeks to remedy that by prohibiting discrimination in employment, housing, public accommodations, extrication, transportation, communications, recreation, institutionalization, health services, voting, and access to public services.

It gives legal recourse to persons with disabilities. It is legislation for whose time has come.

Thank you!

Mr. **Owens**. Thank you.

I just have one question, and that is: Do you find that your students in high school, for example, are aware of the tremendous barriers that they face and are therefore discouraged, give up hope, and do not make that transition after they leave school?

Ms. **Ellis**. I know of one instance where a child was working in our part-time situation at the school. And when that child left school, it was not as easy to find employment as they thought it would be.

Mr. **Owens**. Thank you.

Mr. Bartlett?

Mr. **Bartlett**. Thank you, Mr. Chairman.

I very much appreciate your excellent testimony. It really is helpful. From time to time, as legislation progresses, I may want to get back to one of you regarding some of the specifics of the legislation.

I have a question, first of all, for Dr. Hightower as well as Dr. Ellis, with regard to creation of other laws.

Both of you are head of agencies that are already covered by Federal law as recipients of Federal funds. And so therefore you are covered essentially by Section 504 for these purposes. Now my question is twofold.

In the bill, no doubt there will be other agencies like yours who would be covered by Section 504 as well as covered by the new ADA of prohibition against employment.

Now, should there be a conflict between those two, do you think we should have a preemption so that you would have to deal with only one and not with both, or do you think we should require that there are different versions of the legislation, some that provide for preemption and some that don't?

So my question is, as head of an agency, would it be useful in the logical progression of this for us to give you one agency or one set of laws which you have to deal with, or could you see a potential problem to having to conform to both 504 as well as the new ADA?

Ms. **Ellis**. I think it would be helpful if the two agencies could get together. We will do whatever it is that is required, but sometimes it is difficult to deal with more than one agency.

Mr. **Bartlett**. Dr. Hightower?

Ms. **Van Hightower**. Well, I think that is true. I would hope that we would go with the strongest legislation as possible.

Mr. **Bartlett**. So preemption, but erring on the side of whichever one was stronger?

Ms. **Van Hightower**. That is correct.

Mr. **Bartlett**. Second question. As the head of, again, a public agency, do you see a problem with definitions in the legislation?

That is, would you have us write out very specifically in the statute a definite for what reasonable accommodation is that's readily achievable, and undue hardship and the various other definitions that we have to have?

Or would you rather leave that up to the administrative agencies for regulations, or for the courts to interpret?

Ms. **Ellis**. Whichever you see fit. The school district does have a history of going above and beyond whatever mandates are placed on us. So we are ready, willing and able to make our buildings, our employment situation, whatever, as accessible as we can to ensure that the persons receive the benefit of their best from us.

So you can be as specific, and if you like, you can make it as hard as you want. We are going to go an inch above whatever you say anyway.

Mr. **Bartlett**. Dr. Van Hightower.

Ms. **Van Hightower**. It's my feeling that having dealt with state statutes that are sometimes very vague and difficult to deal with, I prefer them to be specific.

Mr. **Bartlett**. So the clearer we can make it.

Ms. **Van Hightower**. I think the easier it is. I know that it unemploys lawyers, but nevertheless, it's better to go with definitions so that we know what is expected of us.

Mr. **Bartlett**. In our increasingly lotto society, I suspect there will be underworked lawyers nevertheless. If Congress actually succeeds in making something clear or even if, you know—never mind, I was about to make a baseball analogy.

One other question. Dr. Ellis, this is primarily for you, and Dr. Van Hightower, you may choose to answer also.

This legislation goes differently from what you are doing already as you are required, and your testimony was appropriately so on the needs of students, and that's appropriate. You have been required to conform to the Education Handicapped Act for over a decade now, and accommodations for students.

I want to address for a second the other half of this legislation which seems to me to be substantially different, and that is, on employment.

Can you describe for me the school district's policy on employment policies of employees with disabilities—reasonable accommodations for teachers with disabilities, and what kinds of accommodations does that include?

Ms. **Ellis**. Yes, we do. As a matter of fact, in the Office of Board Services, which is where board members have a little cubby hole, we have two disabled persons in there, and we do have accommodations for them. As a matter of fact——

Mr. **Bartlett**. I'm sorry, what department is that?

Ms. **Ellis**. Board Services.

Mr. **Bartlett**. Board Services.

Ms. **Ellis**. Where the board members are. We have two disabled persons in our office.

Mr. **Bartlett**. Kind of move that over into the classroom. I am glad that you have it in the schools.

Ms. **Ellis**. I only know of two persons in the 27 schools that I represent that are there with disabilities, and we do make accommodations for them. I will be more than happy to pull that and submit it to you.

Mr. **Bartlett**. I think that would be helpful.

Let me ask you a tough question. Because the committee has to grapple with some specificity, should, for example, the reasonable accommodation for teachers, include a provision of additional personnel to provide that reasonable accommodation?

Let me be specific. If a teacher was applying who was blind or deaf as a teacher, should the school district then be required to—if it were needed in the classroom—should the school district then be required to add any additional person, an interpreter or a reader in the classroom?

Would you judge that to be a reasonable accommodation?

Ms. **Ellis**. Yes, I would. I think it would be very reasonable.

Mr. **Bartlett**. So you think it would be a reasonable accommodation for the school district to be required by law to hire and pay for a second person in the classroom to accommodate a disabled teacher?

Ms. **Ellis**. Yes. You may recall that we do have mandates now for the number of children that we have in classrooms to have aids for able-bodied persons. So I see no reason why we should not have aids for persons with disabilities.

[Applause.]

Mr. **Bartlett**. You said make it as tough as we will and you will accommodate us, so that was a tough question and a tough answer.

Ms. **Ellis**. Absolutely. That's my answer.

Mr. **Bartlett**. I am a Presbyterian by faith, and we Presbyterians have a saying, be careful what you pray for. You may get it.

[Laughter.]

Ms. **Ellis**. Well, I am one of those down-home Baptists.

Mr. **Bartlett**. Thank you, Mr. Chairman. I have no further questions.

Mr. **Owens**. The Chair would like to note that the size of the room and the audience has doubled. If you have any problem hearing in the back, just raise your hand and we will make certain that you can hear.

Mr. Payne?

Mr. **Payne**. Thank you very much.

I would just like to ask Ms. Van Hightower, knowing of her position in the Treasurer's Office, if, to her knowledge, Harris County is doing any specific projects here relating directly to the handicapped so far as the Job Training Partnership Act is concerned?

Ms. **Van Hightower**. None to my knowledge.

Mr. **Payne**. Then that might be an expansion thatwe could suggest. Around the country we find various types of jobs, but if there could be some type of general program created to upgrade the general skills of the handicapped, I think that it would be helpful once this legislation is passed.

Dr. Ellis, you mentioned there are 23,000 students in Texas who have been identified as having one or more disabilities. What then is the approximate population of students with disabilities in the school districts of Houston?

Ms. **Ellis**. One hundred and ninety thousand and growing.

Mr. **Payne**. One hundred and ninety thousand.

In your estimation, with this new legislation coming similar to the question I just asked Dr. Van Hightower, is there a need for additional counseling for individuals with disabilities?

As you know, in many instances, when laws are passed, people remain unaware of their rights. And in light of this, would you see counseling as being an additional requirement for Houston's School District?

Ms. **Ellis**. Most definitely.

Mr. **Payne**. Thank you, Mr. Chairman. I have no further questions.

Mr. OWENS. Thank you both for your testimony.

Our next panel is Ms. Judy Comfort, Mr. Robert C. Lanier, Mr. Mosbacher, Jr., and Mr. Howard Wolf.

Please be seated.

We will begin with Ms. Judy Comfort, the Division Manager of External Affairs, Southwestern Bell Telephone Company.

Ms. Comfort.

STATEMENT OF JUDITH COMFORT, DIVISION MANAGER, EXTERNAL AFFAIRS, SOUTHWESTERN BELL TELEPHONE COMPANY

Ms. COMFORT. Good morning, Chairman Owens, Mr. Bartlett, Mr. Payne.

I am here today representing the Southwestern Bell Telephone, and also the parent companies, Southwestern Bell Corporation. And I would like to first commend this subcommittee for looking at some very, very important issues addressed in H.R. 2273.

Southwestern Bell is committed to the availability of telecommunication services to persons with disabilities. We do have a long tradition of working with disabled customers. It began going way back in history with Alexander Graham Bell who wanted to use his invention to help people with hearing impairments communicate. We continue to follow his lead of helping people with disabilities.

Our External Affairs Department, of which I am a part, works with various disabled organizations in the cities we serve. The Telephone Pioneers of America are also involved with disabled organizations, and they provide telecommunications devices for the deaf, administer the Talking Books Program for the blind, and many other projects.

In fact, our Telephone Pioneers in West Texas recently received an award from the Texas Association of the Deaf for donating 300 TDDs to individuals and organizations in need.

We recognize that telecommunications services play a significant role in achieving a high quality of life. They also provide increased business opportunities, employability and independence for this important customer group. Therefore, we work diligently with individuals and groups representing disabled persons' interests, regulatory bodies and other government agencies in identifying service applications and establishing accessible rates for all services.

A focus on disabled services is appropriate since disabled customers have specialized needs. Disabled Americans are increasingly gaining recognition of their needs, and state and Federal regulatory bodies are responding such as you are today.

As an American business, Southwestern Bell supports this effort to provide independence to disabled persons—and at the same time improve our business.

As I see it, improved communications systems offer businesses at least three potential benefits. A recognized labor pool of qualified employees, potential new customers and enhanced economic development in our cities since many disabled persons will be self-supporting and taxpaying citizens.

Business is concerned about the shrinking labor pool. Where will our work force come from in the future? And one answer is qualified disabled Americans.

In 1976, Southwestern Bell Telephone adopted an Affirmative Action Program for the Handicapped. Our company is committed to hire and advance qualified disabled individuals who can perform particular jobs with reasonable accommodation. Our Affirmative Action Program outlines the company's policy of equal employment for the disabled in compliance with requirements of Section 503 of the Rehabilitation Act of 1973, as amended.

Southwestern Bell does have numerous disabled employees, and we discuss with them their jobs. We listen to their recommendations and we do adapt their work environments. Some of the modifications we have made include: flexible hours, adaptive devices for personal computers, Braille writers, adjustable furniture, wider doors, ramps, volume control headsets, TDDs, and speaker phones.

We have even produced a supervisors manual that sensitizes supervisors to employees with disabilities.

Related to telecommunications, Southwestern Bell Telephone recognizes the accessibility needs of disabled persons and has several exemptions in place that make communication over the network easier. We offer an exemption from directory assistance and operator assistance charges to the disabled.

Southwestern Bell Telephone also offers disabled customer discounts on long-distance calls within their service area and makes available a special operator to respond to questions about telephone bills or network problems. The operator is equipped with a TDD.

Although Southwestern Bell no longer provides telephone equipment, we do support a program that gives information about equipment for the disabled. Southwestern Bell Telephone currently provides technical assistance and serves on the advisory board of the Tele-Consumer Hotline's Special Needs Program. The hotline staff provides information to customers on the cost and availability of equipment necessary to ensure that those with impairments have continued access to the basic telephone system.

Message relay service, which is addressed in your bill, is vital to hearing and speech impaired persons. Southwestern Bell has coordinated with state and national organizations interested in improving message relay service.

In Texas, the company funded a message relay research project through the Texas Commission for the Deaf. Their findings led to an assessment of message relay service and improvement in the current system. The Texas legislature recently passed HB174 under which will be established statewide message relay service. Such service has also been mandated in Oklahoma.

To communicate over the telephone, a deaf person must use a TDD. However, for a deaf person to communicate with a hearing person who does not have such a device, a relay services is required. This interface is currently handled by live operators who translate text to speech and speech to text to allow communication between hearing and deaf individuals.

However, this arrangement has several inherent disadvantages, including high labor costs, limited availability of the service to the deaf community and a lack of privacy for its users.

We believe that part of the answer to the cost and privacy issues is technology. Southwestern Bell Telephone is currently involved in Bellcore's Telecommunications Network for the Deaf Trial, which will automate many of the relay operator's functions. As you may know, Bellcore is the nation's largest research and engineering consortium and provides technical support for the regional Bell operating companies.

This partially automated message relay system has been tested in the laboratory in order to determine if its features meet the deaf consumer's needs, and in turn to refine the service's capabilities. Plans have been made to test the service with Telephone Exchange for the Deaf, Incorporated, a nonprofit organization providing operator relay services in Washington, D.C. and northern Virginia. Southwestern Bell Telephone has agreed to support this trial to further develop this technology for use in our territory.

Given the current level and anticipated growth of TDD penetration among the hearing-impaired community, the Telecommunications Network for the Deaf service could potentially ave as much as $173 million per year nationally in relay operator cost. It would also improve the disabled customer's ability to use the telephone because it is convenient, private, and in the future may allow access to businesses and services without an operator. And I think that is the ultimate goal.

Other telecommunication services are also breaking down even more barriers to disabled persons and increase their ability to live independently. The door to many of these new services is simply the push button telephone.

Two simple examples are three-way calling, a service that allows you to hold a meeting through teleconferencing, or speed dialing, a service that allows you to program phone numbers and call them quickly by pushing just two buttons.

Perhaps you are already familiar with home shopping and banking or even tapped into a computer data base. The fact is that all these services involve new ways to manage information. They also offer security for those living alone, added independence, and overall convenience and efficiency to those who rely on the phone each and every day. But, best of all, the features are very easy to use.

We are also excited abut the voice and data gateway trials, the largest consumer trials in the nation now underway here in Houston. Using the voice gateway, a customer can dial and receive a variety of options and simple instructions to select a wide range of information. While u sing the data gateway, a customer sees listings for information and entertainment options on a simple video terminal or personal computer screen.

The gate's possibilities are nearly unlimited, and encompass hundreds of information resources. For disabled persons, the gateway can offer information on shopping from the home, travel, special community events, health care, photography, sports, dining, and the list goes o and on. All these services are at a person's fingertips. The bottom line is that these gateways can improve the quality of life for disabled persons.

Southwestern Bell is committed to bringing these services to disabled persona and to customers of all ages and abilities. We are limited in what we are allowed to do for consumers. We are restricted from offering certain products and services, and what we need to remedy the situation is a change in government policy and rules that govern how we are regulated.

Specifically, we need relief from restrictions imposed by the modification of final judgment. Americans are deprived of telecommunications benefits currently enjoyed and widely available in other countries. Freedom of the regional Bell holding companies to manufacture telephone service equipment and to provide full information services can facilitate disabled customers' enjoyment of expanded world-class telecommunications products and services.

The MFJ is the result of the breakup of the Bell System, and bars Southwestern Bell and other Bell companies from bringing many of the kinds of services I have described to our customers.

The modification of final judgement bars Southwestern Bell from three areas critical to the development of telecommunications.

First, originating information to be transmitted over the telephone network; second, designing, or manufacturing telecommunications equipment; and third, providing most long-distance service.

If allowed to use our capabilities, Southwestern Bell Telephone could strengthen the economy and make it more competitive. Our inability to complete due to the MFJ restrictions has negatively affected jobs, innovation and our country's balance of trade.

Disabled persons would have the opportunity to use services and products that have been inaccessible in the past.

Because of the MFJ restrictions, Southwestern Bell and other Bell companies may not even be allowed to offer message relay services. Bell Atlantic has asked the Department of Justice for a declaratory ruling to determine if the regional Bell operating companies are permitted to offer message relay services without a waiver.

The response dated August 17 indicates that message relay is classified as an information service and an inter-exchange service, both prohibited under the MFJ. The Department of Justice's response, however, says the United States does not object to a waiver to permit all the Bell operating companies to provide TDD relay services for hearing-impaired and other disabled customers in accordance with legislative directives or authorizations, but such a waiver would have to be granted by Judge Greene.

We believe that message relay services are in the public interest. Provisions must be added to the current legislation to provide safe harbor exemptions from the MFJ so that the necessary research development and network operations may be performed by the Bell operating companies.

In addition, we recommend that some Federal dollars be allocated toward research and development of automated message relay. It is possible that such a system could be accelerated, minimizing the need for live operators. It would be beneficial to "leap-frog" technology, making accessibility to the network as convenient to the deaf as it is for other telephone users.

In closing, Southwestern Bell Telephone applauds the concepts of the Americans with Disabilities Act. We already support employment of disabled persons and have made necessary modifications for them to do their jobs with our company.

Business must help provide disabled persons the same equal opportunity that have been provided to minorities and women. We must work together to end discrimination against persons with disabilities, and to recognize their abilities. This concludes my remarks and I appreciate the opportunity to share my views on these very important issues.

[The prepared statement of Judith Comfort follows:]

UNITED STATES HOUSTON OF REPRESENTATIVES
COMMITTEE ON EDUCATION AND LABOR
SUBCOMMITTEE ON SELECT EDUCATION

STATEMENT OF
JUDITH L. COMFORT, DIVISION MANAGER-EXTERNAL AFFAIRS
SOUTHWESTERN BELL TELEPHONE COMPANY
REGARDING HR 2273
THE AMERICANS WITH DISABILITIES ACT
AUGUST 28, 1989

MR. CHAIRMAN AND MEMBERS OF THE SUBCOMMITTEE, MY NAME IS JUDITH L. COMFORT. I AM A DIVISION MANAGER WITH SOUTHWESTERN BELL TELEPHONE COMPANY AND AM APPEARING BEFORE THIS COMMITTEE ON ITS BEHALF AND ON BEHALF OF ITS PARENT COMPANY, SOUTHWESTERN BELL CORPORATION, CONCERNING H. R. 2273, THE AMERICANS WITH DISABILITIES ACT OF 1989. I COMMEND THIS SUBCOMMITTEE FOR LOOKING AT THESE IMPORTANT ISSUES.

SOUTHWESTERN BELL TELEPHONE IS COMMITTED TO THE AVAILABILITY OF TELECOMMUNICATIONS SERVICES TO PERSONS WITH DISABILITIES. WE HAVE A LONG TRADITION OF WORKING WITH DISABLED CUSTOMERS. IT BEGAN WITH ALEXANDER GRAHAM BELL WHO WANTED TO USE HIS INVENTION TO HELP DEAF PERSONS COMMUNICATE. WE CONTINUE TO FOLLOW HIS LEAD OF HELPING PEOPLE WITH DISABILITIES OUR EXTERNAL AFFAIRS DEPARTMENT WORKS WITH VARIOUS DISABLED ORGANIZATIONS IN THE CITIES WE SERVE. THE TELEPHONE PIONEERS OF AMERICA ARE ALSO INVOLVED WITH DISABLED ORGANIZATIONS. THEY PROVIDE TELECOMMUNICATIONS DEVICES FOR THE DEAF, ADMINISTER THE TALKING BOOKS PROGRAM FOR THE BLIND, AND MANY OTHER PROJECTS.

WE RECOGNIZE THAT TELECOMMUNICATIONS SERVICES PLAY A SIGNIFICANT ROLE IN ACHIEVING A HIGH QUALITY OF LIFE. THEY PROVIDE INCREASED BUSINESS OPPORTUNITIES, EMPLOYABILITY AND INDEPENDENCE FOR THIS IMPORTANT CUSTOMER GROUP ALSO. THEREFORE, WE WORK DILIGENTLY WITH INDIVIDUALS AND GROUPS REPRESENTING DISABLED PERSONS' INTERESTS, REGULATORY BODIES AND OTHER GOVERNMENT AGENCIES IN IDENTIFYING SERVICE APPLICATIONS AND ESTABLISHING ACCESSIBLE RATES FOR ALL SERVICES.

A FOCUS ON DISABLED SERVICES IS APPROPRIATE SINCE DISABLED CUSTOMERS HAVE SPECIALIZED NEEDS. DISABLED AMERICANS ARE INCREASINGLY GAINING RECOGNITION OF THEIR NEEDS, AND STATE AND FEDERAL REGULATORY BODIES ARE RESPONDING.

AS AN AMERICAN BUSINESS, SOUTHWESTERN BELL SUPPORTS THIS EFFORT TO PROVIDE INDEPENDENCE TO DISABLED PERSONS...AND AT THE SAME TIME IMPROVE OUR BUSINESS.

AS I SEE IT, IMPROVED COMMUNICATIONS SYSTEMS OFFER BUSINESSES AT LEAST THREE POTENTIAL BENEFITS. A RECOGNIZED LABOR POOL OF QUALIFIED EMPLOYEES, POTENTIAL NEW CUSTOMERS AND ENHANCED ECONOMIC DEVELOPMENT IN OUR CITIES SINCE MANY DISABLED PERSONS WILL BE SELF-SUPPORTING AND TAXPAYING CITIZENS.

BUSINESS IS CONCERNED ABOUT THE SHRINKING LABOR POOL. WHERE WILL OUR WORK FORCE COME FROM? ONE ANSWER IS QUALIFIED DISABLED AMERICANS.

In 1976, Southwestern Bell Telephone adopted an Affirmative Action Program for the Handicapped. Our company is committed to hire and advance qualified disabled individuals who can perform particular jobs with reasonable accommodation. Our Affirmative Action Program outlines the company's policy of equal employment for the disabled in compliance with requirements of Section 503 of the Rehabilitation Act of 1973, as amended.

At Southwestern Bell Telephone we have numerous disabled employees. We have discussed their jobs, listened to their recommendations, and adapted work environments. Some of the modifications we have made include: flexible hours, adaptive devices for personal computers such as touch screens, braille writers, adjustable furniture, wider doors, ramps, volume control headsets, Telecommunication Devices for the Deaf, and speaker phones.

We've even produced a supervisors manual that sensitizes supervisors to employees with disabilities.

Related to telecommunications, Southwestern Bell Telephone recognizes the accessibility needs of disabled persons and has several exemptions in place that make communication over our network easier. We offer an exemption from Directory Assistance and operator assistance charges to the disabled. Southwestern Bell Telephone also offers disabled customer discounts on long-distance calls within their service area and makes available a special operator to respond to questions about telephone bills or network

PROBLEMS. THIS OPERATOR IS EQUIPPED WITH A TELECOMMUNICATIONS DEVICE FOR THE DEAF FOR CUSTOMERS WHO COMMUNICATE WITH A TDD.

SOUTHWESTERN BELL TELEPHONE SUPPORTS PROVIDING OUR CUSTOMERS ACCESS TO INFORMATION ABOUT EQUIPMENT FOR THE DISABLED. SOUTHWESTERN BELL TELEPHONE CURRENTLY PROVIDES TECHNICAL ASSISTANCE AND SERVES ON THE ADVISORY BOARD OF THE TELE-CONSUMER HOTLINE'S SPECIAL NEEDS PROGRAM. THE HOTLINE STAFF PROVIDES INFORMATION TO CUSTOMERS ON THE COST AND AVAILABILITY OF EQUIPMENT NECESSARY TO ENSURE THAT THOSE WITH IMPAIRMENTS HAVE CONTINUED ACCESS TO THE BASIC TELEPHONE SYSTEM.

MESSAGE RELAY SERVICE IS VITAL TO HEARING AND SPEECH IMPAIRED PERSONS. SOUTHWESTERN BELL TELEPHONE HAS COORDINATED WITH STATE AND NATIONAL ORGANIZATIONS INTERESTED IN IMPROVING MESSAGE RELAY SERVICE. IN TEXAS, THE COMPANY FUNDED A MESSAGE RELAY RESEARCH PROJECT THROUGH THE TEXAS COMMISSION FOR THE DEAF. THEIR FINDINGS LED TO AN ASSESSMENT OF MESSAGE RELAY SERVICE AND IMPROVEMENT IN THE CURRENT SYSTEM. THE TEXAS LEGISLATURE RECENTLY PASSED HB174 UNDER WHICH WILL BE ESTABLISHED STATEWIDE MESSAGE RELAY SERVICE. SUCH SERVICE HAS ALSO BEEN MANDATED IN OKALHOMA.

TO COMMUNICATE OVER THE TELEPHONE, A DEAF PERSON MUST USE A TELECOMMUNICATIONS DEVICE FOR THE DEAF. HOWEVER, FOR A DEAF PERSON TO COMMUNICATE WITH A HEARING PERSON WHO DOES NOT HAVE A TELECOMMUNICATIONS DEVICE FOR THE DEAF, A RELAY SERVICE IS REQUIRED. THIS INTERFACE IS CURRENTLY HANDLED BY LIVE OPERATORS who translate text to speech and speech to text to allow communication between hearing and deaf individuals.

However, this arrangement has several inherent disadvantages, including high labor costs, limited availability of the service to the deaf community and a lack of privacy for its users.

We believe part of the answer to cost and privacy issues is technology. Southwestern Bell Telephone is currently involved in Bellcore's Telecommunications Network for the Deaf Trial, which will automate many of the relay operator's functions. Bellcore is the research arm of the Regional Bell Operating Companies.

The Telecommunications Network for the Deaf service has been tested in the laboratory. In order to determine if its features meet the deaf consumer's needs, and in turn refine the service's capabilities, plans have been made to test the service with Telephone Exchange for the Deaf, Inc. a non-profit organization providing operator relay services in Washington, D.C. and Northern Virginia. Southwestern Bell Telephone has agreed to support this trial to further develop this technology for use in our territory.

Given the current level and anticipated growth of TDD penetration among the hearing-impaired community, the Telecommunications Network for the Deaf service could potentially save as much as $173 million per year nationally in relay operator cost. It would also improve the disabled customer's ability to use the telephone

BECAUSE IT IS CONVENIENT, PRIVATE, AND ALLOWS ACCESS TO BUSINESSES AND SERVICES WITHOUT USING AN OPERATOR.

YOU'LL HAVE SOME IDEA OF THE BENEFIT OF THE TELEPHONE IF YOU'VE USED THREE-WAY CALLING, A SERVICE THAT ALLOWS YOU TO HOLD A MEETING THROUGH TELECONFERENCING...OR SPEED DIALING, THE SERVICE THAT ALLOWS YOU TO PROGRAM PHONE NUMBERS AND CALL THEM QUICKLY BY PUSHING JUST TWO BUTTONS.

PERHAPS YOU'RE ALREADY FAMILIAR WITH HOME SHOPPING AND BANKING OR EVEN TAPPED INTO A COMPUTER DATA BASE. AS SERVICES LIKE THESE BECOME MORE ADVANCED AND MORE WIDESPREAD THE MEANS OF ACCESSING THEM WILL REMAIN SIMPLE.

THE DOOR TO MANY OF THE NEW SERVICES IS THE PUSH-BUTTON PHONE.

THE FACT IS THAT ALL THESE NEW SERVICES INVOLVE NEW WAYS TO MANAGE INFORMATION.

THEY ALSO OFFER SECURITY TO THOSE LIVING ALONE...ADDED INDEPENDENCE, AND OVERALL CONVENIENCE AND EFFICIENCY TO THOSE WHO RELY ON THE PHONE EACH AND EVERY DAY.

BUT, BEST OF ALL, THESE FEATURES ARE VERY EASY TO USE.

WE'RE ALSO EXCITED ABOUT THE VOICE AND DATA GATEWAY TRIALS, THE LARGEST CONSUMER TRIALS IN THE NATION NOW UNDER WAY HERE IN HOUSTON.

USING THE VOICE GATEWAY, A CUSTOMER CAN DIAL AND RECEIVE A VARIETY OF RECORDED MESSAGES AND SIMPLE INSTRUCTIONS TO ACCESS A WIDE RANGE OF INFORMATION. WHILE USING THE DATA GATEWAY, A CUSTOMER SEES LISTINGS FOR INFORMATION AND ENTERTAINMENT OPTIONS ON A SIMPLE VIDEO TERMINAL OR PERSONAL COMPUTER SCREEN.

OVER A MILLION PEOPLE WILL HAVE ACCESS TO THE GATEWAY BEFORE THE TRIAL CONCLUDES NEXT YEAR. MANY DISABLED PERSONS HAVE FOUND THE GATEWAY THE ANSWER TO ACCESSING SERVICES AND INFORMATION THAT HAD BEEN UNAVAILABLE IN THE PAST.

THE GATEWAY'S POSSIBILITIES ARE NEARLY UNLIMITED. FOR DISABLED PERSONS, THE GATEWAY COULD OFFER INFORMATION ON SHOPPING FROM HOME, TRAVEL, SPECIAL COMMUNITY EVENTS, HEALTH CARE, PHOTOGRAPHY, SPORTS, DINING, AND THE LIST GOES ON AND ON...

ALL THESE SERVICES ARE AT A PERSON'S FINGERTIPS. THE BOTTOM LINE IS THAT THESE GATEWAYS CAN IMPROVE THE QUALITY OF LIFE FOR DISABLED PERSONS.

WE WANT TO PROVIDE SERVICES THAT ARE PRACTICAL AND USEFUL FOR PEOPLE. SOUTHWESTERN BELL TELEPHONE IS COMMITTED TO BRINGING THESE NEW SERVICES TO DISABLED PERSONS AND CUSTOMERS OF ALL AGES AND ABILITIES. BUT WE'RE LIMITED IN WHAT WE'RE ALLOWED TO DO FOR CONSUMERS. WE'RE RESTRICTED FROM OFFERING CERTAIN PRODUCTS AND SERVICES. WHAT WE NEED TO REMEDY THE SITUATION IS A CHANGE IN GOVERNMENT POLICY AND RULES THAT GOVERN HOW WE'RE REGULATED.

AMERICANS ARE DEPRIVED OF TELECOMMUNICATIONS BENEFITS CURRENTLY ENJOYED AND WIDELY AVAILABLE IN OTHER COUNTRIES. FREEDOM OF THE REGIONAL BELL HOLDING COMPANIES TO MANUFACTURE TELEPHONE SERVICE EQUIPMENT AND TO PROVIDE FULL INFORMATION SERVICES COULD FACILITATE DISABLED CUSTOMERS ENJOYMENT OF EXPANDED WORLD-CLASS INFORMATION-AGE TELECOMMUNICATIONS PRODUCTS AND SERVICES.

INFORMED CONSUMERS, REGULATORY SAFEGUARDS, ANTITRUST LAW AND MYRIAD TELECOMMUNICATIONS COMPETITORS ARE MORE EFFECTIVE GUARDIANS FOR FAIR COMPETITION AND A HEALTHY ECONOMY THAN ARTIFICIAL BARRIERS SUCH AS THE MODIFICATION OF FINAL JUDGEMENT RESTRICTIONS.

THE MFJ IS THE RESULT OF THE BREAKUP OF THE BELL SYSTEM, AND BARS SOUTHWESTERN BELL AND OTHER BELL COMPANIES FROM BRINGING MANY OF THE KINDS OF SERVICES I'VE DESCRIBED TO OUR CUSTOMERS.

THE MODIFICATION OF FINAL JUDGEMENT BARS SOUTHWESTERN BELL FROM THREE AREAS OF BUSINESS CRITICAL TO THE DEVELOPMENT OF TELECOMMUNICATIONS PRODUCTS AND SERVICES:

- ORIGINATING INFORMATION TO BE TRANSMITTED OVER THE TELEPHONE NETWORK
- DESIGNING, OR MANUFACTURING TELECOMMUNICATIONS EQUIPMENT
- PROVIDING MOST LONG-DISTANCE SERVICE.

If allowed to use our capabilities, Southwestern Bell Telephone could strengthen the economy and make it more competitive. Our inability to compete due to MFJ restrictions has negatively affected competitiveness, jobs and innovation.

If disabled persons have access to these services our communities will benefit. Access to information and services will increase economic development in our communities. Disabled persons will have the opportunity to use services and products that have been inaccessible in the past.

Because of the MFJ restrictions, Southwestern Bell and other Bell Operating Companies may not even be allowed to offer message relay services. There is a possibility that message relay may be classified as an information service and/or interexchange service prohibited under the MFJ. Bell Atlantic has asked Judge Greene to determine if the regional Bell operating companies are permitted to offer message relay services without a waiver.

We believe that message relay services are in the public interest. Provisions must be added to the current legislation to provide "safe harbor" exemptions from the MFJ so that the necessary research development and network operations may be performed by the Bell operating companies.

We recommend that some Federal dollars be allocated toward research and development of automated message relay. It's possible that such a system could be accelerated, minimizing the need for live

OPERATORS. IT WOULD BE BENEFICIAL TO "LEAP-FROG" TECHNOLOGY...MAKING ACCESSIBILITY TO THE NETWORK AS CONVENIENT TO THE DEAF AS IT IS FOR OTHER TELEPHONE USERS.

SOUTHWESTERN BELL TELEPHONE APPLAUDS THE CONCEPTS OF THE AMERICANS WITH DISABILITIES ACT. WE ALREADY SUPPORT EMPLOYMENT OF DISABLED PERSONS AND HAVE MADE NECESSARY MODIFICATIONS FOR THEM TO DO THEIR JOBS WITHIN OUR COMPANY.

BUSINESS MUST HELP PROVIDE DISABLED PERSONS THE SAME EQUAL OPPORTUNITY THAT HAS BEEN PROVIDED TO OTHER MINORITIES AND WOMEN. WE MUST WORK TOGETHER TO END DISCRIMINATION AGAINST PERSONS WITH DISABILITIES.

Mr. **Owens**. Thank you very much.

[Applause.]

The next witness is Mr. Robert C. Lanier, President of Handar Corporation, and the Chairman of the Metropolitan Transit Authority of Harris County.

Mr. Lanier.

STATEMENT OF ROBERT C. LANIER, PRESIDENT, LANDAR CORPORATION, AND CHAIRMAN, METROPOLITAN TRANSIT AUTHORITY OF HARRIS COUNTY

Mr. **Lanier**. Thank you very much.

I have worked on this public service end of the transportation business for the last six or seven years before chairing the board of Metro, I chaired the State Highway Commission.

We looked at this question of lifts and vans on equipment of Metropolitan Transit Authority. And we voted here a month or so ago to add lifts to all buses and the smaller vehicles purchased as they are added to the fleet.

[Applause.]

The question was a difficult one. We already had a van service that picked up disabled persons and carried them on a door to door service. This van service handled about 540,000 boardings a year. We looked at the Los Angeles system which does not have the van service, but which has lifts. It costs them about the same amount of money. They moved about 90,000 boards a year, about one-fifth or one-sixth of what we did with the same money.

We had hearings on it. I visited privately with Mr. Dart, Lex Frieden, Peggy Nosick. And it seemed to me, and this is my view, the fact was that the van was the more cost-effective service. That is to say, it moved the most people for the least amount of money.

On the other hand, in talking over the problem and listening to the handicapped persons, there was another issue, it seemed to me, at stake, and that was that these persons who wanted to make their contribution, who wanted to fully participate in society looked at the requirement to take a van at the absence of service on demand that one might get on a bus. And it was sort of an extension of the equal but separate doctrine.

In other words, they resisted the notion that a group of our citizens could be separated from the rest of society and told, even if it was true, that these separated facilities are equal to what the rest of society has, and they wanted to fully participate.

And we came down on the side of what we thought was that larger value. It is my notion that at the heart of the American system is the inclusion process. It is a part of what is going on here in my lifetime that has made me the proudest as an American. And it is an area where, if we are going to spend some extra money, and I think these lifts will cost some extra money, I think the money in the main is justified.

You spoke of Congressman Mickey Leland. There was a time in my lifetime when he could not have made this contribution. He could not even have voted in the state. And it is not just, it is not just that. He or other persons are allowed to contribute and have gainful employment, although I think that is important, it is also that there are people out there that could make wonderful contributions, as Congressman Leland did, that would benefit us all if they can—if they are allowed to make that contribution.

[Applause.]

And we decided to have the lifts and the van service, because were we not to do that we would be adding lift service, that is true, but we would have a smaller closed service to the handicapped community. In other words, the same dollars would be transferred over there, but it would cut our service by some 80 percent. So we as a community decided to do both.

If anything, we will probably take a look at the van service and extend it on work trips to areas that we do not now extend it. And at the risk of—when I was a youngster in high school there was a poem I read as required reading. That was in the year 1940. That was 49 years ago. But I remember the idea of that poem my whole life. And I have got just three—I will tell you I am not accustomed to quoting poetry in speeches, but I have got just—I generally would be thought of as a cost-effective person. But I have got three couplets from Thomas Gray's "Elegy Written in a Country Churchyard."

And the idea behind it is that he was walking through a country churchyard and it was largely deserted, cover up with leaves, and he saw the tombstones there, and they had names, Tom Smith, Jane whatever, and it was in a rural English town and he wondered what person buried there society had never given a chance to which that person was capable, and that was the underlying thought of the poem, and these three little couplets illustrate that thought:

"Full many a flower is born to blush unseen, and waste its sweetness on the desert air."

"Some mute inglorious Milton here may rest, some Cromwell, guiltless of his country's blood."

"Here rests his head upon the lap of earth a youth, to fortune and to fame unknown."

And the notion I guess is that who knows what in this little country churchyard a Cromwell might lie, a Milton might lie, to whom society never gave a chance to contribute, not just for themselves, but to all of society.

Thank you.

[The prepared statement of Robert C. Lanier follows:]

ROBERT C. (BOB) LANIER
CHAIRMAN, LANDAR CORPORATION AND THE
METROPOLITAN TRANSIT AUTHORITY OF HARRIS COUNTY, TEXAS
SUMMARY OF TESTIMONY BEFORE
SUBCOMMITTEE OF THE EDUCATION AND LABOR COMMITTEE
ON SELECT EDUCATION
AUGUST 28, 1989

THE BOARD OF DIRECTORS OF THE METROPOLITAN TRANSIT AUTHORITY OF HARRIS COUNTY, TEXAS (HOUSTON METRO) FORMALLY VOTED TO OUTFIT ITS NEW BUSES, VANS, AND MINI-BUSES WITH WHEELCHAIR LIFTS, COMMENCING WITH THE FIRST PURCHASES OF 300 FULL SIZE BUSES (60 PER YEAR FOR 5 YEARS), 51 MINI-BUSES, AND 35 MICRO-BUSES.

THIS BOARD ACTION SUPPLEMENTS A DOOR-TO-DOOR PICK-UP SERVICE PRESENTLY FUNDED WITH $5,894,000.00 OF ANNUAL EXPENDITURES, WELL ABOVE THE LEVEL OF MOST OTHER CITIES.

THE WHEELCHAIR LIFT'S WERE ADDED, NOT BECAUSE WE BELIEVE THEM TO BE THE MOST COST EFFECTIVE, BUT BECAUSE WE BELIEVE THEM TO BE RIGHT. THE CONTROLLING ISSUE, AS I SEE IT, IS AN ATTEMPT TO AFFORD ALL OUR CITIZENS THE RIGHT TO FULLY PARTICIPATE IN THE ECONOMIC AND POLITICAL PROCESS. THE ANALOGY THAT COMES TO MIND IS THE OLD CONTENTION THAT MINORITIES SHOULD BE SEGREGATED UNDER THE "SEPARATE BUT EQUAL DOCTRINE". I DO NOT SUBSCRIBE TO THAT, BUT SUBSCRIBE TO THE NOTION THAT, AS BEST WE CAN, WE SHOULD AFFORD ALL OUR CITIZENS THE RIGHT OF FULL PARTICIPATION. HOUSTON METRO'S DECISION IS A SMALL STEP IN THAT DIRECTION. A STEP WE ARE COMFORTABLE WITH BECAUSE IT IS SOUNDLY BASED IN AMERICAN VALUES AND OVERALL ECONOMIC HEALTH.

MANY ARGUE THAT ALLOWING FULL PARTICIPATION TAKES PEOPLE OFF THE WELFARE ROLL, MAKES THEM INTO TAX-PAYING CITIZENS. THAT IS ALL TRUE. BUT I THINK THERE IS A LARGER VALUE. HAD U.S. CONGRESSMAN MICKEY LELAND LIVED EARLIER IN MY LIFETIME, HE WOULD

NOT HAVE BEEN PERMITTED HIS FULL PARTICIPATION. BUT, AS OUR SOCIETY BECAME MORE INCLUSIVE, IT IS NOT JUST HE, BUT US ALL WHO HAVE BENEFITTED FROM HIS LARGER THAN LIFE CONTRIBUTIONS.

WHO KNOWS WHAT OUTSTANDING CONTRIBUTION LIES DORMANT WITHIN SOME HANDICAPPED PERSON, THAT CONTRIBUTION TEETERING ON THE BRINK OF WHETHER HE OR SHE IS ALLOWED FULL PARTICIPATION IN OUR SOCIETY? THE MOBILITY PROVIDED BY A WHEELCHAIR EQUIPPED BUS FLEET IS AN IMPORTANT ELEMENT OF FULL PARTICIPATION IN OUR SOCIETY.

"FULL MANY A FLOWER IS BORN TO BLUSH UNSEEN,
  AND WASTE ITS SWEETNESS ON THE DESERT AIR.

. . .

SOME MUTE INGLORIOUS MILTON HERE MAY REST,
  SOME CROMWELL, GUILTLESS OF HIS COUNTRY'S BLOOD.

. . .

HERE RESTS HIS HEAD UPON THE LAP OF EARTH
  A YOUTH, TO FORTUNE AND TO FAME UNKNOWN;"

FROM "ELEGY WRITTEN IN A COUNTRY CHURCHYARD" BY THOMAS GRAY.

Mr. **Owens**. Thank you.

Mr. **Bartlett**. Mr. Chairman, if the Chairman would yield before we go on to the next witness. As a long-time Texan, I might just comment to the tough, hard-nosed, cost-effective leader on the observations as to how far we have come. The Texas Highway Commissioner is now quoting poetry. My compliments.

Mr. **Lanier**. Well, do not tell anybody I did it.

[Applause.]

But I believe my thoughts expressed the point. I do.

Mr. **Owens**. The Chair also wishes to note that we very seldom get such testimony. It was quite inspiring.

Mr. **Lanier**. Thank you.

[Applause.]

Mr. **Owens**. Mr. Robert Mosbacher, Jr., President and Chief Executive Officer of Mosbacher Energy Company.

STATEMENT OF ROBERT MOSBACHER, JR., PRESIDENT AND CHIEF EXECUTIVE OFFICER, MOSBACHER ENERGY COMPANY

Mr. **Mosbacher**. Thank you, Mr. Chairman.

I am here appearing not only as president of Mosbacher Energy Company, but also as Chairman of the Texas Department of Human Services Board. I offer my testimony in both regards.

I want to begin by paying tribute to my friend, Congressman Bartlett, from Dallas. Those of us from Houston do not know well Steve Bartlett's commitment to issues of the disabled, but I have had the privilege of knowing Steve and knowing him well, and knowing that he is absolutely committed to this, and has made a tremendous contribution. As a Texas, I am proud he is part of our delegation.

[Applause.]

The Americans with Disabilities Act of 1989, provides this nation an opportunity to take another step towards ensuring civil rights and equality in America for all persons. It affords the roughly 36 million disabled persons living in the United States an opportunity to prove their willingness and ability to participate in, and enhance the work force. This bill represents an important, symbolic step towards ending discrimination against disabled Americans and providing them with equal access to opportunities in our nation.

I applaud the President, his Administration, and the key sponsors of this legislation in the Congress for their bipartisan commitment to expanding the reach of civil rights laws to include disabled Americans. This is a most encouraging example of cooperation between the Executive and Legislative Branches of our Federal Government.

Given this evidence of leadership in Washington, it becomes more incumbent upon those of us in positions of responsibility in state government to show similar leadership. To date, that leadership has been sorely lacking.

As a next step in our commitment within the State of Texas to provide the necessary focus, inter-agency coordination, targeted services, and leverage of public and private resources in a more effective manner, I will recommend to the board of the Department of Human Services that we establish an Office of Disabilities within that department.

Responsibilities of this office might include: planning, design, implementation, administration, coordination, and monitoring of services to persons with disabilities of all ages.

In addition, I have called for the establishment of a Task Force on Disabilities to assist in the establishment of this new office and to help formulate its agenda. It is my intention that these initiatives create programmatic and financial assistance systems that address the goals of this legislation, which are independence and work force participation.

The Texas Department of Human Services plays a central role in the development and delivery of services for persons with disabilities. Designated as a signal state Medicaid agency in Texas, TDHS is responsible for providing services to persons with disabilities, including health, residential, support and protective services. Many disabled persons under the age of 65, for various reasons, have not been served by the current TDHS service delivery system.

Other state agencies charged to serve persons with disabilities are limited either by function or scope of population. For example, the Texas Rehabilitation Commission provides vocational services for adults. The Texas Department of Mental Health and Mental Retardation services persons who have mental illness or mental retardation. The Texas Commission for the Blind serves persons with vision impairments. And the Texas Commission for the Deaf services persons with hearing impairments.

By more effectively coordinating the provision of services at the state level, could with the new efforts at the Federal level, I believe we can maximize the potential impact on disabled persons of these changes. What gives me particular cause for optimism is the growing consensus that we must augment income support for the disabled with a greater emphasis on initiatives for independence, self-sufficiency, and productivity.

[Applause.]

We must remove the barriers and disincentives that prevent or inhibit people from moving off such income support benefits into the work force. Clearly, the Americans with Disabilities Act, coupled with Federal financial assistance programs that reward, rather than penalize employment, will provide a pathway of support towards independence for disabled persons. It is not only good public policy, but it also makes sound economic sense.

The changes made last fall by the Congress in The Family Security Act represent the most fundamental improvements in welfare in over 20 years. This is so largely because of a commitment to make work more profitable than welfare. That is achieved by rewarding work in the form of transitional child care and health care benefits, rather than penalizing those who go to work by systematically removing one form of support after another.

The Americans with Disabilities Act follows the same general approach in terms of encouraging investment in independence and productivity, rather than dependence and debilitating idleness. Not only does it make good economic sense, but it also helps build the dignity and self-esteem of those we seek to assist.

From the perspective of a private sector employer, this legislation is also extremely important. If we are to remain competitive as a nation in the international marketplace, we must have a well trained, well education, and highly motivated work force. Millions of disabled Americans who have been denied access to the work place are well education and can be easily trained.

What is more, they are some of the most highly motivated people in our society today.

[Applause.]

If we look at the demographic changes in the work force that are taking place today and will continue through the balance of this century, it becomes increasingly critical that we call upon disabled individuals to become an appropriate part of the American work force.

I am convinced that our disabled citizens are anxious to fill that need, and with the enactment of this landmark civil rights legislation, we can achieve that goal.

Thank you, Mr. Chairman.

Mr. OWENS. Thank you.

[Applause.]

I would like to call on Mr. Howard Wolf of Fulbright and Jaworski. He also serves as the chairman of the Board of Trustees of the Institute for Rehabilitation and Research.

Mr. Wolf.

STATEMENT OF HOWARD WOLF, PARTNER, FULBRIGHT & JAWORSKI

Mr. WOLF. Thank you, Mr. Chairman.

I would like to start off by saying that the TIRR, which is the Institute for Rehabilitation and Research, is a primary not-for-profit rehabilitation hospital located in the Texas Medical Center in Houston, Texas. Maybe people that you see in the audience today have been patients of this institution, including Lex Frieden.

We have here with us the founder of TIRR, Dr. William Spencer, who is seated behind me.

[Applause.]

And to first address the issue of why is this bill so needed today, I cannot do that any better than to summarize some of the remarks of Dr. Spencer that are going to be inserted into the record.

There are now so many barriers that prevent the disabled person from accomplishing or maintaining crucial activities of daily business. For example, the lack of opportunity to use affordable transportation for shopping, for timely health care services or for access to public and private community services and assistance create needless and costly dependence on others as homebound persons. Services and economic assistance then fall upon overloaded public and private agencies.

Thus, the absence of services and support for independent living can make it nearly impossible to obtain an autonomous or control of one's own life. The alternative becomes chronic care in the hospital for the severely disabled are custodial and placed in a nursing home. Sadly, the occurrence of untreated and preventable medical complications might ensue and require very costly, intensive and recurring hospital care.

Eventually, severe dependency perpetuates a young or working-age person's lack of access to training or education and lack of employment opportunity. Physical and attitudinal barriers are additional contributions. This situation continually increases the expenditures needed from the person's family, community, state and nation. Such financial losses become unrecoverable in the absence of productivity and independence.

Facts supporting this situation have recently been reported in the national local press. For years this tragic depression has been experienced by hundreds of thousands of disabled persons, by professionals trying to assist them, by independent live-in center personnel and advocacy groups. That alone would justify the adoption of the ADA.

In addition, I would like to say that I have read the testimony of several witnesses before the Senate Committee's Subcommittee on the Handicapped, as well as numerous articles, editorial and papers supporting the adoption of the ADA. This extensive body of material aptly demonstrates that the ADA is a law that will benefit millions of handicapped Americans and is legislation whose time has come.

But I would like to go further than that, and I would like to add some words, I guess, in seconding what Dr. Van Hightower said, and seconding what Bob Lanier said. And I would submit that the ADA should be adopted not only because it will help to empower the disabled persons in our country, but also because it will help to enrich the lives of all citizens in the United States.

[Applause.]

Through my work with TIRR, I have been exposed to numerous instances where businesses, organizations and projects have had the participation of a disabled person. Invariably, once they get their "wheels in the door"—to modify a phrase—disabled persons add a new constructive, dramatic dimension to the dynamics of the situation. This is because it is impossible to work or play, in concert with a handicapped person, and not be inspired and motivated by their determination, their courage, and their perseverance.

When we deny a disabled person the opportunity to work, travel, eat or be entertained or in any way to participate in activities with other people, everyone loses. The ADA is not just a bill for Americans with disabilities, it is legislation that will benefit all Americans. It is time to pass the ADA.

And in conclusion, I would like to address an issue that concerns, I know, the committee, and specifically that you referred to, Mr. Bartlett, and that is remedies.

As a full-time practicing lawyer, I would say to you that strong remedies are essential to the effective implementation of this and other civil rights laws. The Civil Rights Act of 1964 is an effective lay today because of the private remedy provisions contained in the 1964 Act and strengthened through the years by amendment.

Civil right laws depend heavily on private enforcement. Provisions such as the right to attorney's fees, injunctive relief and damages are essential to provide private citizens a meaningful opportunity to vindicate their rights. Attempts to weaken the remedies available under the ADA are attacks on the ADA itself, and their success would make the ADA an empty promise of equality.

I am as concerned as you are about our litigious society, and about the fact that just like our national parks, our Federal courts are a national resource, and they are an over-used national resource, a taxed national resource just like our national parks. But I would say to you that, in connection with the ADA, it would not be fair and it would not be appropriate, because this legislation has been so long and so late arriving on the scene, to weaken its effectiveness by denying the remedy section its proper place.

I would say to you as members of Congress that the solution is not in short-changing the ADA, but reorienting our priorities all over the scale of access to the Federal courts and not by reducing the strength and the enforceability of this statute.

Thank you very much.

[The prepared statement of Howard Wolf follows:]

TESTIMONY ON THE AMERICANS WITH DISABILITIES ACT OF 1989

BEFORE

THE HOUSE SUBCOMMITTEE ON SELECT EDUCATION

OF THE

COMMITTEE ON EDUCATION AND LABOR

August 28, 1989

Howard Wolf
Partner
Fulbright & Jaworski

Howard Wolf
August 28, 1989

My name is Howard Wolf. I am a partner in the international law firm of Fulbright & Jaworski. I also serve as Chairman of the Board of Trustees of The Institute for Rehabilitation and Research (TIRR) which is a not-for-profit rehabilitation hospital located in the Texas Medical Center in Houston, Texas. TIRR was founded in 1959 and is the foremost comprehensive medical rehabilitation facility providing services to patients with spinal cord injuries, head injuries and various neurological conditions in the Southwest United States.

My testimony is submitted in support of the adoption by Congress of the Americans with Disabilities Act of 1989 (ADA).

In a country which prides itself on the opportunities it provides to all its citizens, and in which fundamental fairness and human rights are standards we hold for other nations to meet, we must continue to act upon opportunities to extend the full protection of our laws and full access to the benefits of living in this country to all our citizens. Citizens with mental and physical disabilities have long been excluded by the terms of our laws from full citizenship. We have not yet drawn upon the full strength of the Commerce clause or the Equal Protection clause to broadly prohibit discrimination against people with disabilities. Instead, we have tied basic protections against discrimination in employment, transportation, housing, education and services to receipt of federal funding, thus leaving the bulk of discriminatory actions against people with disabilities without private remedy under federal law. The same employer who by federal law would be prohibited from discriminating against a woman can refuse employment to a person with a disability, for no other reason than the disability. A hotel cannot refuse lodging to a Columbian because of that person's nationality, but can to a person with a disability, for no other reason than the disability. People who can walk into a bus can sit wherever they wish; a person in a wheelchair still cannot board most buses.

Long-held stereotypes and limited opportunities for interaction between people with and without disabilities have resulted almost universally in diminished expectations about the individual abilities of people with disabilities and their potential to participate in and contribute to society. For too long, this unfounded but pervasive devaluation of the abilities of people with disabilities has served as the excuse for our history of discrimination and exclusion. In supporting the ADA, members of Congress and the Bush administration have recognized the need to make fundamental changes in our laws if we are to achieve our national goals of assuring equality of opportunity, full

BEST COPY AVAILABLF

participation, independent living and economic self-sufficiency for people with disabilities.

The widespread support of the ADA is also reflective of a pressing desire to get the most from our federal budget; to spend our tax dollars in ways that maximize their use and yield the greatest return. In the past fifteen years we have committed billions of dollars to special education of disabled youth; to the rehabilitation of disabled workers; to improved care and treatment programs for disabled people of all ages. We can be proud of most of these programs and their impact on the lives of people with disabilities. But have we accomplished enough when we educate, rehabilitate and care for people with disabilities only to ignore discrimination against them in the workforce, in transportation, in public accommodations? How many well-educated and highly capable people with disabilities must sit at home every day, not because of their lack of ability, but because of the attitudes of employers, service providers, and government officials?

EMPLOYMENT

Two thirds of all disabled Americans between the age of 16 and 64 are not working. Only 25 percent of disabled Americans work full time. Of the non-working disabled population, 66 percent express a desire to work, because by working they can attain their personal goals and increase their financial stability. (1985 Harris survey conducted for the International Center for the Disabled in cooperation with the National Council of the Handicapped.) By elevating the level of employment of people with disabilities through eliminating discrimination in employment, in transportation and in other services intrinsic to successful employment, we can greatly increase the amount of tax dollars generated by, rather than paid out to, people with disabilities.

A 1987 follow-up survey of employer attitudes toward employees with disabilities indicates that an overwhelming majority of managers find that employees with disabilities perform their jobs as good as, or better than, non-disabled employees, and that the average cost of employing a person with a disability is about the same as the cost of employing a non-disabled person. Yet, despite the high marks given to people with disabilities as hard-working, reliable and productive employees, most employers plan to take no greater efforts to hire people with disabilities and give the hiring of people with disabilities a lower priority than the hiring of people from minority groups and the elderly. A new federal initiative is necessary to assure that able people with disabilities have equal employment opportunities.

PUBLIC ACCOMMODATIONS

The ADA prohibits discrimination on the basis of disability in places of public accommodation, including auditoriums, theaters, restaurants, shopping centers, hotels, gas stations, office buildings and recreation facilities.

Certain business interests urge that small establishments should be excluded from the coverage of the ADA because it will pose an economic hardship to them. The Act itself already takes the needs and special considerations facing small businesses into consideration by stating that existing facilities must be made accessible only if the changes are "readily achievable"; that auxiliary aids and services need not be provided if they would cause an "undue burden"; that only "reasonable" modifications must be made. "Reasonableness" was the foundation of Title V of the Rehabilitation Act, and that concept remains key here. Caselaw under the Rehabilitation Act clarifies how these provisions will be implemented, and courts have not been blind to the realities of small businesses.

TRANSPORTATION

The ADA also prohibits discrimination in transportation by requiring new public bus and rail vehicles to be readily accessible and usable by people with disabilities, and requiring privately owned new vehicles used in public transportation to be accessible within five years from the date of enactment.

REMEDIES

Strong remedies are essential to the effective implementation of this and other civil rights laws. The Civil Rights Act of 1964 is an effective law today because of the private remedy provisions contained in the 1964 Act and strengthened through the years by amendment. Civil rights laws depend heavily on private enforcement. Provisions such as the right to attorney's fees, injunctive relief and damages are essential to provide private citizens a meaningful opportunity to vindicate their rights. Attempts to weaken the remedies available under the ADA are attacks on the ADA itself and their success would make the ADA an empty promise of equality.

Other excellent civil rights laws, like the Fair Housing Act, have been on the books for twenty years, but have yielded no significant changes because of ineffective enforcement and remedies. In its last session, Congress made the FHA into a strong weapon against discriminatory housing practices by amending it to create meaningful enforcement mechanisms and remedies.

CONCLUSION

I have read the testimony of several witnesses before the Senate Subcommittee on the Handicapped as well as numerous articles, editorials and papers supporting adoption of the ADA. This extensive body of material amply demonstrates that the ADA is a law that will benefit millions of handicapped citizens, and is legislation whose time has come.

But in conclusion, I would submit that the ADA should be adopted not only because it will help to empower the disabled persons in our Country, but also because it will help to enrich the lives of all citizens of the United States.

Through my work with TIRR I have been exposed to numerous instances where businesses, organizations and projects have had the participation of a disabled person. Invariably, once they get their "wheels in the door" (to modify a phrase), disabled persons add a new constructive, dramatic dimension to the dynamics of the activity. This is because it is impossible to work, or play, in concert with a handicapped person and not be inspired and motivated by their determination, courage and perserverance.

When we deny a disabled person the opportunity to work, travel, eat or be entertained or in any way to participate in activities with other people, everyone loses. The ADA is not just a bill for Americans with disabilities, it is legislation that will benefit all Americans. It is time to pass the ADA.

Mr. **Owens**. Thank you.

[Applause.]

The Chair would like to note that Dr. William Spencer has submitted written testimony which will be entered into the record without objection.

Without objection, we would also like to announce that the written testimony of all of today's witnesses, or any additional testimony submitted within the next 10 days, will be included in the record of this hearing.

We also want to note that we will include in the record the names of all the volunteers who helped to make this hearing possible.

I would like to ask one question of all of the witnesses. I think Mr. Wolf has opened it up. You are business people, and on the other hand, you feel great understanding and sympathy for this problem.

What do you think we should do with respect to remedies? In the agreement made between the White House and the Democratic leadership in the Senate, we have primarily limited remedies to administrative procedures. That is a critical question. The bill that we are actually considering today is the bill of the House of Representatives which still has a strong remedy section in it. We would like an opinion from each one of you on that matter.

I think we have heard Mr. Wolf already. Mr. Lanier?

Mr. **Lanier**. Does the administrative remedy now proposed allow the aggrieved person to go straight into a given agency and get relief granted? Is that the nature of the relief or is it different?

Mr. **Bartlett**. If the Chairman would yield.

As I understand, the dispute as to whether we use the Senate bill use of the Title VII under EEOC, at which the aggrieved person would file a claim with the EEOC as we do under the Civil Rights Act of 1964. And only in the case of clear consistent pattern or practice would then a lawsuit in the Federal court be permitted. I may be oversimplifying that, but that would be filed by the Justice Department.

The Senate version would abstract the '64 Civil Rights Act. The House version would go beyond that and permit a lawsuit under U.S. Code 1981, which prevents punitive compensatory advantages, which or not an administrative complaint had been filed. So that is the distinction.

Mr. **Lanier**. Well, my own various experiences some years ago when I was a practicing lawyer, and then also I practiced labor law. Without knowing that much about the specifics, one difficulty with litigation is it costs so much money and it takes so long to get to the court. In the state court here, it takes two or three years. In the Federal court, somewhat shorter.

In labor cases of discrimination, the problem there was that where a person claimed he was discriminated against for union activity, it might be two or three years before he got a favorable or unfavorable finding to that effect.

My notion would be, without knowing the specifics of the statute, and maybe it is not the only exclusive thing, but if some sort of administrative remedy could be set up where the complaint could be quickly heard and quickly disposed of and the staff so that speed could be accomplished, would strike me as perhaps as an effective remedy.

Mr. **Owens**. One of the problems in the administrative remedy process is the fact that the agencies have tremendous backlogs also. It takes them years to——

Mr. **Lanier**. Well, I understand. I think if you did that, if you did that, you would have to calculate what your likely case load would be, and it would need to be funded at a level that would allow a speedy hearing, or else the remedy would be worthless.

I think you just need to calculate your case load, calculate your expense, and provide funds for it, or I would not use that remedy. I would let them go straight to court.

Mr. **Owens**. Thank you.

Mr. Mosbacher?

Mr. **Mosbacher**. Mr. Chairman, I would associate myself with Mr. Lanier's remarks, and I think the worst thing that we can see as a result something that became so time consuming that in fact it took years to bring closure.

So whether you are talking about remedies or whether you are talking about trying to establish clear definitions along the way, I think reasonableness will be kind of the test and we must avoid overloading the courts, because the bottom line is whether you are overloading the administrative agency or you are overloading the courts, you end up deferring the goals that you are trying to accomplish, which is moving more people into the work force.

So I would try to find a way to put it on a short circuit and bring it to closure within 30 to 60 days. Now how you do that, I do not now, but that would be my recommendation.

Mr. **Owens**. Do you think 30 to 60 days is a reasonable time period?

Mr. **Mosbacher**. Given how long it takes to resolve most other things, yes, sir. I think 30 to 60 days would be reasonable.

Mr. **Owens**. Thank you.

Ms. Comfort?

Ms. **Comfort**. Well, I am not a labor specialist. I do not have anything more to add than what these gentlemen have brought out.

Mr. **Owens**. Ms. Comfort, let me just note that you said some very interesting things in your statement in regards to removing barriers which would prohibit your company from moving forward in giving help in the area of telecommunications for deaf people. We will take note of that. There is another committee of Congress which is primarily responsible for that.

However, I just wondered in one case—the manufacturing of devices. Is that really an issue for local and regional companies? If each regional company were to engage in its own manufacturing, would not the costs be much higher than if a national company does it on a larger scale, allowing the costs to be brought down as the manufacturing of the devices increases?

Ms. **Comfort**. What is happening is that the United States manufacturing companies are not manufacturing telecommunications equipment. Over 90 percent of telecommunications equipment is now produced by Japanese companies. So basically we do not have domestic manufacturers with the except of maybe AT&T, very few others. So basically we have lost the market. The market is an overseas market.

So I think by allowing the regional operating companies to manufacture, you have seven domestic manufacturers which could help our balance of trade and help us get back our competitive edge in technology.

Mr. Owens. Thank you very much. That is very useful information.

Mr. Bartlett.

Mr. Bartlett. Mr. Chairman, I just want to make sure I understand Mr. Wolf's testimony.

Are you suggesting that in the ADA's final passage it should go beyond the '64 Civil Rights Act in terms of remedies and include U.S. Code 1981, go beyond the racial discrimination?

Mr. Wolf. As I understand the bill that is presently the House version which does go beyond that, I think it should, yes. I think a right without a remedy is very——

Mr. Bartlett. Well, do you think the '64 Civil Rights Act has worked enough for purposes of race discrimination?

Mr. Wolf. I think it is now starting to. I think it took a long time to gather momentum, and I would like to see this statute, which is way overdue, ride on the shoulders of that act, and pick up where it left off.

Mr. Bartlett. Would you likewise extend compensatory impunity damages in U.S. Code 1981, with reference to racial discrimination, be in Title VII for racial discrimination?

Mr. Wolf. Yes, I would.

Mr. Bartlett. You would extend that also?

Mr. Wolf. I do not see that as the issue here, but if you are asking my personal opinion on that, yes, I would.

Mr. Bartlett. Excellent testimony. I picked up at least three different suggestions for some improvements to the legislation. A time limit on EEOC cases, for example, 30 to 60 days Mr. Mosbacher has suggested. And I think that would have to include additional resources for the EEOC. If we are going to require the EEOC to respond more timely, it seems to me we ought to provide additional resources, and perhaps streamline some of their procedures.

And second is a safe harbor for both manufacturing and for relay services. This subcommittee does not have technical jurisdiction over that, but this subcommittee delights in finding way to expand our jurisdiction in Congress, so we may take you up on that, Ms. Comfort.

I would also note that in the Senate provision of the bill is an area that does relate to some of the things we are discussing, and it does seem to me to be generally agreed that it stay in the bill. And that is the provision for technical assistance to be available to private-sector employers.

As private-sector employers begin to learn what reasonable accommodation is readily achievable and undue hardship begin to open up to employment opportunities with persons with disabilities, private-sector employers need to have a readily achievable source of information for technical assistance, for ramps, for telecommunications, for electronic equipment. And I think we will include in the bill some kind of a source at the Federal level for technical assistance so that the dry cleaning shop on the corner will have someone to call and say, what does this mean and what kind of technology is available.

Mr. Lanier.

Mr. **Lanier**. Again, if we could go back to the idea that they have a separately funded mediation service that has familiarity with labor disputes and undertakes to bring the parties together through a conciliatory process, that is somewhat useful. And on the funding, to assure a speedy disposition.

We are discussing here in the state now a remedy that has some possibility. The idea is that a drug user would get a quick mandatory sentence, and the idea being discussed is to set up a separate court to hear that, more or less like a corporation court where that person would be brought to trial very, very quickly.

And here you might consider some mechanism for bringing the matter before a sort of separately funded, not putting the burden on everybody else with a time limit they cannot comply with. You see that throughout the Federal agencies, but a separately funded group of folks that would hear these complaints and either mediate or dispose of it.

Mr. **Bartlett**. Let me move from there to an employment question. It has not yet been raised in this hearing and I would like to ask each of the four of you if you would like to answer it, how would you propose.

There is some ambiguity in both the Senate and the House versions of the bill, although we are getting closer, there remains some ambiguity as to what do we intend to say about the ability of an employer to deny employment to a person who is a user of illegal drugs.

The Senate provision at this point essentially provides that an employer could deny employment to a person based on their usability of drugs. But it seems to indicate, or it may indicate that the employer could be required to prove that it had an effect on their job performance, making it performance-related.

Now, my question just in layman's terms, if you were drafting this bill, would you draft it in a way that an employer upon determining that one of his employees or prospective employees is a user of illegal drugs, would be permitted to termination employment for that person without regard to job performance?

Or do you believe the employer should be required to relate that to job performance?

Mr. **Lanier**. I think I would run him off that day.

Mr. **Bartlett**. Just not even at the close of business that day, just right at——

Mr. **Lanier**. Hand him is keys.

Mr. **Bartlett**. Mr. Mosbacher?

Mr. **Mosbacher**. I agree with that. I do not see how we can send the signal we want to send, which is we do not want to continue to tolerate drugs in the work place, if we are going to make these crazy distinctions between taking drugs, which affects your job, versus taking drugs that do not affect your job. That is a distinction without a difference, in my opinion.

Mr. **Bartlett**. So if the Federal law were to define a drug user as a person with a disability per se, you just do not see that as a disability.

Mr. **Mosbacher**. Not a particular, yes.

Mr. **Bartlett**. Ms. Comfort?

Ms. **Comfort**. Right now at Southwestern Bell we require a drug testing before hiring a person. And if a person would fail to pass that, then he would not, obviously, be hired.

We do have a policy that if an employee is found to be taking illegal drugs, then we would certainly work with that employee with rehabilitation, but we would not tolerate that.

Mr. **Bartlett**. Mr. Wolf?

Mr. **Wolf**. Well, what we are dealing here with, Mr. Bartlett, is a statute which has to do with control, control of your own life, and independence. And I would say that someone who is using drugs, and I realize this may be a simplistic approach to this problem, but I would say that someone who is using drugs made a choice. And if we are ever going to get control of that issue in this country, we have to make people responsible for their own conduct.

The people that this statute is designed are things that are beyond their control, and they are trying to get control of their lives. And I would just support very strongly what Mr. Lanier said. I would say someone who is using drugs and who come through this statute, they should not be employed.

Mr. **Owens**. Will the gentlemen yield for a moment?

Mr. **Bartlett**. I would be happy to yield.

Mr. **Owens**. For clarification, let me just give you an example. A young man graduated from law school, worked in the U.S. Attorney General's office in New York, and was found guilty of using cocaine. He has gone before a judge and was mandated to enter a treatment program. He is in the treatment program and it is publicly known that he is a drug user.

Are you saying that this individual does not have a chance anymore in the work place?

Mr. **Wolf**. No. I am saying that someone who has been rehabilitated.

Mr. **Owens**. Someone who is in a rehabilitation program, who otherwise would be an illegal drug user. We should not have people doing illegal things in the work place. I agree 100 percent. But here is a drug user who is in a rehabilitation program mandated by the court.

Are you saying that this person should not be allowed to——

Mr. **Wolf**. No, I am not saying that. No.

Mr. **Owens**. Thank you very much.

Mr. **Wolf**. Not at all.

Mr. **Owens**. Mr. Bartlett.

Mr. **Bartlett**. Thank you for your help on that. I think as Congress considers the bill, I think that that the area of alcohol abuse will in fact become increasingly clear and will come down on the side of the drug-free work place, and I think the legislation is moving in that direction.

Let me ask Ms. Comfort two additional questions.

First of all, in your employment policy now with Section 503, which I think you stated you have an affirmative action policy for the employment of persons with disabilities.

What kind of remedy system do you have built into that if someone believes they have been denied employment at Southwestern Bell based on their disability? What are their remedies?

Ms. COMFORT. Well, it would be the same remedies as one who might feel that she has been discriminated against who are a minority. It is the same process. At least I believe that is the case.

We have our internal 800 number or hotline number where an employee can seek some remedies internally before going to a more official body. But I am not an expert in the labor field, so I cannot go any further than that. But it would be the same as any other discrimination.

Mr. BARTLETT. You do not have then a separate system which a person with a disability could appeal back to the personnel department, or back to someone in Southwestern Bell?

Ms. COMFORT. It is all part of the affirmative action program, and we do have an employee, for instance, here in Houston whose job is to work with those who have declared themselves as having a handicap or a disability. So we really handle it as part of the affirmative action process.

Maybe legally there is some differences, but internally we handle it all pretty much the same. Of course, a person with a disability might need some special things that a person who feels that they are discriminated another way such as accommodations and flexibility in work hours and that sort of thing. So we work very hard to make those accommodations.

Mr. BARTLETT. It might be helpful, Ms. Comfort, for this committee, if you could, if Southwestern Bell could provide for the committee subsequently both some sort of indication of which kind of appeals have been used and what the results were, so a description from the person here in Houston who is doing it, of the types of accommodations that you made in specific instances. It would be very helpful for us to be able to look at it.

[The requested information will be available in the office of the Subcommittee on Select Education.]

And one last question. And this comes to a section of the bill that can be as yet unresolved I think in the minds of Congress, and that is, in the relay system itself, the bill as passed now in the Senate is still somewhat ambiguous, not as to whether a relay system would be required for a handicapped person to be able to talk over the telephone to a non-hearing impaired person. The question that is still somewhat ambiguous is who pays for that system.

In Southwestern Bell's practice, how is the payment structured? Obviously, an operator-assisted phone call throughout the conversation is an expensive proposition. And how does Southwestern Bell charge for that service now? And in your opinion, what should the Federal law say about it?

Ms. COMFORT. Well, right now we are not involved in the direct delivery of message relay service. We have operator assistance in terms of placing a call and that sort of thing, but not being an interpreter in the sense of message relay.

In Texas, such a program will be started in 1990, in September of 1990, and some entity will bid to have that function, and it will be funded 55 percent by the local exchange companies and 45 percent by the long-distance carriers for the time period, I believe, of one year until we can see how the service is really used in terms of local versus long distance. And we will recover our dollars for that by the surcharge on the phone bill. So that is kind of how that is working.

And the Public Utility commission——

Mr. BARTLETT. Surcharge for all users or for users of the service?

Ms. COMFORT. For all users. That is the mechanism in place for the recovery of the expenses.

Mr. BARTLETT. So with or without Federal, law Southwestern Bell is going to provide the service and are going to charge all users for the service?

Ms. COMFORT. We might not provide it. Whoever wins the competitive bidding process. It could be General Telephone. It could be AT&T. It could be another related telecommunications company. But the funding mechanism would be through our phone bill.

Mr. BARTLETT. But the funding is going to be provided and the funding is going to be a surcharge on all users.

Mr. Mosbacher, I would like to say I very much appreciate your testimony in support for this legislation. As you correctly noted, there is a fellow Texan, George Bush, he had a good deal to do with getting legislation to the point where it is today and likely to pass this session.

I might also say, and I appreciate the kinds words you had to say about me, but I have to say that I am quite a fan, as I know that many people in this audience are, of Rob Mosbacher, Jr., and the work that you have done at the department.

You have indeed been a voice and a real force and a champion for independent living, for covering so many of our programs, of our government programs from the state of dependency into independency, and I think you have helped to propel to the forefront the independent living issues. And in that regard, our compliments to you and the work that you do.

Thank you, Mr. Chairman.

Mr. Payne.

Mr. PAYNE. Thank you.

I would just like to commend all the panelists, particularly Mr. Lanier, for the outstanding job that you have done. We need to have not only the mini and microbuses, but also full-service buses.

I think many people fail to be as thorough as it relates to the psychological aspect of separate and equal, which I think is probably one of the most important aspects, and I think that what we are doing here is really going in the right direction, and I wish that more local agencies would do that.

Ms. Comfort, you indicated Judge Greene said that what Bell Atlantic was doing was prohibited under the MFJ, but that he would not be in opposition.

Is there any action, to your knowledge, on whether that decision has been made, do you know whether Bell Atlantic will be leaning towards making a request for the MFJ prohibiting to be reconsidered as to all the waiver?

Ms. COMFORT. First of all, our request went to the Department of Justice. It is declared for a ruling from Judge Mercer, and there the agency or the department said that a waiver would be required. We have not approached Judge Greene yet. But I guess in Bell Atlantic's request for a ruling, we did ask for a waiver and the process to be started. So we will be pursuing that certainly. And we are very optimistic that a waiver will be granted.

Mr. PAYNE. That certainly makes sense. As you may know, Bell Atlantic is housed in my State of New Jersey, and we really are very pleased with the outstanding work that the organization is doing there.

We have noted some of the points that you have raised, and I am sure that the committee will follow up with the chairman on these issues.

Thank you very much.

Mr. OWENS. Mr. Bartlett has one additional question he wanted to raise.

Mr. BARTLETT. Mr. Chairman, I appreciate the additional time. I neglected to ask a specific question to Mr. Lanier. You are our transit expert in this hearing so I need to get your opinion.

First of all, I understood your testimony to say that Houston is now going to provide both the lifts on the mainstream buses and the para-transit.

My question goes to that issue and it is, do you believe that this Federal law should—the Federal law, as proposed out in the Senate, would require both of all transit systems in the country, both the para-transit and the mainline lifts on buses.

Do you think that's what Federal law should provide, or do you think it should be somewhat different?

Mr. LANIER. Let me say, first of all, that a number, maybe even most of the people in the transit industry think it should not. I would disagree with that. I think you need to provide both. And one reason is if you are going to provide the lifts, if you don't provide the van service. You take a blind person, the lift is of no benefit to them.

[Applause.]

A retarded person, a retarded person is not helped by the lift. And the lifts reach a particular portion of the handicapped community. But if you pass a law that simply says "lifts", and then if there is sort of a general obligation for the remainder of the handicapped community, my feeling is that the dollars spent in the one area would perhaps crowd out service in the other.

You run next into the question of total dollars that an agency can spend serving this particular area. And the question is, would the lifts and the van service, as a combination, be an excessive burden. I really, given the way—I will say this tactfully—given the way the transit agencies spend their money, I do not think that this is below the cut line in terms of the priority of decisions.

In terms, for example, I would rather myself spend the money to serve the handicapped than I would building new rail systems.

They speak of image. I would rather have the image of being an agency that services all its people. So my notion would be that we ought to do both because if you do not, there will be an equally significant segment of the handicapped community, perhaps they are not represented here, but they will be there, for whom the lifts are not appropriate.

The question I think you will have to consider is what is the total burden. In the case of Houston, this total burden will end up running between $5 and $10 million a year. Well, we are $6 million now; probably $7 or $8 million a year.

We have got about 20 million a year of formula money from the Federal Government. We occasionally have discretionary grants we get from the government. We have overall over a $200 million a year budget. I would not make this item that I would cut.

Mr. **Bartlett**. There is one proposal that is at least being discussed that would place a cap on what the Federal requirement is, not the cap on total expenditures, but at least that a cap of 2 percent of the operating budget——

Mr. **Lanier**. A what?

Mr. **Bartlett**. A cap?

Mr. **Lanier**. Of what?

Mr. **Bartlett**. A cap of the operating budget.

Mr. **Lanier**. No, but what is the percentage?

Mr. **Bartlett**. At 2 percent. They say that the Federal law would require—would have a requirement no more than 2 percent of the operating budget.

Mr. **Lanier**. Just a point there on the curve. A 2 percent cap will be absorbed in a normal transit agency if you include depreciation as an expense, which it is, but the use of the lift. And if you both mandate the lifts and have a 2 percent requirement, it will leave an agency, and that may be your judgment, it will leave the agency free to decide whether or not it will have vans. But the mathematical results——

Mr. **Bartlett**. So a 2 percent cap is underestimated here.

Mr. **Lanier**. Well, they presently have a 3 percent cap, and that's a regulation. But that was struck down by, as I understand it from Lex Frieden, that was struck down in the Philadelphia court. But 3 percent is just about the van cost.

Mr. **Bartlett**. And do you think that technology is going to be dramatically improved for lifts on buses over the course of the next 10 years, or do you think it will be about where we are today?

Mr. **Lanier**. Of course, I do not know. I would be inclined to—I have thought a little bit about this, and I do not quite know the language to suggest. But I would try to leave some room in a section for developing technology.

Mr. **Bartlett**. Thank you.

Thank you, Mr. Chairman.

Mr. **Owens**. I want to thank all the witnesses. It has been very informative and inspiring testimony. Thank you very much.

[Applause.]

Our final panel consists of the Honorable Ashley Smith of the Texas House of Representatives, and the Honorable Chet Brooks of the Texas State Senate.

I understand Mr. Brooks has not arrived yet. We will start with the Honorable Ashley Smith.

STATEMENT OF HONORABLE ASHLEY SMITH, TEXAS HOUSE OF REPRESENTATIVES

Mr. Smith. Thank you, Mr. Chairman, and members. It is my distinct pleasure and honor to appear before you today at the request of Mr. Lex Frieden, the Executive Director of the Institute for Rehabilitation and Research Foundation.

We commend you for your accomplishments on the Americans With Disabilities Act, and we are especially proud of the Texas favorite son, Congressman Steve Bartlett, for his service on this committee.

I will keep my comment brief and to the point It is no secret that Texas has experienced economic difficulties for which we are just beginning to recover. Keeping all Texans employed is an important part of that recovery. As of July, 1989, Houston's unemployment rate stood at 6.5 percent, and the Texas unemployment rate was 7.3 percent. We can do better, and the Americans With Disabilities Act can help.

Because we are in a recovery posture, we are committed to keeping the cost of doing business in Texas under control. We would respectfully request that, in your deliberations over the ADA, that you would emphasize those aspects of the bill which would assist Texans in achieving full employment of its citizens while avoiding the burdens that might arise out of punitive damages and related expenses that small businesses in Texas cannot afford.

Our Department of Commerce reminds us that over 80 percent of the employment in Texas is attributable to small business enterprises, and we would commend you for the exemptions and phase-in of small businesses as are present in the terms and conditions of S933.

Texas is fortunate to have the opportunity to provide input into your congressional process, and we thank you for your hard work and commitment.

My comments provide somewhat greater detail in writing which I previously submitted for your consideration. If I or any of my staff can be of any service to you, we would welcome that opportunity. And I would be happy to respond to any questions.

[The prepared statement of Hon. Ashley Smith follows:]

Congresssional Field Hearing
House Committee on Education and Labor
Subcommittee on Select Education
August 28, 1989, Houston, Texas

Gentleman, I would like to take this opportunity to extend a warm welcome to all members of the Subcommittee on Select Education of the House Committee on Education and Labor. It is our pleasure for you to be visiting in Texas, particularly in Houston. Mr. Chairman, it is indeed a privilege to be here today and to provide input for your deliberations on H.R. 2273, the "Americans with Disabilities Act of 1989."

By way of introduction, I would like to enter into the record a commendation for the individual efforts of Mr. Lex Friedan and for the collective efforts of the Houston-based Institute for Rehabilitation and Research Foundation. Mr. Friedan and his staff continue to deliver quality assistance and to promote advancements for the disabled community and I express thanks on behalf of the entire Houston community for his efforts.

As a member of the Texas Legislature, I hold in high esteem and great appreciation our representative government. Your Subcommittee's presence in our community is the personification of that representation. The legislative branch delivers laws to the electorate, on the one hand; while, on the other hand, listens to citizens for directions of what is needed. We thank you for effort and commitments necessary to provide good government. We are especially proud of one of Texas's favorite sons, Congressman Steve Bartlett for his contributions to this Subcommittee and numerous other issues of importance to Texans.

It is not a very well kept secret that the citizens and governments of Texas have experienced economic difficulties from which we are just beginning to recover. The state constitution mandates a balanced budget. In 1987, the Legislature passed the largest tax package in our history because of a sizeable revenue shortfall. This year the Governor took a strong position against any new taxes. That positition was accomplished to a great extent by the Comptroller's projections of continued recovery.

However, the current recovery trends hinge on a very delicate balance. The trends will continue to improve by increased employment. Concomitantly, the state's budget can be enhanced by reduced demand on services. The concept of the ADA, represents a potentially positive influence toward continued economic health and stability in Texas by increasing the number of people in the workforce and by decreasing dependence on benefits and services.

Human resources are our nation's most precious resource. Currently there are between 37 and 43 million disabled persons in America. The Rutgers University Bureau of Economic Research indicates that a total of $169.4 billion was spent by all entities (federal, State/local, and private) during FY86 for disabled persons aged 18-64.

It is only reasonable to expect that there will be costs involved with implementation of any form of either H.R. 2773 or S. 933. As already stated, there is a considerable cost involved by not moving forward with this landmark legislation.

It is my understanding that many aspects of H.R. 2773 and S. 933, are modeled after key portions of previous federal laws - Title VII of the Civil Rights Act of 1964 and Section 504 of the Rehabilitation Act Of 1973. There appears to be a general consensus that implementation of Section 504 occurred without great financial disruption to the states and contractors receiving federal funding.

The ADA expands the scope of Section 504 to include all governments entities and private businesses. It is my understanding that there is no estimate of the nationwide cost of this proposal. For me, the unknown costs present an area of concern for Texas business owners and for Texas government. Many businesses in this state still have a precarious future.

Additionally, it is my understanding that the committee version of S. 933 represents the end result of considerable negotiations between the administration, the Attorney General and the Senate Labor and Human Resources Committee. Based on the information available, the markup of S. 933 addresses many of my concerns about the costs of implementation and enforcement.

The Substitute incorporates numerous, additional waivers and exemptions not found in the current House version. The Substitute includes a phase-in for coverage of employers and includes an effective date of 2 years from the date of enactment. During the first 2 years after the effective date of the Act, only employers with 25 or more employees are covered. After that period of time, the coverage will include employers with 15 employees.

The Substitute defines some of the key terms that might otherwise increase the potential for litigation. These include definitions of such items as "readily achievable", "auxiliary aids and services", "undue hardship", and "reasonable accommodation".

The potential for litigation is indeed an extremely sensitive issue in Texas due to the impact of judicial decisions on the state's budget making process. Consequently, the Bush administration's insistence on no punitive damages holds a particular attraction. The Substitute deletes the authority to seek compensatory and punitive damages. Injunctive relief has been incorporated as the primary remedy for violation.

The concept of extending federal civil rights protection to disabled citizens is an issue that is overdue. My personal view is that the Senate substitute, endorsed by the President, his administration, and the Attorney General provides the best approach for the citizens and businesses of this state by striking a critical balance between disability rights and business concerns.

Mr. OWENS. Thank you, Representative Smith.

I think you heard part of the testimony of the previous panel.

Mr. SMITH. Yes.

Mr. OWENS. There is a general feeling that this bill does not impose undue hardships for municipal governments and for private industry, and that compliance can be achieved without any great burden that will be assumed by these agencies.

Are you saying that you are not certain that that is the case when you make the appeal for not imposing any compliance requirements which might burden the Texans?

Mr. SMITH. I would be very supportive of Rob Mosbacher's comments and Bob Lanier's comments in response to your questions. I think they have a hands on the premise's view of the circumstances and can best respond to those types of questions.

I feel very confident, to the extent that they would not impose additional costs, and I would take their assessment on face value.

The emphasis that I would place from a state perspective is one of recognizing that we are focusing our energies and efforts on what we can do for business recovery, and so our concerns are of a nature to avoid additional expenses related to business.

In reviewing some of the summaries related to comparison of the Senate and House bill, it was my observation that there were a number of comments as to the imposition of punitive damages. My concern would be that which I think has been expressed by the Attorney General and then supported by the President that the elimination of punitive damages would be an issue that we would find more acceptable in the bill than the inclusion of those punitive damages.

Mr. OWENS. Several persons have raised questions about the need for personal attendant services. The present system is prohibitive in terms of once a person goes to work and earns any amount of income, they are denied assistance from the state for a personal attendant.

I think your legislature did consider this problem to some extent, or is considering it. Would you care to elaborate on what is under consideration and your viewpoints on that?

Mr. SMITH. If I understand your question correctly, it may relate to an article that I was just reading where a recent study indicates that, although there may be a great deal of emphasis on the entry level for the disabled, that there are subsequent times where advancement within the system is not being properly attended.

The legislation that you have presented for consideration by this hearing I think is a very effective means of addressing that advanced stage of consideration for advancement in the system. And I find that a very encouraging prospect.

Mr. OWENS. Yes, I am specifically referring to a comment made by Senator Brooks in his written testimony. It appears that Senator Brooks has had trouble getting here, but he did forward his testimony prior to the hearing. He states: "They wanted jobs, but our programs were not structured to meet their needs. Our program was structured around what bureaucrats thought they needed. We were able—that is, the state legislature—to convince our colleagues that personal attendant care for working people was a good investment and put $850,000 in the state's biennial budget for this purpose."

I wondered if you know more about that and could clarify it for us.

Mr. SMITH. I will have to defer to the Senator on his comments. I apologize to you.

Mr. OWENS. Okay. Thank you very much.

Mr. Bartlett.

Mr. BARTLETT. Mr. Chairman, I would comment that Senator Brooks has such seniority in Texas state government having served in the Texas State Senate since right after the Battle of San Hacinto, that he deserves the right to use the time frame of his choice.

I might say that I know that Ashley Smith has been quite involved in employment rights and employment opportunities in the State of Texas, and I very much appreciate your testimony.

As I understand what you are suggesting is that the goal of this legislation, as it would be of state law in prohibiting discrimination, the goal is to prohibit discrimination and make sure that people can obtain employment. And you can best do that through administrative remedies and through injunctive relief where if you find a case of discrimination, an injunctive relief is that you have got to stop, cease and desist. And it seems to me your testimony is that you can best do that through injunctive relief and other administrative remedies as opposed through punitive damages and compensatory damages and the whole panoply of law suits.

As I understand your testimony, you are urging us to err on the side of administrative and injunctive relief against punitive damages and compensatory damages.

Mr. SMITH. Thank you, Congressman. That expresses very well my intention in the testimony today. And beyond that, the only other consideration that I would offer today in my testimony would be that the phase-in aspects for small business should receive some favorable consideration to the extent you deem it appropriate, in that over 80 percent of the employment in the State of Texas is attributable to what our Department of Commerce identifies as small businesses.

To the extent that the obligations can be phased in to permit them to absorb not only the difficulties of recovery of this economy, but what additional obligations might be placed on them through the legislation, we would deem that to be a reasonable pursuit to the ends of this act.

Mr. BARTLETT. Well, I think it is fair to suggest that as we extend, as we should have long ago, in civil rights protection versus disabilities, extend that to the private sector. It is fair to suggest that small employers have a year or two years, in this case, to understand what it is and to begin to understand how to make the accommodations. And it is not that we are going to let them off the hook, because we should not, but I think the EEOC and the administrative remedies, and the Justice Department will have their hands full with the larger employers for the first two years. And by phasing it in, as you have suggested, it provides for better law and for better accommodation and ultimately for disabled persons hired.

I thank the gentleman for his testimony.

Mr. **Owens**. Thank you.

Mr. Payne.

Mr. **Payne**. I do not have questions, but I would hope that most of the administrative remedies for punitive damages will not surface as a deterrent. I do not like damages either, but I do not have that much confidence just with a kind of laissez-faire attitude that many Americans possess.

Mr. **Owens**. Thank you, Mr. Payne.

I see the Honorable Chet Brooks has arrived, and we welcome him.

[Applause.]

You may proceed, Senator Brooks.

STATEMENT OF HONORABLE CHET BROOKS, TEXAS STATE SENATE

Mr. **Brooks**. Thank you, Mr. Chairman. I apologize for being late, but I think there is a wonderful irony to be observed. This is one of the only times, I believe, in my life that I have ever noticed that a person who is not disabled could not find a parking place.

[Laughter.]

I frequently find wrong people or people who are not disabled blocking the disabled person's place, but today there was no parking place for anyone. You have a very good turnout here.

Mr. Chairman, I have presented already to the committee, I have already sent to the committee a formal statement, and I will not duplicate those observations. I am very pleased that the subcommittee has come to Houston and to Texas. We have been working for some time at the state level and also in our national council state legislatures to try to deal with the problems of disabled Americans.

In our state, we are very proud of some of the advances we have made. We are very frustrated by some of the attempts we have made that are still not quite there, but I think suffice it to say we have one of the most active communities and groups of advocates anywhere in the United States and whatever successes we have been able to achieve are, of course, to their credit.

I would like to touch on about three or four issues that we are trying to deal with in our state now. We believe that the Americans With Disabilities Act of 1989 will be a landmark piece of legislation that may in itself mean more to disabled Americans now and in future generations than any other single act we have ever seen passed in the United States.

[Applause.]

It has many excellent provisions in it. It recognizes and seeks to address problems of opportunities for education, opportunities for jobs, public awareness, the problem of having just people across the country aware of problems that disabled Americans face in trying to get a chance. Access being the major barrier at all places.

You, I am sure, already heard or soon will hear of some of the advances made in Texas and in this community of Houston in trying to improve access. The latest victory that we are extremely proud of is the decision by our Houston Metro that buses that will be ordered in the future will have lifts on all of them, and they will have access for everyone.

We had for a time been trying to serve disabled Texans, and particularly disabled Houstonians, with special buses, but those special buses simply do not follow general routes, and they are not dependable as transportation if you are trying to hold or job, or if you are trying to meet a class schedule.

We believe that being integrated into the total system will be a very major improvement for our people. And there is one thing I guess we should all remember, that everyone of us in this whole nation is just one auto accident or one major virus away from being disabled, and we should always keep that in mind no matter whether we are fortunate enough not to have encountered disabilities yet in our lives.

And I am pleased that Congress is working hard to try to strengthen the Federal statutes and, of course, that will result in stronger Federal programs. We in the states are very anxious to interface with the Federal effort, to be supportive of that effect in whatever way we can, and we will even put some money where our mouth is. We will even try to get the state match necessary to get new services and new opportunities out there to our people all across the country.

[Applause.]

I think the written statement that I have presented to the committee will speak for itself. And in that I have gone into some detail about the specific legislation we have passed in recent times in Texas, about the provisions and how we are trying to implement those provisions and some areas we hope to anticipate legislation in which we may have greater improvement and greater services, greater awareness and greater access for our people.

I deeply appreciate the opportunity to be with you today, and I will certainly pleased to respond to any questions the distinguished committee members might have.

[The prepared statement of Hon. Chet Brooks follows:]

SUBCOMMITTEE ON SELECT EDUCATION OF THE U.S. HOUSE COMMITTEE ON EDUCATION AND LABOR

Testimony on the Americans with Disabilities Act of 1989

Senator Chet Brooks, Texas Senate
August 28, 1989
Houston, Texas

Thank you for the opportunity to speak to you about the Americans with Disabilities Act of 1989 currently being considered in Congress. This legislation is probably the most significant measure for people with disabilities to ever come before the U.S. Congress, and I would like to share with you my thoughts on why this legislation is so important to the people of Texas and every other state.

In the 27 years I have served in the Texas Legislature, I have seen many changes in the laws as well as in the attitudes of the public and legislative members. Awareness and sensitivity with regard to issues affecting people with disabilities have probably increased more significantly than most other issues in the health and human services realm. But we still have a long way to go to reach a barrier-free society.

In my opinion, we are fooling ourselves if we believe the issue of civil rights for people with disabilities cannot directly affect each and every one of us. Everybody is vulnerable - we are all just one car accident, one virus away from a disability. Medical advances in this country assure a growing disabled population, but our societal advances toward an integrated society are not keeping in stride.

Just as with other major civil rights issues addressed by our nation in the past, basic rights for people with disabilities have to be addressed at a national level. We cannot effectively piece these protections together state by state, person by person. Routinely my staff and I hear personal stories from individuals who have gone to their boss, their grocery store, their bank, and by requesting or demanding, have gained access to fundamental services necessary in every day life. There are even more stories of frustration when such efforts are unsuccessful or when initial successes are only met with yet another obstacle. This method of change is a never ending process, and, an ineffective approach toward broad, societal changes.

Can you imagine where we would be today if we had accepted such a piecemeal method of improving access to employment and businesses for minority citizens? It would be unacceptable, and we all know it. Access for people with disabilities is no different, and obviously the many individuals involved in developing this legislation have realized this fact. The Americans with Disabilities Act of 1989 gets to the heart of the essential changes needed to create a semblance of a "level playing field" for the disabled --- employment, access to public transportation and public services, access to services provided by private businesses, and access to communication systems.

Over the last 10 years in Texas, as in many other states, we have moved toward an emphasis on home-based programs for people with disabilities, and this is good. Due to a lack of community programs, many people who were capable of leading independent lives on their own or with their families were institutionalized and, consequently, unable to reach their full potential as citizens of this society. Now we are recognizing that home-based services are really not enough. We need to take another step to actively help more people with disabilities move out of the home environment into the workplace.

A perfect example of how our system of human services sometimes stops short of this ultimate goal was demonstrated during the past legislative session in Texas when the Senate Finance Committee took testimony about personal attendant care from people in independent living programs. They told us the income guidelines to receive help from the Texas Department of Human Services were so restrictive that anyone with employment, no matter how minimal, was ineligible to receive attendant care. We had created a real "Catch 22" situation which virtually guaranteed a life of total dependency for many of these individuals. They wanted jobs, but our programs weren't structured to meet THEIR needs --- our programs were structured around what bureaucrats THOUGHT they needed. We were able to convince our colleagues that personal attendent care for working people was a good investment and put $850,000 in the state biennial budget for this purpose.

Now, some of these individuals can go out into the community to seek employment. But without the same basic services available to people without disabilities, can they really compete for jobs? What if public transportation, communication systems, or employment sites are inaccessible? What if they face discrimination from employers who ignore the capabilities of the individual because of years of stereotyping people with disabilities as helpless? These are the reasons the bill we are discussing today is of utmost importance.

The way I see it, MOBILITY is the key. We live in a very mobile society. In order to move up in a job or sometimes to even keep a job, people may have to move their residence. However, if a paraplegic in Austin has the opportunity for a promotion in San Antonio, she is out of luck if she is dependent on the regular public transit system to get to her job. She can schedule a special public transit vehicle, but what if her work hours are irregular or don't coincide with the limited availability of these vehicles? To some extent, this is also true in Houston --- but not for long due to some very significant gains made here recently to make public transit accessible.

Access to communication systems is also essential today to remain gainfully employed. Last session we passed legislation creating a statewide message relay system for the hearing and speech impaired. This is real progress for our state and we should experience a great deal of economic development as a result. However, Texas legislators can only address intrastate telephone access. Congress can assure access for all U.S. citizens within each state and between the states.

The point is that it shouldn't matter if you live in Houston or Austin or Texas or New York. People with disabilities shouldn't have to worry about whether their new job is taking them to an "enlightened" community with local accessibility ordinances or state laws that have removed unfair barriers. They should be able to move with their job or family anywhere in this country and KNOW basic rights and accessibility in the community are available to them. Federal legislation is the only way to ensure such uniformity.

It also shouldn't matter HOW a person became disabled. The cause of a disability, whether it be from a virus, personal negligence, or heredity, has no relevance when it comes to guaranteeing basic individual rights. Take, for example, the current controversies about anti-discrimination measures for people with Human Immunodeficiency Virus (HIV), which leads to AIDS. The President's Commission on AIDS and the Texas Legislative Task Force on AIDS, both bipartisan committees, found discrimination to be at the root of service delivery problems for people with AIDS. The federal government recognizes AIDS as a disabilitiy in determining medical eligibility for Social Security programs. Yet, many lawmakers, both at state and federal levels, insist on excluding people with AIDS or HIV from civil rights protections due to the ways in which HIV is transmitted. People with AIDS or HIV-related disabilities should have the same protections afforded other people with disabilities. The Americans with Disabilities Act would bring anti-discrimination laws in line with this point of view.

Legislators often complain about people who are too dependent on government. It's a big issue in our state legislature, as it is in Congress. In order to do something constructive about such "dependency", those of us in government must LISTEN more carefully to the people affected by our public policies. If we would just open the doors for people with disabilitites, they would go through them. All they are asking from government leaders are assurances that obstacles to their self-sufficiency are removed so they can lead independent, productive lives. The Americans with Disabilities Act of 1989 will go a very long way toward this goal and I urge you and your colleagues to enact it into law.

Mr. **Owens**. Thank you, Senator.

Could you substitute the mike on the end for your mike. Your mike occasionally goes dead, I'm afraid. Can you move the other mike over?

Mr. **Brooks**. Oh, this one?

Mr. **Owens**. Yes, sir.

Before you arrived, I had a question concerning your written testimony. There is a lot of concern about the personal attendant care service. You did comment in your written testimony about the state taking some steps to deal with that problem in appropriating some money.

Could you elaborate on that a little and how it works?

Mr. **Brooks**. Yes, sir. That is one of the most essential programs I think we have in place, and one that, frankly, I think that we in the states elected for a long time. Now we are very aware, much aware that in order for a person to have access to independent living and be independent, they must have some assistance in areas where they simply cannot handle all of their personal needs themselves.

The attendant care program is a vital and viable program that enables disabled persons to live independently and to take advantage of job opportunities, of education opportunities, and to become just productive and mobile members of our society. And we have tried to increase the funding to the attendant care. At times we have been victimized in our state by the ebb and tide of, of course, revenues, state revenues, similar I am sure to what you face at the national level.

We had a little misfortune in our Texas oil patch. OPEC threw a little shot at us that we are still trying to recover from in Texas as in some other states, but even despite all of those problems, I am very proud of the leadership that our Lieutenant Governor Bill Hobby, and other Texas leaders have demonstrated in hanging in there for health care and human services, including the kind of services that disabled need such as attendant care. And even in the hardest of hard times after the oil patch went flat in Texas, we were able—it took us 13 months of sessions and special sessions to do it, but we finally passed a very significant tax bill in Texas, and we were able to fund the essential services and to increase specific programs like the programs that we are so proud of, like the attendant care.

And we are very hopeful that we will have the opportunity to continue that kind of leadership and get those kind of results for years to come.

Mr. **Owens**. The $850,000 that you mention, is that matching for Federal funds, or is that a program independent on its own?

Mr. **Brooks**. Initially, Mr. Chairman, we put in state dollars to develop some programs. We also had a good cooperative opportunity with a couple of the Federal programs where we could get some match, where we could deliver those services jointly.

We have also tried to link up even private sector support where we can, and we have been successful in several parts of our state, where we could even get foundations or private companies, private corporations or individuals to join us in either pilot projects or perhaps in services for a specific targeted purpose or a particular target group.

Mr. **Owens**. Thank you very much.

Mr. Bartlett.

Mr. **Bartlett**. Senator Brooks, my commendation on your attendant care legislation. The absence of attendant care is in fact one of the primary barriers to employment for persons with disabilities. Again, it is the Catch 22. You get attendant care if you are not employed and you do not if you are employed.

Is it too early to ask for results at this point? Do you have any compilation of changes in the behavior of employment as a result of this legislation?

Mr. **Brooks**. It is probably a little premature for us to give you good hard statistical data. We are checking on that through our state agencies. We are working directly with the providers and, of course, the individuals receiving assistance.

I know personally from individuals with whom I am acquainted and work closely, that it has a very significant effect, positive effect on people's ability to get a job, hold a job, meet other kinds of commitments, and they are doing some technology training, updating of technology. If they are in a field where they need to do continuing education, all of those kinds of services are open and accessible to them.

Mr. **Bartlett**. As you obtain data, it would be helpful if you could pass them on up to the congressional level for use in other programs.

I have two comments, both of them basically related, springing off the attendant care issue. In many cases we found at the Federal level, and I know it is true at the state level also that it is not so much—what is needed is not so much the creation of a new Federal program or a new state program. It is not new appropriations. But oftentimes what is needed is to identify the barrier, and in this case in Medicaid, and change the rules of the game so that someone who is employed has—someone who becomes employed has that ability to remove that barrier.

Oftentimes what I know is true at both the Federal and the state level, and is an indication in the attendant care, it is not so much a new program as it is to remove any existing barriers of the Medicaid program.

And with that, I would like to comment that I am not certain what the state is doing at this point. But I would suggest that at the Federal level we found some years ago the bible or the blueprint that we began to use when some years ago we authorized, not just authorized, we mandated the National Council on Handicapped to prepare a report that turned out to be one of the reason that we are here today. It is called "Towards Independence."

And we mandated that the council identify that whole spectrum of barriers to independent living that were currently in Federal law, and the mandate was very, very clear. We did not ask them to come forward with new programs or with new Federal ideas or with new benefits. We just simply asked for a compilation of all of the barriers that were in current Federal laws that restricted people from full independent living.

I am only too familiar with some, on an anecdotal basis, some of the barriers in state law. ICFMMRs, for example, require medical modeling for group homes when in fact a group home is not necessarily a medical model. Oftentimes it is just a chance for people to live, and there are a number of barriers in that. One of them is disabled people living in ICFMMR are not allowed to take a vacation such as you and I would take a vacation for no particular good reason. It is just simply that is the law.

So one of the things I would like to work with you that the state may consider would be to authorize someone to conduct that comprehensive review of all of the barriers so that then you can begin to dismantle those barriers one at a time. And I commend you for the work that you and Mr. Smith have already done on that, and we look forward to working with you in the future.

Mr. BROOKS. I agree with you 100 percent. It is the removal of disincentives. The recognition and removal of disincentives probably is more important than creating new services and new programs. We know what many of the things that will work. We know they will work. We have already demonstrated they will work. We do not have to go field test them anymore. We know they will work. It is just getting people the access to those kinds of services and link them up with the providers that can help them.

Mr. OWENS. Mr. Payne.

Mr. PAYNE. Senator, I have no questions, and your entrance into the thralls of the after 27 years in the state legislature certainly answers any questions I might have. You are on the right side, indeed. With what the state legislature is doing in spite of the problems that you have currently, I would hope that this would be a model for some of the other states that are lagging behind. So I would just like to commend you and the legislature on your excellent work. Thank you.

Mr. OWENS. I would like to thank both of you gentlemen as well as all of the witnesses who appeared today. We want to thank the audience, thank all the many volunteers who helped to make this hearing possible, and thank Houston generally for its great hospitality. The volunteers that helped out at this hearing were Warren Charles, Paul Chase, Susan De Vault, Joyce Frieden, Roxy Funchess, Laurie Gerken, David Kinneson, Linda Pickle, Sally Phillips, Tom Sellers, Vickie Harris Smith, and Ellen Woodall.

The hearing of the subcommittee is now adjourned.

[Whereupon, at 11:45 a.m., the subcommittee was adjourned subject to the call of the chair.]

[Additional material submitted for the record follows.]

COMMENTS ON THE AMERICANS WITH DISABILITIES ACT HR 2273

By: W.A.Spencer, M.D. RE: Americans with Disabilities act, Houston Congressional Hearings August 28,1989

OPINION: These are the personal opinions of the author and may be supported by the appended list of references, personal and otherwise at the end of these comments.

(1) This bill is an opportunity bill because it will provide new essential opportunities for at least hundreds of thousands of persons with disability of many origins in the near future.[1] They would now be able to obtain in the community ordinary technical training or professional education, access to jobs for which they are qualified, as well as fulfillment of those civic responsibilities we all treasure as a basic human and constitutional right. This proposed bill affords an incredible opportunity to reap personal independence and productivity now going to waste. On enactment it will insure the success of medical restorative and comprehensive rehabilitation achieving the basic outcome of independent living.

Why is this bill so needed today? Now there are many barriers that prevent the disabled person accomplishing or maintaining crucial activities of daily living. For example the lack of opportunity to use affordable transportation for shopping, for timely health care services or for access to public and private community services and assistance create needless and costly dependency on others as a homebound person. Services and economic assistance then fall upon overloaded public and private agencies. Thus the absence of services and support for independent living can make it nearly impossible to attain an autonomous lifestyle with control of one's own life. Too, the alternative becomes chronic care in the hospital for the severely disabled or custodial placement in a nursing home. Sadly, the occurence of untreated and preventable medical complications may ensue and require very costly intensive and recurrent hospital care.

Eventually, severe dependancy perpetuates a young or working age person's lack of access to training or education and lack of employment opportunity. Physical and attitudinal barriers are additional contributors. This situation continually increases the expenditures needed from the person, family, community, state, and nation. Such financial losses become unrecoverable in the absence of productivity and independence. Facts supporting this situation have recently been reported in the national and local press.[2] For years this tragic progression has been experienced by hundreds of thousands of disabled persons, by professionals trying to assist them, by independent living center personnel and advocacy group members.

Those objecting to this bill are not comparing the inevitable needless public and private expenditures against the lesser costs for the removal of the physical and societal barriers as proposed in this bill. Nor is there any consideration of the great annual and aggregate lifetime economic as well as social losses to the family, the community the state and the nation!

(2) Our experience in Houston and elsewhere, has shown that access to community life is far less costly than has been projected in the estimates currently claimed by some spokesmen of business and industry.[3] They should go back and read the experience of industrial giants like IBM, CDC, XEROX and Dupont whose management found the cost effectiveness of workplace modifications and access and greater productivity achieved by so called "disabled" workers. They even demonstrated less absentiism, illness and turnover than among their "able bodied" workers.

(3) Extensive and careful studies of the Presidentially appointed and Congressionally authorised National Council on the Disabled and the President's Committee on Employment of People with Disabilities has substantiated the magnitude of this need by means of independent national surveys, reports of the National Research Council on "Injury in America", and testimony of public and private agencies and affected persons.[4] These sources also provide conclusive evidence of the beneficial consequences of a systematic approach to this great national problem[5] This proposed legislation is another great step in a path our nation has embarked upon to control disability, along with all other industrialized nations. If HB2273 is enabled as it is written it will become a true milestone in the long trail to independence for the disabled,which began after World War One. It will close the circle of cost effective Federal programs and entitlements including the Rehabilitation act of 1973 -PL9312, the Open Housing act for the disabled, the Technology Assistance act PL100407,the Civil Rights Restoration act, the Education for all Handicapped Children act PL 94142, and various other components of entitlements for research, demonstrations, technology and services in legislation for the Veterans Department, the National Institutes of Health, National Science Foundation, the Vocational Rehabilitation Administration, the Social Security Administration, Department of Defense. Of course the levels of funding appropriated may be insufficient for the magnitude of disability, but the tools exist. HB2273 should provide more evidence of the cost effectiveness of these many entitlements needing to be funded and considered as part of a whole and integral effort of our nation.

(4) Opposition to this bill may be understandable, by those who have not faced disability personally or in their own family. They may not have had to experience the full consequences of disability. Perhaps they dont appreciate the benefits returned to our nation in realization of the productive potential of the disabled person. Yet they must perceive the value of eventually controlling huge economic outlays by the public sector, private insurers, and purchasers of health and disability insurance. This is clearly a consequence of the ever increasing costs of dependency and medical or custodial chronic care. How can one fail to appreciate the way in which increased availability of rehabilitation services, technology and assistance with home support for independent living provide a powerful way to stem the tide of inexorable financial payments for disability? How tragic that industrialized countries may expect 1.5 to 2.0 dependant young and elderly for every working person in the first half of the next century.[6] How can one ignore the daily heroic efforts of even the most severely disabled persons wresting themselves from the abyss of dependency and contributing to the strength and productivity of our society? Recently, the dollar savings of eight to ten dollars realized for every dollar expended for rehabilitation services was reported by workman's compensation insurance and casualty insurance companies in actuarial experience.[7] What return on investment in our modest expenditures and entitlements for restorative medical and rehabilitative services! Studies and experiences of independent living programs continually demonstrate the much lesser cost of personalized assistance and home support than long term care in nursing homes.

We therefore are so heartened that President Bush endorsed the passage of this bill and is willing to sign it as an investment in helping to stem these human and economic losses that are so much greater than the overblown cost estimates for removal of barriers to the independence of our nation's disabled persons.

Failure to achieve the opportunities so beneficial and so needed by millions of our nations disabled persons is now unthinkable because it can be accomplished! Return on investment in humane as well as monetary terms is incredible.

The potential benefits of this legislation so offset the expense of providing access to the opportunities of resuming living again that passage of HR2273 deserves great priority in today's public agenda.
Our millions of citizens of working age who have suffered the devastating disability of trauma and disease together with those legions of older Americans who would continue to be productive and live independently as long as possible deserve no less!

Thank you for the opportunity to testify and encourage the enactment of this important contribution to our nation's disabled persons.

On 28 August 1989, a Congressional Hearing, chaired by Congressman Major Owens, was held in Houston, Texas at the Multi-Service Center on the American's With Disabilities Act. I wish to have my following testimony included into the records of that hearing.

TESTIMONY OF SALLI B. PHILLIPS, EEO SPECIALIST Salli Phillips
US ARMY CORPS OF ENGINEERS, P.O. BOX 1229, GALVESTON, TEXAS
WEDNESDAY, 6 SEPTEMBER, 1989

As we approach the 1990's it is important for us to understand and be empathetic to the needs of all our citizens, including the physically challenged. As a disabled person, I have experienced discrimination in employment, in transportation, and in access to public facilities and I support legislation like the American's With Disability Act. I also feel that it is the responsibility of the Federal Government to support and pass legislation like the American's With Disability Act, giving disabled persons access to housing, public facilities, transportation and employment. As we have experienced in the past, you can not change attitudes and prejudices but you can pass legislation that protects the rights of all citizens.

Quality of Life is a constant aspiration for many disabled people. We strive for a quality of living comparable to that of our able-bodied friends. Why should we be required to plan ahead every time we go out to eat, or to a movie, or to participate in any leisure activities? Why should we be excluded from participating in such activities? Why should we be required to take someone with us every time we go out because businesses are not accessible? Access, is this not a right that should be afforded to all citizens? Why should we not be given the opportunity to work towards a career and progress in that career? No able-bodied person would go through what a disabled person must go through because they would change the laws. Are we asking to much of Congress to pass legislation that would require businesses, who are providing services to ALL persons, to make their buildings accessible with ramps, to make their bathrooms accessible and provide accessible parking? Or would Congress instead, tell all disabled people that this burden is their own? After all, disabled persons are only as disabled as their environment makes them. Take away the barriers, and a disabled person becomes less disabled.

I pose this question to each member of the committee overseeing this legislation. If you were disabled, do you think you could perform the job you are presently doing today? And, would you, if you had become disabled early in your career, be where you are today? If you answered yes to the first question, it is because you know you are a capable person, despite any physical disability; if you answered no to the second question, then perhaps it is time for you, as a member of congress, to change the laws.

I wish to thank the committee for their time and support of this legislation.

SEP 12 1989

SEP 11 1989

On 28 August 1989, a Congressional Hearing, chaired by Congressman Major Owens, was held in Houston, Texas at the Multi-Service Center on the American's With Disabilities Act. I wish to have my following testimony included into the records of that hearing.

TESTIMONY OF SYED ZAHID, CIVIL ENGINEER, US ARMY CORPS OF ENGINEERS, P.O. BOX 1229, GALVESTON, TEXAS
WEDNESDAY, 6 SEPTEMBER, 1989

We the people, "Disadvantaged" they call us, have been discriminated against in many ways. We all know it. And it is about time for all citizens to acknowledge it. The Disability Act of 1989 is definitely a stepping stone for equality for disabled people. My hats off to you and your committee for your effort and contribution towards this legislation.

When I took an oath to become a citizen of this country, I promised to serve this country at all times and by God, I will do it and I am doing it. I am doing it by being a productive citizen, by being a member of a great American Work Force.

I believe every American, every citizen, every disabled man believes in it. But unfortunately there are restrictions (of course a silent one, not official) to hiring the disabled. That's where we need support the most. To me, an essential support for disabled people means to have a job. And in order for people with a disability to be a full time worker (of course again., if one wishes and is able to be) I suggest the following advantages be given to disabled workers in order to be successful employees:

a. A reasonable accommodation has to be made on a case-by-case basis. The factor of being hired has to be on an individual need.

b. Complete flextime, which basically means a person with a weekly salary schedule, should be able to give 40 hours of regular work in 7 days instead of 5 and his working time should be completely flexible. This is a must for disabled people. Their health, their need is not like a physically able person. That's the reason their time needs are different. If ones salary schedule is biweekly or monthly, then ones time of 80 hours or 160 hours also should be completely flex. As long as he can perform his duties and work 80 hours or 160 hours - what's the harm. I strongly think that will help a good number of disabled people to get back to full time work and off disability income.

c. When on is sick and unable to come to work, then his absence should be given a kind consideration and I suggest the following in order to keep him on payroll and on the job:

1. Leave sharing program. His co-workers should be able to donate their vacation and sick leave towards the needy.

2. Company itself should be able to sustain the leave for a period of time and if necessary put him on leave without pay but not terminate or put him on disability unless one wishes to.

3. Life and health insurance must be given to all workers regardless of disability. No one can predict death unless you are on your death bed. I have outlived many healthy people and so have other disabled people. We are not high risk people as Insurance companies brand us.

4. I also do believe the Small Business Administration should come forward with regulations to help the disabled who show interest and potential to do business. Utilization of creative minds is very important. This is particularly good because a disabled man always understands the needs of other disabled men and he will definitely be more helpful and understanding for other's needs.

The private industries, medium and large, should be able to give all the above advantages to the disabled worker. It is beneficial to the company itself, general tax payers, the government, the country, the society and definitely to himself.

We claim we are the Champion of Human Rights. Lets practice it at home. We are not asking for handouts but just to give us the opportunity to work.

I hope this "Act" levels with our dream.

I am available to work in any capacity with any committee for such cause.

SYED ZAHID

Honorable Major Owens
Chairman, Subcommittee on Select Education
Committee on Education and Labor
House of Representatives
2181 Rayburn Building
Washington, D.C. 20515-6100

Dear Congressman Owens:

On August 28, 1989, I testified during the public forum session of your subcommittee hearing regarding the Americans with Disabilities Act. This letter contains the highlights of that testimony, and it also forwards the JAMA article that I promised to send. By way of background and introduction, two of my affilliations are that I am an active member of the National Alliance for the Mentally Ill, and I am a member of the state Independent Living Council.

ATTITUDINAL BARRIERS

Persons with a chronic mental illness (CMI) constantly face enormous attitudinal barriers, due to the public's misconceptions about these illnesses. The public generally feel that the CMI are dangerous. But, in truth, as stated by the National Institute of Mental Health, persons with mental illness are about as dangerous as the public at large.

Much of the public think of these citizens as being lazy, or just not adequately motivated, incorrectly assuming that they do not even have a legitimate illness or disability. One of the major mental illnesses is chronic depression. Enclosed is a recent article from the Journal of the American Medical Association. It reports on a major study which concluded that "The poor functioning uniquely asssociated with depressive symptoms, with or without depressive disorder, was comparable with or worse than that uniquely associated with eight major chronic medical conditions."

Another misconception is to underestimate the vast numbers of persons disabled by serious mental illness. In the State of Texas, population 14.2 million, the Texas Department of Mental Health and Mental Retardation reports that there are 1.3 million citizens in the prioity population, that is, those most needing services. That is over nine (9) percent of the total!!!

Another attitudinal problem is the widespread belief that the CMI cannot be helped. Based on the work that is going on in Dallas County it appears that someone forgot to tell folks there that the CMI could not perform well in regular job situations. In May of this year I attended an awards banquet in Dallas, Texas, where dozens of these fine citizens were honored for their work records, and seven of them received recognition for working continuously for five or more years. Truly these citizens can be helped, and they can become productive, if given a chance.

JTPA FUNDING

I just want to underscore the point made earlier in the hearing by Congressman Don Payne...Job Training Partnership Training Act funding is available to those organizations serving disabled persons. However, our state Independent Living Council has noted that such organizations do not take advantage of this source of funding. So I would urge these organizations to contact the JTPA Private Industry Council in their community and apply for a grant/contract.

DISCRIMINATION AGAINST DISABLED PERSONS

Title IV of the Americans with Disabilities Act will provide redress for the type of discrimination that took place in Dallas with a program called Anchor Services. This was a supported employment program for CMI, and it occupied a suite of offices on the fifth floor of an office building. After being in operation less than six months, the building manager wrote letters and put on a lot of pressure, trying to force Anchor Services to move out...not because of any breach in the lease, but only because the clients "look strange, and they act strange, and the other tenants are afraid of them".

Thank you for giving me this opportunity to testify before your committee. I strongly urge passage of the ADA.

Sincerely,

Bill Pyle

The Functioning and Well-being of Depressed Patients

Results From the Medical Outcomes Study

Kenneth B. Wells, MD, MPH; Anita Stewart, PhD; Ron D. Hays, PhD; M. Audrey Burnam, PhD; William Rogers, PhD;
Marcia Daniels, MD; Sandra Berry, MS; Sheldon Greenfield, MD; John Ware, PhD

We describe the functioning and well-being of patients with depression, relative to patients with chronic medical conditions or no chronic conditions. Data are from 11 242 outpatients in three health care provision systems in three US sites. Patients with either current depressive disorder or depressive symptoms in the absence of disorder tended to have worse physical, social, and role functioning, worse perceived current health, and greater bodily pain than did patients with no chronic conditions. The poor functioning uniquely associated with depressive symptoms, with or without depressive disorder, was comparable with or worse than that uniquely associated with eight major chronic medical conditions. For example, the unique association of days in bed with depressive symptoms was significantly greater than the comparable association with hypertension, diabetes, and arthritis. Depression and chronic medical conditions had unique and additive effects on patient functioning.

(JAMA. 1989;262:914-919)

See also pp 907, 925, and 943.

THE POLICY and clinical impact of both medical and psychiatric conditions is increasingly being assessed not just by their prevalence and associated mortality, but by their impact on subjective patient well-being and functional status.[1-4] Estimates of that impact are used to justify funds for training, research, and service provision. Well-being, or the subjective assessment of quality of life and health, and functional status, or the capacity to perform tasks and activities, are primary concerns of patients, their families, and clinicians. Poor well-being and functioning are also of policy interest because of societal costs due to loss of productivity and any associated use of health services.[5]

The awareness that chronic health problems can profoundly affect patient functioning, and that patients treated in alternative health care provision systems might differ in the functional outcomes achieved, led to the development of the Medical Outcomes Study (MOS). Tarlov et al[6] describe the aims of the MOS and the rationale for studying patients in three health care provision systems who had one of three chronic medical conditions or depression. In this article, we present evidence that in part justifies the focus on depression, namely, that it is associated with large decrements in patient well-being and functioning. A companion article[7] addresses similar issues for the chronic medical conditions.

While the literature indicates that depression is associated with limitations in social and role functioning,[8-10] few studies have comprehensively examined the well-being and functioning of depressed patients. Herein, we describe unique associations of depression with multiple domains of well-being and functioning. We believe there is a tendency for many clinicians to view the limitations associated with depression as more subjective or of less clinical significance than those associated with major chronic medical conditions. While previous studies[11-20] have estimated associations of specific chronic medical conditions, such as hypertension, diabetes, and heart disease, with multiple domains of patient functioning, such studies have not directly compared patients with depression with those with specific chronic medical conditions. We do so herein, to provide a clinical "yardstick" of the morbidity associated with depression.

In the United States, at least half of patients who receive any mental health care receive that care only from general medical clinicians, and the remainder have at least some visits to mental health specialists.[21,22] Previous authors have reached conflicting opinions about the clinical comparability of patients treated by the two provider sectors.[23] Thus, to understand the functioning of patients with depression in any health care provision system, it is necessary to contrast these two patient groups, as we do herein.

In current clinical practice and research, there are two major paradigms for defining depression: the general phenomenon of depressive symptoms and specific depressive disorders (eg, discrete psychiatric disorders defined by the *Diagnostic and Statistical Manual of Mental Disorders, Third Edition*[24] [*DSM-III*]). While the general medical sector tends to conceptualize depression according to the former definition, much of the mental health specialty sector conceptualizes depression

according to the latter.[illegible] One of the specific goals of this article is to inform this debate by contrasting the morbidity associated with depression, as defined by these two paradigms.

METHODS

The MOS is an observational study of adults who receive care either in a group practice–style health maintenance organization, a large multispecialty group practice, or a single-specialty solo or small group practice. The MOS was designed to assess processes and outcomes of care for patients with hypertension, diabetes, coronary heart disease, or depression. This article uses baseline MOS data collected in 1986 from patients at the time of an office visit in these three systems of care in three US sites. For fuller details on the design of the MOS, see the article by Tarlov et al.[1] The three study sites are Los Angeles, Calif; Boston, Mass; and Chicago, Ill. At each site, one large health maintenance organization and several large multispecialty group practices were selected.

A clinician sample was selected to represent the specialty groups providing the majority of care to patients with the four target conditions. The groups were internists, family practitioners, cardiologists, endocrinologists, diabetologists, psychiatrists, and psychologists. Clinicians eligible for participation in the MOS (1) were between the ages of 31 and 55 years; (2) were board eligible/certified or licensed for independent practice; and (3) had direct patient care as their primary professional activity. The MOS attempted to enroll all eligible clinicians in the participating health maintenance organizations and large multispecialty group practices. The health maintenance organizations and large multispecialty group practices included 266 eligible clinicians, of whom 225 (85%) agreed to participate in the MOS.

In the single-specialty solo or small group practice sector, a multistage selection process was used. In the first stage, 2216 clinicians were initially selected by stratified random sampling from lists provided by national professional associations. Of these, 1525 (69%) were contacted. Through a series of two telephone interviews, 511 physicians were identified as eligible and agreed to a final selection interview. Of these, 298 (58%) agreed to participate in the main study. Among single-specialty solo or small group practice clinicians, participants and nonparticipants were similar in demographics and clinical training, but participants spent more time in direct patient care. Participants and nonparticipants at the final selection stage did not differ in experience with or attitudes toward depression, as assessed by a self-administered questionnaire. The total number of participating clinicians in all settings was 523.

Each participating clinician was asked to invite all adult English-speaking patients visiting the practice over a specified period (9 days on average) to complete a self-administered questionnaire (the Patient Screener). Screening occurred between March 13 and October 31, 1986. Complete questionnaires were obtained for 74% of eligible patients in multispecialty group practices and 65% of patients in single-specialty solo or small group practices (N = 22 462). To reduce respondent burden, two versions of the Patient Screener were fielded, each administered to a random 50% of patients. This article uses data from the random half of patients (n = 11 242) who completed a version that included a battery on well-being, functioning, and chronic medical conditions.

Depressive Disorder and Symptoms

To facilitate assessment of depressive disorders in such a large patient sample, a two-stage case-finding procedure was used. First, patients completed an eight-item depression symptom scale included in the Patient Screener. This scale, developed specifically for the MOS, elicits information on intensity of symptoms of depression (eg, feeling sad or crying spells) over the past week and on periods of depressed mood over the past year. Burnam et al,[illegible] using data from two independent secondary data sources, developed a scoring algorithm for the eight items (each item was weighted by its coefficient in a logistic regression predicting probability of having depressive disorder) and identified a cutoff score (.06) that has excellent sensitivity and acceptable positive predictive value for identifying persons who have *DSM-III* depressive disorder. By *depressive disorder* we mean major depression alone, dysthymia alone, or the combination of both conditions, ie, "double depression." We use exceeding the cutoff as our indicator of current depressive symptoms.

Second, patients who exceeded the cutoff score on the depression symptom scale and who were eligible for a longitudinal phase of the MOS were contacted for a follow-up telephone interview that included the depression section of the National Institute of Mental Health's Diagnostic Interview Schedule (DIS).[illegible] The DIS is a highly structured diagnostic interview that determines the presence of psychiatric disorders according to *DSM-III* criteria.[illegible] Wells et al[illegible] demonstrated that telephone and face-to-face administration of the DIS are equivalent in terms of identifying lifetime depressive disorders, and that the test-retest reliability of the DIS is acceptable for identifying a sample of depressed patients in a two-stage procedure. The longitudinal phase of the MOS was limited to patients with hypertension, diabetes, coronary heart disease, or depression who had an ongoing relationship with the MOS clinician, who could complete self-administered questionnaires, and who did not have an acute major physical condition that could severely and temporarily limit their functioning.

Among the 11 242 patients in the sample, 2467 exceeded the cutoff on the depression symptom scale. Of the 1876 who were also eligible for the longitudinal study, 1137 (61%) completed the telephone DIS interview. Those who did not complete the telephone interview had 0.5 more years of education, on average, than noncompleters ($t = 2.7$; $df = 1874$; $P < .01$; two tailed), but there were no significant differences in mean age, sex, recentness of last health care visit, or mean depression screener score (t's range from 0.3 to 1.3; each $P > .10$). We control for education in the analyses reported herein. Thus, we do not think that nonresponse on the telephone interview poses a serious bias to our results.

Those scoring above the cutoff score on the depression symptom scale were defined as having depressive symptoms. Current depressive disorder was defined as meeting all of the following criteria: (1) lifetime major depression or dysthymia, by *DSM-III* criteria (the only exclusion criterion was lifetime mania); (2) an episode of major depression or period of dysthymia during the last 12 months; and (3) no remission (ie, ≥2 months with two or fewer depressive symptoms[illegible]) since the onset of the recent episode. Helzer et al[illegible] found that the lay-administered DIS tended to underdetect true cases of major depression in persons who just missed meeting full *DSM-III* criteria, ie, those with clustering of symptoms in three rather than four Criteria B symptom groups of major depression. To enhance the sensitivity of the DIS, we modified our criteria for a recent episode of major depression to include persons with clustering in only three symptom groups. Only 43 patients entered the sample owing to this modification.

Chronic Medical Conditions

The definitions of eight chronic medical conditions are given in Table 1. Each

BEST COPY AVAILABLE

Table 1.—Definitions of Patient-Reported Chronic Conditions

History of hypertension	Patient was told by a physician, nurse, or other health care professional that he or she has high blood pressure or hypertension.
History of diabetes	Patient was told by a physician, nurse, or other health care professional that he or she has a high blood sugar level or diabetes.
Current advanced coronary artery disease	Patient was told by a physician, nurse, or other health care professional that he or she has had a heart attack, myocardial infarction, or coronary and that it occurred within the last 12 months. Or, the patient reports now having heart failure or an enlarged heart (with or without angina).
Current angina only	Patient reports now having angina, but neither recent myocardial infarction nor heart failure.
Current arthritis	Patient reports now having arthritis.
Current back problems	Patient reports now having back problems, including disk or spine problems.
Current lung problems	Patient reports now having asthma or other severe lung problems, such as chronic bronchitis or emphysema.
Current gastrointestinal disorder	Patient reports now having ulcer (duodenal, stomach, or peptic) or chronic inflamed bowel, enteritis, or colitis.

Table 2.—Definitions of Measures of Functioning and Well-being*

Measure	No. of Items	Definition	Reliability†
Functioning			
Physical (+)	6	Limitations due to health in activities such as sports, climbing stairs, walking, dressing, and bathing	0.86
Role (+)	2	Extent to which health interferes with work, housework, or schoolwork	0.81
Social (+)	1	Extent to which health interferes with social activities such as visiting friends or relatives in the past month	0.67‡
Bed days (−)	1	Number of days in bed due to health in the last 30 days	NA
Well-being			
Current health (+)	5	Perceptions of current health, such as feeling well or ill	0.87
Free of pain (+)	1	Extent of bodily pain in the past month	0.78‡

*For (+), high score indicates better functioning and well-being; for (−), high score indicates poorer functioning and well-being. NA indicates not applicable (only one version of one item).

†Based on data from the complete patient sample.[illegible] Internal consistency reliability (Cronbach's α[illegible]), unless otherwise noted.

‡Estimate based on the correlation between alternative versions of the item.

condition was assessed by one or two items in the Patient Screener. The items required a simple yes-or-no response. We also identified patients who had no chronic conditions. These patients had neither depressive symptoms nor any chronic medical condition defined in Table 1, nor any other chronic problem assessed by the Patient Screener: cancer in the last 3 years; major neurological problems; cardiac pacemaker; limb amputation; kidney disease; legal blindness; or other problem.

Sociodemographic Factors and Clinical Specialty

The Patient Screener elicited data on age, sex, education, and income. The self-designated medical specialty of the treating clinician was determined from data from professional societies and telephone interviews of the MOS clinicians.

Well-being and Functioning

The Patient Screener elicited information on six domains of functioning, defined in Table 2. A detailed description of these measures is available in the article by Stewart et al.[illegible] The measures were based on the general health status measures used in the RAND Health Insurance Experiment.[illegible] All measures except days in bed are scored from 0 to 100, with 100 representing perfect health on that construct. The "bed days" measure is the number of days spent in bed in the past 30 days.

Statistical Analysis

We used the general linear model to conduct analyses of covariance to compare the functioning of patients with current depressive disorder (the "disorder" group), those with depressive symptoms in the absence of depressive disorder (the "symptoms only" group), and those with no chronic conditions. The covariates were age, sex, education, specialty (mental health specialist vs medical clinician), presence or absence of each chronic condition, interactions between specialty and each chronic medical condition, and interactions between specialty and depression group status (current disorder, symptoms only, or no chronic conditions). For these analyses, we excluded the 1330 persons with depressive symptoms who were ineligible or refused the telephone interview, because we did not know if they had depressive disorder.

Least-squares multiple linear regression was used to estimate the unique associations of each functional status and well-being variable with depressive symptoms (with or without depressive disorder) and with each chronic medical condition. These models used the full sample. The independent variables were sociodemographic characteristics (age, sex, education, and income), specialty, each chronic medical condition, and depressive symptoms (exceeding the screener cutoff).

The SEs and inference statistics presented herein are unadjusted for the clustered sampling design. The intraclass (within-provider) correlations in patient functioning were quite small, ie, .03 to .12, and thus would have minimal effects on the results. In a sensitivity analysis, we determined that the correction was, in fact, trivial.

Because we report many significant findings in a consistent direction, a Bonferroni correction[illegible] for multiple comparisons is too conservative. We comment on results significant at the $P<.05$ level or better, but also present the actual level of significance ($P<.05$, .01, .005, .001, or .0001). We determined that our main conclusions would not be affected by a strict Bonferroni correction, which would impose a significance level between .001 and .005 for most comparisons.

RESULTS

Sample Characteristics

On average, patients of general medical providers are 48 years old, while patients of mental health specialists average 40 years of age ($P<.05$). As shown in Table 3, compared with patients of general medical providers, patients of mental health specialists are more likely to be white, more likely to be highly educated, less likely to be married, and more likely to be female. Patients of general medical providers have a relatively higher prevalence of five out of eight chronic medical conditions and a lower prevalence of back problems.

Well-being and Functioning of Depressed Patients

Table 4 presents the adjusted mean well-being and functioning of patients in each specialty group who have depressive disorder, depressive symptoms only, and no chronic conditions, based on the analyses of covariance. Out of the 24 possible pairwise comparisons (types 1 through 4 in Table 4) between the two depressed groups (one at a time) and the group with no chronic conditions, the depressed group has worse functioning in 17 comparisons and significantly better functioning in 1 comparison.

We compared patients with depressive disorder vs those with depressive symptoms only, for each type of provider sector (comparison types 5 through 6 in Table 4). Among patients of medical clinicians, those with depressive disorder have worse current health than those with symptoms only. Among patients of mental health specialists, those with depressive disorder have worse physical and social functioning and perceived current health and more bed days and bodily pain than those with depressive symptoms but no disorder.

We also contrasted depressed patients treated by the two provider sectors (comparison types 7 through 8 in Table 4). Among patients with depressive disorder, those treated by mental health specialists have poorer social functioning than those treated by general medical clinicians; but among patients with depressive symptoms but no disorder, patients of general medical providers have worse physical functioning and more bodily pain and days in bed.

Depressive Symptoms Compared With Chronic Medical Conditions

We estimated the unique associations of each functioning indicator with any depressive symptoms (with and without depressive disorder), relative to comparable associations with specific chronic medical conditions. Table 5 presents the mean score on each functioning indicator, estimated from the multiple linear regression models and adjusted for all covariates in the models.

As shown in Table 5, the physical functioning of patients with depressive symptoms, other factors being equal, is significantly worse than that of patients with four of the chronic medical conditions; it is significantly better than that of patients with current advanced coronary artery disease and current angina only. Patients with depressive symptoms have significantly worse social functioning than patients with each of the eight chronic medical conditions. Role functioning is significantly worse for patients with depressive symptoms than for patients with six of the chronic medical conditions; but it is significantly worse for patients with current advanced coronary artery disease than for those with depressive symptoms. Patients with depressive symptoms have significantly more recent days in bed, other factors being equal, than do patients with six of the chronic conditions; but they have fewer days in bed than patients with current advanced coronary artery disease. Current health is significantly worse for the depressive symptom group than for those with each of the conditions except the two heart conditions. Patients with depressive symptoms have significantly more bodily pain than do patients with five of the medical conditions, including angina only. They have significantly less pain, other factors being equal, than do patients with current arthritis.

We found no significant interactions between depressive symptoms and any of the chronic medical conditions, across all dimensions of well-being and functioning. Thus, depressive symptoms

and chronic medical conditions have additive associations with patient functioning and well-being.

COMMENT

We have demonstrated that depressive disorder and depressive symptoms in the absence of disorder are associated with limitations in multiple dimensions of patient well-being and functioning when compared with patients with no chronic conditions. We further conclude that the functioning of depressed patients is comparable with or worse than that of patients with major chronic medical conditions. The only chronic conditions having associations with functioning comparable with those of depressive symptoms were current heart conditions.

We found that the effects of depressive symptoms and medical conditions on functioning were additive. For example, the combination of current advanced coronary artery disease and depressive symptoms was associated with roughly twice the reduction in social functioning associated with either condition alone. Perhaps this is one reason why patients with comorbid depressive/medical conditions may be especially likely to come to the attention of physicians.[illegible] Comorbid medical conditions are also of importance because they can complicate the assessment of depression by masking or mimicking symptoms of depression.[illegible]

By clarifying the morbidity associated with depressive disorder and symptoms, our findings underscore the importance of appropriate assessment and treatment of depression across health care settings.[illegible] To the degree that such treatment improves patient outcomes in terms of functioning, patient suffering and societal costs associated with family burden, work loss, and service use may be reduced.

Is there a difference in morbidity for patients with depressive disorders vs depressive symptoms in the absence of disorder? Consistent with Klerman's[illegible] assertion, we found that patients with depressive symptoms, even in the absence of depressive disorder, had poor functioning; their symptoms were thus of considerable clinical significance. Moreover, we found that differences in functioning between patients with depressive disorder and those with depressive symptoms but no disorder were largely limited to patients visiting mental health specialists. Perhaps this is one reason why the distinction between depressive disorder and depressive symptoms may appear relatively less relevant to medical clinicians. While the two paradigms for defining depression may identify patients with similarly poor functioning, they may have different implications for clinical course or treatment response. We are now exploring these issues using data from the MOS.

We found that patients with depressive disorder who visited mental health specialists had much worse social functioning than similar patients visiting medical clinicians; but among patients with depressive symptoms only, those who visited general medical providers had relatively worse physical functioning and more bodily pain and bed days. One possible explanation for these findings is that patients select providers on the basis of how their depression is manifested. Because we adjusted our comparisons for the presence or absence of each specific common chronic medical condition, we know that the differences by specialty visited are not due to differences in prevalences of these conditions. But we did not control for differences in severity of each medical condition. Patients of medical providers could have relatively more severe medical illnesses. Similarly, the relatively poorer social functioning observed for depressed patients in the mental health specialty sector could be due to a greater severity of depression or higher prevalence of comorbid psychiatric disorders in this sector.

Our indicators of chronic medical conditions were based on patient self-reports. Stewart et al,[illegible] using physician-reported data, reached similar conclusions about the well-being and functioning of patients with hypertension, diabetes, and heart conditions, relative to a group with no chronic conditions, as those reported herein. For two medical conditions, hypertension and diabetes, our definition relied on a history of ever having the condition. By contrast, all patients in the depressed sample had active symptoms at the time of the index visit. The functioning and well-being of patients with hypertension or diabetes would probably have been worse than reported herein had we limited our definitions to active or severe disease. In the future, we will use data from the MOS to determine how severity of hypertension, diabetes, heart disease, and depression is related to the functioning and well-being of patients.

Our assessment of depressive disorders relied on the DIS. While its validity has been questioned,[illegible] no "gold standard" diagnostic assessment tool for *DSM-III* disorders exists for comparison.[illegible] The DIS was the most appropriate structured diagnostic instrument for the MOS.[illegible]

The MOS patient sample is representative of the typical visit and thus overrepresents frequent users who might have poorer functioning. These patients are of particular policy interest, however. The study is restricted to large urban cities and to particular group practices, and thus our conclusions may not be generalizable to other settings. While the response rates were moderate for some groups of clinicians and patients, especially in the single-specialty solo or small group practice sector, they were higher than expected for a study of private practices and there was little evidence of nonresponse bias. We have presented results from a cross-sectional, observational study. Thus, causal interpretations are not warranted. Depressive symptoms and disorder could result from functional limitations, as well as cause them.

Are self-reports of functioning by depressed patients accurate? Previous authors have noted that depressed patients are unrealistically pessimistic.[8] We found strong associations between depressive symptoms and bed days, which is generally considered a more concrete indicator of morbidity.[6] To further evaluate this concern, we estimated the partial correlation (adjusted for demographics) between each of the six domains of functioning and well-being and the recentness of the last health care visit (an indicator of intensity of use of health services), using data from the Patient Screener. We tested these correlations separately for patients with depressive symptoms who did or did not have a comorbid chronic medical condition. Of 12 partial correlations, 9 were significant at the $P<.001$ level and 3 were significant at the $P<.01$ level. Thus, even if depressed patients' assessments of their functioning are to some extent unrealistic, they are nevertheless of considerable consequence.

Clinicians are trained to suspect the presence of depressive disorders on the basis of functional impairments in patients, eg, social withdrawal. As a result, there may be some concern that our conclusions reflect circular reasoning, ie, depression is both defined by and associated with functional limitations. However, the *DSM-III* criteria for depressive disorders do not include indicators of limitations in the domains of functioning studied herein. Functional limitations caused by depressive disorder are considered secondary to it, rather than part of its definition.

Our findings therefore present several yardsticks by which to measure the morbidity of depressed patients: yardsticks that can be interpreted by medical and mental health specialty clinicians alike. Depression, as defined by either of two commonly used paradigms, is perhaps more like chronic medical conditions, in terms of morbidity, than has previously been appreciated.

This work was supported by grants from The Robert Wood Johnson Foundation, Princeton, NJ; the Henry J. Kaiser Family Foundation, Menlo Park, Calif; the Pew Charitable Trusts, Philadelphia, Pa; and the National Institute of Mental Health, Rockville, Md (grant MH [illegible]); and by The RAND Corp out of its own research funds. Cooperation and assistance in recruiting physicians and patients was provided by the American College of Physicians, Philadelphia, Pa; the American Academy of Family Physicians, Kansas City, Mo; the American Academy of Pediatrics, Elk Grove Village, Ill; the American Psychiatric Association, Washington, DC; the American Psychological Association, Washington, DC; and their local chapters in the MOS study sites. Specific individuals are acknowledged in the accompanying overview article.

U S Representative Steve Bartlett
House of Representatives
Subcommittee on Select Education
Committee on Education and Labor
Washington DC

Dear Representative Bartlett,

I wish to include the following, in addition to my verbal testimony at the ADA hearing in Houston on August 28, 1989:

I believe that my former employer Exxon, did not treat me fairly.

1] My supervisor (Exxon) said that I had a bad record, which was not true.

2] My supervisor would not let me have a TDD in my office, but the TDD was in the supervisor's office so they could answer and decide to let me use it or not.

3] The supervisor who made false statements about my work records was moved to Personnel and later layed off.

I have not been able to get another job and I don't believe TRC tried to find me one.

Sincerely,

Karen Michel

The Honorable Major Owens
Chairman, House Subcommittee on Select Education
114 Cannon House Office Building
Washington D. C. 20515

Dear Congressman Owens:

I understand you will be hearing testimony on the Americans With Disabilities Act on August 28, 1989 in Houston. I would like to express my support for this piece of legislation.

This is a very important issue that I feel should be addressed immediately. I appreciate your consideration of my opinion, and thank you for your time.

If I can be of service on this or any other matter, please let me know.

Sincerely,

Mike

HEARING ON H.R. 2273, THE AMERICANS WITH DISABILITIES ACT OF 1989

WEDNESDAY, SEPTEMBER 13, 1989

House of Representatives,
Subcommittees on Employment Opportunities
and Select Education,
Committee on Education and Labor,
Washington, DC.

The subcommittees met, pursuant to notice, at 10:10 a.m. in Room 2175, Rayburn House Office Building, Hon. Major R. Owens [Chairman] and Hon. Matthew G. Martinez [Chairman] presiding.

Members present: Representatives Owens, Martinez, Payne, Jontz, Bartlett, Ballenger, Smith, and Gunderson.

Staff present: Eric Jensen, staff director; Terry Deshler, legislative assistant/clerk, Employment Opportunities Subcommittee; and Bob Tate, Select Education Subcommittee.

Chairman **Martinez**. Let me have your attention. I am calling the meeting to order. I am joined in the panel at this time by the chairman of the Select Education Subcommittee. Let it be announced at this time that this is a joint hearing of the Subcommittee on Select Education and the Subcommittee on Employment Opportunities.

The hearing today is on the Americans With Disabilities Act. We will receive testimony on a bill that works toward eliminating the discrimination against the physically challenged. We are hopeful that its passage will enfranchise the rights of disabled in this country so that they might participate in the productivity of our country and become self-reliant.

However, we cannot take for granted the passage of this bill as there are obstacles. There are many in our communities who are naturally fearful of any cost or inconvenience this new law will create. However, the fact is that many states already provide this protection.

This bill enables the whole country to be governed under the same conditions as those states that have had the foresight to pass such legislation.

We then enfranchise the rights of all our citizens. Let me point out that as a nation, we should not be proud that it has taken us so long to work towards ending systematic oppression of the disabled in our country.

I am pleased that here in Congress we have finally gathered enough will and support to make an attempt to end the shunting of our nation's citizens to the limbo of non-participation and dependency.

It is time that we stop this wastefulness. There are more than 43 million disabled in our society who are idle and dependant. With the American Disabilities Act, we can make a difference in their lives. Failure to take advantage of this opportunity robs our nation of a productive and enthusiastic human resource base.

This wastefulness not only burdens society with support payments, but perpetuates a tragedy of denying the aspirations of individuals who seek self-sufficiency and wish to join the mainstream of our society. By passing the Americans With Disabilities Act and insuring equal access to opportunity, we will have broken down one of the final barriers in our society to equal opportunity.

The Americans With Disabilities Act is a civil rights priority whose time has come. Now is the time to give to the disabled of our country back their personal and professional dignity.

I look forward to the testimonies given today. I will now turn to Major Owens for his opening statement and turn the meeting over to Major Owens.

Chairman OWENS. Mr. Chairman, I have no opening statement. I would like to note the fact that these hearings are being held at a time when we should be applauding the wisdom of the President and the leadership of the Senate.

Also, I would like to applaud the fact that the full Senate has passed a bill. We in no way, with these hearings, wish to impede the progress of the bill. We only offer these hearings as an opportunity for the people to add their wisdom so that we may be able to refine the bill in some way and make some adjustments which are important and productive. But, by all means, we want to move the bill and move it rapidly.

We want no impediments. We want no opportunities for those forces—Neanderthal forces out there which are gathering—to in some way decimate the great qualities of the present Senate bill.

So, without any further comment, I want to welcome our first witness, Mr. Evan Kemp, the Commissioner of Equal Employment Opportunities Commission. Mr. Kemp.

STATEMENT OF EVAN KEMP, COMMISSIONER, EQUAL EMPLOYMENT OPPORTUNITIES COMMISSION

Mr. KEMP. Thank you, Mr. Owens. I am here today to talk about employment discrimination against people with disabilities. Twenty-six years ago, I was entering my last year at the University of Virginia Law School. I signed up for interviews with 39 of the top law firms in the country.

I had 39 interviews and 39 flat refusals. Several told me that the reason I was not being hired was that I was disabled.

Chairman OWENS. Could you talk just a little bit louder, Mr. Kemp?

Mr. KEMP. Others said that I wasn't hired because they feared that I would be discriminated in air travel. It was the most traumatic experience of my life and I found it devastating at that time.

Because of my uncle who was the late columnist, Drew Pearson, I did secure a job with the Internal Revenue Service. I started in

October of 1964 as a GS-5. Within less than seven years, I was a GS-15.

In 1971, I broke my leg because I was denied an accommodation, a very minor accommodation, at the Securities Exchange Commission.

It was interesting that I had the same degree of weakness I had before I broke my leg, but after that others perceived me quite differently. I was considered severely disabled afterwards because I had to use a wheelchair. The way I define "severely disabled" is a disability that able-bodied people think is so bad that they would rather be dead than have that disability.

I never got another grade increase at the SEC until they advertised for a job as a supervisor. I was told that I couldn't apply for a supervisor position because I was in a wheelchair. In 1977, I sued the government for denying me a supervisory position on that basis and won that case. In 1980, I left the government to become executive director of the Disability Rights Center.

There are several things that I notice even today that I consider to be discriminatory. One is that when people meet me, they don't assume that I work or have a job. It surprises them when I tell people that I am a commissioner at the Equal Employment Opportunity Commission. They say, "Gosh, I didn't realize that was a part-time job. Do you meet four times a year?"

The other thing that I find rather shocking is that people do not listen to people with disabilities. They assume that they are mad at the world, that they haven't adjusted to being disabled, et cetera.

I think I can illustrate it with a couple of issues that have come before Congress in the last year. First, the question of paratransit. If people would listen to what disabled people say, would look at the studies, it wouldn't be a controversy.

Paratransit does not work for mainstreaming disabled people. It has never worked for getting people to a job. It is great for getting people to a doctor's appointment once a month, maybe to a shopping center, but it cannot work to mainstream people with disabilities.

If you talk to any disabled person, whether employed or not, they will tell you the same thing—people do not listen to disabled people.

Another example is that the first politician who listened to me, and I think to other disabled people, was George Bush and it impressed me so much that I left a very strong Democratic family and converted to the Republican party.

Through 1982, I had always voted the straight Democratic ticket. Since then, I have voted the straight Republican ticket.

Another illustration of not listening to disabled people is my experience with wheelchairs. I ended up in a wheelchair after I broke my leg at the SEC and I found that it didn't meet my needs.

I gathered the information that was used by the Justice Department in an anti-trust suit against Everst & Jennings. The U.S. government won that case in 1979, but there was no second, no rival to Everst & Jennings.

I got a group together and we purchased a run-down, second-rate wheelchair company. The only thing that we did differently is that we listened to disabled people.

Today that wheelchair company is the leading wheelchair manufacturer in this country. We have made money every year. Everst & Jennings has not made money any year domestically since we took over Invacare.

Everst & Jennings still will not go and talk to disabled people. They are still making chairs that they think will satisfy disabled people, but which don't.

I think in closing I'd like to say that the ADA is a monumental bill. Basically, it's turning around a policy that has been dominant for a number of years, that is the segregation of disabled people into a dependency relationship.

It is saying that we want disabled people independent. We want them having control of their own lives and that is quite a statement.

I remember in one of the meetings at the White House, a person who was opposed to ADA stood up and said, "Who had the bright idea of taking disabled people out of the charity pity model and put them in the civil rights model?" I think that really explains what this bill is all about.

If I can answer any questions, feel free to ask them.

[The prepared statement of Evan J. Kemp, Jr. follows:]

TESTIMONY OF
EVAN J. KEMP, JR., COMMISSIONER
U. S. EQUAL EMPLOYMENT OPPORTUNITY COMMISSION
BEFORE THE HOUSE SUBCOMMITTEES ON SELECT EDUCATION AND EMPLOYMENT OPPORTUNITIES

SEPTEMBER 13, 1989 AT 10:00 A.M.

I am here today not as a Commissioner of the U.S. Equal Employment Opportunity Commission, but as a person with a disability. I am 100% for the Americans With Disabilities Act. But there are those who ask "Does it make economic sense to integrate disabled people into society?" Other people inquire "How many disabled people are there really?" While others ask "Does it really matter? Isn't medical science going to cure most disabling conditions?" Both disabled people and nondisabled and politician and nonpoliticians have all asked these questions many times.

To answer these questions and others, I have found it necessary and helpful to have a philosophical framework to work from. I would like to share it with you.

The disability rights movement addresses the problems of all our citizens who are different in some respect from what society considers to be an acceptable American: the 28 year old, 5'10", 160 lb, male WASP with no physical or mental impairments. I believe that the problems encountered in employment, education, and access to transportation and other public facilities by the physically and mentally disabled are but newsworthy examples of the real, but private, frustrations many of our nondisabled citizens face in these same areas every day.

The disability community seems at times to be a cacophony of voices. Beneath the clamor and confusion there is a common philosophical thread which unites the disabled and places them in the vanguard, in calling for modifications and adjustments to our technology and institutions, in order to make them work for all Americans. Opening society will improve the quality of life not only for the disabled but for all our people.

Moreover, our country will be increasingly less able to afford our present welfare and support systems for the disabled. They often foster dependence instead of independence. The desire of disabled people to be integrated into society, and the need for social programs to serve only the truly needy, are each advanced by the independence movement of disabled people.

The mythical American made the United States the strongest economic power in the world. Henry Ford made one automobile to fit the mythical American and employed mythical Americans to build it.

At the height of our industrial revolution, we were so enamored of the mythical American that we forced 15% of the population that was left-handed to become right-handed. With mass production, it was more economical to make all right-handed scissors than to manufacture 85% for the right-handed and 15% for southpaws. Those Americans who deviated too far from the mythical American were excluded from society and sent to special schools, sheltered workshops, institutions, or kept at home in the closet. There was a cost to society in excluding people who were different, but it was minor in comparison to the economic benefits our industrial era brought us. By the 1980s, one dollar in every 12 that the Federal Government spent was a direct payment to a disabled person or to a disability program. What had started out as a minor cost had escalated into a major drain on our economy.

But the new economic era described by Toffler, Nesbit, and others, no longer needs the model or concept of the mythical American. Products and jobs can be tailored to the individual. Disabled people can be employed by the new high-tech industries which are beginning to dominate so much of our society.

For the first time in memory, the jobs are there for disabled people. But the biggest barrier disabled people face in securing these jobs is attitudinal. The cost of these attitudinal barriers is immense. The cost to society of excluding just those disabled people of working age is estimated by the U.S. Department of Labor to be $300 billion a year.

Many transit systems installed escalators when building their facilities. Escalators can be dangerous. There are 60,000 reported injuries a year on escalators in the United States alone. Half of the people over 45 have sight problems that make escalator riding dangerous for them. They use or are in need of bifocals. Children who use escalators are at a high risk, especially in the winter time.

Elevators are available for the disabled. Unfortunately, they break down often and at a rate the general public would find intolerable. For example, many elevators in the District of Columbia Metrorail system "are not operational because they have broken down and have not been repaired in a timely manner." Paralyzed Veterans of America v. Washington Metropolitan Transit Authority, No. 776-72-LFO, Slip op. at 1 (D.D.C. Oct. 19, 1988).

When these systems were designed, if they had been designed for all ages and not just for the mythical American, there would be escalators for less than half the people in our society, and elevators for the majority of people--those over 45 with sight problems; for the elderly; for children; for pregnant women; for adults with strollers; for people using wheelchairs; for those with mobility or grip impairments; and for people who are subject to seizures. The list goes on and on.

I would like to make three points. First there is an immense cost to society of excluding disabled people. Further, medical science is not going to cure disability. Medical science has yet to cure the lasting effects of most disabling conditions. In fact, when medicine is properly practiced, many more lives of critically injured people are saved, resulting in more people with disabling conditions.

And lastly, we as a society have to acknowledge the fact that the disabled are not just a small, identifiable, and vocal group. Any of us could become disabled. We have to acknowledge that 51.9% of us can become pregnant; 100% of us have been children; and many of us will be elderly.

We have to stop thinking of disability as a charity or a soft news issue. It is an issue for all ages, for all of us.

Chairman Owens. I would say that person at the White House asked the right question. He understood that it was a bright idea.

Mr. Kemp. No, he didn't approve of it.

Chairman Owens. I yield to Mr. Bartlett for an opening statement and for questions.

Mr. Bartlett. Thank you, Mr. Chairman. I do have a couple of comments and then it will lead into question, Mr. Kemp of you. First, I want to say to Commissioner Kemp how much I admire his work and his leadership on this legislation.

The legislation has been a long time in coming. I have shared with others in the past that I reached the conclusion, a tortuous conclusion from one who has never been a fan of new Federal laws, but a conclusion, nevertheless, about a year ago that there is today and has been for some time a need to extend civil rights protections to persons with disabilities.

I am glad to see that it looks like we are going to be able to achieve that in this session of Congress. Having said that, my second conclusion was that the version of the ADA as introduced in the House and in last year's session was replete with overstatements and overdone and did a good deal more than extend the civil rights protections to persons with disabilities.

The good news from that is that the President and the Senate concluded some non-political but very intense and substantive discussions and negotiations on what should be in a bill that extends civil rights protections to persons with disabilities. In essence, and this is oversimplifying it, but in essence, they concluded that for purposes of employment, the Congress would extend the 504 protections to everyone in the private sector after a certain threshold for small business and for purposes of public accommodations we would extend the Civil Rights Act of 1964 protections with obvious requirements of modifications based on the uniqueness of disabilities and undue hardship and reasonable accommodations and such that are well-established in law.

I have just been told that I couldn't be heard in the back, so I only know a little bit of sign, so I probably will speak louder then.

The Senate-passed bill was, in fact, the result of rather intense negotiations by all parties. It is not a watered-down version, in my opinion. It is a version that does accomplish the goal which is extending those civil rights protections.

The Senate-passed bill, in my judgment, gives the Congress and the United States the opportunity to pass this law, to pass a bill into law, and make it stick, and make it work. Thus, I would have several admonitions.

First, I think the House bill, as introduced, has been helpful in moving the process along. At this point, my conclusion is that we should then begin to deal with the Senate-passed-bill as the mark that we then work from.

I have never been one, as a legislator, to believe that any bill is perfect and, therefore, I think everyone on each of the committees should have the opportunity to amend or alter the bill as it comes through the committee obviously with the recognition that any alteration, major alteration, has to be careful to make sure that it doesn't drive one of the other members of the coalition away from the bill.

So, the alterations I would be thinking of would be areas in which all sides could generally agree that there was a semicolon in the wrong place or that we used a set of words that were different than what we intended.

For example, the Senate passed a bill, that as I recall opposes the direct threat or safety to the public or consumers in the case of an exception. One might want to convert that to significant risk language as in the Arline decision, and I am not suggesting when I say we do that, I would just suggest that would be the nature of the types of alterations that we would make.

I do have a couple of specifics and let me ask them in a form of a question. That is really the first. Mr. Kemp, in your knowing everything you know about Congress and the substance of all of the legislation, would you recommend that we use the Senate-passed bill as a mark to proceed from or would you recommend that we use the House bill, the introduced bill, as a mark or something in between?

Mr. **Kemp**. I would recommend the Senate bill. ADA has gone through a lot of different stages. The first ADA was introduced in April of 1988. It was quite different than the bill that was introduced on May 10th of this year and the bill that came out of the negotiations between the Senate and the White House is quite different from the bill that was introduced in May.

I think that it does represent the hard work of a group of people in the Senate and the hard work of a group in the White House. I think this is the first bill concerning disabled people that has been taken seriously by Congress and by the White House.

The President set up a working group in March of this year to include most of the departments and agencies in the Federal Government. You had to be an assistant secretary or above to attend.

This group learned about the ADA, learned about mainstreaming disabled people in society and learned an awful lot. I think that they contributed to the compromise that came out on August 2nd.

So, I think I guess I would use the Senate bill as the mark.

Mr. **Bartlett**. Are you happy with the Senate bill in substance as well as in procedure?

Mr. **Kemp**. Yes, I think so. I don't want to be in a position of saying, "Gosh, the House should just automatically okay the bill," because I do think that the House has a duty to look at it and consider it and learn about it. I do think it could do it in a very quick time.

I remember the President of Turkey, who is a dictator at Attaturk. He wanted to westernize the Turkish language and he brought up some of the best linguists in the world to Istanbul and some said, well, it would take thirty years and some people said it would take fifty years and he said he didn't want to wait that long. He put everyone in a room and said, "You can't come out until you come up with a western language," and they did it in two weeks.

I think that the House could really look at this bill, really consider it, really understand disability, and have a decision by the end of this month.

Mr. **Bartlett**. So, it is your conclusion that we can proceed faster, significantly faster, if we proceed from the Senate——

Mr. **Kemp**. Yes, I think so.

Mr. BARTLETT. Second question, the Senate did not deal with the issue of a pre-emption, that is to say, the bill was silent as is the House on the possibility of a defendant being sued under the ADA, the Rehabilitation Act state statutes, and other legislation.

Now, conceptually, do you think that we should have some sort of a preemption section in the bill so that if you are sued under the ADA, if it is the same set of facts, then that is going to be the basis of all litigation on that subject?

Mr. KEMP. I think that the courts have handled questions like this in the past and where there is inconsistency between the ADA and state law, the ADA would be the law.

There are some states that have done a whole lot better job of mainstreaming disabled people than other states and probably their laws are a lot better than the ADA.

I don't think that we should preclude those states that want to have a higher standard.

Mr. BARTLETT. So, perhaps, not preempt state statutes, but other Federal statutes. Let me ask you specifically. Currently the bill in both versions says that ADA does not preempt 504, so that a Federal contractor would be required to comply with both.

Now, since they are both virtually identical, if not identical—the intent is that they be identical or on the same track—do you think that we should have ADA preempt a complaint or a suit under ADA, preempt a future complaint or suit under 504 or 503, based on the same set of circumstances, obviously?

Mr. KEMP. I think that the ADA is probably going to be the dominant bill in this area. I think that judges and lawyers, just like all of us, are lazy and are going to use the ADA as their model.

I think in a few years that we can speak about 504 still being in existence, still being a way to go, but most people probably would be proceeding under the Americans with Disabilities Act.

I think to clarify your first question, Steve, I don't think that—where it is inconsistent, why don't we follow the pattern that is done under Title VII of the Civil Rights Act?

If it is inconsistent, Title VII is in control. If the states have a better system, we allow that to be the dominant law.

Mr. BARTLETT. So, you would follow the Title VII preemption approach?

Mr. KEMP. Yes.

Mr. BARTLETT. All right, that is very helpful. Thank you.

The second question is one that is a new question, so I phrase it with the understanding that you may or may not have thought about it because it is one that I just uncovered or discovered yesterday, and, again, it is a relatively modest question on the Senate-passed bill.

The Senate-passed bill states as undue hardship—essentially sets the test of undue hardship for accommodation, for reasonable accommodation—sets the test of undue hardship on a per employer basis, that is, the size of the employer.

The Parental Leave Act and the Plant Closings Act—by the Parental Leave bill, proposal and Plant Closings bill—by contrast set the meaning of undue hardship on a per site basis. What that means, as I understand it, is that if a restaurant in a chain of a 1,000 restaurants, that individual restaurant could and should be

1536

required to make accommodations, so long as it didn't propose an undue hardship—so far, so good.

An undue hardship might be defined for an individual restaurant at $2,000 or $2,500 or $10,000 or some dollar amount, but an individual restaurant, if you view undue hardship as its impact on the parent company, then one could at least contemplate a million dollar reasonable accommodation at one restaurant because it is a large company even though all the million dollars would only be spent at one site.

Would you think it would productive to explore the site specific definition of undue hardship?

Mr. **Kemp**. No, I don't think so. I think the Plant Closing Bill is really talking about a particular plant that is closing, a site, so I can see the site approach there. The ADA is talking about mainstreaming disabled people.

If only the one restaurant site is required to make those accommodations, it would limit a disabled person who might be very successful as a manager and would be promoted to being district manager, but he could not get that promotion because the other parts of the company were still inaccessible to him.

Mr. **Bartlett**. I understand your answer. As I said, this is a new topic. My question may have bypassed your answer or maybe not. Let me try to rephrase it.

The question is, how do you define the level of expenditures on a company that would be regarded as an undue hardship? You can't define it in dollar amount because it depends on how big the revenue source is for that company. That is to say, building a ramp for an individual company is clearly not an undue hardship.

Building into the wall a breathing machine may well be if it is just simply one employment site. So, the question is, should you measure the size of expenditures based on the size of the employment site or based on the total revenues of the parent company?

Mr. **Kemp**. I think I understand your question, and I have always felt that until you take the economics out of employment decisions, the more severely disabled in our society won't get jobs.

Now, the Europeans passed their integration laws during the first World War in 1917. There were two basic approaches. The German approach placed a quota on each corporation.

The British approach gave the company a tax credit for any accommodation that was used. My feeling is that in a couple of years, Congress will pass a law giving a tax credit to corporations for their reasonable accommodations, so we really won't have to answer this question.

If the accommodation is too expensive for a corporation, if the corporation is anti-disability, they are going to find a way to say that this is not a qualified disabled person.

Mr. **Bartlett**. So you would expand it as much as possible then, as far as——

Mr. **Kemp**. Yes, right now, and I think that the tax credit is needed. People talk about the cost of this bill, but the one thing that we keep forgetting is the cost of excluding disabled people from society runs about $169 billion a year.

We can spend an awful lot of money before we even come close to that $169 billion.

Mr. **Bartlett**. Mr. Chairman, I have one additional, essential question, but my time has expired. I would be happy to wait for the second round if the members are waiting or ask it now. It is the chairman's choice.

Chairman **Owens**. You may proceed.

Mr. **Bartlett**. Mr. Kemp, now, the Senate passed an amendment that said that nothing in this bill can be construed to include homosexuals as a disabled group. That is the subject of some amount of controversy, at least in limited groups.

My question of you is, in your opinion, is there anything in the bill, leaving aside that amendment, if that amendment were not in there, is there anything in the proposed legislation that would include sexual preference in any back door or front door way as a disability, A, and, B, should we, regardless of your answer to the first question, should we include that exception, or that clear statement that sexual preference is not a disability under this bill?

Mr. **Kemp**. I don't think that—no to the first question, Mr. Bartlett. The second——

Mr. **Bartlett**. On the record, the answer is, there is nothing in the bill that includes, in your opinion, at all, that includes sexual preference as a disability or a protected class of individuals?

Mr. **Kemp**. Yes. I don't think there is anything in the bill that includes sexual preference as a disability.

Mr. **Bartlett**. Nothing at all, all right.

Mr. **Kemp**. I think the definition that the doctors have does not include them as being disabled or as behavior that should be considered a disability.

I think that there is this concern, because of the whole AIDS controversy, that a person that is a homosexual might claim that he is perceived as having the AIDS virus, and I think that the amendment that was added in the Senate version of the bill clearly addresses that problem.

Mr. **Bartlett**. So, if you were in our shoes, would you keep that amendment in the bill?

Mr. **Kemp**. Yes, I would.

Mr. **Bartlett**. Thank you. Thank you, Mr. Chairman.

Chairman **Owens**. Mr. Commissioner, I neglected to congratulate you on your promotion to the position of Chairman designate of the EEOC. Congratulations.

Mr. **Kemp**. Thank you.

Chairman **Owens**. Relating to that, let me ask, will the passage of the ADA bill, in your opinion, require the use of additional resources for the EEOC to enforce its provisions?

Mr. **Kemp**. It certainly will. We were asked to estimate the increased cost and we figured it would be about $27 million dollars.

Chairman **Owens**. The increased cost would be $27 million?

Mr. **Kemp**. Million dollars, yes, which does not come close to the $169 billion dollars it cost to exclude disabled people. I think that we need it quite quickly, or at least the start of that money, because there is going to be a lot to be done between the time of the passage of the law and the time that we get jurisdiction.

On every other act that has been passed, we always get behind the eight ball and we are always in a position of trying to catch up.

So, with that experience in mind, I think that Congress should be willing to increase our budget right now.

Yesterday they cut it from a $189 million dollars down to $183 million overnight, which I think is a great shame.

Chairman OWENS. You have a blueprint to make your case if the bill is passed?

Mr. KEMP. Oh, yes. We have used the Federal sector, and drew from the Federal sector and made, I think, very honest estimates of the increased cost. Twenty-seven million dollars just wasn't pulled out of the sky.

Chairman OWENS. Where did you get the $169 billion from? I have heard a variety of figures given as the amount spent annually on persons with disabilities. Is this an official figure that has some backup?

Mr. KEMP. Oh, yes, Ed Berkowitz wrote a book on disability policy and his estimate of Federal, state, and private payments to disabled people to keep them out of the work force was $169 billion. In my prepared——

Chairman OWENS. That is a combination of Federal, state, and private.

Mr. KEMP. Private. In my statement, which I hope has become part of the record, I use the Department of Labor estimate that it roughly costs society $300 billion a year to exclude disabled people.

Chairman OWENS. I know that we, for practical reasons, are talking about moving the Senate version of the bill. Would you comment on the enforcement provisions, and maybe cease to be practical for a little while and talk about what they ought to be, or what amendments might be made in the future?

Mr. KEMP. The disability community did back down on the remedies that they wanted, and I think there are fewer remedies than the original bill had, the one that was introduced on May 10th.

I think that we have got to see what happens in the next few years. If truly we are getting disabled people into the work force, if discrimination lessens in our society, maybe this is the scheme that works.

Again, you know, this bill is more a statement of policy to the whole world. It is saying, "We are not going to exclude disabled people anymore. We are not going to consider them second-class citizens. We are going to bring them into society."

It is not something that is going to happen overnight. It is going to take time. I know in my argument for this bill I said it is like changing the course of the Queen Elizabeth going across the ocean, and that going across the ocean now means going towards segregation of disabled people, keeping us in sheltered workshops, special schools, keeping us out of society.

What this bill does is turn us around toward independence, self-sufficiency, true integration, and you don't do that overnight. So, let's just wait and see what happens on the enforcement part.

Chairman OWENS. In the opening remarks of your testimony you made a very personal and moving statement. Let me ask you this. In your view, has there been any attitudinal shift on the part of the general public since the passage of the Education of the Handicapped Act, of the Rehabilitation Act of 1973; that is, a shift toward viewing people with disabilities for what they can do and not just for what they cannot do, or do you think we penetrated the public conscience?

Mr. **Kemp**. I think the younger generation has. I remember little kids would rush up to me and ask me why I was in the wheelchair and things like that and the parents would be very embarrassed and say, "You can't ask questions like that."

The people who assume that I am not working are older people, people over 40. People who assume that any opinion I have is clouded because I am in a wheelchair are people over 40. Younger people, I think, accept what I say, think that I do have a job and can work. So it is a very generational attitude.

Chairman **Owens**. Thank you very much. Mr. Jontz.

Mr. **Jontz**. Thank you, Mr. Chairman. Commissioner, I am sorry I was not present for your opening statement, but I have had a chance to read it and appreciate your testimony.

I would like to ask you two or three questions that relate to some of the concerns that have been raised by various parties, and may be raised later this morning, and get your response, based on your experience with the EEOC.

Your own personal experience, I think, puts you in a unique position to be able to respond to some of these questions, and I would like to raise them and hear your comments. One of the concerns that many have expressed about this legislation is the use of various phrases which appear in different statutes and also appear in this statute, such as "undue burden," "readily available," "reasonable accommodation," "readily achievable," "essential functions," and so forth.

What response can you make to the criticism that those words are indefinite in their meaning? What response can you make to the allegation that these sort of words just make work for attorneys and courts? As one who has experience in this area, what assurance or consolation can you give to the business owner, or the citizen, who fears the indefinite nature of words of this sort?

Mr. **Kemp**. Well, there is a history for all the words except for "readily achievable." We have had the Rehabilitation Act of 1973 for the last 16 years. "Undue hardship" is used in that, "reasonable accommodations" is used in that. Your other terms are also used there.

I think the one thing that the Act does is it asks employers to look at the disabled person as an individual, look at his strengths and his weaknesses, and look at the job that the employer wants filled and see if that person can fill the job.

I think that it is a process statute. I can be qualified for a job with one company and not qualified for a job with another company, even though its the same job. Under Title VII, that wouldn't occur. If I were qualified for one job, generally I would be qualified for the same job in different corporations. I wouldn't not get the job because the corporation was a new corporation or was in worse financial shape than another one.

So, it is basically a process that this statute comes down to. It says that the employer looks at the individual, looks at his disability, determines whether the disabled person can do that job with or without an accommodation.

If it was with an accommodation, will the accommodation—is one available? If there is one available, is it a hardship on the employer? So, this talk about it being indefinite, I think, is thinking of group approaches to things.

When you talk about the individual approach, the terms aren't indefinite. It is a revolutionary statute. I mean, it is telling people that you have got to go and look at the individual, stop looking at the group, stop having stereotypes about the groups.

Mr. JONTZ. I appreciate that answer. Let me follow up with another set of concerns that I have heard from the business community. Perhaps you have already answered the question in your first answer, but I think a lot of business people will want to know what they specifically have to do to avoid injunctions or fines or what have you. They would like to know, "Will we have to put in this sort of a ramp, or this sort of a door, or what sort of training has to be implemented?"

I guess they look at the breadth of the possible things that they could have to do, and it just seems so immense. Employers would have less fear if they knew specifically that they have to do a, b, c and d, in order to satisfy the conditions of the law. Many people very honestly and sincerely want to satisfy the conditions of the law.

Perhaps you have already answered the question by saying it really is a process that the employer has to go through, but would you respond to the concerns of the employer who says, "I want to meet the requirements of the law, but I just don't know exactly what I have to do?"

Mr. KEMP. I think this is one of the revolutionary aspects of this bill. There are no really a, b, c, d, e answers that a corporation can do. I think what a corporation has to do is to start thinking of the individual and not the group, to really make the whole employment process meaningful to both himself and the individual that he is hiring.

As a matter of fact, I think that what we do in the disability area should be done across the board. Corporations that have a policy right now of taking an individual approach to able-bodied people and have a very structured process of interviewing and determining whether to hire somebody, I think have good work records, have good records with the EEOC.

Those that take the group approach, I think, have bad employer/employee relationships. As a matter of fact, this law, if anything, I think will help corporations to make that change from bad relationships with their employees to good relationships with their employees. It probably would save them a great deal of money.

Mr. JONTZ. So, your advice to the businesses would be, rather than worry about all sorts of possibilities, look at the individual, look at your own specific situation, and, in fact, the requirements of the law will not be burdensome if you look at the individuals. Is that your response to those businesses?

Mr. KEMP. Yes, and you have to do away with your stereotypes. A person in a wheelchair just has a mobility impairment. It doesn't mean that he can't hear, can't see, can't reason.

A person that is mentally retarded can see and hear and often doesn't have a mobility impairment. Just look at the individual, and don't come to the interview with stereotypes. That is my best advice.

Mr. **Jontz**. It would be your judgment, if a business takes that approach, it shouldn't make any difference whether they are a small business in a rural community or a bigger business in a large city. It makes no difference if they look at the individual and look at the process.

The smaller business shouldn't feel like they are unreasonably burdened by the requirements of this law.

Mr. **Kemp**. Yes. Also, we have got to take in the demographics, that we are going to have an acute labor shortage by the end of this century, the early part of the next century, and the small business is the one that is creating the jobs in our economy today.

If they don't start hiring disabled people, they are going to have to go either raid other companies, use bribes to get them to come work for them, or import foreign labor. I think that this country, the real answer to it is to start to hire disabled people.

The last time we were really hired in numbers was during the Second World War, when 12 million people were fighting, and we were needed, but as soon as the war ended, we were out of a job.

Mr. **Jontz**. Just one last question, with the indulgence of the chair. Does ADA make a distinction between intentional and unintentional action by the employer, or does it make any difference? How would you respond to that question?

Mr. **Kemp**. There was an amendment, I think, in the Senate that said that if there was a good faith effort by the employer, that they wouldn't be penalized. I have yet to—though I was down in the anteroom last Thursday from 4:00 to 10:30, I am probably the last person in the world to ask what amendments were passed and not passed.

It was a very confusing seven hours, but I think there was an amendment that would differentiate between a good faith effort and a non-good faith effort at least.

Mr. **Jontz**. What would be your response to whether that is desirable or not, based on your experience with EEOC and some of the problems relating to this whole area?

Mr. **Kemp**. I think that we have to realize that it is a process, that the first determination is whether the person is a handicapped person. Then you make a determination of whether he is a qualified handicapped person.

To do this you look at his limitations and look at the job and see if he can do the job with or without an accommodation. Then you determine if the accommodation can be given or is it available, and if it is available, is it an undue burden.

So, it is a process, and I don't think that corporations which can show that they go through that process will be held liable for anything. But if they think that a person in a wheelchair is mentally retarded and has one foot in the grave and another on a banana peel and don't hire him for that reason, and don't look at the individual, then I think they should be held liable.

Mr. **Jontz**. I thank you for your comments.

Chairman **Owens**. Did Smith and Ballenger walk in at the same time? I think so. Mr. Ballenger?

Mr. **Ballenger**. Mr. Kemp, I am sorry. I was late also and missed your statement, but I read it, and became very interested in the discussion you just had because I am a manufacturer still and have some employees back home.

I was thinking to myself—in fact, Peter and I both said—you were talking about the labor shortage that was going to come in the next century, where I come from, the labor shortage is already there. Unemployment rate has been under three percent for the last two years. We are doing everything we can to locate workers

Listening to you talk, I was reminded of my plant in North Carolina. Back in the days when it was built, current laws and regulations on discrimination were not in place. The plant was built in very hilly country in western North Carolina and was built into the side of a hill.

Given the slope of the land, the office space and everything is away from the ground level. I was just sitting here thinking, I think I have discriminated ever since I built the place, but never knew I was doing it, because my office, where the employment possibilities are, is up maybe ten steps, through an airlock with double doors, and there is no way to get into that place if you are in a wheelchair.

Mr. **Kemp**. No back door?

Mr. **Ballenger**. No back door. Surprisingly, we never thought about it.

Mr. **Kemp**. So, people that come to clean your office have to bring their machinery up those ten stairs——

Mr. **Ballenger**. Yes.

Mr. **Kemp**. [continuing] and hurt their backs and other things like that? Of course, you work with compensation claims?

Mr. **Ballenger**. The EEOC has had me before them several times, and so I understand what you are talking about.

[Laughter.]

Mr. **Ballenger**. The fact that one of the positive things that may come out of this bill is the fact that some people really discriminated without even having the slightest idea that they were doing it. With a labor shortage in the future, employers may be more likely to hire the handicapped individuals. Because you know as well as I do that people in wheelchairs are much more dependable, they are more likely to show up every day, and they will do a better job.

In this particular example I mentioned, if the plant is already designed and built and there is no access for people with wheelchairs and the plant does not do any business with the Federal Government, were this bill law at the present time, would I be breaking the law?

Mr. **Kemp**. More than half of the disabled people don't need reasonable accommodations. There are the people that, you know, had cancer 30 years ago and are discriminated because of that cancer. So we really are just talking about less than half the people.

Now, it sounds like your plant would be good for most disabled people, except people in wheelchairs, and if it is not accessible, I can see circumstances where it would be an undue burden to make it accessible. I don't see why you would have to hire them.

Mr. **Ballenger**. I was just handed a list. North Carolina has a law, for Handicapped Protection Act, and it is a list of things that are necessary or not necessary—there are both sides of the coin—at least in state law in North Carolina.

I was wondering—I don't know whether you have seen this or not before.

Mr. **Kemp**. No, no, but I have visited North Carolina quite a bit. It is quite a progressive state on disability issues.

Mr. **Ballenger**. I wondered if it is possible you might look at that section of our law and get back to us as to where you think the pluses and minuses are and where we might clash as far as North Carolina law and the Federal law that we are about to pass may come.

Mr. **Kemp**. Yes, I think it is one of the states that this law really doesn't affect that much. Recently I took a vacation in Oregon, and that is an extraordinarily accessible state. They advertise that whitewater rafting was accessible to disabled people.

So, I decided to take them up on it, and they didn't blink an eye at me. It looked like they had done it a 1,000 times before. So, the bill is going to have an uneven effect across the country, and North Carolina, I think, is one of the states that is not going to be affected that much because it has had a very good record of accessibility.

Mr. **Bartlett**. Would the gentleman yield?

Mr. **Ballenger**. Yes.

Mr. **Bartlett**. I thank the gentleman for yielding because I was unclear on the answer to the original question. I want to make sure that I am clear and also it is clear on the record.

If an employer, such as Mr. Ballenger, large employer of a manufacturing plant, has an employment office where you intake prospective employees, as I understand it, this law would say that the employer would have to make that employment office accessible on a reasonable basis, reasonable accommodation, to prospective employees, including large numbers of people who would be in a wheelchair, because you don't know who wants to apply in a wheelchair as long as you are inaccessible because they don't apply.

Now, am I reading that right? This bill would say that he would have to make that, at least the employment office accessible?

Mr. **Kemp**. Yes, which is usually a very inexpensive accommodation. One thing that I have always found out, if people really want to hire disabled people, really want them to participate, the accommodations never cost much money.

If they don't want them, the accommodations go right through the ceiling. As a matter of fact, an example is at Duke University. The chapel there is accessible for a wheelchair and that ramp cost $1 million, and it is completely useless because it is made out of marble and it is as slippery as an ice rink.

Sears and Roebuck made their whole national headquarters accessible for $7,600 with TTY's, ramps, this and that and the other thing. It is hard to believe that they could do it for that cheap a price. But if a person wants disabled people, the accommodations really don't become a burden. If they don't, they always do.

I think that we have to realize that more than half the disabled people do not need accommodations. The ones that do—there have been two studies that show that most accommodations are very, very inexpensive.

Right now, with the labor shortage less than three percent, you probably are offering money to your employees if they could bring somebody to work that has a job. If you had disabled people down there, you might not have to——

Mr. BALLENGER. I can accept that, but being a person who has continuously refused to do business with the Federal Government because of the regulations you automatically get into because you do business, I would again ask the question that my fellow congressman asked: Would I be mandated by this law to do that?

Mr. KEMP. Mandated to do——

Mr. BALLENGER. To make accessible at least the personnel section of my company for wheelchair people. I am just curious the way you interpret the law.

Mr. KEMP. It does seem to me that every company that I go to or corporation, I have no problem getting into it. You might have those three or four steps, but I bet that there is a lawn there that I could go across and hand my application in.

I think that, you know, talking about where your office is, I bet there is some way that persons can get in there with the machines that are needed to clean the office.

Mr. BALLENGER. Sure. I am not saying that I wouldn't do that, but the question is, would I be mandated by the law that I would have to do it?

Mr. KEMP. Yes.

Mr. BALLENGER. Thank you.

Mr. BARTLETT. If the gentleman would further yield, and then when we get to my amendment which will apply this law to Congress, you will have to do the same thing in your congressional office, and it is about time.

Mr. BALLENGER. I agree with that a 100 percent. Thank you, Mr. Chairman.

Chairman OWENS. Mr. Smith.

Mr. SMITH. Thank you, Mr. Chairman. Mr. Kemp, I am sorry I missed your opening comment, and I guess I would like to start by not only congratulating you on your appointment, but thanking you and the administration for once again taking leadership on an issue that has cried out for leadership for many years.

I, at the risk of sounding partisan, or at least proud to have an administration that is willing to say there are issues that need to be dealt with finally and begin to deal with them, ADA being one of them, I am very pleased and proud to have that kind of leadership which calls the Congress to finally do something.

I was going to answer yes if you didn't, Cass. I see this bill as, in my mind, the biggest piece of legislation certainly since 94-142, and I am not a student of legislation.

I think we have to learn how to say there will be some disruption, and it is going to hurt a little, because if there wasn't and it didn't, then we aren't—either there isn't a problem, or we are doing everything right to begin with.

So, somehow we need to have an attitude, it seems to me, that understands that it is going to involve change, and change creates friction, and friction creates trouble sometimes, and that we are welcoming and anticipating that we are going to go through those times in trying to create a level playing field for all Americans.

I know you referred in your opening comments to the Senate version of the bill, S9-33. Would you be willing to cite just two or three of what you think are the important adjustments or points that they have reached in that bill that would commend it?

I know you have said that you think it would be a good starting point in the House. Unless you did that in greater detail than I got from the quick run-through of your testimony, could you give us three or four examples where you think the tone of that bill is an improvement in terms of developing a good starting place?

Because I see the bill we passed as a starting point. I don't see it as like the end of the job at all, any more than 94-142 is finished 15 years later. We are after a good, strong doable starting point, and I would be interested in just a little more comment on the Senate version of the bill.

Mr. **Kemp**. The most controversial part of the bill that was introduced on May 10th of this year, the ADA, was a public accommodation section, and there was give and take by both the administration, the disability community and the Senate on this section, and I think it is a fair compromise.

We have got to be able to get our hair cut, buy our clothes, get our food so we can eat, but this was by far the most controversial section. I think disabled people did compromise an awful lot in this area and on transportation and other things. From the bill that was introduced on May 10th, the thing we gave up were stronger remedies,

So I think it is an even tradeoff, and I think the disability community has gone about as far as it can go without really having a backlash.

I would like to explain, and I think your point was well taken, and maybe I was tending to minimize the disruption, that our society really was built for the mythical American. I think that the best book on disability is still Huxley's "Brave New World," which was written in 1933 as political satire. I think we went an extraordinary long ways to realize what he was talking about. I can remember in school that if you were left-handed, your left hand was tied behind your back, because it was easier to make machinery and scissors and other things for all right-handed people.

What the Disability Rights Movement is all about and what the Americans with Disabilities Act is forcing us to do is to start looking at the individuals, stop looking away from the mythical American. I think this Act is going to have a profound effect on older workers and allow them to work longer, because this is needed if our economy is to survive.

It is estimated in the year 2007 for every two workers, there are going to be two people getting Social Security, and one of those two workers is either going to be a disabled person or an older person.

So, I think it will disrupt society, but, you know, it is needed to really start including people into society because of the great exclusion of people during the industrial mass production, assembly line businesses.

Mr. **Smith**. Thank you.

Chairman **Owens**. Mr. Payne.

Mr. **Payne**. Thank you very much, Mr. Chairman. I am sorry to be late. I came at 9:30 and went back to my office, and you see what happens. You talk about disruption.

I have no specific questions. I certainly would like to compliment you, though, for all the fine work that you have been doing. I had the privilege to be with Chairman Owens and Representative Bartlett from Texas at a recent hearing in Houston, where I would imagine 500 or 600 persons showed up during the course of that hearing and we had a very thorough discussion.

Most of the issues were discussed. I was very impressed with the manner in which the hearing was organized. In fact, it was the best organized hearing that I have seen since becoming a Member of Congress. Although it has only been six months.

We do need disruption. As a matter of fact, we should have had people making representatives and senators feel uncomfortable by last year, when there was no action on the bills.

When I was younger, we used to disrupt a lot. We would block traffic and disrupt presidents of colleges who couldn't get into their offices, and I was thinking and mentioning it to Chairman Owens that maybe one day we've got to have a group of people blocking up some traffic or keeping folks from getting in so they can actually see and feel how it is to be singled out for no reason of their own.

I'm just here to say I am strongly supportive of ADA, Jay Rochlin, and some of my long-time friends. Hopefully we can get this watered-down, what I considered weak version through the door since last year I understand we couldn't get it through the door, and once we get it through the door, perhaps we can strengthen it so it can be totally meaningful so that all people will have their civil rights. Thank you.

Mr. **Kemp**. Thank you.

Chairman **Owens**. Thank you again, Mr. Commissioner. I appreciate your testimony.

Mr. **Kemp**. Okay. No more questions?

Chairman **Owens**. Oh, I am sorry. Mr. Gunderson.

Mr. **Gunderson**. Thank you, Mr. Chairman. Thank you, Mr. Kemp. I apologize for being late, but I have reviewed your statement.

One of the questions that everyone brings to our offices when they come and raise concerns is the definition of "reasonable accommodation" and "undue burden." Do you want to insert any comments for the record as to how you would articulate what constitutes "undue burden" or what constitutes "reasonable accommodation"?

Mr. **Kemp**. These are old terms. They have been around for a long time, and the courts have defined them. To determine what's an undue burden you take a number of factors into consideration. How big is the employer? What are his revenues? Does this benefit one person or does it benefit a whole lot of people? Does it benefit both non-disabled and able-bodied people?

A whole host of things are taken into consideration to determine whether it is an undue burden, and the courts, I think, have done a fairly good job in defining it.

A reasonable accommodation is what is needed to allow a disabled person to work. You look at the abilities and the disability of the individual and look at the job. Now, over half the disabled people don't need any reasonable accommodation to do the job. You talk to the disabled person about what accommodation he does need and maybe go to the state rehabilitation agency to see what accommodation is needed.

Quite often, you can find somebody that is going to pay for it right now, like the state rehabilitation agencies or others. But it is an individual process and I think that that is what scares people. We don't like to look at the individual. We would like to look at groups and say, "Gosh, you know, all wheelchair people should be repairing watches and all blind people should be making brooms in a broom factory. All deaf people should be working in printing plants."

This is just requiring the employer to take a look at each employee individually, which he should be doing, and corporations that do that with able-bodied people very, very successful and have very good employer/employee relationships.

Mr. **Gunderson**. I don't know if the question was raised earlier before I arrived, but I am sure you have heard the numerous concerns raised by people in the retail community that this is going to force them to take out many aisles of goods in their stores in order to widen the aisles, that they are going to have to lower the shelves and all this.

I would just like your comment on these concerns.

Mr. **Kemp**. The one thing that I have always found is that people who are selling things always want me to come in there. They will do anything to get disabled people into the store. Our dollars are just the same as an able-bodied person's dollars.

I did have one interesting experience. Several years ago, I went into this corner grocery store, and I was in a great hurry and as I was going back to their sandwich section, I hit a bottle that was holding up about, it looked like a 100 bottles of wine.

They all came smashing down and there was about four inches of wine kind of sloshing around on the floor and I offered to pay for it, and they said no. But I was sure that the little ramp that they had installed would be gone the next day. It is there to this day. But whenever I go in there, they always rush and say, "Well, what can I do for you, Mr. Kemp?"

[Laughter.]

Mr. **Kemp**. And they don't let me near the wine.

So, I think it is a smoke screen. The place that I have my hair cut has two little steps, and I keep trying to tell them I don't want to have my hair cut there; I should go someplace else, and he keeps insisting to have my hair cut there, because my money is just as good as somebody else's. I think it is a smoke screen.

Mr. **Gunderson**. The final suggestion in this area that has been raised is that if you will look at the plant closing legislation, and if you will look at the Parental Family Leave Act, the requirements for enforcement in both areas are based on plants or sites specific.

How would you respond to a proposal that this criteria be added to the "undue burden" determination?

Mr. **Kemp**. I think in both the plant closing and the pregnancy bills, I can see the reasons for using the per site. In disability, it wouldn't work to mainstream disabled people if you were just required to make the site accessible. That is going to delay the upper mobility of disabled people.

I think the one thing from my EEOC experience that we have not done well is had upward mobility of women, blacks and other minorities and we have got to address that, and I think taking a per site approach would hurt disabled people in upward mobility.

What this bill is talking about is mainstreaming them and it is a revolutionary bill, and it is saying, "We have got to make a society that is accessible to all," and we are going to be a happier and better and more economic society.

Mr. **Gunderson**. Fine. Thank you, Mr. Chairman.

Chairman **Owens**. Mr. Ballenger?

Mr. **Ballenger**. Could I ask one more question? Since the Congressman, my friend from Wisconsin brought up the question—North Carolina law has a statement in which "reasonable accommodation does not require," and then it has a list of seven or eight things here.

I was wondering if I could send to you and have you express an opinion as to, is it reasonable as to what they have there in North Carolina, for not what "reasonable accommodation" is, but what it is not.

Mr. **Kemp**. I would love to see it, and I will write you a letter back telling you my opinion.

Mr. **Ballenger**. Thank you, sir.

Mr. **Kemp**. Okay.

Chairman **Owens**. Without objection, could you submit that for the entire committee?

Mr. **Kemp**. I will.

Chairman **Owens**. If Mr. Ballenger doesn't mind.

Mr. **Ballenger**. No, sir.

Chairman **Owens**. Thank you again, Commissioner.

Mr. **Kemp**. Thank you.

Chairman **Owens**. Our next panel consists of Mr. Jay Rochlin, the executive director of the President's Committee on Employment of People with Disabilities; Mr. Mark Donovan, the manager of Community Employment and Training Programs at the Marriott Corporation; Mr. Duane Rasmussen, the president of Sell Publishing Company; Mr. Paul Wharen, the project manager for Thomas P. Harkins, Inc.; Ms. Arlene Mayerson, the directing attorney of Disability Rights Education and Defense Fund.

Mr. Rochlin, you may begin.

Mr. **Rochlin**. Thank you, Mr. Chairman.

Chairman **Owens**. I had neglected to state before that your written testimony will be entered in its entirety for the record.

STATEMENTS OF MR. JAY ROCHLIN, EXECUTIVE DIRECTOR, PRESIDENT'S COMMITTEE ON EMPLOYMENT OF PEOPLE WITH DISABILITIES; MR. MARK DONOVAN, MANAGER, COMMUNITY EMPLOYMENT AND TRAINING PROGRAMS, Marriot CORPORATION; MR. DUANE RASMUSSEN, PRESIDENT, SELL PUBLISHING COMPANY; MR. PAUL WHAREN, PROJECT MANAGER, THOMAS P. HARKINS, INC.; AND MS. ARLENE MAYERSON, DIRECTING ATTORNEY, DISABILITY RIGHTS EDUCATION AND DEFENSE FUND

Mr. ROCHLIN. Thank you, Mr. Chairman. I will summarize parts of that testimony that I feel are important to express today.

I am the executive director of the President's Committee on Employment of People with Disabilities, and I am in this position after 32 years in the private sector. I was with AT&T and the former Bell System, and during my last ten years with them was responsible for developing policies and programs for the employment, advancement and retention of people with disabilities throughout AT&T and the former Bell System.

I am honored to have the opportunity to address you regarding comprehensive civil rights legislation for people with disabilities. The Census Bureau issued a report, which I would like to enter, recently which identified characteristics of Americans with disabilities and which graphically and I must add tragically, details their economic status in our society today.

I think it merits special attention. It reflects that the percentage of men with a work disability fell seven percent, from 30 percent in 1981 to 23 percent in 1988, and the income of workers with disabilities, both men and women, fell also.

In a period of general economic upturn, these figures raise serious questions about the effectiveness of current Federal and state laws barring job discrimination based on disability. Discrimination against individuals with disabilities——

Chairman OWENS. Mr. Rochlin, could you give us the title of the report again?

Mr. ROCHLIN. Yes. It is the Labor Force Status and Other Characteristics of Persons with a Work Disability, 1981 to 1988, and it was released by the U.S. Department of Commerce, Bureau of the Census.

Chairman OWENS. Without objection, the report will be accepted for the record.

Mr. ROCHLIN. Discrimination against individuals with disabilities still persists not only in the critical area of employment in the private sector, but also in public accommodations, transportation, and telecommunications.

There was a Harris Poll done that reflected that top managers in private sector corporations reflected that persons with disabilities often encounter discrimination; and yet, while most Americans with disabilities remain unemployed, total disability expenditures in this country are increasing at an alarming rate, from 19.3 billion dollars in fiscal year 1970 to a 169.4 billion in fiscal year '86, a rise of more than 800 percent.

Private sector disability expenditures paid in the form of payments through insurance policies, private pensions, and indemnity claims are becoming a greater percentage of the Nation's total disability expenditures. In 1986, such private expenditures totaled $31.8 billion.

Mr. Chairman, these are societal problems this nation faces as a result of actions or inactions that discriminate against individuals with disabilities by effect as well as by intent or design.

The principal solution to these problems must be the opportunity to work at a good job. This enables people to be self-sufficient and allows them to earn protection against illness, temporary unemployment, and to prepare for old age.

Thus, we have a societal problem with a business solution, and, Mr. Chairman, this can be one of those rare "win-win" solutions.

The front page of the September 3rd Washington Post stated, and I quote: "Faced with a severe shortage of labor, local companies such as Giant Food, Marriott and American Security Bank are hiring the hard-core unemployed. For the firms, these hires are not just a matter of goodwill—they are a bottom-line necessity."

While comprehensive civil rights legislation can provide protections from employment discrimination for persons with disabilities, it will also enhance the private sector's access to an additional resource of human capital—qualified individuals with disabilities.

In his endorsement of civil rights legislation for Americans with disabilities, President Bush called for a framework that allows for maximum flexibility to implement effective solutions, bills on existing law to avoid unnecessary confusion and litigation, and attains these goals without imposing undue burdens.

The administration believes the Senate-passed version of the Americans with Disabilities Act provides an appropriate framework for moving forward.

I commend you and other sponsors of the legislation before you for your decision to use the terms "qualified individual with a disability" to describe those individuals protected from employment discrimination and "undue hardship" to define limitations on the duty to accommodate.

These terms signal an effort to provide employers the workable and familiar framework the President demanded. In addition, the concept of reasonable accommodations stands the test of flexibility, experience, and undue burdens.

Employers have practical experience with cost effective accommodations for employees with disabilities. The President's Committee operates the Job Accommodation Network, and we've seen a 42 percent increase in its use by employers seeking advice on various aspects of accommodating employees with disabilities, and 72 percent of those inquiries have resulted in the retention or placement of workers with disabilities.

There have been studies that have reflected on the cost of accommodating people with disabilities, and as a rule, they all reflect that more than half of people with disabilities are accommodated with little or no expense. But perhaps the reality of reasonable accommodation can be demonstrated by a placement that occurred in AT&T entity in Arkansas. The person involved in this placement was Tina Saenger, who is here with me today. Seventeen years ago, an automobile accident left Tina with quadriplegia. Eight years later, she was hired by AT&T to be a long-distance operator.

The building she was assigned to was accessible, so mobility was not a problem. However, Tina has limited use of her hands and arms and a metal hand splint is required to support her right hand.

In order to operate the console that she works at, she picks up a pencil with her left hand and puts it in a clasp on the hand splint on the right hand and uses the eraser end of the pencil to depress the keys of the console.

But when she went to work, there was a rule in that office that operators were not to use pencils to key. People felt that using fingers was more sensitive and using pencils could cost errors.

Well, to make a long story short, Tina has been at work there now for over nine years, and she is still using her pencil. Her performance as an operator is accurate and efficient.

When I visited her office some years ago, and in an unsolicited comment, her manager said to me, if he'd a room full of Tinas, he wouldn't have any problems. Yet, the rule prohibiting the use of pencils still exist in that office today.

Allowing Tina to use the pencil is a reasonable accommodation to the limitations caused by her disability, as required by Section 503 of the Rehabilitation Act, but as such, does not compromise the prohibition against the use of pencils. But I must admit to you that when I was there, I suggested that since Tina did so well using her pencil, that maybe performance could be improved in the office by letting all the operators do the same.

But consider the economic impact of that simple accommodation. It enables Tina to have a job which pays well. She owns both a home and a car and supports her mother in addition to herself.

The alternative is no longer acceptable. We should not spend our tax dollars to support someone who is able to be an independent and productive taxpaying citizen, particularly when we could do so easily.

Small businesses have demonstrated ingenuity in reducing the relative costs of accommodations through such innovations as accelerated depreciation schedules for equipment purchases and subsidizing personal equipment of employees.

In Ohio, eight businesses have formed a consortium which allows the pooling of resources for disability management services. The consortium allows a level of flexibility in job restructuring and reassignments and the use of professional rehabilitation personnel who otherwise would be unavailable to small or moderate-sized businesses.

The payoff is in a reduction in the disability expenditures I mentioned at the beginning of my statement and the availability of a qualified work force.

While I no longer speak for private sector employers, I continue to be an employer of people with disabilities. Two-thirds of my staff at the President's Committee are persons with disabilities, so I continue to experience firsthand the accommodation process and also to benefit from the outstanding contributions persons with disabilities make to the role and mission of the President's Committee.

I believe employers are willing to make the investments necessary to put individuals with disabilities to work and to support fair and workable civil rights legislation that will guarantee them equal employment opportunities. The Harris Poll of employers supports that.

We must all recognize, however, that eliminating discrimination in the employment area will not solve the coming national labor shortage or the enormous problems people with disabilities must face everyday.

In order to provide meaningful protections to individuals with disabilities as well as to assure the availability of this segment of the work force to employers, civil rights legislation must be comprehensive.

It must address all the barriers to the independence and integration of people with disabilities into American life. Any break in the link in the chain that connects individuals with disabilities to the work place or prevents them from functioning independently creates a barrier that many times cannot be bridged.

It makes little sense to protect an individual from discrimination in employment if, for example, they have less than adequate accessible public transportation services. We have conducted surveys in 45 communities over the last seven years, and, consistently, inaccessible transportation has been identified as the major barrier, second only to discriminatory attitudes.

Mr. Chairman, just as business looks at the bottom line, so must we all. As I see it, the bottom line in passage of comprehensive civil rights legislation for people with disabilities is: For business, access to a qualified labor force and to a largely untapped group of consumers.

For individuals with disabilities: dignity, pride, and an improved quality of life, and, finally, independence. And for the Nation, a renewal of our commitment to equality for all and a contribution to the human spirit.

Mr. Chairman, the President's Committee stands ready to assist business in implementing the mandates of this comprehensive civil rights statute and other agencies and organizations, both public and private, are equally eager to share their expertise.

As our previous experience with bringing new classes of repressed people into the social and economic mainstream of society has demonstrated, the returns to the Nation will be bountiful.

Thank you, Mr. Chairman.

The Secretary of Energy
The Secretary of Education
The Secretary of Veterans Affairs
The Chairman of the Equal Employment
Opportunity Commission

The Administrator of General Services
The Director of the Office
of Personnel Management
The Director of the United States
Information Agency
The Postmaster General

Mr. Chairman, my name is Jay Rochlin. I am the Executive Director of the President's Committee on Employment of People with Disabilities. My current position follows 32 years with AT&T, the last ten of which I developed policies for AT&T and the former Bell System for employment, retention and advancement of people with disabilities.

I am honored to have this opportunity to address you regarding comprehensive civil rights protections for persons with disabilities.

In a report just released in July, the Bureau of the Census identified characteristics of Americans with disabilities which graphically, and I might add tragically, details their economic status in our society. This new Census report is so important, it merits special attention.

Here are some of the alarming findings:

A) The percentage of men with a work disability working full time fell 7 percent from 30 percent in 1981 to 23 percent in 1988.

B) The income of workers with disabilities dropped sharply compared to other workers. In 1980, men with disabilities earned 23 percent less than men with no work disability, and by 1988 this had dropped to 36 percent less than their counterparts.

In 1980, women with disabilities earned 30 percent less than women with no disabilities, and by 1988 this had dropped to 38 percent less than their counterparts.

In a period of a general economic upturn, these figures raise serious questions about the effectiveness of current federal and state laws barring job discrimination based on disability.

The editor of the Salt Lake City's Deseret News poignantly summarized the meaning of the census findings. The August 30th editorial said, "When it comes to helping the handicapped, America has slipped backward during the 1980's when we should have been making progress."

Discrimination against individuals with disabilities still persists not only in the critical area of employment in the private sector, but also in public accommodations, transportation, and telecommunications. Seventy-five percent of top managers in private sector corporations surveyed in a 1986 Harris Poll feel that persons with disabilities often encounter discrimination from employers.

Yet, while most Americans with disabilities remain unemployed, total disability expenditures in this nation are increasing at an alarming rate: from $19.3 billion dollars in fiscal year 1970 to $169.4 billion dollars in fiscal year 1986 -- a rise more than 800%.

Private sector disability expenditures, paid in the form of payments through insurance policies, private pensions, and indemity claims, are becoming a greater percentage of the nation's total disability expenditures. In 1986, such private expenditures totaled $31.8 billion.

These, Mr. Chairman, are the societal problems this nation faces as a result of actions or inactions that discriminate against individuals with disabilities by effect as well as by intent or design.

The principle solution to these problems must be the opportunity to work at a good job. This enables people to be self-sufficient and allows them to earn protection against illness and temporary unemployment, and to prepare for old age. It follows, then, that helping people to work is in the short and long-term interest of society of a whole.

Thus, we have a societal problem with a business solution. And, Mr. Chairman, this can be one of those rare "win-win" solutions.

The Hudson Institute's Workforce 2000 and Opportunity 2000 concluded that "(b)usinesses will be able to satisfy their labor needs only if they successfully confront... barriers and empower individuals presently outside the economic mainstream to take advantage of meaningful employment opportunities."

The front page of the September 2nd Washington Post stated: "Faced with a severe shortage of labor, local companies such as Giant Food, Marrriott and American Security Bank are hiring the hard-core unemployed. ...For the firms, there hires are not just a matter of goodwill--they are a bottom-line necessity."

While comprehensive civil rights legislation can provide protections from employment discrimination for persons with disabilities, it will also enhance the private sector's access to an additional resource of human capital --- qualified individuals with disabilities.

Right now, I would like to concentrate on your efforts to provide individuals with disabilities the same employment protections enjoyed by others. In his endorsement of civil rights legislation for Americans with disabilities, President Bush called for a framework that allows for maximium flexibility to implement effective solutions, builds on existing law to avoid unnecessary confusion and litigation, and attains these goals without imposing undue burdens. The Administration believes the Senate-passed version of the Americans with Disabilities Act provides an appropriate framework for moving forward.

Mr. Chairman, you and the other sponsors of the legislation before you are to be commended for your decision to use the terms "qualified individual with a disability", to describe those individuals protected from employment discrimination, and "undue hardship" to define limitations on the duty to accommodate. These terms signal an effort to provide employers the workable and familiar framework the President demanded.

In addition, the concept of reasonable accommodation stands the test of flexibility, experience and undue burdens. Employers have practical experience with cost-effective accommodations for their employees with disabilities. Last year, the Job Accommodation Network (JAN), sponsored by the President's Committee on Employment of People with Disabilities, saw a 42 percent increase in its use by employers seeking advice on various aspects of accommodating employees with disabilities. Seventy-two percent of these inquiries resulted in the retention or placement of these workers.

The 1982 Study of Accommodations Provided to Handicapped Employees by Federal Contractors reported that "no" cost was involved for half (51%) of the accommodations reported. An additional 30 percent of the accommodated workers received packages of accommodations for which the total cost was between $1 and $500."

In 1987, Honeywell, in its own report on employees with disabilities, indicated that "the majority of accommodations provided to employees with disabilities cost less than $50." Honeywell also noted the availability of federal and state tax deductions and programs such as Vocational Rehabilitation which further defrayed company costs.

Perhaps the reality of reasonable accommodation can best be demonstrated by a placement that occurred in an AT&T entity in Arkansas. The person involved was Tina Saenger, who is with me today. Seventeen years ago, an automobile accident left Tina with quadriplegia. Eight years later, she was hired by AT&T to be a long-distance operator working at the electronic consoles that have replaced cord switchboards.

She traveled in a wheelchair but mobility was not a problem since she was assigned to an office that was fully accessible. However, when she reported to the job, the Operator Services Manager became quite concerned.

Tina had limited use of her arms and little use of her fingers. A metal hand splint was required to support her right hand. In order to operate the console, she had to pick up a pencil with the thumb and forefinger of her left hand, place it is a clasp on the hand splint and then use the eraser end of the pencil to depress the keys of the console.

However, there was an office rule that operators were not to use pencils to key because of the belief that fingers are more sensitive, and using pencils could cause more errors.

To make a long story short, Tina has been at work over nine years and she is still using her pencil. Her performance as an operator is accurate and efficient.

I visited her office and in an unsolicited comment, her manager told me that if he had a roomful of Tinas, he wouldn't have any problems. Yet, the rule prohibiting the use of pencils still exists in that office.

Allowing Tina to use the pencil is a reasonable accommodation to the limitations caused by her disabiltiy, as required by current Section 503 regulations, and as such does not compromise the prohibition against the use of pencils. Although, I must admit, I did suggest that since Tina does so well using a pencil that perhaps overall office performance might be improved by allowing all operators to do the same.

Consider the economic impact of that simple accommodation. It enables Tina to have a job which pays well. She owns both a home and a car and supports her mother, in addition to herself. The alternative is no longer acceptable. We should not spend our tax dollars to support someone who is able to be an independent and productive taxpaying citizen, particularly when we can do so, so easily.

Let me share another perspective of accommodation. For years we have routinely provided secretaries without disabilities with word processors or memory typewriters, considerably more expensive than manual machines which could get the job done. But the secretary is more efficient with the word processor. And, today, it is hard to conceive of an efficient secretarial pool without access to word processing capabilities.

Or consider copy machines. I remember when secretaries typed 8 copies with carbon paper, which was much cheaper than a copy machine of today, but not as efficient. The purpose of providing an adaptive device as a reasonable accommodation to an employee with a disabiltiy is the same --- to make the individual a more efficient worker.

Small businesses have demonstrated ingenuity in reducing the relative costs of accommodations through such innovations as accelerated depreciation schedules for equipment purchases, and subsidizing personal equipment of employees. In Ohio, eight businesses have formed a consortium which allows the pooling of resources for disability management services. The consortium allows a level of flexibility in job restructuring and reassignments and the use of professional rehabilitation personnel who otherwise would be unavailable to small or moderate-sized businesses. The payoff is in a reduction in the disability expenditures I mentioned at the beginning of my statement and the availability of a qualified workforce.

While I no longer speak for private sector employers, I continue to be an employer of persons with disabilities. Two-thirds of my staff are persons with disabilities, so I continue to experience first-hand the accommodation process, and to benefit from the outstanding contributions persons with disabilities make to the role and mission of the President's Committee.

I believe employers are willing to make the investments necessary to put individuals with disabilities to work, and to support fair and workable civil rights legislation that will guarantee them equal employment opportunities.

It is important to note that 80% of Equal Employment Opportunity officers, 72% of line managers, and 56% of top managers surveyed in the 1986 Harris Poll supported the concept that civil rights laws which protect minorities against discrimination should also apply to people with disabilities. This indicates that the attitudes of business executives are generally supportive of policies which would benefit individuals with disabilities. But, it is most interesting that those closest to the problems of workers with disabilities are the most supportive of change.

We must all recognize, however, that eliminating discrimination in the employment area will not solve the coming national labor shortage or the enormous problems people with disabilities must face every day. In order to provide meaningful protections to individuals with disabilites, as well as assure the availabilty of this segment of the work force to employers, civil rights legislation must be comprehensive. It must address all of the barriers to the independence and integration of people with disabilities into American life.

A break in any link in the chain that connects individuals with disabilities to the workplace or prevents them from functioning independently creates a barrier which many times cannot be bridged. It makes little sense to protect an individual from discrimination in employment if, for example, they have less than adequate accessible public transportation services.

The President's Committee has conducted concensus meetings with leaders in business, government, rehabilitation, and disability rights in 45 communities over the last seven years. These meetings have enabled communities to identify the major barriers to employment of people with disabilities, and to reach concensus on actions which can be taken to correct those barriers. Consistently, inaccessible transportation services has been identified as a major barrier, second only to discriminatory attitudes.

Mr. Chairman, just as business looks at the bottom line, so must we all. As I see it, the bottom line in passage of comprehensive civil rights legislation for people with disabilities is:

For Business--

Access to a Qualified Labor Force and to a Largely Untapped Group of Consumers

For Individuals with Disabilities--

Dignity, Pride, an Improved Quality of Life, and Finally, Independence

For the Nation--

A Renewal of Our Committment to Equality For All and a Contribution to the Human Spirit.

The President's Committee stands ready to assist business in implementing the mandates of this comprehensive civil rights statute. Our guide for hiring people with disabilities, entitled Ready, Willing and Available, developed by our employer members and targeted to small businesses, is an example of the assistance we can offer. Other agencies and organizations, both public and private, are equally eager to share their expertise.

As our previous experience with bringing new classes of oppressed people into the social and economic mainstream of society has demonstrated, the returns to the nation will be bountiful.

Chairman **Owens**. Thank you. Mr. Mark Donovan.

Mr. **Donovan**. Thank you, Mr. Chairman. I would like to just comment that as a result of a timing issue, I have not presubmitted written testimony. What I would like to do is make some comments this morning and then submit that testimony after the fact, if I may.

I am Mark Donovan and I am with Marriott Corporation, have worked for Marriott for over 20 years at this point, and in the last five years have focused in general on creating employment opportunities for individuals who have any barrier to employment and, more specifically, on employment opportunities for individuals who may have a physical or mental barrier, individuals with disability.

I am pleased to be here and I am particularly pleased to have the opportunity to support the historic legislation that is under consideration. The issue of empowering people with disabilities to be fully contributing members of the work force in the work place is one that has been near and dear to my heart and, I might say, near and dear to Marriott's heart for some time.

I think as a result of that, Marriott is recognized as a leader in the whole issue of providing employment opportunity for people with disabilities, in being in the forefront of initiatives to enhance those opportunities.

I think it is critical to note why that is, because I think the general perception might be that that is an altruistic action on the part of Marriott, that somehow it has to do with charitable feeling and the like and I don't think anything could be further from the truth.

Clearly, Marriott has assumed a leadership position in this area because it makes good business sense for Marriott. It doesn't, in fact, cost us money to employ people with disabilities; it saves us money to employ people with disabilities. And I have been interested in some of the previous discussion of the whole accommodation issue because I think in many cases, the accommodation issue is overblown and wrongly placed as a disability issue.

Accommodation is not a disability issue. Accommodation is an employment issue, and, as such, should be seen as a cost of doing business, not as a cost of hiring people with disabilities.

Our life blood is our work force in Marriott Corporation as a service sector business, and what we have found is that it is only through accessing the widest possible diversity of individuals in that work force that we, in fact, can create the strongest work force possible.

So, in fact, in working with people with disabilities, we find that we do it as a business necessity, and not because it makes sense in terms of a charitable action.

I guess I would like to make an analogy to that situation with Marriott because, in a more general sense, I think this legislation is critical in terms of the fact that society as a whole is only as strong as the diversity that that society represents.

It is only when we can weave all the various unique experience and capability of the individuals in that society that we truly can be what we want to be as a society. And so from that standpoint, in my mind, there is no question about the importance of the legislation. There is no question about whether it ought to be enacted. I think the only real question is, what can we do to help craft the legislation in such a way that it, in fact, is as effective as possible, once enacted, to meet its overall objectives.

What I would like to do is just make two or three comments as to issues that I feel might want to be considered as that crafting process takes place.

It seems to me, number one, it is critical that if what we are going to do is provide an active and effective piece of legislation, what we want to do is create a process and a system that includes and encourages cooperation rather than confrontation in the meeting of challenges and the settling of issues.

So, I would strongly encourage a means to include all parties to the issues involved, be those employers or individuals with disabilities or managers or community agencies in the solutions that need to be developed for those problems.

In my experience, that is the way that strong solutions are reached.

I think that related to that, the whole issue of where litigation fits into the process of remedying problems and finding solutions ought to be as a last resort measure, rather than a first resort alternative.

In my sense, litigation is an issue that creates wedges between people, rather than developing inclusion among all parties; and, in fact, while it may develop solutions, doesn't typically develop the best solution.

Second, I think that it is important, as we look to employers to recognize that in some cases there are supports that are appropriate and necessary to help employers, in fact, meet the intent and the spirit of the bill.

The savings to the Federal treasury, in terms of putting people with disabilities to work, have already documented. I would strongly encourage that there be a means to translate some of those savings into the kinds of supports that might be appropriate to employers, whether those be financial supports or technical assistance, or what have you, to assure that we make it as possible and as realistic as possible that they, in fact, meet the spirit of that bill.

Thirdly, I would do everything possible within the language of the bill and within the stipulations of the bill to protect against the bill being used as a foundation for frivolous claims in terms of protection of individual rights and the like.

I think it is critical to recognize that anything that results in frivolous claims, in fact, takes away from the focus of the true intent of the bill which is to empower those individuals who need such empowerment to be contributing members and so, I think it is important to be careful about how language is crafted to avoid that wherever possible.

I would just like to reiterate again how pleased I am to be here, how important I do think this legislation is and not only as an end in itself, but, in fact, because in my view, I feel that the legislation is simply a stepping stone to a greater overall objective which is that ultimately this exact piece of legislation ought to belong in the past and we ought to be in a place where, in fact, we focus so naturally on the ability of the individual that the whole issue of disability, in fact, does become irrelevant.

Thank you very much.

[The prepared statement of Mark Donovan follows:]

TESTIMONY OF

MARK R. DONOVAN
MANAGER, COMMUNITY EMPLOYMENT AND TRAINING PROGRAMS
MARRIOTT CORPORATION

REGARDING THE
AMERICANS WITH DISABILITIES ACT (H.R. 2273)

BEFORE THE
EMPLOYMENT OPPORTUNITIES SUBCOMMITTEE
AND THE
SELECT EDUCATION SUBCOMMITTEE
OF THE
HOUSE COMMITTEE ON EDUCATION AND LABOR

SEPTEMBER 13, 1989

Mr. Chairman, I am Mark Donovan. I have worked for Marriott Corporation for more than twenty years in a wide range of positions from line management to training and human resources. Over the past four years I have been responsible for developing and implementing programming to successfully integrate people with barriers to employment into Marriott's workforce. A substantial number of those programs have involved people with disabilities.

It is with great pleasure that I appear before you to support the Americans with Disabilities Act. This historic legislation holds the promise of a day when true equality of opportunity for people with disabilities is the accepted norm, not the subject of debate.

The issue of empowering people with disabilities to be fully contributing members of the workforce is one which has been central to my efforts, and Marriott's efforts, for some time. As a result of their efforts, Marriott is recognized as a leader in the area of employment of people with disabilities. They clearly stand, with a number of other corporations, in the forefront of innovative initiatives to enhance employment opportunities for those individuals.

I raise that issue because I think it's important to note why Marriott has so aggressively assumed this position. The reason is simple: it makes good, bottom line, business sense.

As a corporation operating in the hospitality industry, our employees are our life blood. It is only to the degree to which we can find, attract, train and retain able and motivated people that we will be successful. Additionally, the strength of our workforce correlates directly to its diversity. We achieve our business potential by weaving an incredibly broad range of individuals, each with unique talents and abilities, into our corporate fabric. To shorten that range is to limit our corporate potential. From our perspective, not to draw upon the resources represented by people with disabilities would be absurd. People with disabilities in our workforce do not cost us money, they make us money.

I might add that I personally feel the same analogy can be drawn for society as a whole. Until every individual becomes a fully integrated member of that society, we won't be everything we could be.

There is no question in my mind, then, regarding the importance of the Americans with Disabilities Act, as it would seek to further that integration. The question which does remain is, "How can the Act best be crafted to assure that, when enacted, it is as effective as possible in meeting its objectives?". I would offer several thoughts in that regard.

First, to the greatest degree possible the legislation should establish processes and frameworks which promote cooperation rather than confrontation between various constituencies in the resolution of challenges. Encourage professional organizations, industry associations, public sector officials, advocacy groups, service providers and individuals affected to participate together in seeking solutions. Inclusion of all parties involved, as active participants in the problem solving process, will almost always yield the best answers, while laying the strongest foundation for implementation of those answers.

Towards this end, litigation should be established as the alternative of last recourse in conflict resolution, rather than the option of first choice. If cooperative problem solving yields the best resolution, litigation often yields the worst as it drives wedges between parties who will, ultimately, have to work together for their mutual success.

Second, address the concern voiced by a number of employers regarding the potential costs of accommodations mandated by this Bill. In our experience those costs are generally insignificant. There are, however, exceptions to that rule, and there is no question that fear of such costs is a major barrier to getting additional employer commitment to employment of people with disabilities.

The savings to Federal and State budgets inherent in facilitating the movement of the disabled into the workforce have been amply identified. Apply some of those savings to assist businesses in overcoming issues of accommodation. Applications should probably include a range of remedies, from the maintenance of organizations like the Job Accommodation Network providing technical support to employers, to the creation of a financial "safety net" to offset costs of accommodation above a certain level.

Third, language in the Bill should be written in such a way as to minimize its use as a foundation for frivolous claims against employers. My sense is that business people don't generally oppose this legislation on the basis of its furthering opportunities for people with disabilities. Concerns arise, rather, over how the law might be used as a weapon against an employer making sound and fair business decisions. Such claims, made with no regard to the real intent of the Act, serve only to clog the courts, generate expense for the employer, and undermine the credibility of the legislation.

Finally, do everything possible to define, in quantifiable ways, parameters for application of the Bills provisions. The vagueness and subjectivity of terms like "readily achievable" and "easily accomplishable" leave employers feeling uneasy about potential impact. The issues being addressed by the Americans with Disabilities Act are terribly complex, and clearly don't always lend themselves to ironclad definition. However, the provision of more specific guidelines for interpretation of language such as that cited would strengthen the Act, and help allay concern in the business community.

Again, let me emphasize how pleased I am to speak on behalf of this important legislation. The Americans with Disabilities Act can be a critical stepping stone to a more enlightened future; to a future where the focus is truly on maximizing the unique abilities each one of us brings to society, and the issue of disability is irrelevant.

Thank you.

Chairman OWENS. Thank you, Mr. Donovan. Mr. Duane Rasmussen.

Mr. RASMUSSEN. Mr. Chairman, members of the committee, my name is Duane A. Rasmussen. I am president and C.E.O. of Sell Publishing Company, a Minnesota corporation located in the small town of Forest Lake and engaged in the publishing of newspaper formatted publications.

We own two weekly newspapers, a weekly shopper, six community booklets and print upwards of 80 to 90 other publications out of the Twin Cities metropolitan area. Today I am speaking on behalf of the National Federation of Independent Business and its 570,000 small business owners.

In addition, I am a past president of the Minnesota Newspaper Association representing all of the 375 daily and weekly newspapers in Minnesota and also speak with some knowledge of their problems.

I also serve on the board of the Independent Business Association of Minnesota. My company employs 42 on its regular payroll and hires occasional help as necessary to handle the distribution of our finished products.

I am here to express my deep concerns about the Americans with Disabilities Act, H.R. 2273, in both its present form and in the substitute Senate bill marked up on August 2, 1989 by the Senate Labor and Human Resources Committee.

While I come from a family which had to deal with a handicapped person's difficulties in getting around in the public areas before the term "handicapped accessible" was even known, and while I thus must agree wholeheartedly with the ideal and goal of the legislation in this Act, I am among the majority of business persons who have a number of real problems with this Act as written.

Before I get into the specifics, I would like to speak about the general change in philosophy of the U.S. House and Senate in recent years.

Too many members of Congress have been introducing legislation to correct certain social problems which are to be paid for through specific costs to small businesses as opposed to being paid for by the general population through taxation methods already in place.

I am speaking about legislation such as Section 89, the Kennedy-type health bills and now the H.R. 2273 and S. 933 authored by Representative Steny Hoyer and Senator Tom Harkin.

The trend seems to hit business with the cost of social "advances" that rightfully belong to the obligation of the general population if the people want to pay for them. We in business clearly see the reasons for this.

Government is having difficulty selling the population on additional taxes, so, the thought is to hit a relatively small group which is perceived as having enough money to cover such changes, but in reality, most small businesses struggle to meet a weekly budget just like every family in America.

I am sorry to express these cynical thoughts, but they are arrived at only through the examples government has created.

Now, if you will put yourselves in the place of a business person, you will quickly see how impossible H.R. 2273 is. How can a business owner make physical changes in the work place even before a specific disabled person begins work?

The ADA drafters themselves envisioned some 900 types of disabilities to be covered, and the business place is to provide for the needs of all 900 plus? Having done a considerable amount of lobbying in the Minnesota legislature, I am well aware of the difficulties created by legislative language.

It is bad legislation when general terms and expressions leading to difficult and indefinite definitions are used. For example, in H.R. 2273 we find expressions such as "undue burden," "readily available," "reasonable accommodation," "readily achievable," "benefit," "full and equal enjoyment," and "essential functions."

What do those really mean? Isn't that making a lot of work for lawyers, courts and juries? Let's take, for example, publishing businesses such as mine. Many are located in older plants that were built before many of the technologically-advanced aids to the disabled were invented or perfected.

Many have no elevators or ramps, and narrow doorways and limited space are the rule, not the exception. All plants contain presses that require fairly robust workers who can lift heavy objects and work sometimes cumbersome equipment with speed and dexterity.

Hearing is an important safety tool due to the use of warning bells and buzzers for various phases of printing. Safety is extremely important so the use of an individual's full faculties are absolutely necessary in many publishing jobs.

While I have given you a brief look at the publishing business, every business in the Nation will face serious problems in complying with H.R. 2273—namely, what do we do specifically in order to avoid injunctions, lawsuits, exorbitant fines, and the like.

Do I need one ramp or ten? Does every door need to be widened or only certain ones, and if so, which ones? Which auxiliary aids do I need for the blind and the deaf in my particular plant? What sort of training do my employees need to deal with certain types of disabilities? When am I safe from the fear of legal action against my business?

We have seen the confusion created by OSHA in the work place over what is really required and who is responsible for it. There are already different requirements among Federal and state laws in conflict with ADA, so what do we follow? What do we do if we have already proceeded with one set of laws, rules and regulations?

Are chemical abusers really disabled? In our management of personnel, chemical abusers are treated as ill persons who must follow their prescribed treatment plan or be discharged. Is that unfair?

My company rents some building space to another business, as a number of small town business people do. What liabilities do business owners have who rent their facilities? If cost is a factor in compliance, at what point is the owner within legal requirements in building a new building, enlarging an existing one or remodeling?

Is it automatic discrimination if an employer hires a person without a disability if that person and a disabled person appear to have the same qualifications? Why must the very small firms in all kinds of social and geographical areas comply with the same requirements as the large ones and those located in large metro areas?

Even more importantly than all of the cost and compliance factors, why does the Act adopt a punitive approach in its philosophy which only encourages lawsuits, including those of a frivolous nature, instead of providing incentives to accomplish the retrofitting and hire the disabled?

Finally, why is there no distinction between intentional and unintentional action? This Act like so many others is impossible! When legislation puts any segment of our population at a disadvantage or forces them into real financial hardship, it can hardly be called fair.

With the ADA legislation, it appears that fairness is the goal as far as the treatment of the disabled, but does that mean that we must be unfair to those who in the end result provide the jobs for the disabled? I, for one, certainly think not!

Thank you.

The Guardian of
Small Business

I am here to express my deep concerns about the Americans with Disabilities Act, H.R. 2273, in both its present form and in the substitute Senate bill marked up on Aug. 2, 1989 by the Senate Labor and Human Resources Committee. While I come from a family which had to deal with a handicapped person's difficulties in getting around in the public area before the term "handicapped accessible" was even known, and while I thus must agree wholeheartedly with the ideal and goal of the legislation in this act, I am among the majority of business persons who have a number of real problems with this act as written.

Before I get into the specifics, I would like to speak about the general change in philosophy of the U.S. House and Senate in recent years. Too many members of Congress have been introducing legislation to correct certain social problems which are to be paid for through specific costs to small businesses as opposed to being paid for by the general population through taxation methods already in place. I am speaking about legislation such as Section 89, the Kennedy-type health bills and now the H.R. 2273 and S. 933 authored by Representative Steny Hoyer and Senator Tom Harkin .

The trend seems to hit business with the cost of social "advances" that rightfully belong to the obligation of the general population if the people want to pay for them. We in business clearly see the reasons for this. Government is having difficulty selling the population on additional taxes, so, the thought is to hit a relatively small group which is perceived as having enough money to cover such changes, but in reality most small businesses struggle to meet a weekly budget just like every family in America. I am sorry to express these cynical thoughts, but they are arrived at only through the examples government has created.

Now, if you will put yourselves in the place of a business person, you will quickly see how impossible H.R. 2273 is. How can a business owner make physical changes in the work place even before a specific disabled person begins work? The ADA drafters themselves envisioned some 900 types of disabilities to be covered. And the business place is to provide for the needs of all 900 plus? Having done a considerable amount of lobbying in the Minnesota Legislature, I am well aware of the difficulties created by legislative language. It is bad legislation when general terms and expressions leading to difficult and indefinite definitions are used. For example, in H.R. 2273 we find expressions such as "undue burden," "readily available," "reasonable accommodation," "readily achievable," "benefit," "full and equal enjoyment," and "essential functions." What do those really mean? Isn't that making a lot of work for lawyers, courts and juries?

Let's take, for example, publishing businesses such as mine. Many are located in older plants that were built before many of the technologically-advanced aids to the disabled were invented or perfected. Many have no elevators or ramps, and narrow doorways and limited space are the rule, not the exception. All plants contain presses that require fairly robust workers who can lift heavy objects and work sometimes cumbersome equipment with speed and dexterity. Hearing is an important safety tool due to the use of warning bells and buzzers for various phases of printing. Safety is extremely important so the use of an individual's full faculties are absolutely necessary in many publishing jobs.

While I have given you a brief look at the publishing business, every business in the nation will face serious problems in complying with H.R. 2273 - namely, what do we do specifically in order to avoid injunctions, lawsuits, exhorbitant fines, and the like. Do I need one ramp or ten? Does every door need to be widened or only certain ones, and if so, which ones? Which auxiliary aids do I need for the blind and the deaf in my particular plant? What sort of training do my employees need to deal with certain types of disabilities? When am I safe from the fear of legal action against my business?

We have seen the confusion created by OSHA in the workplace over what is really required and who is responsible for it. There are already different requirements among federal and state laws in conflict with ADA, so what do we follow? What do we do if we have already proceeded with one set of laws, rules and regulations?

Are chemical abusers really disabled? In our management of personnel, chemical abusers are treated as ill persons who must follow their presecibed treatment plan or be discharged. Is that unfair?

My company rents some building space to another business, as a number of small town business people do. What liabilities do business owners have who rent their facilities? If cost is a factor in compliance, at what point is the owner within legal requirements in building a new building, enlarging an existing one or remodeling?

Is it automatic discrimination if an employer hires a person without a disability if that person and a disabled person appear to have the same qualifications? Why must the very small firms in all kinds of social and geographical areas comply with the same requirements as the large ones and those located in large metro areas?

And even more importantly than all of the cost and compliance factors, why does the Act adopt a punitive approach in its philosophy which only encourages lawsuits, including those of a frivolous nature, instead of providing incentives to accomplish the retrofitting and hire the disabled? And, finally, why is there no distinction between intentional and unintentional action?

This Act like so many others is impossible! When legislation puts any segment of our population at a disadvantage or forces them into real financial hardship, it can hardly be called fair. With the ADA legislation, it appears that fairness is the goal as far as the treatment of the disabled, but does that mean that we must be unfair to those who in the end result provide the jobs for the disabled? I, for one, certainly think not!

0349x

Chairman OWENS. Thank you. Mr. Paul Wharen.

Mr. WHAREN. Chairman Owens and members of the committee, I appreciate the opportunity to appear before the subcommittees on Employment Opportunities and Select Education today to testify upon a very important piece of legislation, the Americans with Disabilities Act.

I am Paul Wharen, Project Manager for Thomas P. Harkins, Inc., a general contracting firm based in Silver Spring, Maryland. Harkins has been in operation for 24 years, and today is ranked by Engineering News Record magazine as number 163 of the top 400 general contractors in the Nation.

To give you a better idea of what Harkins does, I would like to read our Mission statement:

"Thomas P. Harkins, Inc. is a construction company that provides quality services to clientele engaged in the development of multi-family housing, elderly/lifecare and commercial facilities, in order to sustain profitable operations, thereby creating growth and opportunity for our people."

Harkins is a member of the Associated Builders and Contractors' Metro-Washington Chapter. It is my pleasure to represent ABC at the hearings this morning before your subcommittees.

ABC supports Congress' goal of ending discrimination against the disabled. At Harkins, we place a great deal of pride in our progressive equal opportunity employment policy. We have people from all walks of life employed in our office and on our job sites, including people with disabilities.

Harkins is committed to assisting anyone with the potential and desire to develop a career in the construction industry. Our society needs the talents and abilities of the disabled.

I have found that people with disabilities on our staff to be among my most dedicated and loyal employees. However, the realities of the construction industry generally limit our placement of the disabled to our main office.

Construction is a dynamic but dangerous occupation, second only to coal mining in industrial accidents. Mr. Chairman, while ABC is supportive of the intent of the ADA bill, there is a great deal of concern among construction employers regarding the clarity of many of the terms and concepts contained in the bill, 2273.

Specifically, construction employers want to know exactly what will be expected of them under ADA, in making accommodations for the disabled. Therefore, I believe the terms, definitions, and concepts in this bill should be defined as clearly as possible to ensure the goals of the bill can be reached through its methods.

The first item which troubles me, and I am sure a great many employers, is the broad, vaguely defined concepts of "reasonable accommodation" and "undue hardship." The concept of reasonableness has perplexed and eluded lawyers and lawmakers ever since it was introduced.

The terms are subjective by definition. One person's reasonableness is another's undue hardship. I believe the use of these concepts broadly defined in this legislation will only perpetuate the overburdening of our already backlogged legal system.

What is needed is a common denominator; something that will allow for measurement and objectivity so that an employer and employee can tell when the balance has been reached, where the line has been crossed. For most employers and particularly in construction, cost effectiveness is a major factor in the analysis of what can reasonably be done to accommodate an employee.

Under bill 2273, it is not clear how much an employer would be expected to spend and to what lengths he or she must go in achieving the accommodation. Another factor that should be taken into consideration is the nature of the industry or the particular job and the extent of the person's disability.

As I pointed out, the construction job site is a dangerous place to work. I can tell you frankly that there are jobs which I think it is impossible to accommodate people with some disabilities, even with unlimited resources. A construction site requires unrestricted mobility to negotiate the clutter and limited access areas that are part of the project.

It is beyond my concept of reasonable accommodation to see how such a site could be made safely accessible to someone in a wheelchair, for example. However, there are positions in construction companies that can be made accessible for an employee with such a handicap.

In fact, Harkins employs a contracts manager who is wheelchaired-bound and recently required accommodation to work on a particular project. This employee, Dave, generally works out of our main office in Silver Spring.

However, the developer for a high rise project, Harkins was contracted to build, imposed a requirement that only those people working at the construction site could be paid as a cost of the project.

Therefore, Dave had to be brought into the actual site for an 18-month period. This required extensive renovation and accommodation, just to enable him to work in the trailer which serves as a temporary office on a larger construction site.

For the benefit of those who may not be familiar with the physical conditions of a construction site, there is usually little in the way of human comforts or conveniences, including parking and even bathroom facilities.

Workers often have to park in a public lot and use portable toilets. However, to accommodate one person on the site, we had to provide special parking for his van, build ramps into the trailer, widen all of the corridors in the trailer, modify his work area so that everything was the proper height, and put a bathroom in the trailer.

Bathrooms are very rare in construction job site trailers as it requires obtaining a water and sewer hookup for a temporary office. In addition, an assistant had to be assigned to help Dave get around the site, which was possible only after the structure was largely completed.

We were able to make this accommodation for Dave, primarily because we are a large, stable construction company. There are many construction employers who simply could not afford such a move. In fact, some do not even maintain a trailer on the job site that could be modified.

Clearly, what was a reasonable accommodation in our eyes would be an undue hardship in some other construction company's views.

It is my hope that language identifying and quantifying some of these factors would be included in the ADA bill's definition of "reasonable accommodation."

Perhaps the second largest concern for construction employers is how the ADA bill will impact our ability to maintain safe work sites. As project manager, a large portion of my job focuses upon job site safety.

The use of illegal drugs and alcohol on the construction site is extremely dangerous, and is often a contributing factor to work site accidents. Several years ago, ABC made prevention of substance abuse in the work place a number one priority.

We must be certain that the ADA bill does not tie employers' hands who are taking steps to stop America's drug problem.

The current language of H.R. 2273 merely states that "qualification standards" may include "requiring that the current use of alcohol or drugs by an alcoholic or drug abuser not pose a direct threat to property or the safety of others in the work place or program."

ABC strongly supports the ability of employers to maintain a work place that is drug-free, not simply monitored for those employees who pose a "direct threat," through illegal drug use.

Many construction employers conduct pre-employment drug tests on applicants for work on a construction site. This process is implemented because it has been shown to drastically reduce the number of accidents on the work site, and increase the quality of the work on projects.

The "direct-threat" language, as well as the prohibition of pre-employment drug testing, in H.R. 2273 will greatly inhibit contractors' efforts in the area of work site safety.

I strongly urge the members of the Education and Labor Committee to amend H.R. 2273 in such a way that current users of illegal drugs or those abusing alcohol would be removed from the protected disabled status.

Mr. Chairman, ABC is concerned with many other provisions in H.R. 2273. However, in the interest of time, I would like to have them inserted in the record of today's hearing as an appendix to my testimony.

Again, I thank you all for the opportunity to testify today on such a landmark legislation as the Americans with Disabilities Act, and I will be happy to answer any questions you may have regarding my testimony.

Statement of Associated Builders and Contractors

on

AMERICANS WITH DISABILITIES ACT, H.R. 2273

before the

SUBCOMMITTEES ON EMPLOYMENT OPPORTUNITES
AND
SELECT EDUCATION
EDUCATION AND LABOR COMMITTEE
U.S. HOUSE OF REPRESENTATIVES

SEPTEMBER 13, 1989

presented by

PAUL D. WHAREN
PROJECT MANAGER FOR THOMAS P. HARKINS, INC.

Silver Spring, Maryland

Speaking for the Merit Shop

729 15th Street, N.W.
Washington, D.C. 20005
(202) 637-8800

Chairman Martinez, Chairman Owens, and Members of the Committee:

I appreciate the opportunity to appear before the Education and Labor Subcommittees on Employment Opportunities and Select Education of the U.S. House of Representatives today to testify upon a very important piece of legislation, the Americans with Disabilities Act.

I am Paul Wharen, Project Manager for Thomas P. Harkins, Inc., a general contracting firm based in Silver Spring, Maryland. Harkins, Inc. has been in operation for 24 years, and today is ranked by ENR magazine as number 163 of the top 400 general contractors in the nation. To give you a better idea of what Harkins,Inc. does, I would like to read you our Mission Statement:

"Thomas P. Harkins, Inc. is a construction company that provides quality services to clientele engaged in the development of multi-family housing, elderly/lifecare and commercial facilities, in order to sustain profitable operations, thereby creating growth and opportunity for our people."

Harkins, Inc. is a member of Associated Builders and Contractors' Metro-Washington Chapter. Associated Builders and Contractors (ABC) is a national construction industry trade association representing 18,000 contractors, subcontractors and suppliers nationwide. The members believe in the "merit shop" philosophy of awarding construction contracts to the lowest responsible bidder. Today, more than 70% of all construction in this country is done the merit shop way. It is my pleasure to represent ABC at the hearing this morning before your subcommittees.

ABC supports Congress' goal of ending discrimination against the disabled. At Harkins, Inc., we place a great deal of pride in our progressive equal opportunity employment policy. We have people from all walks of life employed in our office and on our jobsites, including people with disabilities. Harkins is committed to assisting anyone with the potential and desire to develop a career in the construction industry.

Our society needs the talents and abilities of the disabled. I have found the people with disabilities on our staff to be among my most dedicated and loyal employees. However, the realities of the construction industry generally limit our placement of the disabled to our main office. Construction is a dynamic, but dangerous occupation--second only to coal mining in industrial accidents.

Mr. Chairmen, while ABC is supportive of the intent of the ADA bill, there is a great deal of concern among construction employers regarding the clarity of many of the terms and concepts contained in the bill, H.R. 2273. Specifically, construction employers want to know exactly what will be expected of them, under ADA, in making accommodations for the disabled. Therefore, I believe the terms,

BEST COPY AVAILABLE

definitions, and concepts in this bill should be defined as clearly as possible, to ensure the goals of the bill can be reached through its methods.

The first item which troubles me, and I am sure a great many employers, is the broad, vaguely defined concepts of "reasonable accommodation" and "undue hardship." The concept of reasonableness has perplexed and eluded lawyers and lawmakers ever since it was introduced. The terms are subjective by definition; one person's reasonableness is another's undue hardship. I believe the use of these concepts, broadly defined, in this legislation will only perpetuate the overburdening of our already backlogged legal system.

What is needed is a common denominator; something that will allow for measurement and objectivity so that an employer and employee can tell when the balance has been reached or the line has been crossed. For most employers, and particularly in construction, cost effectiveness is a major factor in the analysis of what can reasonably be done to accommodate an employee. Under H.R. 2273, it is not clear how much an employer would be expected to spend, and to what lengths he or she must go in achieving accommodation.

Another factor that should be taken into consideration in determining what is reasonable is the nature of the industry or the particular job, and the extent of the person's disability. As I pointed out, the construction jobsite is a dangerous place to work, and I can tell you frankly that there are jobs for which I think it is impossible to accommodate people with some disabilities--even with unlimited resources. A construction site requires unrestricted mobility to negotiate the clutter and limited access areas that are necessarily part of the project. It is beyond my concept of reasonable accommodation to see how such a site could be made safely accessible to someone in a wheelchair, for example.

However, there are positions in construction companies that can be made accessible for an employee with such a handicap. In fact, Harkins, Inc. employs a contracts manager who is wheelchair-bound and recently required accommodation to work on a particular project. This employee generally works at our main office in Silver Spring. However, the construction user for a high-rise, luxury condominium Harkins,Inc. was contracted to build, imposed a requirement that only those people working at the construction site would be paid. Therefore, Dave had to be brought onto the actual site for an 18 month period. This required extensive renovation and accommodation, just to enable him to work in the trailer which serves as a temporary office on larger construction sites.

For the benefit of those who may not be familiar with the physical conditions of a construction site, there is usually little in the way of human comforts or conveniences, including parking and even bathroom facilities. Workers often have to park in a public lot, and use portable toilets. However, to accommodate one person on the site, we had to provide special parking for his van, build ramps into the trailer, widen all of the corridors in the trailer, modify his work area so that everything was the proper height, and put a bathroom in the trailer. This is very rare in construction worksite trailers, as it requires obtaining a water and sewer hookup for a temporary office. In addition, an assistant had to be assigned to help Dave get around the site, which was possible only after the structure was largely completed.

We were able to make this accommodation for Dave, primarily because we are a large, stable construction company. There are many construction employers who simply could not afford such a move. In fact, some do not even maintain a trailer that the worksite that could be modified. Clearly, what was a reasonable accommodation in our eyes would be an undue hardship in some other construction company's view. It is my hope that language identifying and quantifying some of these factors would be included in the ADA bill's definition of "reasonable accommodation."

Perhaps the second largest concern for construction employers is how the ADA bill will impact our ability to maintain safe worksites. As project manager, a large portion of my job focuses upon jobsite safety. The use of illegal drugs and alcohol on the construction site is extremely dangerous, and is often a contributing factor to worksite accidents. Several years ago, ABC made substance abuse in the workplace a number one priority. We must be certain that the ADA bill does not tie employers' hands who are taking steps to stop America's drug problem.

The current language of H.R. 2273 merely states that "qualification standards" may include "requiring that the current use of alcohol or drugs by an alcoholic or drug abuser not pose a direct threat to property or the safety of others in the workplace or program." ABC strongly supports the ability of employers to maintain a workplace that is drug-free, not simply monitored for those employees who pose a "direct threat," through illegal drug use. Many construction employers conduct pre-employment drug tests on applicants for work on a construction site. This process is implemented because it has been shown to drastically reduce the number of accidents on the worksite, and increase the quality of work on projects. The "direct-threat" language, as well as the prohibition of pre-employment drug testing, in H.R. 2273 will greatly inhibit contractors' efforts in the area worksite safety.

In the recent Senate debate on S. 933, language was included in the ADA bill which clearly precluded current users of illegal drugs, or those abusing alcohol, from protected disabled status. I strongly urge the members of the Education and Labor Committee to amend H.R.2273 in this manner.

Mr. Chairman, ABC is concerned with many other provisions in H.R. 2273. However, in the interest of time, I would like to have them inserted in the record of today's hearing as an appendix to my testimony. Again, I thank you both for the opportunity to testify today on such landmark legislation as the Americans with Disabilities Act, and I will be happy to answer any questions you may have regarding my testimony.

APPENDIX - EMPLOYMENT PROVISIONS

The House ADA bill (H.R. 2273 - Section 205) will allow individuals to pursue a cause of action not only if they have been discriminated against, but also if they believe they "are about to be" discriminated against. Such speculative complaints and attendant litigation are not permitted in any other civil rights in employment litigation. An individual may also sue in cases not only of intentional discrimination, but also in cases of unintentional discrimination. The Senate bill (S. 933) has eliminated these issues and ABC feels the House bill should do the same.

The House bill essentially grants more rights to disabled individuals than any other protected class of people by allowing them to circumvent any and all types of administrative remedies, and move directly to a private right of action in the courts complete with injunctive relief, a jury trial and punitive and compensatory damages. This will simply lead to increased litigation in hopes of a large windfall judgement for the plaintiff and his or her attorney, rather than constructive resolutions to the problems of accessibility. We strongly recommend that this be changed to adopt the Senate bill's approach which adopts The Civil Rights Act of 1964 - Title VII procedures and remedies, which include filing charges with the EEOC, and if the EEOC does not act, then a private cause of action may be initiated for injunctive relief and back pay.

The scope of the House bill covers all employers with 15 or more employees. The Senate bill covers 25 or more employees for the first two years, and thereafter 15 or more employees. At a minimum the House should adopt the Senate language, but preferably increase the threshold number of employees. Many small businesses have more than 15 employees and the concepts in this legislation will be new and very costly to implement. Furthermore, the definition of "employer" does not specify whether the 15 employee floor is 15 or more employees per worksite, or total employees, regardless of varying geographic locations. Obviously, clarification of this definition is important to our smaller member firms who may employ 15 people, but they are dispatched in small groups of two or three to varying worksites.

The House bill [Section 101(a)(5)] would make it illegal to discriminate against an individual because of the "relationship to, or association of, that individual or entity with another individual with a disability." This is unparalleled in civil rights law and will invite frivolous lawsuits requiring employers to prove a negative, i.e., that they weren't aware of the association. This provision dramatically expands the class of people covered by this legislation. This section should be deleted or be expressly limited to certain types of associations.

The ADA House bill would hold an employer or other entity liable if the recipient of its charity or assistance discriminates on the basis of disability, whether or not there is knowledge of such discrimination. Section 101(a)(1)(E) should be amended to reflect that such act is illegal only where the provider knows of the discrimination.

The language in Title 1 creates incredible new liabilities for employers if they provide disabled persons with a benefit which is "less effective than" or "is different or separate" from that provided to others [Section 101(a)(1)(C)&(D). Group health insurance benefits, which are offered under the same terms and conditions to all employees, may still be "less effective" or "separate or different" for a person with disabilities. Employers should only be obligated to offer the same benefits package to all employees, whether or not they are disabled. To require otherwise, e.g., provide specific medical coverage or purchase medical insurance with pre-existing condition waivers, would be prohibitively expensive and result in insurance companies being unable to provide and\or underwrite group health policies. Further, there is nothing in the ADA House bill that would prohibit insurers from continuing to exclude preexisting conditions.

Chairman **Owens**. Without objection, your addendum would be inserted in the record along with your statement.

Mr. **Wharen**. Thank you.

Chairman **Owens**. Ms. Arlene Mayerson, directing attorney for Disability Rights Education and Defense Fund.

Ms. **Mayerson**. Mr. Chairman and members of the committee. My name is Arlene Mayerson and I am the directing attorney of the Disability Rights, Education and Defense Fund.

DREFF is a national disability rights organization which pursues its mission through education, legislative and law reform efforts. The ADA represents a culmination of years of work and vision by members of the disability community, many of whom are here today.

I am proud and honored to be here today to testify on the most important piece of disability, civil rights legislation of our time. I have been asked to testify on the employment sections of the bill.

In my written testimony, I have cited the numerous studies which document that employment opportunities for persons with disabilities are severely impeded by misconceptions and generalizations about disabilities, unfounded fears about increased cost and decreased productivity and outright prejudice towards disabled people.

People with disabilities face discrimination in employment in a variety of ways. Many are excluded from the outset by medical requirements that screen out all people with specific disabilities or by inflated or other job requirements that bear no relationship to the successful performance of the job.

Disabled people who are not completely excluded at the outset are often channeled into disabilities stereotyped, dead-ended jobs or denied promotion opportunities. These discriminatory practices affect persons with current disabilities, records of disabilities and people who are perceived as being disabled.

We have examples of all these types of cases in our caseload at DREFF. I wanted to take a moment to describe them to you, but I think in the interest of time, I won't. Believe me, the stories of discrimination are endless.

People with disabilities are everyday being denied job opportunities because of stereotypes, fears, and overly restrictive job requirements. I could not help but notice that these stereotypes seem to be contained in Mr. Rasmussen's description of his own employment practices.

He stated that hearing is necessary for safety in the publishing industry because of the use of warning bells and buzzers. It is ironic that historically many of the only jobs available to deaf people have been in the printing industry.

Moreover, safety concerns would likely be easily accommodated by the use of visual alerts. The ADA employment provisions adopt two fundamental principles derived from Section 504 of the 1973 Rehabilitation Act.

The first, that selection procedures evaluate the ability of an individual to perform the job and are not based on stereotypes in generalizations about the disability; and two, that persons with disabilities who are able to perform the essential functions of the job with or without reasonable accommodation are not denied employment opportunities.

Each provision of the employment title operates to support these two fundamental principles. In the committee's first hearing on the ADA, the business community circulated two working papers outlining their concerns with the ADA.

The primary concerns in the employment area address the confusion created by Title I and Title II provisions which seem to apply differently to the same situation.

The inclusion of 1981 remedies and employment, the request for a definition of undue burden, the clarification that the ADA did not conflict with drug-free work place policies, and the removal of the word "identify" from the section barring discriminatory selection criteria, every one of these concerns was dealt with in a Senate compromise.

The disability community fully supported the 1988 ADA introduced by Senator Weicker and Congressman Coelho, which was stronger in protection than the 1989 ADA before us today.

The disability community strongly supported the provisions of S9-33 as reported out of committee and H.R. 2273 as it is today. In the spirit of political compromise, we are willing to support the Senate compromise, but we are not willing to use it as a starting point to whittle down even further.

The business community has been more than reasonably accommodated. There is no more compromising to do and still maintain fundamental civil rights protection for persons with disabilities.

Let me specifically address the concerns set forth the NFIB's testimony today which I did have the opportunity to read before the hearing. As you will see, some of the concerns stem simply from misunderstandings of the bill's provision and the rest, I am afraid, from a basic unwillingness to be subject to any disability, civil rights legislation.

Mr. Rasmussen asked, "How can a business owner make physical changes to the work place even before a specific disabled person begins work?" In employment, the ADA like Section 504 requires the accommodation to the known physical or mental limitations of a qualified applicant or employee with a disability.

Reasonable accommodation may include making existing facilities used by the disabled employee accessible. This is done on an individual basis according to the needs of the employee. This is true of all accommodations. Hence, the question posed on page four of the NFIB testimony as to which auxiliary aids are required for deaf or blind employees would again be subject to the needs of the individual and subject to the undue burden defense.

I would like to clarify the question asked by Mr. Ballenger about his plant to Mr. Kemp. I don't know if I caught exactly what the plant is, but basically, the procedure in employment is if someone in a wheelchair wants to apply to your firm, the ADA, as 504 requires that the applicant be reasonably accommodated which might mean that you make an alternative site to interview the applicant and to determine if that applicant is otherwise qualified for the job that is open in your plant.

If the applicant is otherwise qualified for the job that you have available, the question is whether there are barriers in the work site for that qualified disabled person.

Again, the requirement is of reasonable accommodation. If the work site can be made accessible without causing an undue burden to your business, then it must be made accessible.

So, again, the question is, the person has to have the right to be judged on the merits by arranging an alternative place for an interview and whatever other procedures you have to hire workers and then the worker must be reasonably accommodated if it does not cause an undue burden on your business.

The NFIB testimony then lists several items which he claims are "general, difficult and indefinite." All but one of those terms has been in use under the Section 504 regulations for over a decade and have now produce the catastrophies suggested by NFIB.

The one new term in the ADA is readily achievable which is defined in the Senate substitute at the request of the business community as "easily accomplishable and able to be carried out without much difficulty or expense," a definition which clearly reflects the concerns of the businesses.

NFIB proceeds to object to what it characterizes as the punitive approach. This is particularly hard to understand in that the business community fought and won the removable of punitive damages in the Senate compromise.

They were successful, I suppose at least partially, by their claim that punitive damages encouraged frivolous lawsuits. Now, the NFIB is still complaining about frivolous lawsuits. There is absolutely no basis for this. People with disabilities will not be made whole for the injuries they suffer, because of the discrimination under the Senate compromise.

We can only hope that lawyers will be willing to take meritorious cases with the possibility of no damages. It is trying to still be hearing complaints of frivolous lawsuits from the business community after this major compromise was made.

Finally, the NFIB asks, "Why must small firms in all kinds of social and geographical areas comply with the same requirements as the large ones and those located in large metro areas?"

I want to emphasize small employers "do not" have the same obligations as large ones under the ADA. Employers of under 15 are not even covered by the Employment Provisions of the ADA.

Those that are covered, over 15, have different requirements to provide reasonable accommodation in auxiliary aids, depending on the resources they have available under the undue burden defense.

The Senate compromise even contains a provision for small businesses in the area of new construction, exempting elevators for two floor buildings and businesses under 3,000 square feet per floor.

The ADA fully considers and accommodates the needs of small business. Not all people with disabilities live in large metro areas and those living in towns and rural areas want to work and participate in their communities as much as anyone else.

I should add I didn't have a chance to read the comments of the Association of Building and Contractors before the hearing. I do think that the Senate compromise does address all the concerns that were raised by this group as well, and I am also aware as stated by Mr. Wharen that the Senate incorporated legislative history particularly on the work site situation.

The time has come for action on the ADA. The Senate compromise represents many 100s of hours of input from concerned parties, including the business community. It has been endorsed by the Bush Administration only because these concerns were addressed.

I was extremely encouraged by Mr. Bartlett's comments today that the Senate compromise also has in large part met many of the concerns that he expressed at the first hearing and by his additional comment that any changes should not be of the sort that would in any way jeopardize the historic coalition that has been created for this bill.

We urge immediate passage of the ADA, a bill that is fair and just and gravely needed to put an end to loss potential and to open the doors of our country to everyone.

Thank you.

SUBCOMMITTEE ON EMPLOYMENT OPPORTUNITIES

SEPTEMBER 13, 1989

I. INTRODUCTION

The general public does not associate the word "discrimination" with the segregation and exclusion of disabled people. Most people assume that disabled children are excluded from school or segregated from their non-disabled peers because they cannot learn or because they need special protection. Likewise, the absence of disabled co-workers is simply considered confirmation of the obvious fact that disabled people can't work. These assumptions are deeply rooted in history.

Most people are never forced to examine their assumptions or stereotypes about disabled people unless they themselves or a family member become disabled, or they have a disabled child. At that point the falseness of the stereotypes and the injustice of the policies based on those stereotypes become all too apparent.

Historically, the inferior economic and social status of disabled people was viewed as an inevitable consequence of the physical and mental limitations imposed by disability. Over the years, this assumption has been challenged by policy makers, professionals, disabled citizens, the courts and by Congress. Gradually, disability public policy has recognized that many of the problems faced by disabled people are not inevitable, but instead are the result of discriminatory policies based on unfounded, outmoded stereotypes and perceptions and deeply embedded prejudices toward disabled people. These discriminatory policies and practices affect disabled people in every aspect of their lives.

The first major challenge to the notion that being disabled meant life-long economic dependency was prompted by the return of a vast number of disabled World War I veterans and the ever increasing incidence of industrial accidents. Recognizing the social and financial benefit of returning these injured persons to work, Congress passed the original landmark federal rehabilitation legislation, the Smith Fess Act of 1920. The prevalent view of disabled people as "helpless" and "hopeless" was challenged by legislation designed to enable disabled people to become productive, contributing members of society. Most importantly, by the mid 1960's the explicit goal of rehabilitation policy was the integration of disabled people into the mainstream of American life.[1] This "integrationist" goal set the stage for an examination of the social barriers that impede the attainment of equal opportunity for disabled Americans.

From a civil rights perspective, a profound and historic shift in disability policy occurred in the 1970's.[2] Following

---

[1] See H. R. Rep. No. 432, 89th Cong. 1st Sess. 2 (1965).

[2] This shift in public policy is well portrayed in a statement made by Senator Williams prior to the enactment of the 1973 Rehabilitation Act:

> For too long, we have been dealing with [the handicapped] out of charity . . . . This is medieval treatment for a very current problem . . . . Most of us see the handicapped only in terms of stereotypes that are relevant for extreme cases. This ancient attitude is in part the result of the historical separation of our handicapped population. I wish it to be said of America in the 1970's that when the attention at last returned to domestic needs, it made a strong and new commitment to equal opportunity and equal justice under law; . . . The handicapped are one part of our Nation that have been denied these fundamental rights for too long. It is time for the Congress and the Nation to

the powerful civil rights activism of the 1960's, the 1970's produced a more fundamental change in the social and legal status of disabled people than any prior era of American history. Through landmark litigation[3] and legislation,[4] disabled Americans were recognized for the first time as a legitimate minority subject to discrimination and worthy of basic civil rights protections.

This major shift in disability public policy culminated in the passage of a broad anti-discrimination provision, Section 504 of the Rehabilitation Act of 1973. Section 504 evidences Congress' recognition that while there are major physical and mental variations in different disabilities, disabled people as a

---

assure that these rights are no longer denied. 118 Cong.Rec. 3321-22 (1972).

[3] Two landmark cases Pa. Assoc. for Retarded Citizens v. Commonwealth of Pa., 334 F.Supp. 1257 (E.D. Pa. 1971); and Mills v. Bd. of Education of the Dist. of Columbia, 348 F.Supp. 866 (D.D.C. 1972), held that disabled children who had previously been excluded from public education had the right to a public education appropriate to their educational needs.

[4] In addition to the 1973 Rehabilitation Act, Congress enacted several other pieces of legislation designed to promote equal opportunity and integration of disabled people into the mainstream of American life. Chronologically, these statutes included: 1968--Architectural Barriers Act, 42 U.S.C. Section 4151 *et seq.* (required federally funded or leased buildings to be accessible); 1970--Urban Mass Transportation Act, 49 U.S.C. Section 1612 (required eligible jurisdictions to provide accessibility plans for mass transportation); 1975--Education for All Handicapped Children Act, 20 U.S.C. Section 140 *et seq.* (provided that each handicapped child was entitled to a free appropriate education in the least restrictive environment); and 1975--National Housing Act Amendments, 12 U.S.C. Section 1701 *et seq.* (provided for barrier removal in federally supported housing).

group faced similar discrimination in employment, education and access to society. As with racial minorities and women, Congress recognized that legislation was necessary to ameliorate widespread institutionalized discrimination.[5]

Nothing is more central to the goal of independence than employment. As demonstrated below, disabled Americans face widespread discrimination in seeking to secure equal employment opportunities. The Rehabilitation Act covers private employers only when they receive federal funds or federal contracts. It is now time to finish the work begun in 1973--to recognize the basic civil rights of people with disabilities by providing the same protection against employment discrimination as is afforded other minorities and women. Passage of the ADA is essential to assure Americans with disabilities equal employment opportunity.

II. THE NATURE AND HISTORY OF PREJUDICE TOWARDS DISABLED PEOPLE

The roots of prejudice against and stereotypes about disabled people reach far back in history and persist today. Disabled people have throughout history been regarded as incomplete human beings--"defective." In early societies this view of disabled people resulted in persecution, neglect and death.[6] These practices gradually gave way to the more humanitarian belief that disabled people should be given care and protection. Persecution was largely replaced by pity, but the exclusion and segregation of disabled people remained unchallenged.[7] Over the years, the view of disabled people as incompetent and dependent upon charity, custodial care and protection became firmly embedded in the public consciousness. The invisibility of disabled Americans was simply taken for granted. Disabled people were out of sight and out of mind.

---

[5] That Section 504 was intended to include disability within the general corpus of federal anti-discrimination law is unmistakable. As stated in the Senate Report accompanying the 1974 amendments:

> Section 504 was patterned after, and is almost identical to, the anti-discrimination language of section 601 of the Civil Rights Act of 1964 . . . and section 901 of the Education Amendments of 1972 . . . . The section therefore constitutes the establishment of a broad government policy that programs receiving Federal financial assistance shall be operated without discrimination on the basis of handicap. Id. at 39, reprinted in 1974 U.S. Code Cong. & Ad. News at 6390.

The discriminatory nature of policies and practices that exclude and segregate disabled people has been obscured by the unchallenged equation of disability with incapacity and by the gloss of "good intentions." The innate biological and physical "inferiority" of disabled people is considered self-evident. This "self-evident" proposition has served to justify the exclusion and segregation of disabled people from all aspects of life. The social consequences that have attached to being disabled often bear no relationship to the physical or mental limitations imposed by the disability. For example, being paralyzed has meant far more than being unable to walk--it has meant being excluded from public school,[8] being denied employment opportunities,[9] and being deemed an "unfit" parent.[10] These injustices co-exist with an atmosphere of charity and concern for disabled people.

---

[6] For an historical overview of persecution of disabled people in early societies, See Burgdorf and Burgdorf, A History of Unequal Treatment: The Qualifications of Handicapped Persons as a 'Suspect Class' Under the Equal Protection Clause, 15 Santa Clara Law. 832-36 (1975).

[7] Interestingly, a positive relationship has been established between tendencies to pity blind people on the one hand, and the tendency to espouse community segregation for the blind on the other. Lukoff & Whiteman, Attitudes Towards Blindness, 55 The New Outlook for the Blind 39, 42 (1961)

It is only within the last decade that a fundamental challenge to traditional notions about disability has been launched. Increasingly, the social science and psychological literature has explored the implications of a socio-political

---

[8] "Many of the physically handicapped children do have the mental ability to attend public school but are denied that right due to architectural barriers and-or transportation problems." 117 Cong. Rec. 42293 (1971).

[9] In *Heumann v. Bd. of Education of the City of N.Y.*, 320 F.Supp. 623 (S.D. N.Y. 1970) plaintiff was denied a license to teach "on the grounds that being confined to a wheelchair as a result of polio, she was physically and medically unsuited for teaching.

[10] "Historically, child-custody suits almost always have ended with custody being awarded to the non-disabled parent, regardless of whether affectional or socio-economic advantages could have been offered by the disabled parent." I. Vash, *The Psychology of Disability* 155 (1981).

This issue was eloquently addressed in a landmark decision by the California Supreme Court, *Carney v. Carney*, 24 Cal. 3d 725, 598 P.2d 36, 157 Cal. Rptr. 383 (1979). In that case the lower court awarded custody to the mother of two boys after the father was injured and became a quadriplegic. The California Supreme Court reversed, stating that ". . .the court's preconception . . . also stereotypes William as a person deemed forever unable to be a good parent simply because he is physically handicapped. Like most stereotypes, this is both false and demeaning." *Id.* at 737, 598 P.2d at 42, 157 Cal. Rptr. at 389.

BEST COPY AVAILABLF

definition of disability that recognizes the critical impact of social factors on the lives of disabled Americans.[11] There is a growing awareness of the similarities between racial prejudice and the prejudice experienced by disabled people.[12] And like women, disabled people have identified "paternalism" as a major obstacle to economic and social advancement.

III. DOCUMENTATION OF THE REALITY OF DISABILITY-BASED EMPLOYMENT DISCRIMINATION

Employers, like other members of the general public, hold stereotypes and prejudices about disabled people that impede their ability to objectively evaluate the qualifications of disabled applicants and workers. Disabled people face discrimination in employment in a variety of ways. Many disabled people are excluded from the outset by medical requirements that screen out all people with specific disabilities or by inflated physical or other job requirements that bear no relationship to the successful performance of the job. Disabled people who are not completely excluded at the outset are often channeled into disability-stereotyped dead-ended jobs or denied promotional opportunities. These discriminatory policies affect all disabled people, whether their disabilities are severe, moderate or perceived. The unemployment rate among persons with disabilities is staggering. While 88% of working-age men and 69% of working-age women are employed, only 33% of disabled working-age Americans work--only one disabled woman out of five and four disabled men out of ten have jobs.[13]

---

[11] For a look at works which have utilized the socio-political definition of disability *see* Hahn, *Disability and Rehabilitation Policy: Is Paternalistic Neglect Really Benign?* (Book Review), 42 Pub. Ad. Rev. 385 (1982); Bowe, *Rehabilitating America: Barriers to Disabled People* (1978); Gliedman & Roth, *supra* p. 14; and Eisenberg, *supra* p. 12.

[12] *See* p. 11, *infra*

The presumption that these figures reflect the actual inability of disabled people to work is refuted by the many sociological, psychological and government studies that have documented that employment opportunities for disabled adults are severely impeded by misconceptions and generalizations about disabilities, unfounded fears about increased costs and decreased productivity,[14] and outright prejudice toward disabled people.

A recent report by the U.S. Advisory Commission on Intergovernmental Relations[15] stated:

> Probably the most significant barriers faced by persons with disabilities relate to the attitudes, predispositions, and behaviors of nondisabled persons. Such attitudes range from negative views of disability to discomfort in associating with people who experience some form of disability. The nature and extent of attitudes about disability have been documented through an extensive set of research studies conducted in many settings. One common finding is that nonhandicapped people tend to be preoccupied with disabling conditions and often incapable of seeing beyond these conditions to the whole person. Such predispositions lead

> nondisabled persons to overlook and ignore the full range of abilities possessed by persons with disabilities.
>
> *****
>
> Researchers have shown that negative and discriminatory attitudes extend to the employment capabilities of disabled individuals. Both potential employers and coworkers have been shown to have negative views and expectations about the productivity and reliance of workers who experience some form of mental or physical disability. As Peter Jamero has noted, "employers, more often than not, appear more inclined to judge handicapped persons on the basis of disability rather than on what they are capable of performing." The reluctance of employers to hire persons with disabilities is rooted in common myths and misunderstandings, including the notions that the employment of disabled workers will increase insurance and worker compensation costs, lead to higher absenteeism, harm efficiency and productivity, and require expensive accommodations.
>
> These attitudes, common to many employers in the United States, have persisted despite empirical evidence from several quarters that disabled workers perform at levels equal to or superior to other employees. (Footnotes omitted).

The 1973 Rehabilitation Act authorized a needs study, which was reported to Congress in 1976, Urban Institute, Report of the Comprehensive Service Needs Study (1975) (herein cited as *Needs Study*). The *Needs Study* summarized existing literature on employer attitudes as follows:

> Virtually all the studies on employer attitudes have found that large proportions of employers disfavor hiring disabled people. There are strong indications that these attitudes are in large part based on non-rational, negative feelings--prejudice, in other words. *Id*. at 324.

In keeping with the historical evolution of disability public policy, the *Needs Study* recommended:

> a major shift in research and development emphasis toward a focus on the interaction of the individual and

BEST COPY AVAILABLE

> the barriers in the environment . . . . The major problems seem to be not so much with the severely handicapped, as with the severely handicapping environment. *Id*. at 818.

Hence, stereotypes and prejudices rather than handicaps themselves were viewed as the most potent barrier to equal employment opportunity.

While few people would openly admit to feelings of hostility towards disabled people, the persistence of deeply rooted prejudices has been well documented. In one study reported in the *Needs Study*, the author probed the attitudes of employers by asking them to rank various groups in terms of which ones they believed most employers would be more likely to hire. Colbert, Kalish & Chang, *Two Psychological Portals of Entry for Disadvantaged Groups*, 34:7 Rehab. Literature 194 (1973), cited in *Needs Study* at 314-15. The list included physically and mentally disabled groups, minority groups, controversial groups (student militants, prison parolees), old people and "neutral" groups (e.g. whites, Canadians). The study found that *"physical disability groups were clustered together and ranked lower than all minority groups and old people and higher than all . . . mentally disabled groups*." *Id*. at 315. Employers were more willing to hire student radicals or prison parolees than people who were either physically or mentally disabled. *Id*. This finding is consistent with a frequently cited study that found that all disabled groups were subject to prejudice and that personnel directors would prefer to hire a former prison inmate

BEST COPY AVAILABLE

or mental hospital patient than an epileptic. Triandis & Patterson, *Indices of Employer Prejudice Toward Disabled Applicants*, 47 J. of Applied Psychology 52 (963).[16]

Numerous studies have been conducted that conclude that disabled people are subject to the same type of prejudices and discrimination as members of racial and ethnic minorities. The earliest work in this area, Barker, *the Social Psychology of Physical Disability*, 4:4 J. of Soc. Issues 28 (1948), concluded that "the physically handicapped person is in a position not unlike that of the Negro, the Jew and other underprivileged racial and religious minorities; he is a member of an underprivileged minority." *Id*. at 31.[17] In a later study, Barker specifically reported that persons with various disabilities were unable to find adequate employment as a result of "irrational prejudice." Barker, Wright, Meyerson & Gonich, *Adjustment to Physical Handicap and Illness: A Survey of the Social Psychology of Physique and Disability*, 55 Bull. of the Soc. Science Research Council (1953).

Often reflective of the employer's own prejudices are the fears about the "reaction of others" to a disabled worker. In a survey reported in the Needs Study, employers were found to believe that paraplegics were best suited for jobs requiring a minimum of public contact. Employers feared the negative "reactions of others to the disability." Felton & Litman, Study of Employment of 222 Men with Spinal Cord Injury, 46 Archives of Physical Med. and Rehab. 809 (1965) cited in Needs Study at 321 n.32.[18]

[16] *See* discussion of employer bias against epileptics on p. 14 *infra*.

[17] See also Cowen, Underberg & Verillo, *The Development and Testing of an Attitudes to Blindness Scale*, 48 J. of Soc. Psychology 297 (1958); Wright, *Physical Disability—A Psychological Approach* (1960); Safilios-Rothschild, *The Sociology and Social Psychology of Disability and Rehabilitation* III (1970).

This rationale for not hiring disabled workers persists today. In a recent case a doctor with multiple sclerosis was denied admission to a psychiatric residency program because the admissions committee feared the negative reactions of patients to his disability.[19] Pushkin v. Regents of the Univ. of Col., 658 F.2d 1372 (10th Circ. 1981). The 10th Circuit found these fears to be based on general stereotypes rather than any actual information about the disabled applicant. After evaluating the evidence, the 10th Circuit affirmed the district court's order directing the admission of the plaintiff to the residency program.

---

[18] This response is reminiscent of "customer preference" cases brought under Title VII. See e.g. Diaz v. Pan American World Airways Inc., 442 F.2d 385 (5th Cir. 1971).

[19] Fears of the "reactions of others" have served to justify the exclusion of disabled people from many aspects of life. In 1971 one million handicapped children were excluded entirely from public school. 117 Cong. Rec. 45974 (1971). As stated by Congressman Vanick:

> [I]n the past, the reason for excluding these children from their right to an education has never been very clear . . . In one case a court ruled that a cerebral palsied child, who was not a physical threat and was academically competitive, should be excluded from public school, because his teacher claimed his physical appearance "produced a nauseating effect" on his classmates. Id.

Similarly, in 1972, Congressman Vanick commented on an airline rule that allowed carriers to "refuse transportation to 'crippled' persons on the grounds that they make passengers uncomfortable." 118 Cong. Rec. 11363 (1972).

The study referred to above on the attitudes toward and experiences with hiring paraplegics also found that most employers believed that paraplegics were best suited for non-professional jobs. This stereotype was directly contrary to the fact that paraplegics are actually found to be employed most frequently as professionals. Felton, supra p. 20, at 321.

Often the image of what disabled people "should" do or can do has no basis in reality. Different stereotypes attach depending on the disability involved. See Himes, Measuring Social Distance in Relations with The Blind, 54 Outlook for the Blind 54 (1960). ("Each physical disability--deafness and crippleness as well as blindness--is significantly, though differently, stereotyped." Id. at 55.) Another study cited in the Needs Study indicated "that most employers would not consider people with most kinds of disabilities for production and sales jobs, but would for clerical and, to a lesser extent, managerial jobs; (and) that over 50% of the employers would never consider hiring a blind or mentally retarded person for any type of job . . ." Williams, Is Hiring the Handicapped Good Business, 38:2 J. of Rehab 30 (1972) cited in Needs Study at 312.

Discriminatory employer attitudes are manifested in a variety of ways. Most obvious is the continued use of medical standards that exclude all persons with particular disabilities from employment opportunities. The individual who has a disability that is exempted has no opportunity to prove his/her individual abilities to perform the job. Medical standards that are not formalized in writing are utilized in practice. Disabled people are rejected for employment as a result of pre-employment medical exams that merely reveal the existence of a disability without demonstrating any actual job-related limitation.

Although at least 85% of people with epilepsy have obtained control of their seizures, through medication, a significant number of employers flatly refuse to hire epileptics without any consideration of the effect the condition will have on safety and job performance.[20] Likewise, employers frequently refuse to hire persons who have cancer. A study performed in 1972 by the California Division of the American Cancer Society concluded that most corporations and governmental agencies in that state discriminated in hiring against job applicants for an average period of five years after treatment for cancer.[21] The study revealed that this discrimination by employers stemmed from concerns that applicants with cancer, or a history of cancer, might not survive long enough to justify the training, that they

BEST COPY AVAILABLE

might need extended periods of sick leave, and that they would cause increases in the cost of health insurance, workers compensation, and life insurance. Some employers believed that other employees would object to employees who were cancer victims because of the mistaken belief that cancer is contagious.

All of these reasons were proven false in a study performed in 1972 by the Metropolitan Life Insurance Company of its employees who were known to have had treatments for cancer. The study indicated that their work records were good relative to employees who had never had cancer. The conclusion was that hiring persons who have been treated for cancer for jobs for which they are qualified is sound industrial practice.[22] Hence, a significant percentage of persons who have had treatment for cancer suffer unjustifiable and discriminatory loss of job opportunities.

Many employers require applicants to have back x-rays taken, and then disqualify anyone whose results are abnormal. However, studies show that there is no difference between the incidence of low back pain in groups with low back abnormalities discoverable by x-ray and groups without such abnormalities.[23] Hence, many qualified persons with abnormal back x-rays are unnecessarily precluded from working.

[23] Rockey, Fantel, Omenn, *Discriminatory Aspects of Pre-employment Screening: Low Back X-ray Examinations in the Railroad Industry*, 5 Am. J. of Law & Med. 197, 202 (1979).

Seemingly more objective, but no less discriminatory, are job "requirements" that in fact bear no relation to the successful performance of the job. Moreover, "employers frequently underestimate the capabilities of disabled workers" to perform legitimate job functions. Nagi, *Work, Employment & the Disabled*, 31 Am.J. Econ. Soc. 21 (1972), cited in *Needs Study* at 314.[24]

The *Needs Study* cited two pioneering studies that confirm that private employers, as well as state and local governments, utilize job "requirements" that bear no relationship to the successful performance of the job. Viscardi, *The Adaptability of Disabled Workers*, 2:3 Rehab. Rec. 3 (1981), cited in *Needs Study* at 326 n.45; Greenleigh Associates, Inc., *A Study to Develop a Model for Employment Services for the Handicapped* (1969), cited in *Needs Study* at 326 n.46. Examples given are requiring employees to stand up for jobs that "can just as easily--or more easily--be performed sitting down" and requiring the "taking of written civil service tests that mentally retarded people cannot pass for jobs that they are capable of performing." Id. at 326. The Needs Study also reported a situation where "workers suffering upper limb amputations on the job were retained after a job analysis performed by the union involved discovered that, contrary to popular belief, over 80 percent of the work required on the job did not require the use of both arms." Id. at 804.

---

[24] The use of stereotypes about the physical abilities of women are analogous to the stereotypes about disabled people. For example, *Weeks v. Southern Bell Telephone & Telegraph Co.*, 408 F.2d 228 (5th Cir. 1969), involved a regulation that prohibited women from lifting over 30 pounds. The court overruled the regulation because it was based on general presumptions instead of individual ability. *See* also *LeBlanc v. Southern Bell Telephone & Telegraph Co.*, 333 F.Sup. 602 (E.D. La., 1971), *aff'd*, 460 F.D 1229 (5th Cir. 1972) *cert. denied*, 409 U.S. 990 (1972); *Rosenfeld v. Southern Pacific Co.*, 444 F.2d 1219 (9th Cir. 1971).

Outmoded stereotypes whether manifested in medical or other job "requirements" that are unrelated to the successful performance of the job, or in decisions based on the generalized perceptions of supervisors and hiring personnel, have excluded many disabled people from jobs for which they are qualified. The function of anti-discrimination laws is to assure that decisions are made based on individual merit.

Employers often attempt to justify the rejection of disabled applicants by claiming that hiring disabled workers will cause decreased productivity and safety, and increased absenteeism and costs. An examination of the literature on the actual performance of disabled workers reveals the fallacies those rationalizations contain.

According to the Needs Study, the best and most comprehensive study of the job performance of disabled workers was conducted by the Bureau of Labor Statistics, U.S. Dept. of Labor, and appears in Bull. No. 923, The Performance of Physically Impaired Workers in Manufacturing Industries (1948), cited in Needs Study at 318. In this comprehensive study Department staff examined the employment records of 11,000 disabled and 18,000 carefully matched non-disabled workers in manufacturing plants throughout the country. Data on productivity, absenteeism, nondisabling injuries, disabling injuries and quits were abstracted. Company records rather than supervisors' impressions were the data source. For each disabled worker, one to three non-disabled workers were matched, not only for sex, age, and occupation but also for plant, shift, and particular job within the same plant and shift.

As reported in the Needs Study:

> The most important finding was that differences between impaired and unimpaired workers in any of the performance categories measured were slight . . . . Impaired workers had significantly higher involuntary termination (firing) rates. The authors attribute this to postwar practice of firing disabled workers to hire returning (able-bodied) war veterans . . . . One of the conclusions that the authors draw is that the physically impaired worker is not necessarily a handicapped worker. The results of this major study are strong evidence that employers' fears of low performance rates among disabled workers are unjustified. (emphasis added) Id. at 318-19.[25]

Interestingly, the authors found that many of the manufacturing plants surveyed reinstated policies against hiring disabled workers after having relaxed such policies during the war years. See Needs Study at 296-97. The reinstatement of exclusionary policies, despite the positive employment records of disabled workers, is strong evidence that these standards are not related either to functional skill or ability required for job performance or to a concern for the safety of workers.

---

[25] For example, the study specifically stated:
The data suggest that. . . an orthopedic impairment left more abilities than it took away. A man who has lost an arm was not necessarily incapable of performing jobs that required the use of two hands. Nor. . . did the survey indicate that the worker who had lost a leg necessarily had to be confined to sedentary occupations. . . . Men who had lost a hand were found engaged in machine operations or in handling materials; and workers who had lost a leg were engaged in work requiring considerable walking and moving about. Bureau of Labor Statistics, Bull. No. 923, supra p. 27, at 59.

Other government studies have also found that handicapped workers performed as well as, or better than, their non-handicapped co-workers. U.S. Bureau of Labor Standards, Dept. of Labor, Bull. No. 122, Proceedings of the National Conference on Workmen's Compensation & Rehabilitation 19 (1950). All studies on the subject support the fact that disabled workers have as good as or better safety records than non-disabled workers. U.S. Dept. of Labor, Bull. No. 122 at 8.[26] Government studies have also concluded that the employment of handicapped persons does not affect the premium rates either for non-occupational benefit plans or for workers' compensation. U.S. Bureau of Labor Standards, Dept. of Labor Bull. No. 234 at 10.[27]

Over the last twenty-five years the Dupont Corporation has conducted a number of studies on the performance of its handicapped employees. The most recent report, E. I. DuPont de

Nemours & Co., Equal to the Task (1981) (DuPont Survey of Employment of the Handicapped), concluded "Dupont studies over a period of twenty-five years have shown that the performance of handicapped employees is equivalent to that of their unimpaired co-workers. In safety, job duties and attendance, the handicapped hold their own." Id. at 4.

IV. THE REHABILITATION ACT MODEL

The anti-discrimination in employment sections of the ADA are modelled after Section 504 of the 1973 Rehabilitation Act. The primary difference in the ADA and Section 504 is scope, not content. While Section 504 applies only to recipients of federal funds, the ADA would extend employment coverage to all entities covered by Title VII of the 1964 Civil Rights Act. The purpose is simple--to complete the commitment begun in 1973 to extend to Americans with disabilities the same protections against discrimination as that afforded other minorities and women.

The statutory framework is designed to ensure that persons with disabilities are treated as individuals and that employment decisions are not made on the basis of stereotypes about certain disabilities. Only those individuals who are qualified to perform the job in question are protected. Hence, employers are not required to employ an unqualified individual simply because he or she has a disability.

The ADA defines a "qualified individual with a disability" as "an individual with a disability who, with or without reasonable accommodation, can perform the essential functions of

BEST COPY AVAILABLE

the employment position that such individual holds or desires." The term "reasonable accommodation" is a term of art from the Section 504 regulations. The ADA also incorporates the Section 504 limitation on reasonable accommodation, which is that of "undue hardship." The term discrimination includes the failure to make reasonable accommodation unless the covered entity "can demonstrate that the accommodation would impose an undue hardship on the operation of its business." The Section 504 regulations establish a context for determining whether an accommodation is reasonable or poses an undue hardship. The relevant section, 45 C.F.R. §84.12, provides:

> (b) Reasonable accommodation may include (1) making facilities used by employees readily accessible to and usable by handicapped persons, and (2) job restructuring, part-time or modified work schedules, acquisition or modification of equipment or devices, the provision of readers or interpreters, and other similar actions.
>
> (c) In determining pursuant to paragraph (a) of this section whether an accommodation would impose an undue hardship on the operation of a recipient's program, factors to be considered include:
>
> > (1) The overall size of the recipient's program with respect to number of employee, number and type of facilities, and size of budget;
> >
> > (2) The type of the recipient's operation, including the composition and structure of the recipient's workforce, and
> >
> > (3) The nature and cost of the accommodation needed.

Hence, reasonable accommodation is a flexible standard that balances the rights of the applicant or employee with the employer's legitimate business interests. The determination of undue hardship must therefore be made on an individual basis. As

BEST COPY AVAILABLE

explained in the "Analysis of the Final Regulation," 42 Fed. Reg. 22685, 22688 (1977):

> Paragraph (c) of this section sets forth the factors that the Office for Civil Rights will consider in determining whether an accommodation necessary to enable an applicant or employee to perform the duties of a job would impose an undue hardship. The weight given to each of these factors in making the determination as to whether an accommodation constitutes undue hardship will vary depending on the facts of a particular situation. Thus, a small day-care center might not be required to expend more than a nominal sum, such as that necessary to equip a telephone for use by a secretary with impaired hearing, but a large school district might be required to make available a teacher's aide to a blind applicant for a teaching job. Further, it might be considered reasonable to require a state welfare agency to accommodate a deaf employee by providing an interpreter, while it would constitute an undue hardship to impose that requirement on a provider of foster home care services.

In determining whether an individual is qualified under the ADA, an employer may not use selection criteria that identify or limit persons with disabilities unless the criteria can be shown by the covered entity to be necessary and related to the ability of an individual to perform the essential functions of the particular employment position. As demonstrated earlier, persons with disabilities are often subject to disqualifying physical or mental criteria that bear no relationship to job performance.

To assure that qualified applicants are not excluded because of a physical or mental condition, it is critical that the selection procedure not included pre-employment inquires that serve solely to identify a person's disability. It has been common practice for pre-employment questionnaires to include

BEST COPY AVAILABLF

sweeping questions such as: do you have any physical defect; have you ever been treated for mental illness; have you ever been hospitalized; do you ever experience seizures. These types of intrusive inquiries identify a person's disability without serving any legitimate job-related purpose. In order to insure that improper bias does not enter into the selection process, it is critical to limit employers' inquires to those that evaluate a person's ability to perform job-related functions. As explained in the Section 504 Regulations, Analysis, supra, 42 Fed. Reg. at 22689, "an employer may not ask on an employment form if an applicant is visually impaired but may ask if the person has a current driver's license." This type of procedure assures that subjective stereotyping about disabling conditions, which as shown above is prevalent, does not enter into the determination of whether an applicant is qualified for the job.

As in Section 504 and Title VII, the ADA's non-discrimination provisions extend to "job application procedures, the hiring or discharge of employees, employee compensation, advancement, job training, and other terms, conditions and privileges of employment.

In order to provide uniform enforcement procedures, the ADA makes the EEOC the enforcing agency. It is expected that the EEOC and other federal agencies with jurisdiction over the employment practices of private employers will work cooperatively to enforce the anti-discrimination provisions. This has been done in instances where there is over-lapping jurisdiction in

BEST COPY AVAILABLE

employment discrimination cases under Title VI, Title VII, Title IX and Executive Order 11246. Procedures for Complaints of Employment Discrimination Filed Against Recipients of Federal Financial Assistance, 28 C.F.R. 42.601-613 (January 25, 1983). Both the Office of Civil Rights and the Office of Federal Contract Compliance refer individual cases of employment discrimination to the EEOC.

Finally, under the ADA a private right of action is available and the remedies of Title VII and 42 U.S.C. section 1981 are available, as in race and national origin employment cases. Section 1981 damages are limited to cases of intentional discrimination. Punitive damages require a showing that the defendant acted "wantonly, maliciously or in bad faith." The Senate substitute limits ADA employment discrimination remedies to those available under Title VII. This was a major concession to allay the concerns of the business community, the administration and some members of Congress. It is intended that the remedies under the ADA will parallel any changes made in Title VII.

Section 605 of the ADA allows for attorney's fees to the prevailing party. This provision has long been recognized as essential to the right of protected groups, in order to fully utilize anti-discrimination statutes. As Senator Cranston stated when enacting the attorney's fees provision in the 1978 Amendments to Section 504, "a right without a remedy is no right at all."

V. The Anti-Discrimination in Employment Sections of the Rehabilitation Act Have Created Workable Standards Which Take Into Consideration the Rights of Workers With Disabilities and the Business Interests of Employers

A review of the case law prohibiting employment discrimination under the 1973 Rehabilitation Act provisions demonstrates a reasoned approach that considers both the rights of workers with disabilities and the business interests of employers. The cases also illustrate the drastic need for anti-discrimination provisions to assure that people with disabilities who are qualified to work are not forced onto the welfare rolls by employer ignorance and prejudice.

The threshold jurisdictional issue in Section 504 cases, as in the ADA, is whether a person is "handicapped" or "disabled."[28] The U.S. Supreme Court's seminal decision on this issue is School Board of Nassau County v. Arline, 107 S.Ct. 1123 (1987). In that case the court was called upon to interpret the Rehabilitation Act definition of "handicapped" person, which is identical to that contained in the ADA. The term includes an individual who (i) has a physical or mental impairment, which substantially limits one or more major life activities, (ii) has a record of such an impairment, or (iii) is regarded as having such an impairment.

---

[28] The definition of persons with disabilities in the ADA is not intended to be substantively different than the definition of "handicapped person" in Section 504. The substitution of disabilities for handicaps merely reflects a preference in terminology.

The Arline Court stated that this definition:

> . . . reflected Congress' concern with protecting the handicapped against discrimination stemming not only from simple prejudice but from 'archaic attitudes and laws' and from 'the fact that the American people are simply unfamiliar with and insensitive to the difficulties confronting individuals with handicaps.' "...[t]o combat the effects of erroneous but nevertheless prevalent perceptions about the handicapped, Congress expanded the definition of 'handicapped individual' so as to preclude discrimination against 'a person who has a record of, or is regarded as having, an impairment [but who] may at present have no actual incapacity at all.'"
>
> *****
>
> By amending the definition of 'handicapped individual' to include not only those who are actually physically impaired, but also those who are regarded as impaired and who, as a result, are substantially limited in a major life activity, Congress acknowledged that society's accumulated myths and fears about disability and disease are as handicapping as are the physical limitations that flow from actual impairment.[29]

Since Arline, the Congress has adopted language that recognizes coverage of persons with contagious diseases and incorporates "direct threat to others" as a legitimate qualification standard. [See Civil Rights Restoration Act of 1987; Fair Housing Act Amendments of 1988 (not limited to contagious diseases)]. The ADA also adopts this approach:

---

[29] The specific question in Arline was whether a person with a contagious disease is covered by the Act. The Court held in the affirmative stating that an exclusion for contagious diseases "would mean that those accused of being contagious would never have the opportunity to have their condition evaluated in light of medical evidence and a determination made as to whether they are 'otherwise qualified.'" After Arline, the Solicitor General issued an opinion that persons with HIV-infection are covered by the Act. As stated above, this conclusion has been endorsed by Congress.

> The term qualification standard may include... requiring than an individual with a currently contagious disease or infection not pose a direct threat to the health or safety of other individuals in the workplace or program.[30]

As is the true with contagious diseases, a review of the case law shows that the legitimate concerns of employers and taken into account in all types of cases. However, it is also clear that many employers utilize outmoded job criteria that screen out qualified workers. The employer always has the opportunity to show that the criteria are job related and are consistent with business necessity and the safe performance of the job. If such a showing is made, the disabled person is disqualified unless alternative criteria that do not have an adverse impact would also meet legitimate business interests. The requirement of reasonable accommodation has also resulted in the employment of qualified persons with disabilities without compromising legitimate business interests. Finally, the case law reveals that persons with disabilities are still subject to outright prejudice and ignorance based on unfounded stereotypes. Clearly, employers have no legitimate interest in failing to employ on that basis.

Pushkin v. Regents of the University of Colorado, 658 F.2d

---

[30] The ADA also states that a qualification standard may include "requiring that the current use of alcohol or drugs by an alcoholic or drug abuser not pose a direct threat to property of the safety of others in the workplace. This provision was originally included in the 1978 Amendments to Section 504. This type of provision is also included in the CRRA and the FHAA (not limited to drugs or alcohol).

1372 (10th Cir. 1981), illustrates the pervasive use of stereotypes to deny qualified persons with disabilities employment opportunities. In that case a physician who had multiple sclerosis sought and was denied admission to the University's Psychiatric Residency Program. The Tenth Circuit agreed with the district court's determination that Dr. Pushkin was an otherwise qualified individual who had been rejected solely on the basis of his handicap, in violation of the Rehabilitation Act.

The evidence presented at trial indicated that the defendant had made the following assumptions about Dr. Pushkin: (1) that he was angry and emotionally upset due to his handicap, and would thus be unable to do an effective job as a psychiatrist, (2) that he had difficulties with mentation, delirium and disturbed sensorium due to the MS and steroid use, (3) that his handicap would render him unable to handle the workload, and (4) that he would miss too much time away from work.

At trial the district court found that these assumptions were rebutted by evidence of Dr. Pushkin's past competence in dealing with his condition, and by witnesses' testimony that his emotional responses were normal and that he treated patients appropriately.

The Tenth Circuit affirmed the finding that the University's reasons for rejecting Dr. Pushkin "were based on incorrect assumptions or inadequate factual grounds." Id. at 1383. The appellate court opined that handicap discrimination usually results from "invidious causative elements and often occurs under the guise of extending a helping hand or a mistaken, restrictive belief as to the limitations of handicapped person." *Id*. at 1385. In this case, the University's actions were not "predicated on any known deficiency of Dr. Pushkin himself" but based on a general knowledge of MS that did not apply to Dr. Pushkin, the individual.

Likewise in *Smith v. Fletcher*, 393 F.Supp. 1366 (S.D. Tex. 1975), *modified*, 559 F.2d 1014 (5th Cir. 1977), a paraplegic who had a Master's degree in physiology was assigned menial clerical tasks because her supervisor had made "an arbitrary and unfounded decision as to her physical capabilities." The court ordered that she be promoted from a GS-9 to a GS-13.

Strathie v. Department of Transportation, 716 F.2d 227 (3rd Cir. 1983), illustrates that strict adherence to outmoded physical requirements serves to exclude qualified disabled employees. In that case, a hearing impaired person sought a position as a public school bus driver. He was denied the necessary driver's license on the grounds that he could not meet the Department of Transportation regulation requiring a specified level of hearing without the use of a hearing aid. With a hearing aid Mr. Strathie meet the Department's standards.

The district court held that the regulation was valid and that Mr. Strathie was not therefore an "otherwise qualified" handicapped individual under the Rehabilitation Act. In support of this decision the court accepted defendant's arguments that the accommodation of a hearing aid was unreasonable because of the risks of dislodgement, mechanical failure, inability to localize sound, and the possibility that the wearer would lower the volume of the aid and thus decrease its usefulness.

The Third Circuit reversed, noting that the district court had failed to consider Mr. Strathie's proposed modifications that would reduce the risks. The modifications included frequent inspections of the aid and carrying a spare aid and batteries to minimize mechanical failures, pre-setting volume to avoid variability, and individualized assessment of ability to localize sound. With respect to the risk of dislodgement, the court noted that certain types of hearing aids are "less likely to become dislodged than are regular eyeglasses." The court emphasized that it was anomalous for the Department to allow vision standards to be met with corrective lenses, yet did not allow candidates to meet hearing requirements with the help of a hearing aid. The opinion as a whole highlighted the need to address the realities of a given individual's situation, instead of relying on overly broad general assumptions.

The need for individualized determination under Section 504 with respect to the qualifications of persons with disabilities was also emphasized by the court in Jackson v. State of Maine 544 A.2d 291 (Me. 1988). Mr. Jackson was an insulin-controlled diabetic who was prevented from taking the examination for public school bus driver on the basis of a regulation requiring him to be "free from...diabetes". Id. at 293. The Court noted that the

BEST COPY AVAILABLE

denial of plaintiff's application "was automatic and based solely on his diabetes." Defendants offered no evidence that Mr. Jackson, as an individual, could not safely drive a school bus. The doctor who examined him concluded that he was "free from any condition that might affect his ability to safely operate a school bus." Moreover, at the time of the appeal Mr. Jackson was working successfully as a bus driver.

In Stutts v. Freeman, 694 F.2d 666 (11th Cir. 1983), the Eleventh Circuit found that the use of a written test as the sole criterion for a job as an equipment operator discriminated against Mr. Stutts, who had dyslexia (a learning disability).

Nelson v. Thornburgh, 567 F.Supp. 369 (E.D.Pa. 1983), illustrates the importance of reasonable accommodation to maintain qualified disabled workers and the flexible approach taken by courts when considering the burden on defendants. Thornburgh involved blind income maintenance workers who alleged that the Department of Public Welfare had unlawfully discriminated against them, failing to accommodate their disability by providing part-time readers. The employees themselves had hired readers, and with the assistance of these readers were able to perform the job as well as their sighted colleagues. The court held that inability to read did not mean that the employees were not "otherwise qualified," as this was not essential to successfully meeting the requirements of the position. Several accommodations, including brailling forms and manuals, and using technology like a Versabraille, and possible schedule changes to make the most efficient use of readers, would insure that employees were able to function on the job.

The court acknowledged that "accommodation...will impose some further dollar burden upon an already overtaxed system of delivery of welfare benefits", but noted that "the additional dollar burden is a minute fraction of the DPW/PCBA personnel budgets." Moreover, the court emphasized that the failure to accommodate in the workplace would impose very real costs on American society and the American economy, in light of the consequence of having to support these employees on government benefits if they were not allowed to contribute their productivity as members of the workforce.

Finally, Chalk v. United States District Court Central District of California, 840 F.2d 701 (9th Cir. 1988), illustrates how irrational fear of contagion can serve to deny a qualified disabled person his profession, unless court review is available. In that case Mr. Chalk, a certified teacher of hearing-impaired students, was barred from teaching after a diagnosis of AIDS. The Ninth Circuit reviewed all relevant medical literature and concluded that there was no significant risk of transmission in the classroom setting. Among the cited literature was a Surgeon General's Report that stated, "casual social contact between children and persons infected with the AIDS virus is not dangerous." The Court stated that "the basic purpose of Section 504 is to ensure that handicapped individuals are not denied jobs or other benefits because of the prejudicial attitudes or

ignorance of others."

VI. REPORTS OF EMPLOYERS HAVE BEEN POSITIVE

Reports from employers demonstrate that many of the fears associated with passage of the Rehabilitation Act anti-discrimination provisions were unfounded. In addition to the studies that refute employers fears about productivity, absenteeism and safety,[31] a comprehensive study by the Department of Labor regarding accommodations to disabled employees by federal contractors demonstrates that accommodations that allow participation can often be done without great expense.[32] Almost one-forth of the disabled employees in the study received some type of accommodation. Over fifty percent of the accommodations in the study cost nothing; an additional thirty percent cost less than $500; only eight percent cost more than $2000. The experience of providing accommodations was positive for employers. The report stated that "accommodation is seen by firms as sensible business practice to secure a reliable worker with needed skills, akin to the provision of tools or other aids to non-disabled workers to increase their productivity".

The Wall Street Journal reported on the change in federal contractor employer practices under Section 503 as early as January, 1976. More than 275,000 companies employing more than one-third of the work force were affected at that time.[33] As a result of Section 503, companies reviewed their hiring practices. The Wall Street Journal article provides interesting anecdotal evidence of the positive effect of the non-discrimination provisions on a number of major American enterprises:

[31] See, discussion, supra, pp. 17-20

[32] "A Study of Accommodations Provided to Handicapped Employees by Federal Contractors," Executive Summary, U.S. Department of Labor, June 1982.

> "We had a medical department that thought it was saving the company money by only hiring Greek gods," says a personnel officer for a large Midwestern manufacturing firm. "We have completely abandoned that approach." Now, he adds, "we're trying to fit a person to a particular job." The company, for example, has begun considering applications from the deaf.
>
> GTE Sylvania has changed more than its attitude toward former cancer patients. The company used to have rigid weight limits for all jobs. "We've thrown all those out the window," says John McKeith, who handles industrial relations.
>
> International Telephone & Telegraph Corp. has scraped rules that barred applicants with epilepsy, cancer and some other health problems. An epileptic has been hired as a packer for an ITT subsidiary.
>
> Bell Helicopter Co. of Fort Worth, Texas, became the target of a Section 503 complaint when it turned a man down for a position as a contract analyst. He had spinal curvature and it was corporate policy "not to hire anyone with a bad back," says Jim Kight, a Labor Department specialist in Dallas. The complaint was resolved when Bell changed corporate physicians - which, Mr. Kight says, was "the same thing as changing its policies."
>
> Written tests, too, are sometimes being modified. In Chicago, officials at Continental Illinois National Bank & Trust Co. quickly devised a braille version of its computer-programming aptitude test because they feared that a blind applicant was about to complain under the federal law. He got the job.

---

[33] Unfortunately, the courts have not recognized a private cause of action under Section 503 and agency action has been hampered by back-logs and limited enforcement. Hearings before the Subcommittee on Employment Opportunities of the House Committee on Education & Labor, 95th Cong., 1st Sess., 28 (1977).

> For some firms, the new attack on job discrimination has altered stereotypes rather than formal hiring practices. In the past, says one personnel executive, "we were tempted to say, 'This girl can't type; she's blind.' We had preconceived notions." Now, [business] concerns are starting to explore their whole range of jobs, finding ways that disabled employes [sic] might perform them with minor changes in hours or duties.
>
> Thus, Union Carbide Corp. is advertising sales-representative job openings in handicapped groups' newspapers, merely specifying that "car maneuverability" is required. U.S. Steel did recruiting last spring at the National Technical Institute for the Deaf, in Rochester, N.Y.; it was the school's first such visit in its seven-year history.
>
> And in 1974, Sears, Roebuck & Co. hired Brad Shorser as its first blind management trainee despite a few officials' misgivings about his ability to deal with customers. Now a successful assistant customer-service manager for the Hichsville, N.Y., store, 28-year-old Mr. Shorser says the federal law's existence "most definitely" helped him get the job.

Seven years later the Wall Street Journal again highlighted the advantages of employing persons with disabilities pursuant to non-discrimination provisions. The article, which appeared on November 22, 1983, noted that "[w]ork accommodations for the disabled often cost little and benefit others." It observed that a poll of 2,000 federal contractors found that "81% of changes made cost $500 or less." Moreover, modifications often helped able-bodied workers as well. For example, in addition to providing wheelchair access, "[w]idened doorways at Western Electric allow easier moves of heavy equipment. Scientific Atlanta likes its enlarged elevators for similar reasons." And the benefits are not limited to improved physical arrangements.

"when Tektronic altered an assembly line supervisor's tasks to aid a mentally retarded man, all 12 workers' output rose and errors fell."

VII. A Uniform Federal Law Is Necessary to Protect Persons With Disabilities Who Are Qualified To Work From Discrimination

While 44 states have passed laws prohibiting employment discrimination against persons with disabilities, only twelve are comparable to the Rehabilitation Act in providing protections against discriminatory practices.[34] This demonstrates how unprotected persons with disabilities are from private employment discrimination. Persons with disabilities are now the only major group that, while recognized by Congress as face widespread discrimination in employment, still has no adequate federal protection. Until the ADA is passed, Americans with disabilities will continue to be kept out of the workforce because of stereotypes and ignorance.

The state statutes provide for coverage of private employers, at least to the extent of Title VII. The majority do not limit coverage to moderate sized employers as in Title VII. Hence, restrictions on the right of private employers to exclude disabled workers is not new to the ADA. However, the state laws vary widely, and do not provide as much protection as the

---

[34] Handicap Discrimination Legislation: With Such Inadequate Coverage at the Federal Level, Can State Legislation Be of Any Help? 40 Arkansas Law Review, pp. 261, [illegible]. (Five additional states prohibit state agencies and recipients of state funds from discriminating. (Only Delaware and Wyoming have passed no legislation at all.)

BEST COPY AVAILABLE

Rehabilitation Act once the primary hurdle of coverage is overcome.

One major problem is the failure of many state statutes to cover mental disabilities. In addition, many state statutes have very restrictive definitions of "handicap." Many define handicap as a limitation on work. This type of definition gives rise to the anomalous result that a person whose disability was the cause of the adverse employment decision but does not affect the ability to work is not protected against employment discrimination. The same anomaly results when statutes cover only severe handicaps. Others list specific handicaps leaving all other subject to arbitrary employment practices. For example, New Hampshire excludes handicaps caused by illness and Arizona excludes handicaps that were first manifested after age 18. Many statutes require a presently disabling condition despite the fact the employers often use signs of a future disabling condition to disqualify an employee. It is estimated that between 150,000 and 1.2 million pre-employment lower back x-rays are given each year. Despite the fact that they have been totally discredited in the scientific literature, they are still widely used to screen out asymptomatic applicants.[35] Hawaii actually limits coverage to impairments which will last a lifetime without substantial improvement. Hence, a person with cancer may be excluded just because he may get better.

---

[35] *Id.* at 266.

Over one-half of the states do impose a reasonable accommodation requirement. However, several define the term restrictively. In Minnesota, a $50 cap is provided. Many restrict the requirement to employers of over a certain number. This makes no sense, when the accommodation may involve simple readjustments of work space (lowering a desk). With the undue burden protection of federal law, there is no reason to exempt employers or limit the type of accommodation which can be made. Finally, nearly one-half of the states do not require any reasonable accommodation despite extensive documentation that accommodations are most often not costly.[36] Yet for many disabled people the willingness to accommodate can make the difference between fruitful employment and welfare.

Now is the time for Congress to make a national commitment to the equal employment opportunities of persons with disabilities. The federal law is too limited in coverage and state laws vary widely and are often too restrictive. The result is the sanctioning of widespread proven employer bias and the exclusion of millions of Americans from jobs that they can perform and deserve to hold.

---

[36] Dupont study, *supra*, *Wall Street Journal*, Nov. 22, 1982, at 1 col. 4.

Chairman OWENS. Thank you. Let me begin by asking Mr. Rochlin, what has been the experience of employers in the implementation of Section 504, of the Rehabilitation Act? Has it proven workable or have there been insurmountable problems?

Mr. ROCHLIN. Mr. Chairman, I think Section 504 and Section 503 have both been workable; 504 pertaining to those employers that are recipients of Federal funds and 503 to those employers that are contractors of the Federal Government.

There has been enough experience under the Rehabilitation Act by employers covered by both of those sections, that we have seen that the provision of reasonable accommodation is not difficult, and that it can be done cost effectively in most cases, and solves a great many accommodations.

As I mentioned in my testimony, several studies including a recent evaluation of the accommodations that our Job Accommodation Network provides indicates that over half of accommodations provided for people with disabilities do not have any cost associated with them.

What we find more times than not is that people with disabilities are not looking for gold-plated widgets. They want to go to work and they are looking for the simplest accommodation possible. There are resources for employers. One of the best resources for employers is the individual with the disability themselves. Most often, they are not consulted when they usually hold the key to effectively providing an accommodation.

They know what they need. They are not looking for something expensive. They just want to go to work, and, if consulted, oftentimes, they will provide solutions.

I know of one corporation that some years ago in a good faith effort to make their headquarters building accessible decided to lower all of the water fountains at considerable cost, without consulting any of their employees who had disabilities, and while the work was in progress, one of their employees who used a wheelchair came along and said, "You know, you really didn't have to do this. If you would have put a cup dispenser next to each water fountain, it would have been satisfactory, because we could reach the cup and fill the cup and drink from the cup. It is just that we can't get our mouth to the spigot on the fountain."

So, there are sources and there are sources of technical assistance. I thought listening to Mr. Wharen— yes, Mr. Wharen's testimony about making the work site accessible on a construction site and what was involved with the bathroom facilities.

There are manufacturers of Port-a-Johns who manufacture accessible Port-a-Johns. They are available. I just, as a matter of fact, used a number of them on a trip to Alaska, manufactured by the same outfit that manufactured the standard Port-a-John and they are wheelchair-accessible.

So, that, I think, supports the provision in the Senate bill for technical assistance. I think that was an excellent amendment, and I think if adequate technical assistance is provided, some of the concerns, such as those raised by Mr. Wharen, could be satisfactorily and economically addressed.

Chairman OWENS. Technical assistance will be provided to the businesses?

Mr. **Rochlin**. That is correct.

Chairman **Owens**. A unit which gives technical assistance to businesses, to what degree will that be useful? Do you care to comment, Mr. Rasmussen and Mr. Wharen?

Mr. **Wharen**. It would certainly help. Anything would be—it just is beyond me to imagine. All the construction sites I have been on in 25 years, a large number could be made accessible, but then a large number can't, especially when we are building downtown, as I am sure you've seen a lot of the buildings being constructed around here.

Sometimes the trailers for the superintendents are above the catwalks on the sidewalk because it is the only available space. Where are you going to park?

You can have a lot of opportunities for handicapped people in the main office. Especially in our industry where a lot of people are getting injured, the experience these people have, it is a terrible thing to lose.

So, I think a lot of construction companies would be very receptive to making available office space, and it is very minimal cost because we build things, so it doesn't—the cost——

Chairman **Owens**. Have you had any unreasonable demands made on you? What kinds and how many people have applied for jobs in the construction industry, or your industry, who had disabilities? Because all disabilities are not physical ones?

Mr. **Wharen**. Right. We—well, first, Dave, the person I talked about, we hired him in a wheelchair. He didn't get disabled in our company; he came to us from another company. We hired him for his knowledge to be used in awarding subcontracts and estimating projects.

We have—on the project I am currently in charge of we have several other disabled people. We have a fellow missing a hand from a birth defect. Now, he is a very hard worker, but he is limited with only one hand as to what he can do, and we take that into consideration when we make assignments, but he can't do everything, but he can do a lot of work.

We have a mentally retarded gentleman that we use to install insulation, which is a simple task. He is a good worker, he stays at it all day. So we are very happy to have those types of people.

We are really concerned about what would happen—and the clause—you are not hiring somebody because of their association with somebody who is disabled. Gee whiz, how are you going to defend yourself against that?

The construction industry is really hurting for people to work, and we are always willing to hire able-bodied workers, but to go up 200 feet in the air—if somebody comes to you that can't walk well and you require him to be 200 feet above the ground, and you don't hire him because of that, what are they going to do, sue you?

You were really looking out for his welfare or her welfare, because we have a lot of women working on our site also.

Chairman **Owens**. I think you are contemplating some extreme situations that won't necessarily happen.

Mr. Rasmussen, could you elaborate on the same question? What kinds of people have applied and what unreasonable demands have been made on you to date that makes you believe that you will experience a great hardship if this bill is passed?

Mr. RASMUSSEN. Well, Mr. Chairman, I have had very limited contact with the problem of the handicapped person except in my personal reference that I made earlier in my presentation.

Chairman OWENS. You had very limited contact?

Mr. RASMUSSEN. Pardon?

Chairman OWENS. I said you have had very limited contact?

Mr. RASMUSSEN. Very limited——

Chairman OWENS. The company has had limited contact?

Mr. RASMUSSEN. I do recall that at one newspaper I worked at we hired a reporter/photographer who was spastic and who had one arm immobilized, and yet, he was probably one of the best reporters because he had the uncanny ability to handle a speed graphic camera. If you folks remember back to the speed graphic, you really needed two hands for that, but he managed it quite well.

In our particular locality, we have had no person apply with any kind of handicap, I will have to admit. On the other hand, our newspaper association has a clipping service in downtown Minneapolis that they run for all of the individuals in the state and corporations who want clippings from the various newspapers of stories about them.

Our clipping service has tried directly to hire handicapped people, wheelchair-bound people to come in and work as newspaper readers and clippers and has been unable to find anyone to even apply. So I am not sure what our problems are or what they might be down the line, but the fact that this legislation, to our interpretation, indicates that we have to be prepared for anyone who would apply is our concern——

Chairman OWENS. Your fear is not based on any experience?

Mr. RASMUSSEN. No.

Chairman OWENS. Your fear is based on your perception that the legislation will put you in a position where you must respond to——

Mr. RASMUSSEN. Well, it tells me that I have to have my building ready, for example, for any of these people before I know that any will apply. I don't mind at all making an accommodation upon hiring someone, but I think that it is a very unreal situation for a small business to have a building retrofitted or ready for anyone who comes down the line.

Chairman OWENS. Mr. Donovan, you have had experience. You have a program. You hire large numbers of people. Do you see the present legislation placing new demands on you that would be unreasonable so that your present program would become more costly?

Dr. DONOVAN. My view of it, and I have to clarify that clearly I am not a lawyer, and so I am not necessarily expert at analyzing legislation, but our experience has been, as I stated earlier, that the key to being successful in the whole endeavor is to develop a setting where you sit down and you work through the practicalities of an issue with all of the parties involved and you deal with the issues as they arise.

I guess some of the discussion that has occurred here and that I've had occur elsewhere concerns me. I have a son who loves to play the "what if" game, and I constantly have to counsel him on the fact that that is not a realistic way to view the world.

You can develop "what if" scenarios that would essentially paralyze any action that you wanted to take. I think what is important is that you leave yourself open to sitting down and working with an individual situation, and our experience has been that, generally speaking, the great majority of situations can be solved very simply and very inexpensively, and that there is not a critical problem that accrues to us as a result.

I think the key is that what we need is a bill that leads towards the mutual development of practical solutions, as opposed to prescriptive solutions that try to solve all the problems and imagine all the problems from the get go and react to them before they even need to be reacted to.

So, Marriott's experience has been that, in fact, most of the problems aren't nearly as complicated when you actually sit down and deal with practical solutions, and that clearly the benefits far, far outweigh any negatives that may accrue in terms of temporary accommodations and the like.

Chairman OWENS. Anybody else care to comment on the same question?

Mr. RASMUSSEN. Mr. Chairman, if I might go back. I think you indicated what we thought about a source for the technical advice to small businesses, and I referred to the OSHA program which had its difficulties when it started out.

But later on now in Minnesota, the Minnesota OSHA department does the inspections for the Federal Government, but they have a very reasonable approach to OSHA violations in Minnesota, where they will counsel with the business person, advise them of what should be done in the particular violation and how to correct it, and work out a time frame in which to accomplish it and a reasonable way to accomplish it.

I think that some sort of a source to go to for that kind of help is what the small business person needs, because we do not have lawyers, we do not have personnel managers, we do not have specialists of any kind available to us who have delved into this and found the answer.

Chairman OWENS. Thank you. Mr. Rochlin, do you want to make a comment?

Mr. ROCHLIN. Yes, Mr. Chairman, I would. There is one phrase in the law that I think that has not gotten its due share of attention, and that is "qualified individual with the disability."

I think what we must remember is that we are talking about people who are qualified for the jobs. There sometimes appears to be a concern that the law is going to require employers to hire all people with disabilities. That is not the case. The law is going to require that people who are qualified and have a disability be hired.

One of the things that I have found in my past experience is that the reasonable accommodation process protects the employer as much as it does the individual, if the employer follows the process as it has been currently used in 503 and I think would be used under the ADA, and that simply is that you first consider the person as an individual and focus on that person's qualifications, not on the disability.

What happens too often with employers is that they immediately focus on the disability. If they put the disability aside, except as they may have to accommodate it in the employment process, and focus first on the individual's qualifications.

If the individual does not have the qualifications to do the job for which they are applying, the employer does not have to hire them, and the decision is made on that basis.

If the person has the qualifications, then the employer is able to say to that person, "You are qualified to do this job. Now will the limitations caused by your disability create the need for any accommodation?"

Together the employer and the individual can discuss what may or may not be needed to accommodate that person in the work force. That also protects the employer relative to litigation.

If the first thing the employer focuses on is the disability and then ultimately learns that the person isn't qualified and doesn't hire them, yes, I would agree they would have a difficult time in a court of law protecting themselves against a charge of discrimination when the first thing they talked about was the individual's disability.

If they focus first on qualifications, and the person isn't qualified, and they don't hire them for that reason, and the person files a complaint saying, "They didn't hire me because I am disabled," the employer is in a position then of defending themselves on the basis of saying, "Disability had nothing to do with that. This job requires qualifications a, b, and c, and this individual did not have those qualifications." So, the reasonable accommodation process, if followed as it has been used under 503, I believe, provides protection for all individuals involved.

Chairman OWENS. Thank you. My time is up. Mr. Bartlett?

Mr. BARTLETT. Thank you, Mr. Chairman. First, Mr. Chairman, I want to say that I think that this panel has been an excellent panel at really focusing on the issues, and this hearing today, I think, has made as much or more progress than all of the hearings that have gone on in the past.

One of the changes that I note just in terms of tone and content, both with this panel and with the original witness, is that we're now, with the Senate-passed bill, we are now beginning to treat this legislation as disability legislation or access for persons with disabilities.

There had been fear of some risk in previous hearings that the legislation was being viewed as either political legislation or as civil rights legislation, with a view towards changing other civil rights laws that apply to other groups of individuals.

Those laws may or may not be changed or be needed to be changed by Congress, but I do think it is important to keep the focus of this legislation on disability legislation.

Ms. Mayerson, let me begin with you and say that I agree with several of the things that you said and disagree with one or two others.

What I agree with, and I want to be very gentle—I was about to raise the issue of the hearing-impaired in the publishing plant also because I know better, and I know Mr. Rasmussen is in the business, so I don't want to dispute someone who is actually out there publishing and printing, but that is a good example, it seems to me, of how much the world has changed and how easily, or in the words of the proposed law, "readily achievable," an accommodation can and often is to a person with a disability.

There are, amazingly enough now, incredibly bright and noticeable red lights that will go off on safety equipment to indicate a problem that are typically used in the work place to accommodate a hearing-impaired person.

Mr. Rasmussen is right, though, this bill, it seems to me, should not be interpreted, nor is it written this way, in any way that would require an employer to hire someone whose safety would be jeopardized merely because of his disability by work place on the job.

So, let me use another example that was used earlier, and, Ms. Mayerson, we may get your response or Mr. Wharen and Mr. Rasmussen. Later a question was asked, "Would a construction site, therefore, be required to hire someone for high rise-work who has a disability that may cause him to fall?"

Let me just suggest that it seems to me the way I interpret this proposed law, as I interpret currently 504, would be that, therefore, an employer would not be required to, and, indeed, should not hire a person with vertigo or with an unsteady walk that causes him to sway back and forth from the path.

But an employer would not be allowed nor should be allowed to automatically dismiss from employment or dismiss from prospective employment persons with other disabilities whose disabilities don't affect whether they would fall off the walk or not.

It seems to me to be that is the way to interpret this law as current 504. Now, Mr. Wharen or Ms. Mayerson, have I missed something in that definition? Is that the way you read it, or is there another danger here?

Ms. **Mayerson**. No, I think you are correct. As Mr. Rochlin was stating that, this law like 504, only covers qualified handicapped people for employment. You have to be qualified for the job in order to get the job.

Mr. **Bartlett**. Mr. Wharen?

Mr. **Wharen**. I agree. If we use qualified people as the main criteria for hiring, there would be no problem with that.

Mr. **Bartlett**. Mr. Rasmussen, is that what you think this bill says, or do you think it should say that, or do you think it shouldn't even be to that limit? That is to say, should a—the fundamental question is, should a private employer be prohibited from discriminating against someone because of their disability, if their disability does not affect their job performance or the business necessity?

Mr. **Rasmussen**. I agree with that essentially. Just as a point of correction of the impression I may have given in my statement. I was speaking of our operation of our rotary press. It is quite essential that the operators have their ears cleared. We don't allow radios playing. We don't allow the headsets, anything like that because they have to hear every little click that goes on in that press because it is the sounds that the press gives off that tip off the operator as to impending problems.

In that kind of an operation, even the bells and the whistles or lights, the problem has occurred often before the bell goes off, so you hope that they hear that. In many operations of putting on a newspaper, of course, there is no problem with deaf people working or other handicapped people.

I think the primary purpose of the legislation ought to be to allow everybody to be considered on an equal basis for hiring, without consideration of the handicap, except that if you reach a point where the handicap cannot be accommodated in some way, that, obviously the employer then, I think, has to have the reservation to make the decision of what should be done.

Mr. BARTLETT. And that is, it seems to me, both the intent and the result of the Senate-passed bill, likely not the result of the original House bill, but at least the result of the Senate-passed bill.

Mr. RASMUSSEN. It could be, yes.

Mr. BARTLETT. I appreciate you clarifying that. You do leave yourself open to misinterpretation by even coming before the committee and testifying on such an emotional subject, and I want to tell you I appreciate your candor and your help.

So, if it is important to the job to hear each click and whir and buzz and the whine of the machine, then one could reasonably assume that is a job qualification; but if that is not important to the job, then that wouldn't be a job qualification. Ms. Mayerson, is that the way you would read it?

Ms. MAYERSON. I would agree with that, but I would caution that oftentimes things are considered essential in a job that you really have to look very closely to examine that and often get assistance, maybe from places like the President's Committee, to see what other people in the industry are doing in the area.

Mr. BARTLETT. I think that is correct. The world is changing, and it is going to change even faster with the ADA. I walked through a fair number of both manufacturing and distribution plants in Texas and watched for these things.

Within two days this summer, I recall walking through a plant and finding in the shipping department two individuals working there, one who is profoundly deaf and had been working there for about, I don't know, ten years, and then in a similar department, not seeing anyone who was disabled in a similar company.

So, I asked each employer afterwards, I asked the person who had the shipping clerk who was profoundly deaf whether they had made any reasonable accommodation, to use the terms of the law, to hire him.

The employer looked at me with a blank stare and he said, "Well, no, not especially. He came in, he applied, he looked like he had a good work record, looked like he could understand the job, real smart, so we hired him. So, we didn't have any reasonable accommodation."

So, I pursued it and I said, "Well, how do you communicate with him?" The employer said, "Well, we write little notes. He has a note pad by his work station and his supervisor has a note pad, and he writes out a note if he has to communicate, and the supervisor has through the years learned a little bit of sign."

The other employer, I said, "Have you ever considered anyone who is deaf in your shipping department?" because it was the next day and it was on my mind. He said, "No, couldn't do that. How could we communicate with him?"

So, the concept of reasonable accommodation is emerging and much of it requires an open mind.

Now, Ms. Mayerson, I also want to say that it is also important to remember that these objections are very real, that there is a certain fear in the business community that they could be required to do things that are unreasonable.

I think it is important as we study the legislation to remember that Mr. Rasmussen, Mr. Wharen, and others who come before Congress, either individually or publicly, are not doing so out of any degree of enthusiasm. They really do have some fears, and those fears need to be listened to and accommodated and understood.

I do want to say to Mr. Rasmussen and to the NFIB, I read your testimony very carefully and listened to you. It becomes at this point extremely essential, extremely helpful and necessary for the NFIB or your business or others who have objections to give us your objections in the form of objections.

That is to say, "Here is what the Senate-passed bill says, here is why we don't like these words, and here is a suggestion to alter those words."

I am not suggesting you didn't give us good testimony, you did, but your testimony doesn't lead us anywhere. You asked questions which are all answerable, but you didn't tell us what you would have us do different, unless you just view that there shouldn't be such a law, and that is a fair view. It is a democratic society and that is a fair view.

A specific area that I would ask you and the NFIB to address is this. I have heard the words for some time that the concepts or the expressions in the proposal of "undue burden," "readily available," "reasonable accommodation," "readily achievable," "benefit," "full and equal employment" and "essential functions," to use your words that you left out of language. I have heard now for several weeks that those are vague terms.

They don't seem to me to be vague, but I am willing to explore ways to make them more specific if you have a suggestion for what words would be more specific than "undue hardship" or "undue burden." That seems to me to be a very specific set of words.

So I want you to think about how you would make this legislation more specific, if, indeed, you would. One proposal, for example, would be to put a cap on the total dollar amount of a reasonable accommodation. I resist that because caps tend to be floors in the way the government works. I am a Presbyterian. We Presbyterians have a saying, "Be careful what you pray for; you may get it."

I would be hesitant to pray for a cap if, in fact, therefore, the result of the cap is that every employer is required to make a $25,000 accommodation, regardless of whether that much is needed.

So, if you could give us specifics on how you would change those words to make them more specific, it would be helpful.

I will go on very quickly. Ms. Mayerson, I do want to clarify your testimony as regards the Senate bill and perhaps clarify what I said because it is a concept. I heard you say that you support the Senate bill, but you were worried about using it as a starting point, and I assume that on your side of the table, you have the same kind of fears and perhaps paranoia, as Mr. Rasmussen on his side of the table. I assume that is because you worry about the starting point idea, that somehow the bill is going to be made worse from your perspective, rather than better.

I guess I want to ask you first, do you think that we ought to, though, introduce the Senate bill in the House and proceed with the Senate-passed bill as the vehicle, or are you saying something different?

I have a fear that if we proceed with the House-passed bill, we will never get there, because you force members to vote on individual prescriptions of the Senate that they don't want to vote on.

The beauty the way the Senate works and also the loss of the way the Senate works, is that they all get together—not all of them, but four or five of them get together and they write up the bill in the dead of night, and no one sees it, and then they come out with a product, and then each senator can say, "Well, I didn't agree with everything in that bill, but I will vote for the product."

Now, we don't do that in the House. We take it right out here in the light of day and vote on them one at a time. So are you saying we should take the Senate bill as our House mark or not?

Ms. MAYERSON. Yes, I think that the Senate bill, as I said, reflects taking into consideration the concerns of the business community that we are addressing in the House hearing as well as in the Senate, and it is a very struggled attempt to try to reach a compromise that everyone could live with. And I think that we can proceed from there.

Mr. BARTLETT. Now that you have allayed my fears, you said that you support the Senate bill, I want to allay yours and all I can point to is my own seven years of record on this subcommittee as well as exactly what I say.

When I say, "use the Senate bill as a pointing point," I simply mean that we then legislate. I don't mean that we negotiate or reach a compromise or do all the grand strategy. All the grand strategies have been done. There is no more need for a summit. The summit was held by Governor Sununu and Senator Kennedy.

The summit is done, but now it leaves it up to poor old Bartlett and Owens, that now we have to take this product and read every line of it. There may be some agreement, there may be some disagreements, but by and large, I think that as we read particular words or sections, there may or may not be ways to change or improve that section, not in a negotiation kind of strategy, but just merely legislating.

There also may be disagreements. The Senate bill has some things in it which perhaps others on either side may disagree with, in which case. I think you just have to say the majority rules. Each side needs to be careful that we don't change anything that is going to disrupt the package, but beyond that, I think we can and ought to legislate.

Mr. Rochlin, do you also support the Senate bill as our vehicle?

Mr. ROCHLIN. That is the bill that the administration has endorsed, yes.

Mr. **Bartlett**. I would ask this for Ms. Mayerson or Mr. Rochlin. The Senate bill included language on an amendment that would specifically exclude homosexuality and a series of other similar disabilities—not disabilities, of other similar conditions as a disability.

First of all, do you think that the bill, even without that provision, includes sexual preferences as a disability? Second, do you think, to allay the fears of those who think it does and to make sure that some future court doesn't interpret it differently, do you think that we ought to include that section in here that says that homosexuality is not a disability to be covered by this legislation?

Ms. **Mayerson**. First, I think that this bill does not cover homosexuality as a disability. It was never intended to, as 504 and 503 did not cover homosexuality as a disability. I don't think for that reason that the amendment is necessary. I agree with you that the only purpose of the amendment then would be to allay fears by members of Congress or their constituents that homosexuality is covered by this Act, but it is not.

Mr. **Bartlett**. In your opinion, this proposal, this Act, does not cover homosexuality and could not be interpreted as so?

Ms. **Mayerson**. This Act does not cover homosexuality as a disability and should not be interpreted to do so. So, therefore, I believe the amendment is not necessary, but is only for the purpose that you said, to allay fears.

Mr. **Bartlett**. Is the amendment harmful in any way?

Ms. **Mayerson**. What is that?

Mr. **Bartlett**. Would the amendment be harmful in any way to put in the bill?

Ms. **Mayerson**. Clearly, on the issue of homosexuality, it would not be.

Chairman **Owens**. Would the gentleman yield?

Mr. **Bartlett**. I would be happy to yield, Mr. Chairman.

Chairman **Owens**. Do you think we should put a statement in that this Act does not cover devil worship as a mental illness?

Mr. **Bartlett**. I hadn't thought of that.

[Laughter.]

Ms. **Mayerson**. I am sorry, Mr. Owens. I didn't understand the question.

Chairman **Owens**. Should we take care of devil worship? Devil worship may be a mental illness. Should we say that this Act does not cover devil worship as a disability? You don't have to—thank you very much.

[Laughter.]

Ms. **Mayerson**. I am afraid I really don't know what that devil worship stems from in terms of disability. I mean, schizophrenia? I don't think we can go so far as to say schizophrenics are not covered by the Act. But devil worship, in particular, I am not familiar with, so I don't know. I'd reserve my answer on that one.

Chairman **Owens**. Thank you.

Mr. **Bartlett**. One other question, and then I will—two quick ones. First, do you think that the ADA should preempt enforcement under 504 and 503? The Senate bill did not address it, or do you think an employer should be liable on both laws simultaneously?

Ms. **Mayerson**. I feel very strongly that the ADA should not preempt any other remedies that are available to a disabled claimant.

Mr. **Bartlett**. Including 504 and 503?

Ms. **Mayerson**. Including 504 and 503.

Mr. **Bartlett**. Mr. Rasmussen?

Mr. **Rasmussen**. I know that has been one of the concerns of employers, and I think there was an effort in the Senate amendment to using 504 to try and bring the ADA and the Rehab Act more in line.

I think that there may be some ways of addressing this, might even be making 503 compatible with ADA, but I think that those concerns have been minimized by the amendment.

Mr. **Bartlett**. Mr. Donovan, do you have an opinion on that?

Dr. **Donovan**. I really don't have a view on that. I am not familiar enough with the amendment.

Mr. **Bartlett**. One last question, Mr. Chairman, I will just ask of each of the witnesses. Do you believe that this legislation should cover Congress for purposes of employment and accommodations and the other purposes? Should Congress be covered under this legislation?

Mr. Rochlin?

Mr. **Rochlin**. I think that this legislation should apply to all.

Mr. **Bartlett**. Ms. Mayerson?

Ms. **Mayerson**. I am happy to see Congress covered.

Mr. **Bartlett**. Mr. Donovan?

Dr. **Donovan**. I would agree.

Mr. **Bartlett**. Mr. Wharen?

Mr. **Wharen**. Yes.

Mr. **Bartlett**. Mr. Rasmussen is going to say——

Mr. **Rasmussen**. I would have happily agree.

Mr. **Bartlett**. Mr. Chairman, I would like unanimous consent to hold the record open briefly to submit some additional written questions, and also hold the record open for Mr. Rasmussen if the NFIB has additional specific suggestions that they would like to submit.

Chairman **Owens**. Let the record show the Chairman also agrees with all the panelists that Congress should be covered. Mr. Payne.

Mr. **Payne**. Thank you very much. I will be very brief. Number one, I agree with almost everything you said, Ms. Mayerson. But, I don't agree that this is a fair and just Act. I think that this Act may be the fairest and most just that we can get through Congress at this time.

Ms. **Mayerson**. I will accept that correction.

Mr. **Payne**. Second, I think that sometimes we may learn as an industry. I heard Mr. Wharen discussed the fact that Port-a-Johns were not available for construction workers, thereby, making it tough for handicapped folks. Mr. Rochlin also mentioned that they do make Port-a-Johns for handicapped. But, I think that maybe the issue is Port-a-Johns, regardless of who they are for, and maybe the construction industry ought to reconsider what it does for its nonhandicapped workers too. Maybe it is not a bad idea to have Port-a-Johns for them. It might make their situation a lot more comfortable.

I totally disagree with most of what Mr. Rasmussen said as it relates to even his industry. I was in the same industry for 15 years or so and handled many of the work place problems as a vice president in charge of personnel.

I don't know if your machines are single-operated, but most of the presses are at least doubled-operated. There is no question that with respect to the rotary, and its sound, you can tell if a tear is coming. You can tell by the sound of the machine that there is going to be a crackup as we called them. If you have an operator with normal hearing you are not disadvantaged by a deaf person because the hearing impaired worker, assists the operator. There is eye contact with the operator in addition to the work being done.

I think that many of the problems that you mentioned are not real problems at all. As a matter of fact, we had a deaf person running the forklift. There were all kinds of lights and sounds, and everybody up the block could hear the forklift, so he didn't need to hear because the workers all really knew where he was and were very alert. So, you know, you can shift things around with less difficulty than what you would really believe.

I think that many of the—ideas discussed are "what if," situations and they are the exception to the rule. It is unfortunate that many times we look at, as you mentioned, a handicapped, wheelchaired person working on a second story beam. Because you are handicapped, it doesn't mean that you're mentally ill also.

I mean, if a person wanted to work on a second story beam and was confined to a wheelchair, in my opinion, I don't think you would find too many people who would apply for something like that.

I think there are many times that we do build up a great fear out of expectation. The question was, should there be a law? Maybe that is the basic question, because there would not be a law if it was not necessary. If people did these things, then we wouldn't have this watered-down version of this ADA legislation.

I simply wanted to make just a couple of those statements because I have had personal experience, as I mentioned, and you even gave good examples.

You cited two things; one, that you have not been inundated with people with disabilities asking for positions that were impossible for them to fill; and, secondly, you gave a very good example of a one-armed photographer. Those two statements almost contradicted everything else that you said. I don't believe you are going to have tremendous numbers of people applying for positions that they know that they cannot fill.

Once again, I think there is no greater fear than fear itself. You know, little children are told to be afraid of the dark because there is something in there. There's nothing in there, Charlie, it is just that it is dark. If you are brought up to feel that in darkness there is a man that floats around, you are always going to be afraid of the dark.

I think the greatest thing that Congress can do is to try to educate business people. The reason all of those nebulous terms are in there is because without it, this bill would really go nowhere.

I mean, I would wonder what "reasonableness" meant. It is also subjective, although there are bases from 503 and 504 which I am not very familiar with because I haven't been here a long time like my colleagues, my learned colleagues on the right. I am new and I am just learning about ADA, and I am going to try to get to 503 and 504.

But I do know that we would not have those terms of "readily available," and "reasonable accommodation," and "readily achievable," if we could really have stronger language.

I believe that punitive damages are out. I think that people should be penalized for what they do wrong, and if they discriminate against someone, they should be penalized, but that is out. That, is un-American.

So it is easier now. You can discriminate. If someone takes a grievance through the court system and it is found out that you did discriminate, from what I understand, there are no punitive damages. As I understand it, the predecessor bill that went nowhere in 1988 had punitive damages in there. However, evidently, it was taken out in order to move the bill right along.

These are just basic points that I wanted to make. Specifically, Mr. Rasmussen, the equipment that we used when we had deaf persons working—I don't know if you use the same type. The old ditty-glazer, which was slower than the Schreiber, and finally the Mustang Hamilton, which is a very, very fast rotary type of equipment which makes a tremendous amount of noise were the types that we used in the business of manufacturing computer forms. This is the same process using laser printer that you use for your industry.

I do want to indicate that we had very successful deaf and handicapped persons who worked for us. I think we did a good job for safety because everyone was more alert. Many injuries are from forklifts and things of that nature, in the normal work place, and we really made sure that everyone was aware that the lift was moving around.

I don't have any specific questions, but I appreciate the opportunity to just listen. It has been very educational, especially from my senior colleagues here, and hopefully we can get this little step for mankind in.

We went to the moon; it was a big giant step for mankind. Here, we are making a small step. I hope that we can have a bill that goes further in the future, but let's try to get this one through.

Thank you, Mr. Chairman.

Chairman Owens. I want to thank all of the panelists. At this point, the hearing is adjourned.

[Whereupon, the hearing concluded at 11:40 a.m.]

[Additional material submitted for the record follows.]

STATEMENT BY
THE ASSOCIATED GENERAL CONTRACTORS OF AMERICA

TO
THE EMPLOYMENT OPPORTUNITIES AND SELECT EDUCATION SUBCOMMITTEES
OF
THE HOUSE COMMITTEE ON EDUCATION AND LABOR

ON
H.R. 2273
THE AMERICANS WITH DISABILITIES ACT OF 1989
OCTOBER 2, 1989

AGC is:

- More than 32,500 firms, including 8,000 of America's leading general contracting firms, responsible for the employment of 3,500,000-plus employees;
- 102 chapters nationwide;
- More than 80% of America's contract construction of commercial buildings, highways, industrial and municipal-utilities facilities.

The Associated General Contractors of America (AGC) welcomes the opportunity to comment on H.R. 2273, "The Americans with Disabilities Act of 1989." AGC supports the goals of this bill, and its Senate companion, S. 933. AGC cannot, however, lend its support to all of the specific provisions of the proposed legislation, because some provisions could have a negative impact on the construction industry's effort to stop unlawful drug use, and to ensure jobsite safety. AGC is also concerned that vague language will waste resources on litigation.

DRUG USE

First, AGC believes that it remains important to ensure that the legislation will not hinder the business community's efforts to discourage unlawful drug use. The construction industry has found that drug users not only cut productivity, but also increase accident rates.

Recent studies reveal that as many as 23% of all American workers use drugs on the job, and that drug use may account for over half of all accidents in the workplace. Some AGC members have found that 30% to 50% of their job applicants cannot pass pre-employment drug tests. One AGC member recently found that 40% of its employees tested positive for drug use after workplace accidents. Responding to its members' concern, AGC has adopted a "zero tolerance" policy that does not tolerate any level of unlawful drug use by anyone in the construction industry.

S. 933 appears to protect the employer's right to test for unlawful drug use, but H.R. 2273 does not. AGC urges the members of the subcommittee to take the Senate's approach, in order to avoid the problem that the Rehabilitation Act of 1973 has created for federal contractors and certain others. Within the last month, a federal court has held that the 1973 statute forbids the Immigration and Naturalization Service to discharge a drug-addicted attorney arrested for cocaine use and possession of narcotics paraphernalia. Nisperos v. Buck, Case No. CC-88-4039-WWS (N.D. Cal. September 12, 1989).

CONSTRUCTION JOBSITES

AGC's second concern is that the proposed legislation will compromise sound employment decisions made in the interest of jobsite safety. The unique nature of the temporary construction jobsite, with its ever-changing structure, makes it impractical, if not impossible, to guarantee the safety and health of all disabled Americans who might seek employment on construction jobsites.

The proposed definition of "disability" is extremely broad. The U.S. Supreme Court has held that elementary school teachers with contagious tuberculosis fit within the similar definition in the 1973 statute. Nassau County School Board v. Arline, 480 U.S. 273 (1987). More importantly, the courts have held that construction workers with congenital back anomalies fit within that definition, even though they risk injury from routine lifting, and other physical work required on construction jobsites. E.E. Black, Ltd. v. Marshall, 497 F.Supp. 1088 (D. Haw. 1980). The construction industry simply cannot afford to employ a helper for everyone susceptible to physical injury from lifting or other work required on construction jobsites.

Most employers have at least the opportunity to amortize the cost of accommodating a disabled individual over a long period of time, or to build the cost into their price structure. Construction employers, however, have neither of these advantages. Construction employers have to amortize the cost of making an accommodation over the short time available to complete a particular project. Construction employers cannot build the cost into their price structure because the cost is not foreseeable at the time when bids are due.

Other terms used in the proposed legislation, such as "reasonable accommodation" and "undue hardship," are simply too vague to assist construction employers in their efforts to comply with the law. These terms are subjective, and will tend to waste resources on litigation.

AGC is cognizant of the recent colloquy between Senator Hatch and Senator Harkin on "reasonable accommodation" and "undue hardship." On September 7, 1989, during the Senate debate on S. 933, Senator Hatch questioned whether that bill takes "the nature of a particular industry into account," and Senator Harkin responded that "each industry, and indeed each separate business, may be unique in the type of accommodation employers are able to provide without significant difficulty or expense." Senator Harkin later stated that "[c]onstruction is unlike manufacturing, and most other types of industries, in that an employer is usually confronted with monitoring multiple worksites at remote locations...."

AGC appreciates this effort to clarify the vague terms in the proposed legislation, but believes that the House of Representatives must do more. The statutory language still invites case-by-case determinations, on specific facts, and without objective guidance.

CONCLUSION

In closing, AGC would like to thank the subcommittee for the opportunity to express these views. AGC strongly supports the cause of the many disabled Americans who simply seek their rightful place in the American workplace. AGC believes that all citizens should be, and are committed to, equal opportunity for all in our society, and in every respect. With that said, AGC urges the subcommittee to exercise the utmost care in the drafting of this legislation to ensure that, unlike recent legislation enacted by Congress, extended debate and corrective legislation does not become necessary later to correct mistakes that maximum care can now avoid.

OPENING STATEMENT OF THE HONORABLE STEVE BARTLETT
ON THE AMERICANS WITH DISABILITIES ACT
BEFORE THE JOINT HEARING OF THE
SUBCOMMITTEES ON EMPLOYMENT OPPORTUNITIES
AND
SELECT EDUCATION
SEPTEMBER 13, 1989

Mr. Chairman, many of us witnessed the passage of the Americans with Disabilities Act in the Senate last Thursday. It was an historic moment for all of us fully committed to furthering the independence of and opportunities available to individuals with disabilities.

The Senate passed bill was the result of intense negotiations among the disability community, the civil rights community, Democrats, Republicans, the President, and business groups. These negotiations were long, were difficult -- but I believe all parties negotiated in good faith, never loosing sight of or disagreeing on the bill's intent -- full civil rights for people with disabilities.

The enthusiasm, the pride, and the expectations among our friends with disabilities are at very high levels, and justifiablely so. Now is our opportunity to demonstrate our commitment and support, in concrete, not rhetorical terms. House Democrats and Republicans should join together and introduce S.933 as passed by the Senate. Each Committee of jurisdiction should use that bill as its legislative vehicle for moving to the House floor.

Such a gesture would make substantive and procedural sense, and reduce the possibility of untimely delays during consideration of the ADA by the House. Many of the most difficult issues have been resolved to the satisfaction of all key players. Do we have the time or the right to reopen these problem areas by working from the House bill as introduced? I think not.

If we work from S.933 as passed by the Senate, it will become apparent that the remaining issues are those that require clarification or refinement, much of which can be done by example. Let me give three illustrations.

First, do we need to allow the possibility a defendant being sued under the ADA, the Rehabilitation Act, and State statutes, simultaneously or sequentially, with the same set of facts? I think not, we could add a preemption provision which makes legal sense and common sense.

BEST COPY AVAILABLE

Second, to clarify the meaning of "undue hardship", should we allow it to be measured on a per site basis? I think that's reasonable.

Third, can we clarify defenses, burden of proof, and the role of good faith, so that legal sanctions can be swiftly and fairly applied? I know we can.

As we proceed this morning I urge the witnesses to use the ADA as passed by the Senate as their frame of reference. We need to know what more there is to do, not to undo.

It is now our opportunity to make a contribution to a recent historical event -- let's add to it, not detract from it by revisiting challenges that have been met and overcome.

Thank you, Mr. Chairman.

I

101st CONGRESS
1st Session

H. R. 2273

To establish a clear and comprehensive prohibition of discrimination on the basis of disability.

IN THE HOUSE OF REPRESENTATIVES

May 9, 1989

Mr. Coelho (for himself, Mr. Fish, Mr. Hawkins, Mr. Conte, Mr. Owens of New York, Mr. Ackerman, Mr. Atkins, Mr. Beilenson, Mr. Bennett, Mr. Borski, Mr. Bosco, Mrs. Boxer, Mr. Campbell of California, Mr. Cardin, Mr. Clay, Mr. Crockett, Mr. de Lugo, Mr. Donnelly, Mr. Dwyer of New Jersey, Mr. Dymally, Mr. Edwards of California, Mr. Fazio, Mr. Feighan, Mr. Frank, Mr. Frost, Mr. Fuster, Mr. Gejdenson, Mr. Gordon, Mr. Hayes of Illinois, Mr. Hoyer, Mr. Hutto, Mr. Jacobs, Mr. Jontz, Mr. Kastenmeier, Mr. Kleczka, Mr. Levin of Michigan, Mr. Lewis of Georgia, Mr. Manton, Mr. Matsui, Mr. McCloskey, Mr. McDermott, Mr. McHugh, Mr. Mfume, Mr. Miller of California, Mr. Mineta, Mrs. Morella, Mr. Oberstar, Mr. Pallone, Ms. Pelosi, Mr. Richardson, Mr. Rowland of Connecticut, Ms. Schneider, Mr. Shays, Mr. Smith of Vermont, Mr. Solarz, Mr. Studds, Mr. Traxler, Mr. Udall, Mr. Vento, Mr. Waxman, Mr. Weiss, Mr. Wise, Mr. Wolpe, Mr. Florio, Mr. Williams, Mr. Roybal, Mr. Morrison of Connecticut, Mr. Brown of California, Mr. Dellums, Mr. Sabo, Mr. Espy, Mr. Dixon, Mr. Miller of Washington, Mr. Young of Alaska, Mr. Foglietta, Mr. Rangel, Mr. Garcia, Mrs. Saiki, Mr. Martinez, Mr. Mavroules, Mr. Conyers, Mr. Markey, Mr. Visclosky, Mr. Kildee, and Mrs. Collins) introduced the following bill; which was referred jointly to the Committees on Education and Labor, Energy and Commerce, Public Works and Transportation, and the Judiciary

August 29, 1989

---

A BILL

To establish a clear and comprehensive prohibition of discrimination on the basis of disability.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SECTION 1. SHORT TITLE; TABLE OF CONTENTS.

(a) Short Title.—This Act may be cited as the "Americans with Disabilities Act of 1989".

(b) Table of Contents.—The table of contents is as follows:

Sec. 1. Short title; table of contents.
Sec. 2. Findings and purposes.
Sec. 3. Definitions.

TITLE I—GENERAL PROHIBITION AGAINST DISCRIMINATION

Sec. 101. Forms of discrimination prohibited.

TITLE II—EMPLOYMENT

Sec. 201. Definitions.
Sec. 202. Discrimination.
Sec. 203. Posting notices.
Sec. 204. Regulations.
Sec. 205. Enforcement.

TITLE III—PUBLIC SERVICES

Sec. 301. Definition of qualified individual with a disability.
Sec. 302. Discrimination.
Sec. 303. Actions applicable to public transportation considered discriminatory.
Sec. 304. Regulations.
Sec. 305. Enforcement.

TITLE IV—PUBLIC ACCOMMODATIONS AND SERVICES OPERATED BY PRIVATE ENTITIES

Sec. 401. Definitions.
Sec. 402. Prohibition of discrimination by public accommodations.
Sec. 403. Prohibition of discrimination in public transportation services provided by private entities.
Sec. 404. Regulations.
Sec. 405. Enforcement.

TITLE V—TELECOMMUNICATIONS RELAY SERVICES

Sec. 501. Definitions.
Sec. 502. Telecommunications relay services.
Sec. 503. Regulations.
Sec. 504. Enforcement.

TITLE VI—MISCELLANEOUS PROVISIONS

Sec. 601. Construction.
Sec. 602. Prohibition against retaliation.
Sec. 603. State immunity.
Sec. 604. Regulations by the Architectural and Transportation Barriers Compliance Board.
Sec. 605. Attorney's fees.
Sec. 606. Effective date.

SEC. 2. FINDINGS AND PURPOSES.

(a) FINDINGS.—Congress finds that—

(1) some 43,000,000 Americans have one or more physical or mental disabilities, and this number is increasing as the population as a whole is growing older;

(2) historically, society has tended to isolate and segregate individuals with disabilities, and, despite some improvements, such forms of discrimination against individuals with disabilities continue to be a serious and pervasive social problem;

(3) discrimination against individuals with disabilities persists in such critical areas as employment, housing, public accommodations, education, transportation, communication, recreation, institutionalization, health services, voting, and access to public services;

(4) unlike individuals who have experienced discrimination on the basis of race, sex, national origin, religion, or age, individuals who have experienced discrimination on the basis of disability have often had no legal recourse to redress such discrimination;

(5) individuals with disabilities continually encounter various forms of discrimination, including outright intentional exclusion, the discriminatory effects of architectural, transportation, and communication barriers, overprotective rules and policies, failure to make modifications to existing facilities and practices, exclusionary qualification standards and criteria, segregation, and relegation to lesser services, programs, activities, benefits, jobs, or other opportunities;

(6) census data, national polls, and other studies have documented that people with disabilities, as a group, occupy an inferior status in our society, and are severely disadvantaged socially, vocationally, economically, and educationally;

(7) individuals with disabilities are a discrete and insular minority who have been faced with restrictions and limitations, subjected to a history of purposeful unequal treatment, and relegated to a position of political powerlessness in our society, based on characteristics that are beyond the control of such individuals and resulting from stereotypic assumptions not truly indicative of the individual ability of such individuals to participate in, and contribute to, society;

(8) the Nation's proper goals regarding individuals with disabilities are to assure equality of opportunity, full participation, independent living, and economic self-sufficiency for such individuals; and

(9) the continuing existence of unfair and unnecessary discrimination and prejudice denies people with disabilities the opportunity to compete on an equal basis and to pursue those opportunities for which our free society is justifiably famous, and costs the United State billions of dollars in unnecessary expenses resulting from dependency and nonproductivity.

(b) PURPOSE.—It is the purpose of this Act—

(1) to provide a clear and comprehensive National mandate for the elimination of discrimination against individuals with disabilities;

(2) to provide clear, strong, consistent, enforceable standards addressing discrimination against individuals with disabilities;

(3) to ensure that the Federal Government plays a central role in enforcing the standards established in this Act on behalf of individuals with disabilities; and

(4) to invoke the sweep of congressional authority, including its power to enforce the fourteenth amendment and to regulate commerce in order to address the major areas of discrimination faced day-to-day by people with disabilities.

SEC. 3. DEFINITIONS.

As used in this Act:

(1) AUXILIARY AIDS AND SERVICES.—The term "auxiliary aids and services" shall include—

(A) qualified interpreters or other effective methods of making aurally delivered materials available to individuals with hearing impairments;

(B) qualified readers, taped texts, or other effective methods of making visually delivered materials available to individuals with visual impairments;

(C) acquisition or modification of equipment or devices; and

(D) other similar services and actions.

(2) DISABILITY.—The term "disability" means, with respect to an individual—

(A) a physical or mental impairment that substantially limits one or more of the major life activities of such individual;

(B) a record of such an impairment; or

(C) being regarded as having such an impairment.

(3) REASONABLE ACCOMMODATION.—The term "reasonable accommodation" shall include—

(A) making existing facilities used by employees readily accessible to and usable by individuals with disabilities; and

(B) job restructuring, part-time or modified work schedules, reassignment, acquisition or modification of equipment or devices, appropriate adjustment or modifications of examinations and training materials, adoption or modification of procedures or protocols, the provision of qualified readers or interpreters, and other similar accommodations.

(4) STATE.—The term "State" means each of the several States, the District of Columbia, the Commonwealth of Puerto Rico, Guam, American Samoa, the Virgin Islands, the Canal Zone, the Trust Territory of the Pacific Islands, and the Commonwealth of the Northern Mariana Islands.

TITLE I—GENERAL PROHIBITION AGAINST DISCRIMINATION

SEC. 101. FORMS OF DISCRIMINATION PROHIBITED.

(a) IN GENERAL.—

(1) SERVICES, PROGRAMS, ACTIVITIES, BENEFITS, JOBS, OR OTHER OPPORTUNITIES.—Subject to the standards and procedures established in titles II through V, it shall be discriminatory to subject an individual or class of individuals, directly or through contractual, licensing, or other arrangements, on the basis of disability, to any of the following:

(A) Denying the opportunity to participate in or benefit from a service, program, activity, benefit, job, or other opportunity.

(B) Affording an opportunity to participate in or benefit from a service, program, activity, bene-

fit, job, or other opportunity that is not equal to that afforded others.

(C) Providing a service, program, activity, benefit, job, or other opportunity that is less effective than that provided to others.

(D) Providing a service, program, activity, benefit, job, or other opportunity that is different or separate, unless such action is necessary to provide the individual or class of individuals with a service, program, activity, benefit, job, or other opportunity that is as effective as that provided to others.

(E) Aiding or perpetuating discrimination by providing significant assistance to an agency, organization, or individual that discriminates.

(F) Denying the opportunity to participate as a member of boards or commissions.

(G) Otherwise limiting the enjoyment of any right, privilege, advantage, or opportunity enjoyed by others.

(2) EQUAL OPPORTUNITY.—For purposes of this Act, aids, benefits, and services to be equally effective, must afford an individual with a disability an equal opportunity to obtain the same result, to gain the same benefit, or to reach the same level of achievement, in

the most integrated setting appropriate to the individual's needs.

(3) OPPORTUNITY TO PARTICIPATE.—Notwithstanding the existence of separate or different programs or activities provided in accordance with this section, an individual with a disability shall not be denied the opportunity to participate in such programs or activities that are not separate or different.

(4) ADMINISTRATIVE METHODS.—An individual or entity shall not, directly or through contractual or other arrangements, utilize standards or criteria or methods of administration—

(A) that have the effect of discrimination on the basis of disability;

(B) that have the purpose or effect of defeating or substantially impairing the accomplishment of the objectives of the services, programs, activities, benefits, jobs, or other opportunities provided with respect to an individual with a disability; or

(C) that perpetuate the discrimination of others who are subject to common administrative control or are agencies of the same State.

(5) RELATIONSHIPS OR ASSOCIATIONS.—It shall be discriminatory to exclude or otherwise deny equal services, programs, activities, benefits, jobs, or other

opportunities to an individual or entity because of the relationship to, or association of, that individual or entity with another individual with a disability.

(b) DEFENSES.—

(1) IN GENERAL.—It shall be a defense to a charge of discrimination under this Act that an alleged application of qualification standards, selection criteria, performance standards or eligibility criteria that exclude or deny services, programs, activities, benefits, jobs, or other opportunities to an individual with a disability has been demonstrated by the covered entity to be both necessary and substantially related to the ability of an individual to perform or participate, or take advantage of the essential components of such particular program, activity, job, or other opportunity and such performance, participation, or taking advantage of such essential components cannot be accomplished by applicable reasonable accommodations, modifications, or the provision of auxiliary aids or services.

(2) QUALIFICATION STANDARDS.—The term "qualification standards" may include—

(A) requiring that the current use of alcohol or drugs by an alcoholic or drug abuser not pose a direct threat to property or the safety of others in the workplace or program; and

(B) requiring that an individual with a currently contagious disease or infection not pose a direct threat to the health or safety of other individuals in the workplace or program.

TITLE II—EMPLOYMENT

SEC. 201. DEFINITIONS.

As used in this title:

(1) COMMISSION.—The term "Commission" means the Equal Employment Opportunity Commission established by section 705 of the Civil Rights Act of 1964 (42 U.S.C. 2000e–4).

(2) EMPLOYEE.—

(A) IN GENERAL.—The term "employee" means an individual employed by an employer.

(B) EXCEPTION.—The term "employee" shall not include any individual elected to public office in any State or political subdivision of any State by the qualified voters thereof, or any individual chosen by such officer to be on such officer's personal staff, or an appointee on the policy making level or an immediate adviser with respect to the exercise of the constitutional or legal powers of the office.

(C) LIMITATION ON EXCEPTION.—The exception contained in subparagraph (B) shall not

include employees subject to the civil service laws of a State government, governmental agency or political subdivision.

(3) EMPLOYER.—

(A) IN GENERAL.—The term "employer" means a person engaged in an industry affecting commerce who has 15 or more employees for each working day in each of 20 or more calendar weeks in the current or preceding calendar year, and any agent of such a person.

(B) EXCEPTIONS.—The term "employer" does not include—

(i) the United States, a corporation wholly owned by the government of the United States, or an Indian tribe; or

(ii) a bona fide private membership club (other than a labor organization) that is exempt from taxation under section 501(c) of the Internal Revenue Code of 1986.

(4) PERSON, ETC.—The terms "person", "labor organization", "employment agency", "commerce", and "industry affecting commerce", shall have the same meaning given such terms in section 701 of the Civil Rights Act of 1964 (42 U.S.C. 2000e).

(5) QUALIFIED INDIVIDUAL WITH A DISABILITY.—The term "qualified individual with a disability" means an individual with a disability who, with or without reasonable accommodation, can perform the essential functions of the employment position that such individual holds or desires.

SEC. 202. DISCRIMINATION.

(a) GENERAL RULE.—No employer, employment agency, labor organization, or joint labor-management committee shall discriminate against any qualified individual with a disability because of such individual's disability in regard to job application procedures, the hiring or discharge of employees, employee compensation, advancement, job training, and other terms, conditions, and privileges of employment.

(b) CONSTRUCTION.—As used in subsection (a), the term "discrimination" includes—

(1) the failure by an employer, employment agency, labor organization, or joint labor-management committee to make reasonable accommodations to the known physical or mental limitations of a qualified individual with a disability who is an applicant or employee unless such entity can demonstrate that the accommodation would impose an undue hardship on the operation of its business;

(2) the denial of employment opportunities by a covered employer, employment agency, labor organization, or joint labor-management committee to an applicant or employee who is a qualified individual with a disability if the basis for such denial is because of the need of the individual for reasonable accommodation; and

(3) the imposition or application by a covered employer, employment agency, labor organization or joint labor-management committee of qualification standards, tests, selection criteria or eligibility criteria that identify or limit, or tend to identify or limit, a qualified individual with a disability, or any class of qualified individuals with disabilities, unless such standards, tests or criteria can be shown by such entity to be necessary and substantially related to the ability of an individual to perform the essential functions of the particular employment position.

SEC. 203. POSTING NOTICES.

Every employer, employment agency, labor organization, or joint labor-management committee covered under this title shall post notices in an accessible format to applicants, employees, and members describing the applicable provisions of this Act, in the manner prescribed by section 711 of the Civil Rights Act of 1964 (42 U.S.C. 2000e–10).

SEC. 204. REGULATIONS.

Not later than 180 days after the date of enactment of this Act, the Commission shall issue regulations in an accessible format to carry out this title in accordance with subchapter II of chapter 5 of title 5, United States Code.

SEC. 205. ENFORCEMENT.

The remedies and procedures set forth in sections 706, 709, and 710 of the Civil Rights Act of 1964 (42 U.S.C. 2000e–5, 2000e–8, and 2000e–9), and the remedies and procedures available under section 1981 of the Revised Statutes (42 U.S.C. 1981) shall be available, with respect to any individual who believes that he or she is being or about to be subjected to discrimination on the basis of disability in violation of any provisions of this Act, or regulations promulgated under section 204, concerning employment.

TITLE III—PUBLIC SERVICES

SEC. 301. DEFINITION OF QUALIFIED INDIVIDUAL WITH A DISABILITY.

As used in this title, the term "qualified individual with a disability" means an individual with a disability who, with or without reasonable modifications to rules, policies and practices, the removal of architectural, communication, and transportation barriers, or the provision of auxiliary aids and services, meets the essential eligibility requirements for the receipt of services or the participation in programs or activities provided by a State or agency or political subdivision of a

State or board, commission or other instrumentality of a State and political subdivision.

SEC. 302. DISCRIMINATION.

No qualified individual with a disability shall, by reason of his or her disability, be excluded from the participation in, be denied the benefits of, or be subjected to discrimination by a State, or agency or political subdivision of a State or board, commission, or other instrumentality of a State and political subdivision.

SEC. 303. ACTIONS APPLICABLE TO PUBLIC TRANSPORTATION CONSIDERED DISCRIMINATORY.

(a) DEFINITION.—As used in this title, the term "public transportation" means transportation by bus or rail, or by any other conveyance (other than air travel) that provides the general public with general or special service (including charter service) on a regular and continuing basis.

(b) VEHICLES.—

(1) NEW BUSES, RAIL VEHICLES, AND OTHER FIXED ROUTE VEHICLES.—It shall be considered discrimination for purposes of this Act and section 504 of the Rehabilitation Act of 1973 (29 U.S.C. 794) for an individual or entity to purchase or lease a new fixed route bus of any size, a new intercity rail vehicle, a new commuter rail vehicle, a new rapid rail vehicle, a new light rail vehicle to be used for public transporta-

tion, or any other new fixed route vehicle to be used for public transportation and for which a solicitation by such individual or entity is made later than 30 days after the date of enactment of this Act, if such bus, rail, or other vehicle is not readily accessible to and usable by individuals with disabilities, including individuals who use wheelchairs.

(2) USED VEHICLES.—If an individual or entity purchases or leases a used vehicle after the date of enactment of this Act, such individual or entity shall make demonstrated good faith efforts to purchase or lease a used vehicle that is readily accessible to and usable by individuals with disabilities, including individuals who use wheelchairs.

(3) REMANUFACTURED VEHICLES.—If an individual or entity remanufactures a vehicle, or purchases or leases a remanufactured vehicle, so as to extend its usable life for 5 years or more, the vehicle shall, to the maximum extent feasible, be readily accessible to and usable by individuals with disabilities, including individuals who use wheelchairs.

(c) PARATRANSIT AS A SUPPLEMENT TO FIXED ROUTE PUBLIC TRANSPORTATION SYSTEM.—If an individual or entity operates a fixed route public transportation system to provide public transportation, it shall be considered

discrimination, for purposes of this Act and section 504 of the Rehabilitation Act of 1973 (29 U.S.C. 794), for such individual or entity to fail to provide paratransit or other special transportation services sufficient to provide a comparable level of services as is provided to individuals using fixed route public transportation to individuals with disabilities, including individuals who use wheelchairs, who cannot otherwise use fixed route public transportation and to other individuals associated with such individuals with disabilities in accordance with service criteria established under regulations promulgated by the Secretary of Transportation.

(d) COMMUNITY OPERATING DEMAND RESPONSIVE SYSTEMS FOR THE GENERAL PUBLIC.—If an individual or entity operates a demand responsive system that is used to provide public transportation for the general public, it shall be considered discrimination, for purposes of this Act and section 504 of the Rehabilitation Act of 1973 (29 U.S.C. 794), for such individual or entity to purchase or lease a new vehicle, for which a solicitation is made later than 30 days after the date of enactment of this Act, that is not readily accessible to and usable by individuals with disabilities, including individuals who use wheelchairs unless the entity can demonstrate that such system, when viewed in its entirety, provides a level of service to individuals with disabilities equivalent to that provided to the general public.

(e) NEW FACILITIES.—For purposes of this Act and section 504 of the Rehabilitation Act of 1973 (29 U.S.C. 794), it shall be considered discrimination for an individual or entity to build a new facility that will be used to provide public transportation services, including bus service, intercity rail service, rapid rail service, commuter rail service, light rail service, and other service used for public transportation that is not readily accessible to and usable by individuals with disabilities, including individuals who use wheelchairs.

(f) ALTERATIONS OF EXISTING FACILITIES.—With respect to a facility or any part thereof that is used for public transportation and that is altered by, on behalf of, or for the use of an individual or entity later than 1 year after the date of enactment of this Act, in a manner that affects or could affect the usability of the facility or part thereof, it shall be considered discrimination, for purposes of this Act and section 504 of the Rehabilitation Act of 1973 (29 U.S.C. 794), for such individual or entity to fail to make the alterations in such a manner that, to the maximum extent feasible, the altered portion of the facility, the path of travel to the altered area, and the bathrooms, telephones, and drinking fountains serving the remodeled area are readily accessible to and usable by individuals with disabilities, including individuals who use wheelchairs.

(g) EXISTING FACILITIES, INTERCITY RAIL, RAPID RAIL, LIGHT RAIL, AND COMMUTER RAIL SYSTEMS, AND KEY STATIONS.—

(1) EXISTING FACILITIES.—Except as provided in paragraph (3), with respect to existing facilities used for public transportation, it shall be considered discrimination, for purposes of this Act and section 504 of the Rehabilitation Act of 1973 (29 U.S.C. 794), for an individual or entity to fail to operate such public transportation program or activity conducted in such facilities so that, when viewed in the entirety, it is readily accessible to and usable by individuals with disabilities, including individuals who use wheelchairs.

(2) INTERCITY, RAPID, LIGHT, AND COMMUTER RAIL SYSTEMS.—With respect to vehicles operated by intercity, light, rapid and commuter rail systems, for purposes of this Act and section 504 of the Rehabilitation Act of 1973 (29 U.S.C. 794), it shall be considered discrimination for an individual or entity to fail to have at least one car per train that is accessible to individuals with disabilities, including individuals who use wheelchairs, as soon as practicable but in any event in no less than 5 years.

(3) KEY STATIONS.—For purposes of this Act and section 504 of the Rehabilitation Act of 1973 (29

U.S.C. 794), it shall be considered discrimination for an individual or entity to fail to make stations in intercity rail systems and key stations in rapid rail, commuter rail and light rail systems readily accessible to and usable by individuals with disabilities, including individuals who use wheelchairs, as soon as practicable but in no event later than 3 years after the date of enactment of this Act, except that the time limit may be extended by the Secretary of Transportation up to 20 years for extraordinarily expensive structural changes to, or replacement of, existing facilities necessary to achieve accessibility.

SEC. 304. REGULATIONS.

(a) ATTORNEY GENERAL.—Not later than 180 days after the date of enactment of this Act, the Attorney General shall promulgate regulations in an accessible format that implement this title (other than section 303), and such regulations shall be consistent with this title and with the coordination regulations under part 41 of title 28, Code of Federal Regulations (as in existence on January 13, 1978), applicable to recipients of Federal financial assistance under section 504 of the Rehabilitation Act of 1973 (29 U.S.C. 794).

(b) SECRETARY OF TRANSPORTATION.—

(1) IN GENERAL.—Not later than 240 days after the date of enactment of this Act, the Secretary of

Transportation shall promulgate regulations in an accessible format that include standards applicable to facilities and vehicles covered under section 303.

(2) CONFORMANCE OF STANDARDS.—Such standards shall be consistent with the minimum guidelines and requirements issued by the Architectural and Transportation Barriers Compliance Board in accordance with section 604(b).

SEC. 305. ENFORCEMENT.

The remedies, procedures, and rights set forth in section 505 of the Rehabilitation Act of 1973 (29 U.S.C. 794a) shall be available with respect to any individual who believes that he or she is being or about to be subjected to discrimination on the basis of disability in violation of any provisions of this Act, or regulations promulgated under section 304, concerning public services.

TITLE IV—PUBLIC ACCOMMODATIONS AND SERVICES OPERATED BY PRIVATE ENTITIES

SEC. 401. DEFINITIONS.

As used in this title:

(1) COMMERCE.—The term "commerce" means travel, trade, traffic, commerce, transportation, or communication among the several States, or between the District of Columbia and any State or between any for-

eign country or any territory or possession and any State or the District of Columbia or between points in the same State but through another State or the District of Columbia or foreign country.

(2) PUBLIC ACCOMMODATION.—

(A) IN GENERAL.—The term "public accommodation" means privately operated establishments—

(i)(I) that are used by the general public as customers, clients, or visitors; or

(II) that are potential places of employment; and

(ii) whose operations affect commerce.

(B) INCLUSIONS.—Public accommodations referred to in clause (i)(I) include auditoriums, convention centers, stadiums, theaters, restaurants, shopping centers, inns, hotels, and motels (other than inns, hotels, and motels exempt under section 201(b)(1) of the Civil Rights Act of 1964 (42 U.S.C. 2000a(b)(1))), terminals used for public transportation, passenger vehicle service stations, professional offices of health care providers, office buildings, sales establishments, personal and public service businesses, parks, private schools, and recreation facilities.

(3) **Public transportation.**—The term "public transportation" means transportation by bus or rail, or by any other conveyance (other than by air travel) that provides the general public with general or special service (including charter service) on a regular and continuing basis.

SEC. 402. PROHIBITION OF DISCRIMINATION BY PUBLIC ACCOMMODATIONS.

(a) **General Rule.**—No individual shall be discriminated against in the full and equal enjoyment of the goods, services, facilities, privileges, advantages, and accommodations of any place of public accommodation, on the basis of disability.

(b) **Construction.**—As used in subsection (a), the term "discriminated against" includes—

(1) the imposition or application of eligibility criteria that identify or limit, or tend to identify or limit, an individual with a disability or any class of individuals with disabilities from fully and equally enjoying any goods, .services, facilities, privileges, advantages, and accommodations;

(2) a failure to make reasonable modifications in rules, policies, practices, procedures, protocols, or services when such modifications may be necessary to afford such privileges, advantages, and accommodations

unless the entity can demonstrate that making such modifications would fundamentally alter the nature of such privileges, advantages, and accommodations;

(3) a failure to take such steps as may be necessary to ensure that no individual with a disability is excluded, denied services, segregated or otherwise treated differently than other individuals because of the absence of auxiliary aids and services, unless the entity can demonstrate that taking such steps would result in undue burden;

(4)(A) a failure to remove architectural and communication barriers that are structural in nature in existing facilities, and transportation barriers in existing vehicles used by an establishment for transporting individuals (not including barriers that can only be removed through the retrofitting of vehicles by the installation of a hydraulic or other lift), where such removal is readily achievable; and

(B) where an entity can demonstrate that removal of a barrier under subparagraph (A) is not readily achievable, a failure to make such goods, services, facilities, privileges, advantages, and accommodations available through alternative methods if such methods are readily achievable;

(5) with respect to a facility or part thereof that is altered by, on behalf of, or for the use of an establishment later than one year after the date of enactment of this Act in a manner that affects or could affect the usability of the facility or part thereof, a failure to make the alterations in such a manner that, to the maximum extent feasible, the altered portion of the facility, the path of travel to the altered area, and the bathrooms, telephones, and drinking fountains serving the remodeled area, are readily accessible to and usable by individuals with disabilities;

(6) a failure to make facilities constructed for first occupancy later than 30 months after the date of enactment of this Act readily accessible to and usable by individuals with disabilities, except where an entity can demonstrate that it is structurally impracticable to do so, in accordance with standards set forth or incorporated by reference in regulations issued under this title; and

(7) in the case of an entity that uses a vehicle to transport individuals not covered under section 303 or 403—

(A) a failure to provide a level of transportation services to individuals with disabilities, in-

cluding individuals who use wheelchairs, equivalent to that provided for the general public; and

(B) purchasing or leasing a new bus, or vehicle that can carry in excess of 12 passengers, for which solicitations are made later than 30 days after the date of enactment of this Act, that is not readily accessible to and usable by individuals with disabilities, including individuals who use wheelchairs.

SEC. 403. PROHIBITION OF DISCRIMINATION IN PUBLIC TRANSPORTATION SERVICES PROVIDED BY PRIVATE ENTITIES.

(a) GENERAL RULE.—No individual shall be discriminated against on the basis of disability in the full and equal enjoyment of public transportation services provided by a privately operated entity that is primarily engaged in the business of transporting people, but is not in the principal business of providing air transportation, and whose operations affect commerce.

(b) CONSTRUCTION.—As used in subsection (a), the term "discrimination against" includes—

(1) the imposition or application by an entity of eligibility criteria that identify or limit, or tend to identify or limit, an individual with a disability or any class

of individuals with disabilities from fully enjoying the public transportation services provided by the entity;

(2) the failure of an entity to—

(A) make reasonable modifications consistent with those required under section 402(b)(2);

(B) provide auxiliary aids and services consistent with the requirements of section 402(b)(3); and

(C) remove barriers consistent with the requirements of section 402(b)(4); and

(3) the purchase or lease of a new vehicle (other than an automobile) that is to be used to provide public transportation services, and for which a solicitation is made later than 30 days after the date of enactment of this Act, that is not readily accessible to and usable by individuals with disabilities, including individuals who use wheelchairs.

SEC. 404. REGULATIONS.

(a) ACCESSIBILITY STANDARDS.—Not later than 240 days after the date of enactment of this Act, the Secretary of Transportation shall issue regulations in an accessible format that shall include standards applicable to facilities and vehicles covered under section 403.

(b) OTHER PROVISIONS.—Not later than 240 days after the date of enactment of this Act, the Attorney General shall

issue regulations in an accessible format to carry out the remaining provisions of this title not referred to in subsection (a) that include standards applicable to facilities and vehicles covered under section 402.

(c) STANDARDS.—Standards included in regulations issued under subsections (a) and (b) shall be consistent with the minimum guidelines and requirements issued by the Architectural and Transportation Barriers Compliance Board in accordance with section 604(b).

SEC. 405. ENFORCEMENT.

Sections 802(i), 813, and 814 (a) and (d) of the Fair Housing Act (42 U.S.C. 3602(i), 3613, and 3614 (a) and (d)) shall be available with respect to any aggrieved individual, except that—

(1) any reference to a discriminatory housing practice or breach of a conciliation agreement shall be considered to be a reference to a practice that is discriminatory under this title concerning a public accommodation or public transportation service operated by a private entity; and

(2) subparagraph (B) of paragraph (1) and paragraphs (2) and (3) of subsection (a) of section 813 shall not apply.

TITLE V—TELECOMMUNICATIONS RELAY SERVICES

SEC. 501. DEFINITIONS.

As used in this title:

(1) COMMISSION.—The term "Commission" means the Federal Communications Commission.

(2) TELECOMMUNICATIONS RELAY SERVICES.—The term "telecommunications relay services" means services that enable simultaneous communication to take place between individuals who use TDDs or other nonvoice terminal devices and individuals who do not use such devices.

(3) TDD.—The term "TDD" means a Telecommunication Device for the Deaf, a machine that employs graphic communications in the transmission of coded signals through the nationwide telecommunications system.

SEC. 502. TELECOMMUNICATIONS RELAY SERVICES.

(a) GENERAL RULE.—It shall be considered discrimination for purposes of this Act for any common carrier, as defined in section 3(h) of the Communications Act of 1934 (47 U.S.C. 153(h)), that offers telephone services to the general public, to fail to provide, not later than 1 year after the date of enactment of this Act, interstate or intrastate telecommunication relay services so that such services provide indi-

viduals who use nonvoice terminal devices because of disabilities with opportunities for communications that are equal to those provided to their customers who are able to use voice telephone services, except that it shall not be considered discrimination for such a common carrier to fail to provide such services in any State to which subsection (b) applies if such services are provided under subsection (b).

(b) STATE DISCRIMINATION.—It shall be considered discrimination by a State, that designates an entity to provide interstate or intrastate telecommunication relay services to individuals throughout the entire State in a manner consistent with regulations issued by the Commission, for purposes of this Act, for such State, through the designated entity, to fail to provide, not later than 1 year after the date of enactment of this Act, interstate or intrastate telecommunication relay services so that such services provide individuals who use nonvoice terminal devices because of disabilities with opportunities for communications that are equal to those provided to their customers who are able to use voice telephone services.

(c) CONSTRUCTION.—Nothing in this title shall be construed to discourage or impair the development of improved or future technology designed to improve access to telecommunications services for individuals with disabilities.

SEC. 503. REGULATIONS.

Not later than 180 days after the date of enactment of this Act, the Commission shall issue regulations to carry out this title, and such regulations shall establish minimum standards and guidelines for telecommunications relay services.

SEC. 504. ENFORCEMENT.

(a) CIVIL ACTIONS.—Section 802(i), 813, and 814 (a) and (d) of the Fair Housing Act (42 U.S.C. 3602(i), 3613, and 3614 (a) and (d)) shall be available with respect to any aggrieved individual, except that—

(1) any reference to a discriminatory housing practice or breach of a conciliation agreement shall be considered to be a reference to a practice that is discriminatory under this title concerning the provision of an appropriate interstate or intrastate telecommunication relay service; and

(2) subparagraph (B) of paragraph (1) and paragraphs (2) and (3) of subsection (a) and subsection (d) of section 813 shall not apply.

(b) ADMINISTRATIVE ENFORCEMENT.—

(1) IN GENERAL.—The Commission shall enforce the provisions of this title.

(2) APPLICABLE ENFORCEMENT PROVISIONS.—The remedies, procedures, and rights set forth in sections 206, 207, 208, and 209 of the Communications Act of 1934 (47 U.S.C. 206, 207, 208, and 209) and

in title IV of the Communications Act of 1934 (47 U.S.C. 401 et seq.) shall apply with respect to the enforcement of this title, except that nothing in this subsection shall be construed to limit or restrict in any manner the remedies, procedures, or rights set forth in subsection (a).

(3) CEASE AND DESIST ORDERS.—Whenever, after full opportunity for hearing, on a complaint or under an order for investigation and hearing made by the Commission on the initiative of the Commission, the Commission shall be of the opinion that any carrier, or any State as described in section 502(b), is or will be in violation of this title or of any regulation issued under this title, the Commission shall—

(A) order that the carrier or State cease and desist from such violation to the extent that the Commission finds that such violation exists or will exist; and

(B) take other actions as it finds appropriate and necessary.

(4) PENALTIES.—

(A) IN GENERAL.—Any carrier or State to which section 502(b) applies that knowingly fails or neglects to comply with this title or of any regulation or order made by the Commission in car-

rying out this title shall forfeit to the United States the sum of $10,000 for each such offense.

(B) SEPARATE OFFENSES.—Each distinct violation of the provisions of this title shall be a separate offense under subparagraph (A). In case of a continuing violation, each day shall be considered a separate offense.

(C) RECOVERING FORFEITURES.—Such forfeitures shall be payable and recoverable in the same manner as prescribed in section 504 of the Communications Act of 1934 (47 U.S.C. 504).

TITLE VI—MISCELLANEOUS PROVISIONS

SEC. 601. CONSTRUCTION.

(a) REHABILITATION ACT OF 1973.—Nothing in this Act shall be construed to reduce the scope of coverage or apply a lesser standard than the coverage required or the standards applied under title V of the Rehabilitation Act of 1973 (29 U.S.C. 790 et seq.) or the regulations issued by Federal agencies pursuant to such title.

(b) OTHER LAWS.—Nothing in this Act shall be construed to invalidate or limit any other Federal law or law of any State or political subdivision of any State or jurisdiction that provides greater protection for the rights of individuals with disabilities than are afforded by this Act.

(c) Relationship Among Titles.—The requirements contained in titles I through V shall be construed in a manner that is consistent with the other provisions of this Act, and any apparent conflict between provisions of this Act shall be resolved by reference to the title that specifically covers the type of action in question.

SEC. 602. PROHIBITION AGAINST RETALIATION.

No individual shall discriminate against any other individual because such other individual has opposed any act or practice made unlawful by this Act or because such other individual made a charge, testified, assisted, or participated in any manner in an investigation, proceeding, or hearing under this Act.

SEC. 603. STATE IMMUNITY.

A State shall not be immune under the Eleventh Amendment to the Constitution of the United States from an action in Federal court for a violation of this Act. In any action against a State for a violation of the requirements of this Act, remedies (including remedies both at law and in equity) are available for such a violation to the same extent as such remedies are available for such a violation in an action against any public or private entity other than a State.

SEC. 604. REGULATIONS BY THE ARCHITECTURAL AND TRANSPORTATION BARRIERS COMPLIANCE BOARD.

(a) ISSUANCE OF GUIDELINES.—Not later than 6 months after the date of enactment of this Act, the Architectural and Transportation Barriers Compliance Board shall issue minimum guidelines that shall supplement the existing Minimum Guidelines and Requirements for Accessible Design for purposes of sections 304 and 404.

(b) CONTENTS OF GUIDELINES.—The guidelines issued under subsection (a) shall establish additional requirements, consistent with this Act, to ensure that buildings, facilities, and vehicles are accessible, in terms of architecture and design, transportation, and communication, to individuals with disabilities.

SEC. 605. ATTORNEY'S FEES.

In any action or administrative proceeding commenced pursuant to this Act, the court, or agency, in its discretion, may allow the prevailing party, other than the United States, a reasonable attorney's fee, including litigation expenses, and costs, and the United States shall be liable for the foregoing the same as a private individual.

SEC. 606. EFFECTIVE DATE.

This Act shall become effective on the date of enactment.

HEARING ON H.R. 2273, AMERICANS WITH DISABILITIES ACT OF 1989

FRIDAY, OCTOBER 6, 1989

House of Representatives,
Subcommittee on Select Education,
Committee on Education and Labor,
Indianapolis, IN.

The subcommittee met, pursuant to notice at 2:30 p.m., in Room 137, University Place Conference Center, Indianapolis, Indiana, Hon. Major R. Owens [Chairman] presiding

Members present. Representatives Owens and Jontz

Staff present: Bob Tate, Martha Phipps, Alan Lovesee, and Randy Johnson.

Mr. Owens. The Subcommittee on Select Education of the Committee on Education and Labor is now in session.

This afternoon marks the fourth House Select Education Subcommittee hearing on the "Americans with Disabilities Act." In the past year, the subcommittee conducted field hearings on the same legislation in Boston, Massachusetts and Houston, Texas with an overwhelming support expressed for the legislation in both parts of the country.

In each instance the subcommittee was the wiser for having heard the testimony of, and having spoken to, dozens of individuals who either have a disability themselves or are concerned in some fashion with people with disabilities.

We are likewise delighted to hear this afternoon from citizens of Indiana. We have also heard from public officials of all walks of life, not only those who are responsible for programs which serve people with disabilities but those who are responsible for public transportation, for public accommodations and for employment programs.

Following passage of the bill in the Senate by a 76 to 8 vote, and this was accomplished with the support of the President, the House now seeks to take the bill up for consideration later this month.

The Speaker has indicated that he would like to have the Americans with Disabilities Act on the floor before the end of October. We hope this will be the last field hearing before this historic legislation is passed.

I would like to take this opportunity to compliment Congressman Jim Jontz, not only for the hard work that he and his staff have put forth in organizing today's hearing but also for his diligence and effective representation of the interests of people with disabilities.

The citizens of Northwest Indiana are fortunate to have such an able, industrious representative in Washington. I look forward to working closely with Jim for the final passage of the Americans With Disabilities Act in the House this fall.

I yield to Congressman Jontz for an opening statement.

Mr. JONTZ. Thank you very much, Mr. Chairman. I want to welcome everyone here this afternoon and particularly welcome you, Mr. Chairman and thank you for your willingness to bring this hearing to Indiana.

We have had some excellent field hearings previously on this subject, the American Disabilities Act, so I thought it might be a good idea to ask you to come to the midwest or a rural community to hear from the many people with disabilities in our state who have valid concerns which should be incorporated into the Act.

Now, I appreciate your leadership position in the Congress, Mr. Chairman, on this issue. As we were visiting earlier today, it was actually a Hoosier, former Congressman, John Brademas, who was the originator and I believe the first chair of the Select Education Subcommittee.

So I am delighted to have the subcommittee hearing in Indiana today and to have you here as our guest and thank you for taking the time to conduct this hearing.

I want to express my appreciation to everyone who is here today as a show of support here in Indiana for the Americans With Disabilities Act.

This Act is the most important legislation affecting the lives of people with disabilities that has been considered by the Congress for a long time.

Your presence here is representative of the strong support this legislation has here in our state and throughout the entire country.

The Americans With Disabilities Act is a comprehensive piece of legislation that will insure that people with disabilities are guaranteed the same civil rights that every other group of Americans is guaranteed.

People with disabilities are entitled to lead independent and productive lives, to make choices for themselves, and to be integrated in mainstream into society.

These are inalienable civil rights that must be guaranteed to every American regardless of race, religion, or disability.

The Americans With Disabilities Act addresses five basic areas, employment, transportation, public accommodation, public services, and communication.

Equal access to each of these areas is essential for all Americans who want to lead independent and productive lives.

The Americans With Disabilities Act will provide enforceable standards. It addresses discrimination against individuals with disabilities and insures the Federal Government plays a central role in enforcing these standards on behalf of individuals with disabilities.

I have heard some people say that the ADA places too heavy a burden on employers and businesses because they will have to make expensive accommodations.

The fact is, in my opinion, most employers will actually benefit from the Americans With Disabilities Act. It is not excessively costly to provide reasonable accommodations.

Most employees with disabilities do not require any accommodation whatsoever and on the average, necessary accommodations have been found to cost less than $50.

In addition, employers will be able to gain valuable employees and potential consumers and customers by making it possible to consider and hire people with disabilities. Increase accessibility of business facilities will give employers increased flexibility in obtaining and retaining employees.

By making places of business accessible, business owners will be able to attract new customers who are no longer kept away by physical barriers.

By reducing or eliminating architectural, transportation, communication barriers that prevent or restrict individuals with disabilities from living independent, productive lives in the mainstream of American society, all of society will benefit.

An accessible environment will not only benefit people with disabilities but will affect nearly everyone at some point in their lives.

Among those who will benefit from increased accessibility are children, parents pushing their children's strollers, persons carrying luggage or groceries, the temporarily disabled, the elderly, and the family and friends of persons with physical disabilities.

For too long, our society has been structured in a way that many opportunities, great and small, have been denied to people with disabilities.

It is time for the needless obstacles, both physical and attitudinal, to be removed. It is time to pass the Americans With Disabilities Act.

Thank you very much again, Mr. Chairman for bringing the hearing to Indiana today. I look forward to hearing the testimony of the witnesses who will share their views on this historic legislation with our committee.

STATEMENT OF CONGRESSMAN JIM JONTZ AT THE
SUBCOMMITTEE ON SELECT EDUCATION FIELD HEARING
ON THE AMERICANS WITH DISABILITIES ACT OF 1989
INDIANAPOLIS, INDIANA, OCTOBER 6, 1989

Thank you Mr. Chairman and thank you to all of you who came here today to show your support of the Americans with Disabilities Act. This Act is the most important legislation affecting the lives of people with disabilities ever considered by the Congress. Your presence here is representative of the strong support this legislation has here in Indiana and throughout the entire country.

The Americans with Disabilities Act is a comprehensive piece of legislation that will ensure that people with disabilities are guaranteed the same civil rights that every other group of Americans is guaranteed. People with disabilities are entitled to lead independent and productive lives, to make choices for themselves, and to be integrated and mainstreamed into society. These are inalienable civil rights that must be guaranteed to every American, regardless of race, religion or disability.

The Americans with Disabilities Act addresses five basic areas: employment, transportation, public accommodations, public services, and communication. Equal access to each of these areas is essential for all Americans who want to lead independent and productive lives. The Americans with Disabilities Act will provide enforceable standards addressing discrimination against individuals with disabilities and ensure that the Federal government plays a central role in enforcing these standards on behalf of individuals with disabilities.

I have heard people say that the ADA places a heavy burden on employers and businesses because they will have to make expensive accommodations. The fact is, most employers will actually benefit from the ADA. It isn't costly to provide reasonable accommodations. Most employees with disabilities do not require any accommodation whatsoever, and, on the average, necessary accommodations have been found to cost less than $50.

In addition, employers will be able to gain valuable employees and potential consumers and customers. By making it possible to consider and hire people with disabilities, increased accessibility of business facilities will give employers increased flexibility in obtaining and retaining employees. By making places of business accessible, business owners will be able to attract new customers who are no longer kept away by physical barriers.

By reducing or eliminating the architectural, transportation, and communication barriers that prevent or restrict individuals with disabilities from living independent and productive lives in the mainstream of American society, all of society will benefit.

An accessible environment will not only benefit people with disabilities, but will affect nearly everyone at some point in their life. Among those who benefit from increased accessibility are children, parents pushing their children in strollers, persons carrying luggage or groceries, the temporarily disabled, the elderly, and the families and friends of persons with physical disabilities.

For too long our society has been structured in a way that many opportunities, great and small, have been denied to people with disabilities. It is time for the needless obstacles, both physical and attitudinal, to be removed. It is time to pass the Americans with Disabilities Act.

Thank you Mr. Chairman. I look forward to hearing the testimony of the witnesses who will share their views on this historic legislation with the Committee.

Mr. Owens. We are pleased to welcome as our first set of panelists: Mr. Greg Fehribach, Chairman of the Indiana Governor's Council on People with Disabilities; Barry Chambers, the Commissioner of the Indiana Department of Human Services; Deanna Durrett of the Commission on Mental Health; and Muriel and Chris Lee, Producer and Playwright of "Always a Chance for Change."

I do not think Muriel and Chris Lee have arrived yet but they can join the panel as soon as they arrive. I would like to note, for the sake of the panelists, that we have copies of your written testimony which will be entered into the record in its entirety.

Because we are trying to hear from a number of witnesses this afternoon, there is a limitation on time. We ask that you speak for only five minutes.

However, in the questioning period, you will have a chance to elaborate on those points that you cannot cover while you are speaking. We will begin with Mr. Fehribach.

STATEMENT OF GREG FEHRIBACH, CHAIRMAN, INDIANA GOVERNOR'S COUNCIL ON PEOPLE WITH DISABILITIES

Mr. Fehribach. Thank you, Mr. Chairman, Mr. Jontz. On behalf of Evan Bayh of the State of Indiana, we would like to thank you for coming and holding this hearing here in Indiana.

We believe that Hoosiers present a cross-section and possibly a good group of people that might be able to shed some light on the committee as far as passing the Americans With Disabilities Act.

As you noted, my name is Greg Fehribach and I wear several hats. I am an attorney practicing law with the law firm of Timmons, Endsley, Chavis, Baker, and Lewis.

And I am also the Chairman of the Governor's Council on People with Disabilities.

Moreover, I am a disabled American. My disability is one that necessitates my use of an electric wheelchair and specially equipped van. I am presently building a home in downtown Indianapolis and I enjoy various recreational activities.

My educational background is from Ball State University where I obtained a Bachelor of Science Degree and a Master of Art's Degree. I have also obtained a Juris Doctor from the University of Ohio, College of Law.

Mr. Chairman, Mr. Jontz, I submit I am one of the lucky ones. There are many citizens in this nation who would cherish the opportunity to be a taxpayer like myself.

Disabled Americans comprise the largest group of minority voters in the union today. And it is this group of voters that often burden tax roles as opposed to contribute to them.

The ADA is a necessary step in alleviating what is now a burden on an already strained budget. Passage of this bill would be an active step to eliminate discrimination against disabled Americans thereby giving the disabled American the opportunity to participate in and benefit from employment and other advantages that able bodied citizens are already afforded.

Many consider the language of this Act to be burdensome as Congressman Jontz has already noted. Yet, we must consider the burdensome costs that citizens who not able to contribute, that a citizen who is not able to contribute to his own health and well being places on society today.

Those who feel it is cheaper to institutionalize a citizen than it is to work side by side with that same citizen have a false perception.

I have worked in various jobs since I was 16 years old. Very little if any money has ever been spent by my employers to allow me the right to work.

At the age of 31, I will pay more tax per capita than 60 percent of Americans. Because I have had an opportunity, I will not cost the taxpayers on the average between $2,000 and $5,000 per month for my care and maintenance.

A.D.A. will give other disabled Americans an opportunity that I have already had. A.D.A. will allow disabled Americans the privilege of paying income tax. It will prevent them from using the welfare system for their care and maintenance.

Transportation is essential for disabled persons to maintain self-sufficiency. There is not one of us in this room today who does not need some form of transportation in order to pursue employment, to recreate, or to contribute effectively to society as a whole.

Disabled people are disabled by the present transportation system in America. But ADA will allow disabled Americans to become differently able to use transportation that necessity dictates.

The disabled user of transportation will also pay the same taxes for the privilege of transportation that all other people pay.

Thereby again, we will be contributing to the coffers as opposed to draining them.

There's a Constitutional right to travel throughout this great land. A.D.A. simply assures that disabled Americans have the right to travel and use transportation which they have not previously been able to exercise prior to this legislation.

Disabled people also have the right to fair and accommodating housing. Institutionalization is not fair nor is it accommodating.

Disabled people have historically been considered sick and in need of quasi-medical surroundings in which to live. This is a misconception. A disabled person would cherish the opportunity to pay property tax or any other tax that would result from ownership or occupancy in their own home.

One factor that anchors the concept of Americana is the premise that a man's home is his castle. As a disabled person striving for independence, I would consider the opportunity of occupying a home which promotes this independence, a true treasure.

A.D.A. will insure the Fourth and Fourteenth Amendment right that the rest of Americans take for granted. It is an assurance for the disabled that independence is a goal and privacy is a desire that often seems unattainable.

Mr. Chairman, Mr. Jontz, each night the evening news depicts citizens from all over the world striving to become free and independent. The Berlin Wall and the fences that stretch between East and West Germany have held back the migration for East Germans to West Germany are small hurdles compared to the walls of independence that the disabled persons have been unable to scale.

Additionally, the blacks in South Africa have more hope in attaining equality in the job place than does a disabled person in

America. For a black in South Africa is allowed to work. But the disabled American is encouraged to stay home.

Therefore, I encourage the Congress of the United States to, one, deliver independence to disabled Americans. Two, to relieve the able-bodied American of a financial burden that need not exist.

Three, to pass the Americans With Disabilities Act.

In closing, I would like to remember a little history. In 1776, we fought the war of independence for those truths which at that time were proclaimed to be self-evident. In 1989 the disabled American is still striving for life, liberty, and the pursuit of happiness.

Hopefully, with the passage of this bill we will be able to achieve our independence. Thank you.

[The prepared statement of Greg Fehribach follows:]

TESTIMONY FOR
THE AMERICANS WITH DISABILITIES ACT

BY:

GREGORY S. FEHRIBACH
ATTORNEY AT LAW
CHAIRMAN, GOVERNOR'S PLANNING COUNCIL
FOR PEOPLE WITH DISABILITIES

AT:

INDIANA UNIVERSITY-PURDUE UNIVERSITY
AT INDIANAPOLIS
CONFERENCE CENTER

OCTOBER 6, 1989

Mr. Chairman and Committee Members:

My name is Gregory S. Fehribach. I am an attorney practicing law with the law firm of Timmons, Endsley, Chavis, Baker & Lewis, 120 E. Market St., #777, in Indianapolis, State of Indiana, 46204. Additionally, I am Chairman of the Governor's Council for People With Disabilities, and I AM A DISABLED AMERICAN.

My disability is one that necessitates my use of an electric wheelchair and a specially equipped van. I am presently building a home in downtown Indianapolis and I enjoy various recreational activities. My educational background is from Ball State University, Muncie, Indiana, where I obtained a Bachelor of Science and a Master of Arts degree. My law degree was granted from Ohio Northern University, College of Law. Mr. Chairman, I AM ONE OF THE LUCKY ONES.

There are many citizens in this Nation who would cherish the opportunity to be a taxpayer like myself. Disabled Americans comprise the largest group of minority voters in the Union today. These voters often burden the tax roles as opposed to contributing to them. The Americans With Disabilities Act, (ADA), is a necessary step in alleviating what is now a burden to an already strained budget. Passage of this Bill will be an active step to eliminate discrimination against the Disabled American. Thereby giving the Disabled American the opportunity to participate in and benefit from employment and other advantages that able bodied citizens are afforded.

Many consider the language of this Act to be burdensome, yet we must consider the burdensome costs that a citizen who is not able to contribute to his own health and well being, places on society. Those who feel it is cheaper to institutionalize a citizen than it is to work side by side with that same citizen have a false perception. I have worked in various jobs since I was sixteen (16) years old. Very little if any money was spent by my employers to allow me the right to work. At the age of 31, I will pay more tax per capita than 60% of other Americans. Because I have had an opportunity I will not cost the taxpayers $2,000 - $5,000 per month for my care and maintenance. ADA gives other Disabled Americans an opportunity. The ADA will allow disabled people the privilege of PAYING INCOME TAX and it will prevent them from using the welfare system for their care and maintenance.

Transportation is essential for a disabled person to maintain self-sufficiency. There is not one of us in this room today who does not need some form of transportation in order to pursue employment, to recreate, or contribute effectively to society as a whole. Disabled people are disabled by the present transportation system in America today, but ADA will allow the disabled to become "differently able" to use transportation as necessity dictates. This disabled user of transportation will PAY THE SAME TAXES FOR THE PRIVILEGE OF TRANSPORTATION that all others pay. Thereby again we will be contributing to our coffers as opposed to draining them. There is a Constitutional right to travel throughout this great land. ADA simply ensures that the Disabled American has the right to travel and use transportation which they have not been able to adequately exercise prior to this legislation.

Disabled people also have a right TO FAIR AND ACCOMMODATING HOUSING. Institutionalization is not fair nor is it accommodating. Disabled people have historically been considered sick and in need of a quasi-medical surrounding in which to live. This is a misconception. The DISABLED PERSON WOULD CHERISH THE OPPORTUNITY TO PAY PROPERTY TAX OR ANY OTHER TAX that would result from ownership or occupancy in their own home. One factor that anchors the concept of Americana is the premise that a man's home is his castle. As a disabled person striving for independence, I would consider the opportunity of occupying a home which promotes this independence a true treasure. ADA ensures the 4th and 14th Amendment rights that the rest of Americans take for granted. It is an assurance for the Disabled whose INDEPENDENCE IS A GOAL AND PRIVATELY A DESIRE that often seems unattainable.

Mr. Chairman and Committee Members, each night the evening news depicts citizens from all over the world striving to become free and independent. The Berlin Wall and the fences that have held back East Germans from migrating to West Germany, are small hurdles compared to the walls of independence that the disabled people have been unable to scale. The Blacks in South Africa have more hope in achieving equality at the job place than does the disabled person in America. The Black South African is allowed to work but the disabled American is encouraged to stay at home.

Therefore I encourage the Congress of the United States:

(1) to deliver independence to the Disabled American;

(2) to relieve the able-bodied American of a financial burden that need not exist;

(3) to pass the Americans With Disabilities Act.

In 1776 we fought the war of independence for those truths which we proclaim to be self evident. In 1989 the Disabled American is still striving for life, liberty and the pursuit of happiness. Hopefully through the passage of this Bill we too will be able to achieve our INDEPENDENCE.

Respectfully submitted,

Gregory S. Fehribach

Gregory S. Fehribach

Mr. OWENS. Thank you. Mr. Barry Chambers.

STATEMENT OF BARRY CHAMBERS, COMMISSIONER, INDIANA DEPARTMENT OF HUMAN SERVICES

Mr. CHAMBERS. Thank you, Mr. Chairman, Mr. Jontz. I am the Commissioner of the Indiana Department of Human Services. We are a state agency in Indiana that provides services to more than one million needy Hoosiers.

We provide an array of services to people that are elderly, people with disabilities, children, families and people living in poverty.

It is time now though to end discrimination against people with disabilities. It is time to take this next step in the civil rights movement. It is time to pass the Americans With Disabilities Act.

Discrimination in any form is not acceptable in a country that prides itself on the belief that every person is entitled to an opportunity to be a contributing member of society.

The Americans With Disabilities Act moves equal rights for people with disabilities to a category of official compassion by guaranteeing every individual equal access in areas of employment, public transportation, accommodations, and communication.

Those of us who do not suffer from a disabling condition have a tendency to take our abilities for granted. We do not realize that some of the things that we do are not possible for all individuals.

Countless numbers of Americans get up every day to take a bus to work, to have lunch at their favorite restaurant, to stop to use a pay telephone.

But there are people that cannot do these things. They cannot get on a bus because they use a wheelchair. Is it not ironic that those who cannot walk are also unable to ride. They cannot reach a pay telephone or use a water fountain or find a hotel room that will allow them mobility to perform routine functions of daily living.

The benefits to be gained with the passage of this legislation will be felt in the workplace, in the marketplace, and in the homes of people with disabilities throughout this country.

The contribution made by people with disabilities to their communities cannot be calculated in dollars and cents. There are those that see things only in terms of costs associated with the passage of this bill.

I ask you to consider the cost of having individuals who could be gainfully employed on tax supported programs. I ask you to consider the cost of a system that does not allow people the opportunity to be responsible citizens and contributing members of society for lack of the most basic considerations.

Surely it takes no genius to see that the contributions of these individuals as wage earners and taxpayers will certainly outweigh the initial costs of providing these kinds of reasonable accommodations.

In our country, people are judged by their abilities. The cruel joke is that everybody does not have the opportunity to demonstrate those abilities.

We hear a lot about the American dream, the equality of all citizens, the pursuit of life, liberty, and happiness in one of the richest nations in the world. As we enter the decade of the 90's, American technology has shown us a world that our parents only dreamed of.

The time has come to end discrimination, to guarantee equal opportunity to 43 million Americans with disabilities. To extend the American dream to all individuals with disabilities.

I know we have the ability to make changes in our physical surroundings, to make our world accessible to all. I know that we recognize our moral obligation to end discrimination against people with disabilities.

The Federal Government must set this example. No single piece of legislation will immediately solve all of the problems facing people with disabilities. But the ADA is an essential foundation upon which to build.

This legislation will provide the vital support for disability policies and encourage people with disabilities to work productively and to live independently in their communities.

Public hearings held since this legislation was initially introduced in 1988 have provided much first-hand testimony to legislators and community leaders that demonstrates discrimination and lack of access facing individuals who want to exercise their right to be contributing members of society.

Justin Durrett, a former commissioner of the Rehabilitation Services Administration chaired a public hearing in Indianapolis last year on behalf of the Task Force on Rights and Enpowerments of Americans with Disabilities.

More than 100 people attended that hearing. One person after another related personal examples of discrimination they faced.

Mr. Durrett, speaking about the ADA said, "Thirty-seven years in the human rights movement has convinced me absolutely that we will continue to receive leftover rights, leftover jobs, and leftover resources for services until the Nation makes a firm, formal, and forceful statement to all of its citizens that people with disabilities are equal everyday, everywhere just like everyone else."

It is time for the Nation to make this statement. I ask you to remember the Civil Rights Act of 1964, the Rehabilitation Act of 1973, and the recent amendments to the Fair Housing Act. Each of these pieces of legislation was formed by the conscious of a nation.

This bill is the first step in eliminating those situations which limit an individual's potential for work and normal living. I ask your support for the Americans With Disabilities Act. Thank you.

....TO TAKE THE NEXT STEP IN AMERICA'S CIVIL RIGHTS MOVEMENT.

....TO PASS THE AMERICANS WITH DISABILITIES ACT.

DISCRIMINATION IN ANY FORM IS NOT ACCEPTABLE IN A COUNTRY THAT PRIDES ITSELF ON THE BELIEF THAT EVERY PERSON IS ENTITLED TO AN OPPORTUNITY TO BE A CONTRIBUTING MEMBER OF SOCIETY.

THE AMERICANS WITH DISABILITIES ACT MOVES EQUAL RIGHTS FOR PEOPLE WITH DISABILITIES FROM THE CATEGORY OF "OFFICIAL COMPASSION" BY GUARANTEEING EVERY INDIVIDUAL EQUAL ACCESS IN AREAS OF EMPLOYMENT, PUBLIC TRANSPORTATION, ACCOMODATIONS AND COMMUNICATION.

THOSE OF US WHO DO NOT SUFFER FROM A DISABLING CONDITION HAVE A TENDENCY TO TAKE OUR ABILITIES FOR GRANTED.

WE DON'T REALIZE THAT SOME OF THE THINGS WE DO ARE NOT POSSIBLE FOR ALL INDIVIDUALS.

COUNTLESS NUMBERS OF AMERICANS GET UP EVERY DAY AND TAKE A BUS TO WORK, HAVE LUNCH AT THEIR FAVORITE RESTAURANT, STOP TO USE A PAY PHONE.

BUT THERE ARE PEOPLE WHO CAN'T DO THOSE THINGS. THEY CAN'T GET ON A BUS BECAUSE THEY USE A WHEEL CHAIR.

ISN'T IT IRONIC THAT THOSE WHO CAN'T WALK ARE ALSO UNABLE TO RIDE.

THEY CAN'T REACH A PAY TELEPHONE, OR USE A WATER FOUNTAIN OR FIND A HOTEL ROOM THAT WILL ALLOW THEM THE MOBILITY TO PERFORM THE ROUTINE FUNCTIONS OF DAILY LIVING.

THE BENEFITS TO BE GAINED WITH THE PASSAGE OF THIS LEGISLATION WILL BE FELT IN THE WORKPLACE, IN THE MARKETPLACE, AND IN THE HOMES OF PEOPLE WITH DISABILITIES THROUGHOUT THE COUNTRY.

THE CONTRIBUTION MADE BY PEOPLE WITH DISABILITIES TO THEIR COMMUNITIES CAN NOT BE CALCULATED IN DOLLARS AND CENTS.

THERE ARE THOSE WHO SEE ONLY THE COSTS INVOLVED IN THE PASSAGE OF THIS BILL.

I ASK YOU TO CONSIDER THE COST OF HAVING INDIVIDUALS WHO COULD BE GAINFULLY EMPLOYED ON TAX SUPPORTED PROGRAMS.

I ASK YOU TO CONSIDER THE COST OF A SYSTEM THAT DOES NOT ALLOW PEOPLE THE OPPORTUNITY TO BE RESPONSIBLE CITIZENS AND CONTRIBUTING MEMBERS OF SOCIETY FOR LACK OF THE MOST BASIC CONSIDERATIONS.

SURELY IT TAKES NO GENIUS TO SEE THAT THE CONSTRIBUTIONS OF THESE INDIVIDUALS AS WAGE EARNERS AND TAXPAYERS WILL CERTAINLY OUTWEIGH THE INITIAL COSTS OF ACCOMODATING THEM.

IN OUR COUNTRY PEOPLE ARE JUDGED BY THEIR ABILITIES.

THE CRUEL JOKE IS THAT EVERYONE DOES NOT HAVE THE OPPORTUNITY TO DEMONSTRATE THOSE ABILITIES.

WE HEAR A LOT ABOUT THE AMERICAN DREAM, THE EQUALITY OF ALL CITIZENS, THE PURSUIT OF LIFE, LIBERTY, AND HAPPINESS IN ONE OF THE RICHEST NATIONS IN THE WORLD.

AS WE ENTER THE DECADE OF THE NINETIES AMERICAN TECHNOLOGY HAS SHOWN US A WORLD THAT OUR PARENTS ONLY DREAMED OF.

THE TIME HAS COME TO END DISCRIMINATION, TO GUARANTEE EQUAL OPPORTUNITY TO 43 MILLION PEOPLE WITH DISABILITIES.

TO EXTEND THE AMERICAN DREAM TO ALL INDIVIDUALS WITH DISABILITIES.

I KNOW THAT WE HAVE THE ABILITY TO MAKE OUR PHYSICAL SURROUNDING ACCESSABLE TO ALL.

I ALSO KNOW THAT WE RECOGNIZE OUR MORAL OBLIGATION TO END DISCRIMINATION AGAINST INDIVIDUALS WITH DISABILITIES.
THE FEDERAL GOVERNMENT MUST SET THE EXAMPLE.

NO SINGLE PIECE OF LEGISLATION WILL IMMEDIATELY SOLVE ALL OF THE PROBLEMS FACING PEOPLE WITH DISABILITIES.

BUT, THE AMERICANS WITH DISABILITIES ACT IS AN ESSENTIAL FOUNDATION UPON WHICH TO BUILD.

THIS LEGISLATION WILL PROVIDE VITAL SUPPORT FOR DISABILITY POLICIES THAT ENCOURAGE PEOPLE WITH DISABILITIES TO WORK PRODUCTIVELY AND TO LIVE INDEPENDENTLY IN THEIR HOME COMMUNITIES.

PUBLIC HEARINGS HELD SINCE THIS LEGISLATION WAS INITIALY INTRODUCED IN 1988, HAVE PROVIDED FIRST HAND TESTIMONY TO LEGISLATORS AND COMMUNITY LEADERS, THAT DEMONSTRATES THE DISCRIMINATION AND LACK OF ACCESS FACING INDIVIDUALS WHO WANT TO EXERCISE THEIR RIGHT TO BE CONTRIBUTING MEMBERS OF SOCIETY.

JUSTIN DART, A FORMER REHABILITATION SERVICES ADMINISTRATION COMMISSIONER, CHAIRED A PUBLIC HEARING IN INDIANAPOLIS LAST YEAR ON BEHALF OF THE TASK FORCE ON RIGHTS AND EMPOWERMENT OF AMERICANS WITH DISABILITIES.

MORE THAN 100 PEOPLE ATTENDED THE HEARING. ONE PERSON AFTER ANOTHER RELATED PERSONAL EXAMPLES OF DISCRIMINATION THEY HAVE FACED.

MR. DART, SPEAKING ABOUT THE AMERICANS WITH DISABILITIES ACT, SAID, "THIRTY-SEVEN YEARS IN THE HUMAN RIGHTS MOVEMENT HAS CONVINCED ME ABSOLUTELY THAT WE WILL CONTINUE TO RECEIVE LEFT OVER RIGHTS AND LEFT OVER JOBS AND LEFT OVER RESOURCES FOR SERVICES UNTIL THE NATION MAKES A FIRM, FORMAL AND ENFORCEABLE STATEMENT TO ALL OF ITS CITIZENS THAT PEOPLE WITH DISABILITIES ARE EQUAL EVERY DAY AND EVERY WHERE, JUST LIKE EVERYONE ELSE."

IT'S TIME FOR THE NATION TO MAKE THAT STATEMENT.

I ASK YOU TO REMEMBER THE CIVIL RIGHTS ACT OF 1964, THE REHABILITATION ACT OF 1973 AND THE RECENT AMENDMENTS TO THE FAIR HOUSING ACT.

EACH OF THESE PIECES OF LEGISLATION WAS FORMED BY THE CONSCIENCE OF A NATION.

THIS BILL IS THE FIRST STEP IN ELIMINATING THOSE SITUATIONS WHICH LIMIT AN INDIVIDUALS POTENTIAL FOR WORK AND NORMAL LIVING.

Mr. OWENS. Thank you. Deanna Durrett.

STATEMENT OF DEANNA DURRETT, FOR JOSEF REUM, INDIANA DEPARTMENT OF MENTAL HEALTH

Ms. DURRETT. Thank you, Mr. Chairman. Thank you, Mr. Jontz. I am here on behalf of the Commissioner of the Indiana Department of Mental Health, Josef Reum. And this is his testimony.

Thank you for the opportunity to submit written testimony in support of the adoption of the Americans With Disabilities Act. As Commissioner of the Indiana Department of Mental Health, I am delighted to offer whole hearted support for this landmark legislation.

It has been long in coming and will be of benefit to our entire citizenry. The number of people who experience a disability in their lives grows with each passing day.

This fact is due in part to tremendous advances in medical care and assistive technology and the aging of our nation as a whole.

The protections under S. 933 do not extend special protections or status to people with disabilities. They protect the right of each and every citizen to age, to become ill, to be rehabilitated after an injury, to continue to participate fully in the economic, civic, social, recreational, and spiritual life of our community.

People with disabilities and their families represent a major economic and potentially political force in our great nation. But we, and now I am speaking as a person who has experienced a life-long disability, have never been recognized as full citizens.

We have had to endure segregation in much the same way people of color and women who have endured discriminatory segregation until recently and sadly, even today.

But the segregation and stigmatization of people with disabilities has been even greater for people with disabilities such as mental retardation, cerebral palsy, mental illness, and now mostly certainly people with AIDS.

We have experienced the segregation which shuts away the humanity, the vulnerability we represent to society. We have been institutionalized. We have been sheltered. We have had our choices limited by those who felt more competent under provisions of substituted judgment.

This legislation sets many people free who challenge the best of our society to respect the dignity and integrity of the individual.

Provisions of the Act finally recognize our right of citizenship without the qualifier of Federal assistance. In this, the last year of the U.N. declared decade of the disabled, people ought to have the opportunity to discover the beauty, the creativity, the challenge, and the strength of their brothers and sisters who experience a disability.

In protecting the right not to be segregated, we also encourage the opportunity for integration and learning. This is a principal we embrace here in Indiana and it is a principal which must guide our nation into a new aging and medically sophisticated reality. Thank you for the opportunity to offer testimony.

[The prepared statement of Josef Reum follows:]

Josef Reum, Commissioner, Indiana Department of Mental Health

October 6, 1989

Dear Congressman Jontz, distinguished members of the panel, especially Representative Long.

Thank you for the opportunity to submit written testimony in support of the adoption of the Americans with Disabilities Act (S.933). As the Commissioner for the Indiana Department of Mental Health I am delighted to offer whole hearted support for this landmark legislation. It has been long in coming and will be of benefit to our entire citizenry. The number of people who experience a disability in their lives grows with each passing day. This fact is due in part to tremendous advances in medical care and assistive technology and the aging of our nation as a whole. The protections under (S.933) do not extend special protections or status to people with disabilities. They protect the right of each and every citizen to age, to become ill, to be rehabilitated after an injury, to continue to participate fully in the economic, civic, social, recreational and spiritual life of our community.

People with disabilities and their families represent a major economic and potentially political force in our great nation. But we, and now I am speaking as a person who has experienced a life long disability, have never been recognized as full citizens. We have had to endure segregation in much the same way people of color and women who have endured discriminatory segregation until recently (and sadly even today). But the segregation, the stigmatization of people with disabilities has been even greater for people with disabilities such as mental retardation, cerebral palsy, mental illness and now most recently people with AIDS. We have experienced a segregation which shuts away the humanity, the vulnerability we represent to society. We have been institutionalized, we have been sheltered, we have had our choices limited by those who felt more competent under provisions of substituted judgement. This legislation sets many people free who challenge the best of our society to respect the dignity and integrity of the individual. Provisions of the act finally recognize our right of citizenship without the qualifier of federal assistance.

Mr. Owens. Thank you. Will Muriel and Chris Lee come forward, please?

STATEMENT OF MURIEL LEE, GOVERNOR'S PLANNING COUNCIL FOR PERSONS WITH DISABILITIES, AND CHRIS LEE

Ms. Lee. Thank you, Mr. Chairman and all members of your committee for this opportunity. We are pleased to be here and to have the opportunity to testify before the Subcommittee on Select Education of the House Committee on Education and Labor regarding H.R. 2273, the Americans With Disabilities Act.

I am Mrs. Ralph Lee of Nashville, Indiana. I serve on the Governor's Planning Council for Persons with Disabilities. I am an immediate past chairman of COVOH, the council, the volunteers, and organizations in Indiana.

Both of these organizations comprise a cross section of all groups representing persons with disabilities. Both of these groups fully endorse the Americans With Disabilities Act.

However, my role today is not that and what I am here to do is to assist my son, Christopher Lee in presenting his testimony.

Chris is severely disabled by cerebral palsy and requires assistance in all of his daily activities. His perspective on Americans With Disabilities Act comes directly from his own experiences as a writer, as a student at I.U., as a playwright for the Christopher Puppet Theater and as an informed and knowledgeable space enthusiast.

He accesses a computer by the click of his tongue. He has had several newspaper and magazine articles published. He was given an award this fall by the Indiana Department of Education for his video program, "Always a Chance for Change."

The video program has been shown in schools and community groups throughout Indiana, Illinois, Ohio, and Michigan.

The "Always a Chance for Change" program uses puppet characters to portray both negative and positive attitudes towards persons who are disabled.

Christopher asks that the "Always a Chance for Change" program and video program and leaders guide be included in your report for these hearings. So if I may, I will just set them there with a copy of the tape for you.

On the page that is marked, it deals with a little bit about changing attitudes and we highly recommend it.

Mr. Owens. Without objection, we will include part of the written introduction into the record. The rest of it will be available in the subcommittee office.

Ms. Lee. Thank you, Mr. Chairman. I take great pride in turning the microphone over to Christopher who would like to share with you his perspective on the bill.

Mr. Lee. I was pleased in the reading of the bill that there was a designated period of time for the promulgation of rules and regulations.

I would just like to make a recommendation——

Mr. Owens. Mrs. Lee, there is a second mike that you can use there.

Ms. Lee. Fine thank you.

Mr. LEE. [continuing] a recommendation that I think would strengthen the bill. Let me digress a little an incident I have heard just this week that illustrates my point beautifully.

I was going to a meeting on home care. Mother was my chauffeur. When we got to the place there were handicap spaces as the law provides but they were all filled with what appeared to be all non-handicapped persons' cars. So we had to park in the street.

There was a ramp entrance, again, according to law but the doorway was locked. Obviously the building's manager had complied with the letter of the law, but had no understanding of the special needs of the disabled.

This brings me to my recommendation. Use the time between the enactment of a law and the promulgation and the enforcement of the program to educate those affected by the laws. Use it for education in so that they become educated in the awareness and special needs of the disabled and not just comply to the letter of the law. Thank you, Mr. Chairman.

[The prepared statement of Christopher C. Lee follows:]

STATEMENT

Respectifully Submitted

to

TheSelect Subcommittee on Education

of the

House Committee on Education and Labor

Regarding

H.R. 2273, the Americans With Disabilities Act

Christopher C. Lee
Nashville, Indiana

October 6, 1989

I am pleased to be here and I wish to give my endorsement to this historic peice of legislation. First, let me say that in reading the bill I was pleased to see a specified period of time for the promulgation of rules and regulations, I would hope that the regulations would be issued within the designated 12 month time-frame. I say this because I feel that the period between the enactment of the law and the enforcement of the program for employers and all other aspects of the program should be used for not only the training of potential employees, but should encompass a strong component of awareness training that enables the individual to accept the person with a disability and to become aware of that person's special needs. In other words, to simply have the law does not insure acceptance nor awareness. Let me give an example.

Tuesday afternoon of this past week, an incident occured that illustrates not only the need for the law but also a need for a program of awareness. I was on my way to an important meeting regarding in-home care for the elderly and the disabled. Mother was driving my van and when we arrived at the building all of the handicapped parking spaces were taken by what appeared to be non-disabled drivers. We had to park in the ally to reach the ramped entrance. When we got to the designated handicapped entrance, it was locked. We had to wait until someone on the inside opened the door. It's obvious that those in charge of the building had complied with the letter of the law - but they had completely misunderstood the real needs of persons using a wheelchair.

Achieving a positive attitude toward persons with disabilities usually requires a change. But changing attitudes depends on each persons background and previous experience with someone who is disabled. We need to recognize that some persons begin with negative feelings while others quickly accept and soon become aware of the disabled persons special needs.

From my perspective, educational programs fostering positive attitudes towards persons with disabilities is a necessary component of the Americans With Disabilities Act in order for it to become a reality.

Thank you, Mr. Chairman and Members of the Committee for this opportunity to testify before the Select Sub-Committee on Education of the House Committee on Education and Labor regarding H.R. 2273, The Americans With Disabilities Act.

I am Mrs. Ralph Lee of Nashville, Indiana. I serve on the Governor's Planning Council for Persons with Disabilities and I am the Immediate past Chairman of COVOH, the Council of Volunteers and Organizations for the the Handicapped in Indiana. Both of these organizations comprise a cross section of all groups representing persons with disabilities. Both groups endorse the Americans With Disabilities Act. However, my role today is to assist my son, Christopher Lee, in presenting his testamony. Chris is severely disabled by cerebral palsy and requires assistance in all activities of daily living. His perspective on the Americans With Disability Act comes directly from his own experiences as a writer, a student at Indiana University, a playwrite for the Christopher Puppet Theater and as an informed and knowledgeable space enthusiast!. He accesses a computer by the click of his tongue. He has had several newspaper and magazine articles published. He was given an award this Fall by the Indiana Department of Education for his video program, "Always a Chance for Change." The video program has been shown in schools and community groups throughout Indiana, Illinois, Ohio and Michigan. The "Always a Chance for Change" program uses puppet characters to portray both negative and positive attitudes toward persons who are disabled. Christopher asks that the "Always a Chance for Change" video program be included in the report from these hearings.

I take pride in presenting my son, Christopher Lee.

A BIT ABOUT CHANGING ATTITUDES.

Attitudes appear to develop and change as a result of actual or vicarious experiences which are both positive and pleasurable. The program, ALWAYS A CHANGE FOR CHANGE, can begin this process of change. It provides an enjoyable experience that allows for sympathetic and imaginative participation.

Regardless of the stimulus - a video tape, role playing or visits with persons who are handicapped - changes in attitude appear to go through a sequence of responses:

First, the individual is exposed to a new idea, i.e.
  the new value which is or is not accepted;
Second, the individual will react impulsively or
  mechanically to the idea;
Third, the individual will voluntarily respond to the
  acceptance of the new value; and
Fourth, the individual will decide and begin to
  take positive action.

Depending upon one's present attitude, based on background and experiences, a person may move quickly or slowly through the four responses to a new idea.

Thus, it becomes important to determine the experiences of the persons viewing the program, i.e. their entry level. What do they already know about persons with disabilities? What have they experienced? What attitudes are present? What degree of change can or should be expected?

Whatever the entry level, if a positive change is to occur each person will generally experience all of the four responses . Some will move quickly through a response while others may not be ready or able to respond in a positive fashion.

Each character in the program, ALWAYS A CHANCE FOR CHANGE is at a different entry level. Each responds in a different fashion:

Honey Bunny and Mr. Mantoni represent caricatures of various negative attitudes toward persons with disabilities. Their entry levels may or may not allow them to experience all four responses to a new idea.

J.B. and Gretchen have an entry level which is positive and receptive to change.

The functional attitude desired is for each of them to become aware that persons with disabilities have talents and abilities like their own, and for each to interact positively with them.

Mr. **Owens**. Let me begin by responding to that observation and recommendation.

Number one, the fact that the Americans With Disabilities Act is a comprehensive and sweeping piece of legislation which puts an emphasis on rights is an educational process itself.

It is saying to the American people that although we have been quite generous and compassionate in the past and can be proud of some of the programs that do exist for people with disabilities, we are going one step further. We are saying that every human being has the right to be able to realize their own capabilities to the maximum.

The government, the power and the authority of the government, should be behind each individual. It does not guarantee it. A right is not a handout. A right is an opportunity.

And the individual still must go forward to implement his rights, but he has behind him the power of the law and the power of the government.

There is a debate out there, people who never thought about the problem before are being forced to think about it.

So we are going to raise the level of awareness. Hopefully it will mean that people will not park in those reserved spaces for the handicapped because their level of awareness will be raised.

The passage of the bill will be the beginning. It is not the end of the process. It is a beginning of empowerment for people with disabilities so they can fight for their own rights with the government behind them 100 percent.

And it will make it less likely that you will arrive at a building which has a ramp, but the doors are locked. You cannot get in because they don't want you to. They only want to comply with the letter of the law.

We hope that the spirit of the law, as a result of this effort to pass ADA, will be impressed upon people and they will act more in accordance with the spirit of the law.

The bill that was passed by the Senate contains a provision for technical assistance to sensitize and help those who have to comply with the law.

Of course, persons who provide public accommodations would be among the largest number given some help in complying with the law. And some of that help may not be technical assistance on how to change the physical place of business rather, technical assistance on how to change the attitudes of the custodians and the people who work at the particular facility or place of employment.

So, that type of assistance provision is in the Senate bill now and we hope to have it remain in the bill that passes.

So I am quite grateful for your observation and your recommendation. We certainly will go forward in that respect.

Now, if I may turn to the other panelists, I am pleased to note that all of you support and endorse the ADA quite enthusiastically.

I would like your opinion on some of the things that we find ourselves up against at this point. And everyday that goes by is a dangerous day in my opinion because there are more and more people who come out and find reasons for not wanting to pass it.

Perhaps some of you saw the editorial in the New York Times on September 6 which was entitled, "Blank Check for the Disabled."

Prior to that, I had seen an article by a congressman who said that the people with disabilities were trying to come under the banner of Civil Rights and create a welfare state for the disabled.

So there are a lot of attitudes that are quite negative in terms of costs. And two of you specifically addressed the matter of cost.

I do not think the American people know how much they are paying right now in terms of subsidies for people with disabilities; how we probably will decrease rather than increase the costs. But even if we do not decrease costs, we will change them around so that we will be paying to help people to become productive citizens and also become taxpayers.

So I would appreciate a comment on the idea that we are facing tremendous costs. Mr. Fehribach.

Mr. **Fehribach**. I think a big problem is a fear of the unknown by the people that are being adverse to the legislation at hand.

People have grown accustomed to want to put things that they do not want to see aside. And therefore, they are willing to pay for the fact that they put something that is not comfortable to them on a shelf.

I think that as a result, ADA is not only causing them to think well, it is more costly to have disabled person in society, but moreover, it is a situation where people do not want to have—I do not understand a disabled person in society is also a contributor.

Therefore, it is cheaper to educate somebody, get them a job, and have them paying taxes than it is to have them educated not having a job and institutionalized.

Since 1972, Mr. Chairman, we have educated and trained people with disabilities and that is good. But we have not really taken the next step forward in order to allow them to have a job or to actually pay back the state and the United States for the money that we have spent on educating and training these people.

Once again we have just used that as kind of a baby sitting type of situation. It is time that the American citizens quit paying for baby sitting and ask for the people that we have paid for to be trained and educated to go out there and do a job.

And I think that is all ADA is doing, is asking that we are allowed to do a job that we have been trained to do, and thereby contribute to America as a whole.

Mr. **Owens**. But I might note that Senator Tom Harkin pointed out in a letter answering the New York Times editorial that taxpayers are now paying about $57 billion on taking care of people with disabilities. Most taxpayers do not know that and it is important to get that fact out there.

Mr. Chambers.

Mr. **Chambers**. A Lou Harris poll told us that two-thirds of all people with disabilities are unemployed. That same poll told us that two-thirds of those people unemployed want to work.

And in large part, the reasons people are not working is because of the lack of accessibility of the workplace, the lack of accessibility of society.

Our agency also has the responsibility on behalf of social security for determining which people who apply for Social Security Disability Benefits or Supplemental Security Income Benefits in fact meet the definition of disabled.

More than 40,000 individuals each and every year apply for social security or SSI benefits. People receiving these benefits receive them for extended periods of time.

If in some small part, making our society more accessible, making the workplaces more accessible, making communication, making transportation more accessible can dent this large number of people every year going on to government benefits, we will save substantial dollars.

I do not think though that we can hold out the Americans With Disabilities Act as a dollar savings type program. It is the right thing to do to make our society accessible to this group of individuals.

It also makes sense in terms of assisting people with disabilities in becoming employed and participating in the workplace. But it also makes sense in terms of bringing these people into our society.

Mr. OWENS. Ms. Durrett, do you care to comment?

Ms. DURRETT. I would certainly underscore what Barry and Greg have both indicated. I think it is a double-headed issue here in terms of the economic issue wherein the fear of the unknown, we think something new like this is going to cost without our realizing that the costs we are already paying are certainly there.

The other part of it is the attitudinal issue. And I think that is that whole part about making our accommodations, making our society accessible to people with disabilities begins to change people's attitudes about people's disabilities because they are evident to them. They have an opportunity to see what people can do.

And I think in itself is going to make a major dent in additional programs and additional opportunities for people with disabilities.

Mr. OWENS. Thank you. Mr. Jontz?

Mr. JONTZ. Thank you, Mr. Chairman. I have no questions. I want to thank all three of the representatives from the state for their strong endorsement of the legislation and I think it reflects not only the personal commitment of the agencies and people you represent to the disabled in our state, to people with disabilities—but also our Governor for having appointed you all to these important jobs.

And I certainly want to thank Mr. Lee his testimony and his suggestion. I think that all of us in the Congress and in the public will have a responsibility to work and educate society at large about what the Americans With Disabilities Act is all about.

And I certainly want to work with my colleagues to undertake this sort of effort to change attitudes that will be necessary for the implementation of the legislation. So thank you all for your testimony this afternoon. I really appreciate your sharing these views and recommendations with us.

Mr. OWENS. Thank you very much.

Our next panel consists of Dr. Jack Lewis who is a professor of Sociology and Social Work at Anderson University in Indiana; Mr. David Reynolds, a teacher at the Indiana School for the Deaf; and Ms. Janna Shishler, a law clerk here in Indianapolis.

Each speaker will address a particular aspect of the bill. Dr. Lewis and Mr. Reynolds will talk about education, and Ms. Shishler about employment.

Dr. Lewis.

STATEMENT OF JACK LEWIS, PROFESSOR OF SOCIOLOGY AND SOCIAL WORK ANDERSON UNIVERSITY, INDIANA

Dr. LEWIS. Thank you very much, Mr. Chairman. I am Professor of Sociology and Social Work at Anderson University here in Anderson, Indiana. I am also a member of the Governor's Planning Council for People with Disabilities and a member and active in the American Council of the Blind of Indiana and have been very active in organizational work for the blind for approximately 30 years.

And I particularly am enthusiastic about the Americans With Disabilities Act for persons in education. I myself am legally blind with 10 percent vision. I do not see well enough to recognize faces but I do see well enough to tell who is sleeping.

And I am very grateful for the Rehabilitation Act of 1973 that I am employed in higher education. The Americans With Disabilities Act I think has promise to integrate many more disabled people into education and employment as that the Rehab Act failed to accomplish.

And in that regard, I did want to bring up one particular concern that I noticed that the definition of a person with a disability has been carried over from the 1973 Rehabilitation Act in Section 504 and Section 503 as well as other parts of the Rehab Act.

And it says in effect that a person with a disability is a person that has a physical or mental impairment that substantially limits one or more of its major life activities, a person who has had such an impairment, a person who has been considered as having such an impairment.

And the concern is, that just what does that mean? And the reason that I am emphasizing that is this, that I understand why the definition is so broad. Because it is an opportunity to encompass many disabled people who have been discriminated against under the Act to help them to receive equality in the American way.

But it also might be presenting problems for persons with severe disabilities.

Back in 1978, I did a series of workshops around the state of Indiana on Section 503 of the 1973 Rehabilitation Act pertaining to employment in private industry.

And a personnel director of one of the major industries says listen, "I do not have to worry about this. I am complying." He said, "I have gone through my files and I have found that approximately 25 percent of my workers fit the definition of a disabled person with lower back problems, heart problems, having had psychological counseling and so forth."

And the point that needs to be stressed for education as well as any of the other areas designed for employment for disabled persons is that unless there is some incentive to give consideration to the severely handicapped, I think that we run the risk of finding that 10 years or 15 years later, we may find people with marginal disabilities working, having benefited from the Act but yet the severely disabled people still at home, unemployed or underemployed.

And I sincerely believe that some way the definition needs to be examined in consideration of giving impetus for consideration of the severely disabled person.

Now, as far as other aspects of education is concerned, many years ago at the school for the blind where I attended in Georgia, the superintendent once said that most people's handicap is above the eyes. And this is certainly true.

And when it is above the eyes of an employer, it is certainly very undesirable and very much a detriment as far as employing disabled people.

But when the handicap is above the eyes of the disabled person too, then that certainly is a very serious barrier. And education has been designed as a means of trying to prepare persons for independence in life and for employment including disabled people.

But for disabled people, too often it has had a counter-effect in terms of building dependency. Think about it. More than once a person in a wheelchair has had to go through the humiliation of being picked up and carried upstairs to get to a particular laboratory or a particular classroom.

Visually impaired people such as myself have had to depend on readers and had to arrange our schedules for the convenience of other people.

So much of the lives of disabled people in higher education and education in general has been having to adjust their lives and their schedules for the convenience of others because of the dependent positions that they are in.

The Americans With Disabilities Act certainly would do a great deal to offset that. Requiring a reasonable accommodation is certainly justified.

There is no reason why every university library and every library in a public school should not have a voice synthesizer with their computer terminals in the library.

Right now I can go to my computer and interface with Ball State Library, search out material, read the annotations, screen my material which certainly enables me to be a lot more independent in doing my research.

And the utilization of TDD machines for the deaf should certainly be in every university and the ADA would certainly make that a possibility.

But I think what we need to keep in mind is, that the ADA will enable people to achieve greater success in life economically as well as life satisfaction.

But also it will help to assure and condition people for independence. So much of education has been a disincentive in terms of creating dependency.

But with the reasonable accommodations that are available today particularly through high technology, there is no reason why disabled people cannot come out of schools, not only with a diploma, not only with job readiness but also with a strong self-concept where they see themselves as first-class citizens and not second-class citizens.

And I believe that, that is one of the major strengths of the Americans With Disabilities Act. Thank you, Mr. Chairman.

Mr. OWENS. Thank you. Mr. Reynolds.

STATEMENT OF DAVID REYNOLDS, INDIANA SCHOOL FOR THE DEAF, VIA INTERPRETER

Mr. REYNOLDS. Good afternoon. My name is David Reynolds. I am a teacher at the Indiana School for the Deaf and I am a third-generation deaf person. My three children are fourth-generation deaf.

I attended the Illinois School for the Deaf and I attended Galludet University. As you know, where Galludet had the protest recently.

I got my Bachelor's Degree there and I got it in English. I also went to the Western Maryland College and received my Master's Degree there.

I have been very, very active in the State of Indiana in various deaf organizations. We have the Indiana School for the Deaf Alumni Association. And we have the Indiana Association of the Deaf.

And we also have many, many other organizations that I am actively involved with.

A year ago on March 1, I was very actively involved when we protested because we were not getting quality education in the State of Indiana. And I was the chair person of that committee that organized that protest.

I am currently the co-chair person of the communications curriculum committee at the Indiana School for the Deaf where we are trying to change the philosophy of the school to a more bilingual, bicultural program because we recognize that deaf children's native language is American sign language.

As you all know, at the Galludet protest there was a very deep purpose there. And that purpose is that deaf people want to be independent and take control of decision making.

We do not want to be controlled by hearing people. That has happened for more than 150 years. Hearing people have continued to try to tell us what to do and we do not want that anymore.

We must take control of our educational system. Our educational system in the United States must give children the opportunity to learn and we must lead our educational system.

And that means that we must have more deaf people in administrative positions. We must have more deaf teachers because that gives us access to our language.

And what that means is that we will have role models. And this is where we see that ADA can help us because you can help us get that access to communication.

Our language is different and that is very important. That is the issue. We do not have much access to communication.

Also when you are talking about hiring processes, currently there are a majority of hearing administrators. Currently, there are a majority of hearing teachers. Their view is very different from a deaf person's viewpoint.

But up until now, we have not been able to voice our concerns and our views. Here in the State of Indiana, we currently have tests that teachers must take and those tests are geared for English-speaking people.

Those tests do not give many opportunities for deaf people. A deaf person needs more access. They need more choices. They need maybe to use a video tape so that they can take these tests through American sign language.

So they need more access and more choices. Like the person or Dr. Lewis or someone just said on the panel talking about attitudes, attitude is very important.

We have been oppressed by hearing people for many years. We know that hearing people can work with us. We want them to work with us but their attitude has been very oppressive toward the deaf community.

We have not been allowed to have access to our communication system and our language. We do not have many devices where we need to have them. For example, we do not have a lot of TDD's and TTY's at the School for the Deaf. We do not have an emergency alarm system at the School for the Deaf. There are no flashing lights.

And it is so sarcastic. They just put in an intercom system at the School for the Deaf and how crazy is that? I mean it makes no sense to have that.

Also we do not have enough interpreters. And that is another lack of access. We do not have enough captions in the school. We need more television sets even in the school itself that are captioned.

I am very concerned myself because I am thinking of the future of deaf children in this country. I am thinking of my own deaf children, my own three deaf children at home. I want all deaf children in this country to have equal access to what they need.

I think ADA can really help us. I think that we can have less discrimination in the schools and less discrimination in the workplace.

We need to be in control of our educational system. That is very crucial. Also related to deaf offices in the State of Indiana, they are currently looking for people to run those offices and it is very important to have deaf people that are involved in the screening process and we do not have that currently.

Deaf people are very unique. We are a very unique, "handicap." It separates us from all of the people here in this room.

The only thing that is different about us is our communications. Our language is different. We are not physically impaired but our communication and our language is very important and we do not have access to that.

We need support and we need help. Thank you very much.

Mr. OWENS. Thank you. Janna Shishler.

STATEMENT OF JANNA SHISHLER, LAW CLERK, INDIANAPOLIS

Ms. SHISHLER. I am pleased to be here and unlike most of the rest of the people that have been on the panels, I have not been involved with the disability movement much at all.

I have been in school for the past eight years and just got out last year. And so I feel as though my testimony is going to be much more personal about my own experiences rather than on a more general level.

On a crisp fall evening 10 years ago I became one of the continually expanding number of Americans with disabilities.

My admission to the group took only a matter of seconds but the result has altered my life dramatically. That evening, the hay wagon upon which I was a passenger suddenly lurched off the side of the road, throwing myself and several of my companions into the air.

My subsequent impact with the ground caused two of my cervical vertebrate to sublex, thereby placing enormous pressure on my spinal cord.

Since that night I have been a quadriplegic with no muscular function below my biceps. I was a 19 year old sophomore at Indiana University.

What I believe is particularly significant for others about the circumstances surrounding my injury is the relative ease with which it occurred. It was completely unforeseen and was not accompanied by any overtly dangerous activity.

Similar opportunities for traumatic injury are present in the every day lives of most citizens of this country. Consequently, the possibility of joining the population of disabled Americans is ever present.

This fact is compounded by the greying of the American population and the accompanying physical deterioration often associated with the aging process.

While considering this bill, I hope the Congressmen voting upon it and those parties opposing its passage focus on its benefits rather than the initial expense often necessary for opening opportunities for the disabled segment of our society.

The Americans With Disabilities Act should be viewed as an investment in the future of a substantial number of American citizens, perhaps even their own future.

The years immediately following my injury were spent trying to determine the most efficient method of accomplishing every day tasks such as dressing, eating, and studying.

Activities which had formerly required no conscious thought were now an effort. I believe the two things that made the adjustment possible were the support of my family and my immediate return to school.

In the fall of 1980, I transferred my credits from Indiana University's Bloomington campus to the Indianapolis campus.

After four years of hard work, I graduated with honors in 1984. Upon the conclusion of my undergraduate work I was admitted to the Indiana University, Indianapolis School of Law.

In 1988, I completed my legal education again receiving awards for my academic performance. I am currently employed as a judicial law clerk with United States Magistrate, John Paul Godich.

Discrimination never seemed to have hindered my progress until I began seeking employment in the private sector.

While in law school, I participated in the placement program offered by the university. The procedure permitted potential employers to select those they wanted to interview initially from resumes submitted to the placement office.

I received initial interviews with several local law firms based upon my academic record since in most instances I did not inform them of my disability.

Not only did I fail to receive any offers of employment but I, unlike many of my friends with comparable resumes was not asked to participate in any second interviews.

It is difficult for me to admit or believe that I may have been the subject of intentional discrimination. I am more apt to focus on my own real or imagined shortcomings or to appreciate the hesitancy reflected in employers' attitudes as a justifiable emphasis on the bottom line.

Generally, I have been one of those who have allowed others to lead the fight for disability rights while I sit on the sidelines and enjoy the fruits of their labors.

However, having been confronted with the unequal access on a personal level, I have finally recognized the necessity of broad based participation in the movement for equal participation in the American dream.

Although the presence of Civil Rights legislation does not guarantee the elimination of discrimination, it at least may provide the impetus to changing stereotypical beliefs that the disabled are slow, disruptive, and incapable.

The only sure remedy is exposing the general public to capable disabled persons and the workplace is the perfect venue.

The existence of such laws have positively affected employment in Federal and state Government by persons with disabilities.

During summer breaks from law school, I worked in the legal division of the Indiana Department on Aging and Community Services with Barry Chambers who you met earlier and for the State Attorney General's office.

A number of my co-workers were also disabled. None of my employers had to expend additional sums merely to meet my employment needs.

The computers which are a necessary part of my work were purchased with my own funds or with the assistance of the Indiana Department of Vocational Rehabilitation.

Vocational Rehabilitation also provided the funds for a specially built desk, speaker telephone, and the mouth sticks I use for typing.

Accessible bathrooms, a one-time expense, were already in place. My current position with the Federal Government has allowed me to become a self-supporting, tax paying member of society.

I no longer receive a regular Social Security check or assistance for vocational rehabilitation. My salary is sufficient to permit me to hire and pay the personal attendant who assists me each morning.

I believe that I am not an exception to the rule. The majority of persons with disabilities do not relish the thought of sitting day after day in a bedroom or nursing home.

The expense of maintaining nursing care for the disabled may be drastically reduced by implementing job training and opening access to employment for the Americans With Disabilities Act.

The Act will allow many of the disabled who have heretofore been ostracized from society to become contributing members.

Finally, I do not believe that it is unduly burdensome to place the obligations of the Act on employers with 15 or more employees who engage in interstate commerce.

First, modifications such as ramps or accessible bathrooms are a one-time expense which may be reimbursed through the dedicated work of disabled employees and the business of new customers or clients who were previously barred from access.

Second, if it is necessary to a persons' equipment for the disabled employee, it will typically benefit the business as a whole.

Thirdly, as alluded to earlier, a disabled individual who makes the effort to seek training and performing a particular type of work will in all likelihood prove to be an excellent employment risk.

I will be returning to the job market soon myself. I look forward to the Act as promised by the passage of the Americans With Disabilities Act. Thank you for your consideration.

Mr. Owens. I want to thank all of you for your testimony and assure you that personal testimony and the process of sensitizing legislators to this particular piece of legislation is very important.

Mr. Reynolds, I want you to know that the uprising—and I call it an uprising—at Gallaudet University played a major role in accelerating the movement of this legislation.

The bill would be probably two or three years behind schedule if it had not been for that dramatic uprising, the statement that was made at Gallaudet University.

So the spirit of your testimony is very much the spirit of the Galludet movement. I have no questions. I yield to Mr. Jontz.

Mr. Jontz. Thank you, Mr. Chairman. The statements that each of you gave were very eloquent. All Americans want to accomplish with their lives what you have accomplished.

And I think that those accomplishments are testimony equally eloquent to the need for the Americans With Disabilities Act so that all citizens can make those accomplishments. I want to thank you for your statements and express my appreciation for your being with us this afternoon. Thank you, Mr. Chairman.

Mr. Owens. Thank you again. Our next panel consists of Nanette Bowling, the Staff Liaison to the Mayor's Advisory Council for Handicapped Individuals, the Office of Mayor Bob Sargent, Kokomo, Indiana; John Turney who is a member of the Mayor's Advisory Council for Handicapped Individuals; and Michael Williams, the vice president for Ancillary Services, St. Joseph's Hospital in Kokomo, also the Kokomo employer of the year.

Mr. Jontz. Mr. Chairman, while the members of the next panel are taking their seats, I want to take just a minute to welcome them. We are very proud of all of the citizens of Kokomo.

And I am very appreciative of their appearance here today. I know a number of people had a distance to come. I know the road between Kokomo and Indianapolis very well and appreciate the effort that this panel has made to be with us. I want to personally welcome them as my constituents from the Fifth Congressional District.

Mr. Owens. Again, your written statement will be entered into the record. You have five minutes for your oral testimony but will be free to elaborate during the questioning period on any points you do not feel you have time to cover. We will start with Nanette Bowling.

STATEMENT OF NANETTE BOWLING, STAFF LIAISON TO THE MAYOR'S ADVISORY COUNCIL FOR HANDICAPPED INDIVIDUALS, OFFICE OF MAYOR BOB SARGENT, KOKOMO, INDIANA

Ms. Bowling. Chairman Owens, Congressman Jontz, my name is Nanette Bowling. I am administrative assistant to Mayor Robert Sargent of Kokomo, Indiana.

I am also Mayor Sargent's staff liaison to his Advisory Council for Handicapped Individuals. In 1980, a group of concerned citizens began meeting with the city administration in an effort to direct city resources to meeting the needs of handicapped persons.

One result of those meetings was the formation of the Mayor's Advisory Council for Handicapped Individuals. John Turney, who serves on the Kokomo Council and the Governor's Planning Council will present to you some of the specific accomplishments of the Mayor's Advisory Council for Handicapped Individuals.

The Kokomo Mayor's Advisory Council for Handicapped Individuals has a mission statement which reads as follows:

"The goal of the Mayor's Advisory Council for Handicapped Individuals is to serve as an advocacy group for all physically and or mentally handicapped citizens of the City of Kokomo, Indiana and the Kokomo area to identify the needs of all handicapped citizens and to advise the Mayor of Kokomo on matters which will improve the health, education, and quality of life for these citizens."

Mayor Robert Sargent considers his advisory council for handicapped individuals one of his strongest advisory council. He has five different advisory councils.

He considers the following just to mention a few to be the benefit of the Council, that the Council provides to his administration.

To provide information on the effect of pending and inactive policies on the lives of citizens with disabilities.

To provide a mechanism by which citizens with disabilities can have their relevant concerns addressed.

The Council also increases credibility with local citizens in the area of disabilities concerns.

The Council also increases the respect of citizens and elected officials throughout the state for efforts to expand the participation of all citizens in every aspect of community life.

As the needs and concerns of citizens with disabilities becomes visible and addressed through the efforts of the Mayors' Advisory Council for Handicapped Individuals, the following are a few of the benefits Kokomo, Indiana has witnessed.

Increased revenue sources and more effective delivery of programs as more citizens with disabilities are given increased opportunity to become productive members of the community.

Increased access to activities of community life by citizens with disabilities such as employment, transportation, social, recreational, civic, and political.

And an enhanced sense of awareness and commitment to the community by all of its citizens.

Despite the successful program and progress made by the Kokomo Mayor's Advisory Council for Handicapped Individuals, the absence of comprehensive Federal legislation prohibiting discrimination against individuals with disabilities has proved to be a serious roadblock in our overall efforts.

Members of the Council have witnessed discriminatory acts against persons with disabilities. There are many examples I could cite.

Three common examples of discrimination against persons with disabilities will suffice. The Council worked with a disabled woman who was denied a parking space on the parking lot where she works.

A handicapped parking space near a ramp had been designated for her. The space was taken from her after a reorganization at her place of employment. She was offered a parking space three blocks from where she worked.

The Council advocated for an elderly wheelchair bound man who lived in Howard Country. Howard County rural transportation is not equipped with a wheelchair lift. The man's wife died. The Council members worked with city senior transportation whose funding only allows them to transport within the city limits to bend their guidelines to go into the county. Senior city transportation did go into the county and transported this man to his wife's wake and funeral.

The city senior transportation system was forced to run the risk of losing its funding by traveling outside of its designated area in order to provide this needed human service.

Several members of the Council have been affected by devastating disincentives to voting. The Council is acutely aware that in 1984 the United States Congress passed the Voting Accessibility for the Elderly and Handicapped Act, P.L. 98-435.

In order to meet the requirements of this law, some jurisdictions merely encouraged persons with disabilities to vote by absentee ballot, an approach which is merely a ruse to avoid compliance with the clear intent of the Act which is that voting places be accessible to the disabled.

It also deprives the disabled voter of an option available to other absentee voters, the right to change their vote by appearing personally at the polls on election day to cast their ballot.

Other jurisdictions create a public spectacle of the person with a disability by having a voting machine taken to the person's vehicle for him or her to vote.

These mechanisms are demeaning to the disabled person. These methods for accessibility create a loss of dignity and independence for the disabled voter.

The Mayor's Advisory Council for Handicapped Individuals has been distressed in the knowledge that in the absence of national standards, there are no means available to redress such inequities.

The Americans With Disabilities Act is much needed legislation. Protection of the civil rights of all people and I underscore the words, all people, to include people with disabilities is long overdue for our great nation.

Every mayor in every town across the United States can establish an advisory council for handicapped individuals. Those councils would and should be as diverse as the jurisdictions involved.

If national law is enacted via ADA, the physical and attitudinal barriers for persons with disabilities would soon be eliminated.

This legislation would allow our Mayor's Advisory Council for Handicapped Individuals more of an opportunity to work with all aspects of our community in the areas of accessibility, employment, public services, and public accommodations.

A great deal has been done but there is much more to be done. Representing Mayor Robert Sargent of Kokomo, Indiana, we strongly recommend the passage of the Americans With Disabilities Act of 1989 and we thank you for this opportunity to present testimony.

[The prepared statement of Nanette Bowling follows:]

CITY of KOKOMO

ROBERT SARGENT, Mayor
City Hall
Kokomo, Indiana 46901
(317) 456-7444

TO COMMITTEE CHAIR CONGRESSMAN MAJOR OWENS
AND CONGRESSMAN JIM JONTZ:

My name is Nanette Bowling. I am Administrative Assistant to Mayor Robert Sargent of Kokomo, Indiana. I am also Mayor Sargent's staff liaison to his Advisory Council for Handicapped Individuals.

In 1980 a group of concerned citizens began meeting with the city administration in an effort to direct city resources to meeting the needs of handicapped persons. One result of those meetings was the formation of the Mayor's Advisory Council for Handicapped Individuals. John Turney who serves on the Kokomo Council and the Governor's Planning Council will present to you some of the specific accomplishments of the Mayor's Advisory Council for Handicapped Individuals.

The Kokomo Mayor's Advisory Council for Handicapped Individuals has a mission statement which reads as follows:

> The goal of the Mayor's Advisory Council for Handicapped Individuals is to serve as an advocacy group for all physically and/or mentally handicapped citizens of the City of Kokomo, Indiana and the Kokomo area; to identify the needs of all handicapped citizens; and to advise the Mayor of Kokomo on matters which will improve the health, education, and quality of life for these citizens.

Mayor Robert Sargent considers his Advisory Council for Handicapped Individuals one of his strongest advisory councils. He considers the following, just to mention a few, to be benefits the Council provides to his administration:

--to provide information on the effects of pending and enacted policies on the lives of citizens with disabilities;
--to provide a mechanism by which citizens with disabilities can have their relevant concerns addressed;
--The Council also increases credibility with local citizens in the area of disability concerns;

Page Two
To Congressmen Owens and Jontz

If national law is enacted via the Americans with Disabilities Act, the physical and attitudinal barriers for persons with disabilities will be eliminated. This legislation would allow our Mayor's Advisory Council for Handicapped Individuals more of an opportunity to work with aspects of our community in the areas of accessibility, employment, public services, and public accommodations. A great deal has been done, but there is so much more to be done. Representing Mayor Robert Sargent, of Kokomo, Indiana, we strongly recommend the passage of the Americans with Disabilities Act of 1989.

We thank you for the opportunity to address you.

Mr. OWENS. Thank you. Mr. John Turney.

STATEMENT OF JOHN TURNEY, MEMBER, MAYOR'S ADVISORY COUNCIL FOR HANDICAPPED INDIVIDUALS, KOKOMO, INDIANA

Mr. TURNEY. Mr. Owens, Mr. Jontz, I John Turney come before you on behalf of the Mayor's Advisory Council for Handicapped Individuals of Kokomo, Indiana and the Indiana State Commission for the Handicapped.

Being a disabled person for the last 12 years, I have become a strong advocate for the disabled community. The Mayor's Advisory Council for Handicapped Individuals in Kokomo, Indiana is expanding on the focus generated during the National and international year of disabled persons.

Its efforts to accomplish such goals as improving access to housing, building, and transportation, expanding employment opportunities, expanding participation and recreation in social and cultural activities and reduction in the evidence of disability during the decade of disabled persons.

The accomplishments of this council are numerous. The successes are obvious. And the progress is significant. Various activities have been utilized in the Council for the purpose of addressing the unmet needs of disabled persons.

Setting the goals to address these needs and encouraging a community-wide commitment to continue the pursuit of these goals is in the future.

Historically, in the January, 1988 group of concerned citizens requested that the mayor direct city resources to meet the needs of the disabled persons.

Attention was given to established the Mayor's Advisory Council for Handicapped Individuals for the purpose of identifying these needs, increasing public sensitivity to the problems of the handicapped, encouraging action to the citizens which meet these needs for the disabled persons.

Presently, the Council meets monthly with the Mayor and or an assistant. A wide variety of activities have been undertaken by the Council.

Each new project has become a part of an ongoing program to encourage awareness of the needs of disabled persons.

One of the more important functions of the committee is to accept and refer recommendations by citizens to appropriate agencies and review the ideas submitted by the community regarding needs which are not being met.

The committee provides the community with a group to approach when an organization action is needed. Networking, the members of the Council provide linkages between Council and other organizations which concern themselves with more specific needs of the handicapped.

The Advisory Council members act as representatives to and from the following related organizations. Briefly, Howard County Multiple Sclerosis, Big Brothers, Big Sisters, Bona Vista Rehabilitation, Mental Health Association, Indiana State Commission for the Handicapped.

This is only a partial list of clubs and organizations for which representatives come to the Mayor's Advisory Council for Handicapped Individuals and to which these members carry information and projects.

The outreach is extensive and varied as the interests and experience of the Council membership. The interchange of ideas and information is one of the many values a council such as this, partnerships between public and private sector have developed in a variety of capacities throughout the Council's activities.

The expansion of the Council use of existing organization has been of prime importance to the growth of the Council activity.

The exchange of information and new legislation and program development which is available through membership in the National organizations of special interests to the handicapped is a valuable tool for expanding programs and defining direction.

Representatives of the Council attend the Annual Governor's Council for the Handicapped and they regularly attend conferences and seminars which memberships arise to new developments of interest to the disabled person.

Media focus, attention is given to the need to educate the public of the interests and activities of the Council. Local newspaper, television, and radio stations are routinely notified of activities which may be of interest to the public.

Response to the media throughout the prominent coverage has been favorable.

A weekly press conference in the Mayor's office has been a forum for the announcement of many Council activities. This regularly scheduled conference is attended by representatives of local newspaper, radio, and television stations.

The relocation of meetings and local government agencies to accessible buildings was an early project supported by the Mayor and the Council.

Meetings of which held by the city and county council had been formerly in buildings which were not accessible. Such meetings are now held in accessible areas and there is a new willingness to provide additional services which may be requested by an individual desiring to attend these meetings.

An example of those services, a provision for interpreters for deaf persons attending public hearings upon request.

These earlier efforts were recognized by the U.S. Council for the International Year of the Disabled. The City of Kokomo was the first in Indiana, the second in the United States to be chosen as a flagship community.

A municipal model to which communities throughout the Nation can look for examples of integrating handicapped persons into the mainstream of the community.

The administration has been very proud of this honor and has made a very asserted effort to see this activity of the Council receive any aid which can be provided toward continuing its work.

During the calendar year of 1983, members of the Advisory Council received further recognition. Tom Jones received 1983 volunteer Indiana State Meritorious Service Award.

At the same time, Rosemary DeBaillie of Kokomo, Indiana was named handicapped of the year for 1983. Later that year, I was honored by being named to the Indiana State Commission for the Handicapped.

Employment, various local businesses and industries have agreed to be interviewed by Council members in order to describe company policies regarding the hiring of handicapped persons.

This project will assist employers in locating responsible workers and will provide direction to handicapped persons who are seeking employment.

Each year a company is honored in its efforts of hiring the handicapped at the annual awards banquet sponsored by the Council.

Nominations are accepted from the general public so that anyone may be considered for an award. Bona Vista Rehabilitation Center in Kokomo works in cooperation with Delco Electronics to locate a production operation in Bona Vista so clients can receive some actual experience in machine work. These functions are performed by the Center's clients.

Accident prevention, Operation Fire Escape is a project which serves those persons who may need special needs in the event of a fire at their home or business. A list of persons with special needs is kept at the fire department so identifing the address of any person having special needs or using oxygen may be done quickly.

This program decreases the likelihood of death or already handicapped person and will increase the evidence of further disabilities through accidents.

Recreation and social and cultural activities. Two most recently planned public parks were constructed with accessibility on a focus.

All improvements and plans for existing parks are more readily available in other facilities as well.

Accessibility to such events as the Howard County 4H Fair, the annual Haynes-Apperson Festival, Veterans Day Parade were improved with special seating and parking arrangements.

Improving accessibility, contacts have been made with local businesses in an effort to encourage the participation and ongoing programs. One such program established a city ordinance for handicapped parking. Cooperation is apparent in the increasing number of specifically marked spaces and relocation of some spaces more convenient to the access to available ramps.

Shopping area, churches, funeral homes now have identified spaces used by the persons with special needs. An ordinance establishing a fine scheduled for those cars which are illegally parked in assigned spaces in the downtown area have been passed.

In conjunction with the ordinance to raise the level of concern, a handicapped parking patrol will be formed to issue parking citations.

Volunteers have surveyed accessibility of local restaurants, apartments, and public buildings. It is the intention of the Council to rate these buildings based upon the accessibility.

Additionally, the Council sees a high priority a publication of the director rating a business based on accessibility. The survey focused on the need for better access to the public library during the 1983 calendar year. The city cooperated with the library by providing funds for electronic door operations.

In addition, a number of inaccessible polling places will now be made accessible.

Efforts have been directed to arrange a more effective transportation facility for those persons needing to ride to their place of employment.

Recently those efforts have been rewarded through the cooperation of the city administration in the Bona Vista Programs in provision of a transportation of existing citizen senior program bus system and the school.

In the extension efforts to increase the mobility of handicapped persons is a commitment by the city to upgrade accessibility wherever improvements such as sidewalk repairs are scheduled. Curb cuts and other alterations are included whenever possible in order to improve accessibility.

In summary, the Mayor's Advisory Council for Handicapped Individuals has accomplished much success and heightened public awareness of the need for the handicapped in removing obstacles impeding mobility.

Its efforts continue to enhance the quality of life for all residents of Kokomo, Indiana. The Indiana State Commission for the Handicapped was mandated by the legislation to develop a plan to coordinate and integrate local and private efforts to address the needs and concerns of disabled as well as to define and develop services not available in Indiana for persons with disabilities.

The mandate requires that the plan provide direction, formation of state policies and programs directly and delivery of services to persons with disabilities.

The overriding objective advocated by the Commission is to achieve progress towards independent, equality of opportunity, and normalization of lifestyles for persons with disabilities through law, policies, and practice within the State of Indiana.

Philosophically, the Commission believes that every person should be—of all conditions which will encourage achievement or optimized balance between the highest level of independence and social responsibility of which person is capable.

Additionally, the Commission believes that the best interests of persons with disabilities shall be served through giving emphasis on meetings, excuse me, with disabilities as served through giving emphasis on meeting the human needs they share with all citizens in the manner respecting their individual uniqueness.

The design and development of the plan has been formulated and pursued in a matter consistent with a primary objective, philosophical position and emphasis on human need.

The plan has been developed to respect the important dimension of the human experience, ecological development, and holistic individuals throughout the State of Indiana. Thank you gentlemen.

[The prepared statement of John D. Turney follows:]

Kokomo, Indiana

Ladies and Gentlemen I come before you on behalf of "The Mayor's Advisory Council for Handicapped Individuals" Kokomo, In. and The Indiana State Commission for the Handicapped.

Being a disabled person for the last twelve years I have become a strong advocate for the disabled community.

The Mayor's Advisory Council for Handicapped Individuals

Kokomo, Indiana

Expanding on the focus generated during the National and International Years of Disabled Persons, the Mayor's Advisory Council for Handicapped Individuals dedicated its efforts to accomplishing such goals as improved access to housing, buildings and transportation, expanded employment opportunities, expanded participation in recreational, social and cultural activities, and reduction in the incidence of disability during the Decade of Disabled Persons. The accomplishments of the council are numerous. The successes are obvious. The progress is significant.

Various activities have been utilized by the council for the purpose of assessing the un-met needs of disabled persons, setting goals to address those needs and encouraging a community--wide commitment to continue to pursue these goals in the future.

The Council: A History

In January, 1980, a group of concerned citizens requested that the Mayor direct city resources to meeting the needs of disabled persons. Attention was given to establishing an Advisory Council for Handicapped Individuals for the purpose of identifying those needs, increasing public sensitivity to the problems of the handicapped, and encouraging actions by citizens which will meet the needs of disabled persons.

Presently, the council meets monthly with the Mayor and/or Assistant. A wide variety of activities has been undertaken by the council. Each new project has become a part of the ongoing program to encourage awareness of the needs of disabled persons. One of the more important functions of the committee is to accept and refer recommendations by citizens to appropriate agencies and to review the ideas submitted by the community regarding needs which are not being met. The committee provides the community with a group to approach when an organized action is needed.

The Council: Networking

Members of the council provide the linkages needed between the council and other organizations which concern themselves with the more specific needs of the handicapped. Advisory council members act as representatives to and from the following related organizations:

Howard County Multiple Sclerosis Society
Radio City React (C.B. Club)
National Liaison Representative for Disabled Individuals in Kokomo and Howard County
Various churches
Big Brothers/Big Sisters of Howard County
North Central (Indiana) Health Planning Committee
Disability Rights Information Research Center
United Ostomy Association
ASC and Home Health Care of Howard County
Bona Vista Rehabilitation Center
Mental Health Association
March of Dimes Birth Defects Foundation
Kokomo Civic Theatre
Wildcat Creek Canoe Club
Altrusa Service Organization
Indiana Alligators (C.B. Club)
Indiana Paraoptometric Association
Wabash Valley Certified Dispensers Association of Indiana
Senior Citizens Advisory Council
Council of Volunteer Organizations for the Handicapped
National Organization on Disability
Indiana State Commission for the Handicapped

This is only a partial list of the clubs and organizations from which representatives come to the Mayor's Advisory Council for Handicapped Individual and to which these members carry information and projects. The outreach is extensive and as varied as the interests and experiences of the council's membership.

The interchange of ideas and information is one of the many values of a council such as this. Partnerships between the public and private sectors have developed in a variety of capacities throughout all the council's activities.

The expansion of the council's use of existing organizations has been of prime importance to the growth of the council's activities. the exchange of information on new legislation and program development which is available through membership in national organizations of special interest to the handicapped, is a valuable tool for expanding programs and defining direction. Representatives of the council attend the annual Governor's conference for the Handicapped and regularly attend conferences and seminars which keep members apprised of new developments of interest to disabled persons.

The Council: Media Focus

Attention has been given to the need to educate the public of the interests and activities of the council. Local newspapers, television and radio stations are routinely notified of any activity which may be of interest to the public. The response of the media through prominent coverage has been favorable. The weekly press conference held in the Mayor's office has been a forum for the announcement of many council activities. This regularly scheduled conference is attended by representatives of the local newspapers, radio and television stations.

The Council: Recognition

The relocation of the meetings of local government agencies to accessible buildings was an early project supported by the Mayor and the council. Meetings such as those held by the City and County Council had formerly been held in buildings which were difficult or impossible to enter with a wheelchair. Such meetings are now held in accessible areas and there is a new willingness to provide additional services which may be requested by any individual desiring to attend these meetings. An example of those services is, the provision of interpreters for deaf persons attending public hearings upon request.

These early efforts were recognized by the U.S. Council for the International Year for Disabled Persons. The City of Kokomo was the first in Indiana, the second in the nation to be chosen as a Flagship Community -- a municipal model to which communities throughout the nation can look for examples of integrating handicapped persons into the mainstream of the community. the administration has been very proud of this honor and has made every effort to see that the activities of the council receive any aid which can be provided toward continuing its work.

During 1983, members of the advisory council received further recognition on the state level. Tom Jones received a 1983 Volunteer Indiana State Meritorious Service Award from the Commission on the Handicapped. At the same time, Rosemary De Baillie was named Hoosier Handicapped Citizen of 1983 by the Commission. Later this year, John Turney was honored by being named a member of the Commission.

The Council: Employment

Various local business and industries have agreed to be interviewed by council members in order to describe company policies regarding the hiring of handicapped persons. This project will assist employers in locating responsible workers and will provide direction to handicapped persons who are seeking employment. Each year a company is honored for its efforts in hiring handicapped persons at the awards banquet sponsored by the council in January. Nominations are accepted from the general public so that anyone may be considered for an award.

Bona Vista Rehabilitation Center has worked in cooperation with Delco Electronics to locate a production operation at Bona Vista so that clients can receive some actual experience in machine work. These functions are performed by the center's clients.

The Council: Accident Prevention

Operation Fire Escape is a project which serves those persons who may need special help in the event of a fire at their home or business. A list of persons with special needs is kept at the fire department so that identifying the addresses of any persons having special needs or using oxygen may be done quickly. This program has decreased the likelihood of death of already handicapped persons and will decrease the incidence of further disability through accident.

The Council: Recreational, Social and Cultural Activities

The two most recently planned public parks were constructed with accessibility as a focus. All improvement plans for existing parks are more readily available in other facilities as well. Accessibility to special events such as the Howard County 4-H Fair, Haynes-Apperson Festival, and Veteran's Day Parade were improved with special seating and parking arrangements. When Artrain, a traveling art experience, came to Kokomo, ramps were installed and tour interpreters for the deaf were provided.

The Council: Improving Accessibility

Contacts have been made with the local business community in an effort to encourage participation in on-going programs. One such program centered on establishing a city ordinance for handicapped parking. Cooperation is apparent in the increased number of specially marked parking spaces and the relocation of some spaces to obtain more convenient access to available ramps. Shopping areas, churches, and funeral homes now have identified spaces for use by persons with special needs. An ordinance establishing a fine schedule for those cars which are illegally parked in assigned spaces downtown has been passed. In conjunction with the ordinance to raise the level of concern a handicap parking patrol will be formed to issue parking citations.

Volunteers have surveyed the accessibility of local restaurants, apartments and public buildings. It is the intention of the council to rate these buildings based on their accessibility. Additionally, the council sees as a high priority, the publication of a directory, rating these businesses based on their accessibility. The survey focused on the need for better access to the public library. During 1983, the city cooperated with the library to provide funding for electronic door openers. Construction was completed in March, 1984. In addition a number of inaccessible polling sites will now be accessible.

Efforts have been directed to arranging more effective transportation facilities for those persons needing rides to their place of employment. Recently those efforts have been rewarded through the cooperation of the city administration and Bona Vista Programs in the provision of transportation by an existing Senior Citizens Bus System and the school. As an extension if the efforts to increase mobility for handicapped persons.is the commitment by the city to upgrade accessibility wherever improvements, such as sidewalk repair, are schedules. Curb cuts and other alterations are included, wherever possible, in order to improve accessibility.

The Council: A Summary

The Mayor's Advisory Council for Handicapped Individuals has accomplished much success in heightening public awareness of the needs of the handicapped and of removing obstacles which impede mobility. It's efforts continue to enhance the quality of life for all residents of Kokomo, Indiana.

Indiana State Commission For The Handicapped

The Indiana State Commission for the Handicapped was mandated by legislation to develop a plan to coordinate and integrate State, local and private efforts to address the needs and concerns of persons with disabilities, as well as to define and develop services not available in Indiana for persons with disabilities. The mandate requires that the Plan provide direction in the formulation of State policies and programs affecting the delivery of services to persons with disabilities within the State of Indiana.

Perspective

The overriding objective advocated by the Commission is to achieve progress toward independence, equality of opportunity, and normalization of lifestyles for persons with disabilities through laws, policies, and practices of, and within, the State of Indiana. Philosophically, the Commission believes that every person should be provided with conditions which will encourage achievement of optimum balance between the highest levels of independence and social responsibility of which the person is capable. Additionally, the Commission believes that the best interests of persons with disabilities will be served through giving emphasis to meeting the human needs they share with all citizens in a manner respecting their individual uniqueness. The design and development of the Plan have been formulated and pursued in a manner consistent with this primary objective, philosophical position, and emphasis on human needs. The plan has been developed to respect three important dimensions of human experience: ecological (e.g., individual, family, community, State); development (i.e.; all development stages from conception through death); and holistic (i.e., physical, psychological, social, spiritual).

Mr. OWENS. Thank you. Mr. Michael Williams.

STATEMENT OF MICHAEL WILLIAMS, VICE PRESIDENT FOR ANCILLARY SERVICES ST. JOSEPH'S HOSPITAL, KOKOMO, INDIANA, KOKOMO EMPLOYER OF THE YEAR

Mr. WILLIAMS. Mr. Chairman, Mr. Jontz, I certainly appreciate the opportunity to address the Committee regarding such a significant and much-needed piece of legislation as the ADA.

Again, my name is Michael Williams. I have an extensive background in hospital and human resources administration and have served as assistant director of personnel at Wishard Memorial Hospital in Indianapolis and as director of personnel and later as assistant administrator at Hendricks Community Hospital in Danville, Indiana.

Since 1984, I have been employed at St. Joseph's Hospital and Health Center in Kokomo as vice president for ancillary services.

Associated with that position, I am administratively responsible for the human resources department. That department, under the director of human resources, is the coordinating body for all employment, wage and salary, benefit administration, and employee relations activities that occur within the hospital.

St. Joseph's Hospital and Health Center has a long-standing history of supporting the employment of disabled individuals.

For the most part, this history evolved from the mission of the hospital which in summary is to recognize the dignity and capability of all human beings.

Over the years, St. Joseph's Hospital has averaged a two to three percent employment rate of disabled individuals. We have found that the majority of these individuals are not only equally qualified and capable of performing their assigned responsibilities when compared to non-disabled persons, but that they are often superior to outstanding employees.

As such, they have proven to be a sound investment for our employment dollars.

We have employed individuals with varied disabilities including those with both physical difficulties such as blindness, hearing impairment, speech impairment, congenital disabilities, degenerative or debilitating diseases and so on as well as those experiencing mental or emotional problems.

St. Joseph's Hospital has taken significant steps to accommodate the work environment to the particular disability of the employee.

We have modified work schedules within certain business parameters when necessary. Some modifications include allowing part time hours, delayed start times, advanced leaving times, extended lunch and break periods, et cetera.

Additionally, we have from time to time restructured work assignments to better provide for a disabled employee's optimal performance.

Specifically, certain tasks within the context of the job have been realigned to accommodate a particular employee's disability.

It is important to note that to the best of our ability to measure any required job restructuring has not had a negative impact upon productivity or moral.

Further, it has been our practice to reassign disabled employees generally at their requests when positions come available for which they are qualified and which more readily match their capabilities.

For the most part, any reassignments made also have not had a negative impact upon productivity or moral. To my knowledge, it has not yet been necessary to purchase or modify any equipment utilized by our disabled employees in order for them to perform their jobs.

However, for those individuals with sight impairment, we have instituted a buddy system approach where fellow employees who are assigned similar break and lunch periods escort our disabled employees to the cafeteria or break area.

For those individuals with impaired hearing, we have provided from our work force, employees who sign. These people are utilized when necessary during the application and interview process as well as during the course of the hearing impaired individual's employment.

In summary, St. Joseph's Hospital and Health Center is proud of its tradition of providing employment opportunities to our disabled citizens.

We have provided for these opportunities at minimal cost to the hospital and have achieved maximum return on our investment. We will continue to provide these opportunities with or without legislation such as the Americans With Disabilities Act.

However, after reviewing a summary of the Act and carefully assessing its implications to employers such as St. Joseph's Hospital, I must heartily endorse the ADA as a positive step forward toward providing full civil rights protection to America's disabled. Thank you.

[The prepared statement of Michael L. Williams follows:]

Testimony

RE: Americans with Disabilities Act

Field Hearing, October 6, 1989

Indianapolis, Indiana

Submitted by:

Michael L. Williams, SPHR

Vice President/Ancillary Services

Saint Joseph Hospital & Health Center

Kokomo, Indiana

- Testimony -

My name is Michael L. Williams. I have an extensive background in hospital human resources administration and have served as Assistant Director of Personnel at Wishard Memorial Hospital in Indianapolis and as Director of Personnel, and later as Assistant Administrator at Hendricks Community Hospital in Danville, Indiana.

Since 1984, I have been employed at Saint Joseph Hospital & Health Center in Kokomo, as Vice President for Ancillary Services. Associated with that position, I am administratively responsible for the Human Resources Department. That department, under the Director of Human Resources, is the coordinating body for all employment, wage/salary, benefit administration and employee relations activities that occur within the hospital.

Saint Joseph Hospital & Health Center has a long-standing history of supporting the employment of disabled individuals. For the most part, this history evolves from the mission of the hospital, which, in summary, is "to recognize the dignity and capability of all human beings---."

Over the years, Saint Joseph Hospital has averaged a 2-3% employment rate of disabled individuals. We have found that the majority of these individuals are not only equally qualified and capable of performing their assigned responsibilities when compared to non-disabled persons, but that they are often superior to outstanding employees. As such, they have proven to be a sound investment for our employment dollars.

We have employed individuals with varied disabilities, including those with both physical difficulties (i.e., blindness, hearing impairment, speech impairment, congenital deformities, degenerative or debilitating diseases, etc.) as well as those experiencing mental/emotional problems.

Saint Joseph Hospital has taken significant steps to accommodate the work environment to the particular disability of the employee. We have modified work schedules, within certain business parameters, when necessary. Some modifications include allowing part-time hours, delayed start times, advanced leaving times, extended lunch and break periods, etc. Additionally, we have from time to time restructured work assignments to better provide for a disabled employee's optimal performance. Specifically, certain tasks within the context of the job have been realigned to accommodate a particular employee's disability. It is important to note that, to the best of our ability to measure, any required job restructuring has not had a negative impact upon productivity or morale.

Further, it has been our practice to reassign disabled employees (generally at their request) when positions come available for which they are qualified and which more readily match their capabilities. For the most part, any reassignments made also have not had a negative impact upon productivity or morale.

To my knowledge, it has not yet been necessary to purchase or modify any equipment utilized by our disabled employees in order for them to perform their jobs. However, for those individuals with sight impairment, we have instituted a "buddy system" approach, where fellow employees who are assigned similar break and lunch periods escort our disabled employees to the cafeteria or break area.

For those individuals with impaired hearing, we have provided from our workforce employees who "sign." These people are utilized, when necessary, during the application and interview process, as well as during the course of the hearing impaired individual's employment.

In summary, Saint Joseph Hospital & Health Center is proud of its tradition of providing employment opportunities to our disabled citizens. We have provided for these opportunities at minimal cost to the hospital and have achieved maximum return on our investment. We will continue to provide these opportunities with or without legislation such as the Americans with Disabilities Act.

However, after reviewing a summary of the Act and carefully assessing its implications to employers such as Saint Joseph Hospital, I must hardily endorse the ADA as a positive step forward toward providing full civil rights protection to America's disabled.

Respectfully Submitted:

Michael L. Williams, SPHR
Vice President/Ancillary Services
Saint Joseph Hospital
& Health Center

Mr. **Owens**. Thank you.

I would like to thank all of the panelists. Mr. Turney and Ms. Bowling, I am very impressed with the Mayor's Advisory Council for Handicapped Individuals. It seems to me that it definitely is a model and could serve as a model for a lot of other municipalities. It could even provide technical assistance that you stated is needed in the implementation of the Americans With Disabilities Act.

I'm curious. How did the Council get started? Did Jim Jontz recommend it?

Mr. **Turney**. Well, it was a group of handicapped individuals that looked at Kokomo as a community and basically there was very little being done from previous city administrations that addressed the needs of the handicapped.

And you might say it went from a kitty cat to a roaring lion in an about an overnight situation.

Mr. **Owens**. You probably said it but I do not remember. How long has the Council been in existence?

Mr. **Turney**. Well, it formed in January of 1980. But there forth, it is an ongoing process. It is something that, you know, you go in there and you have a lot of walls to knock down and philosophies to overcome of previous people.

But you use a positive attitude about it and present yourself in a positive way, a lot of positive results. And I think Kokomo as a community can be very proud for what it has done for the disabled.

Mr. **Owens**. I agree with you. It can be very proud. Mr. Williams, how many employees in the category of people with disabilities do you have at the hospital?

Mr. **Williams**. Currently, we have approximately 20 to 22 individuals that are disabled on board out of a workforce of about 800.

Mr. **Owens**. Thank you. Mr. Jontz.

Mr. **Jontz**. I have no questions. I just want to thank this panel for indicating what can be done at the level of municipal government and also in the private sector. You certainly serve as good examples. I appreciate your endorsement of ADA. Thank you.

Mr. **Owens**. Our next panel consists of Rick Edwards, the Program Consultant of the Office of Vocational Rehabilitation, who will address public accommodation provisions; Jeff Myers, former Indianapolis police officer, who will also speak on public accommodations; Marchell Hunt, Chairperson of Common Concerns, the Disability Advocacy Organization, who will speak on transportation; David Scott, who will also speak about transportation; and Gay May, Commissioner of the Indiana Department of Veterans' Affairs, who will speak in general about how the Act will help all of us in society.

I want to welcome all of the panelists. We have only one interpreter and she has good reason to be quite tired. So we will take a five minute break before we begin your testimony.

[Whereupon, a short break was taken.]

Mr. **Owens**. Be seated. Let me introduce our panel again, Rick Edwards, Program Consultant, Office of Vocational Rehabilitation; Jeff Myers, Indianapolis Police Department. Marchell Hunt, Chairperson of Common Concerns, the Disability Advocacy Organization; David Scott, Indianapolis Resource Center for Individual Living; and Gary May, Indiana Department of Veterans' Affairs.

We will begin with Rick Edwards.

STATEMENT OF RICK EDWARDS, PROGRAM CONSULTANT, OFFICE OF VOCATIONAL REHABILITATION

Mr. EDWARDS. Chairman Owens, Representative Jontz, members of the Committee, and ladies and gentlemen, my name is Rick Edwards.

I appreciate the opportunity to come to you to present my views on the proposed Americans With Disabilities Act. I was involved in an automobile accident in 1970 when I was 15 years of age which damaged my spinal column at cervical six and seven. As a result I use a wheelchair.

Within a split second I went from a person who enjoyed certain inalienable rights to one of over 37 million people who it seems they are not entitled to those freedoms.

Why do I say this? I have just finished my second year at Culver Military Academy and after an education at the Rehabilitation Institute of Chicago, I went back to my hometown of Spencer to complete high school.

My father was told that I would have to be bussed to a special school 20 miles away because the two-level school at Spencer had no elevator.

Fortunately, my father who was also the school attorney made our appeal clear on that and I went to Spencer. But how many are simply sent off to a special school somewhere?

The ADA will provide the means to end this type of discrimination. Article I of the Bill of Rights says I have the National right to worship Almighty God but the church next door has no access for persons in wheelchairs.

The Twenty-sixth Amendment to the Constitution gives me the right to vote, yet until last year my polling place was inaccessible.

The Indiana Code provides for the issuance of handicapped placard yet what good are they if there are no handicapped spaces or those limited spaces are filled abusers.

The ADA—relieving these problems. Opponents to this legislation argue that the language is vague and conflicting. A September 11, 1989 Wall Street Journal article indicates that the bill does not explain what reasonable accommodation entails. I would like to help them out.

Reasonable accommodation means that is what is fair, just, sensible or wise. For example, it is not just to require individuals to pay through taxes for public transportation that they are not allowed to use.

It is not sensible to buy a telecommunications device for the deaf and not instruct the operators in its use.

It is not wise to pay more for people to stay at home on SSI than to help those who are trying to do a job.

The ADA simply put, is a reasonable piece of legislation. The same Wall Street Journal article if society is really that hostile to the disabled and needs this sort of blunt coercion.

When an OB/GYN advises my wife not to have children because I cannot be an effective father from a wheelchair I say, yes.

When I try to tell a building owner, my dentist's office and my optician's office that the building's brick columns are being place in the center of the curb cuts and he says, too bad, then I say, yes, society needs this kind of blunt coercion.

The article goes on to put forth the belief that most Americans are instinctively sympathetic to disabled problems. I am not asking for sympathy. I am asking for the opportunity to participate in life with the same protections of my civil rights that have been enjoyed by all other major minorities for 25 years.

If, as the article infers, most are indeed willing to put forth a good faith effort and that this legislation is not necessary, why then is the grade in the tunnel from 1 North Capital to our State House not even near standard?

Why are the new drinking fountains in our State House erected out of reach of persons in wheelchairs? And why were curb cuts at the Indianapolis Airport filled in with concrete?

All of these examples could have been avoided if anyone had bothered to consult someone with a disability and the cost, if any, would have been nominal.

An article in last month's Indianapolis Business Journal quotes the National Federation of Independent Businesses as saying that the ADA will require nearly every business in the Nation to make costly alterations and purchase special equipment.

This is simply not true. The Journal of American Insurance in 1986 stated that most of the myths concerning the problems of employing the handicapped originate as a result of attitudinal barriers.

Study after study shows that the majority of employed disabled persons received accommodations that cost employers much less than the employer originally anticipated. In fact, the majority were under $100 for each person.

Because society is being assaulted with the fallacy that people with disabilities are less than able and that the cost to allow us to participate is to quote the NFIB, "Beyond the reasonable bounds of common sense," the Americans With Disabilities Act is necessary.

It is necessary to provide us freedom from the bondage of discrimination. It is therefore the reason why I am here today to urge you to encourage your peers in the House to support this Act as it is without further compromising amendments. Again I thank you for the opportunity to be heard.

[The prepared statement of Ric Edwards follows:]

Statement to Representative Jim Jontz at the Public hearing for the Americans with Disabilities Act on October 6, 1989.

Representative Jontz, Representative Owens, members of the Committee, ladies and gentlemen, my name is Ric Edwards. Thank-you for the opportunity to come to you to present my views on the proposed Americans with Disabilities Act.

I was involved in an automobile accident in 1970, when I was fifteen (15) years old, which damaged my spinal cord at Cervical six and seven. As a result, I use a wheelchair .

Within a split second, I went from a person who enjoys certain inalienable rights to one of over 37 million people who, it seems, are not entitled to these freedoms. Why do I say this?

I had just finished my second year at Culver Military Academy, and after an education at the Rehabilitation Institute of Chicago, I went back to my hometown of Spencer to complete High School. At Spencer, my father was told that I would have to be bussed to a "special school" 20 miles away because the two level school had no elevator. Fortunately, my father, the school attorney, was able to clarify our position on that and I went to Spencer. But how many are simply sent off to that unnecessarily "special" school? The ADA will provide the means for ending this type of discrimination.

Article 1, Section 2 of the Bill of Rights says I have the natural right to worship Almighty God, but the church next door has no access for persons in wheelchairs. The 26th Amendment to the Constitution gives me the right to vote, yet until last year my polling place was inaccessible. Indiana Code 4-28-10-24 provides for the issuance of handicapped parking placards, yet what good is this when there are no handicapped parking spaces or they're filled with abusers of these limited spaces?

The ADA is directed toward relieving these problems.

Opponents to this legislation argue that the language is vague and conflicting. A September 11, 1989 Wall Street Journal article states that the bill doesn't explain what "reasonable accommodation" entails. They might wish to invest in a dictionary but until they do, I would like to help them out... "Reasonable" means 'what is just, fair, sensible or wise.' For example, it is not "just" to require individuals to pay, through taxes, for public transportation that they are not allowed to use. It is not "sensible" to buy a Telecommunication Device for the Deaf and not train the operators in its use. It is not "wise" to pay more for people to stay at home on SSI than to help those who are trying to work at a job.

The ADA is, simply put, a 'reasonable' piece of legislation.

The same Wall Street Journal article asks if "society is really that hostile to the disabled" and "needs this sort of blunt coercion?"

When a OB-Gyn advises my wife not to have children because I can't be an effective father from a wheelchair, I say "yes". When I try to tell a building owner (my dentist's office and my obtician's office) that the building's brick columns are being placed in the middle of the curb cuts and he says "too bad" I say "yes, society needs this sort of blunt coercion."

The article goes on to put forth the belief that "most Americans are instinctively sympathetic to the disabled's problems." I'm not asking for sympathy. I'm asking for the opportunity to participate in life with the same protection of my civil rights that have been enjoyed by all other major minorities for 25 years.

If, as the article infers, most are indeed willing to put forth a good faith effort and that this legislation is not necessary, why is the grade in the tunnel from one North Capitol to our State House not even near standard? Why are the new drinking fountains in our State House erected out of reach of persons in wheelchairs? Why were the curb cuts at the Indianapolis Airport filled in with concrete?

All of these examples could have been avoided had anyone bothered to consult someone with a disability; and the cost, if any, would have been nominal. An article in last month's Indianapolis Business Journal quotes the National Federation of Independent Business in saying that the ADA " will require nearly every business in the nation to make costly alterations and purchase special equipment..." This is simply not true. The Journal of American Insurance/First Quarter 1986, in an article "Hiring the Handicapped; Overcoming Physical and Psychological Barriers in The Job Market stated that "Most of the myths concerning the problems of employing the handicapped originate as a result of (these) attitudinal barriers." "Study after study shows that the majority of employed disabled persons received accommodations that cost employers much less than the employer originally anticipated." In fact the majority were under $100 for each person.

Because society is being assaulted with the fallacy that people with disabilities are less than able and that the cost to allow us to participate is, to quote the NFIB "beyond the reasonable bounds of common sense", the Americans with Disabilities Act IS necessary. It is necessary to provide us freedom from the bondage of discrimination.

It is, therefore, the reason why I am before you today; to urge you to encourage your peers in the House to support this Act, as it is without further compromising amendments.

Again, Thank you for the opportunity to speak.

Mr. OWENS. Thank you. Mr. Myers.

STATEMENT OF JEFF MYERS, FORMER POLICE OFFICER, INDIANAPOLIS

Mr. MYERS. Mr. Chairman, Mr. Jontz, I would like to thank you for this opportunity and I would like to give you some of my personal situations, views, and what I have observed on public accommodations over the past several years.

There are buildings what they call accessible and this ADA Bill will help them make really accessible. The guidelines, I think people need to be given to show them exactly what it takes to get in.

I called a lot of places in advance to find out, you know, if it is accessible. I am told it is. And when you get there, you have got an eight inch curb that you cannot even get up to the building.

I found a few places and ways to get up to these buildings and when I get there, there are ramps that I cannot even be pushed up even though I have a power wheelchair.

There are numerous places that follow the same guidelines that go over and over and these places need some kind of a guideline. And I feel like the ADA Bill will cover these.

There are numerous sports arenas in this city of ours that go at it at the same way. This is a big problem I have is, we are handicapped and it is like we are not expected to have family or friends and that is not the case anymore.

Now, there are a lot of family members that go along with handicapped people. We have families now. And they allow you to have one person with you at most of these places and your family members and friends, they have to go somewhere else.

I would just like to see the ADA Bill go through and get the road paved like the Civil Rights Act of '64. Thank you.

[The prepared statement of Jeff Myers follows:]

AMERICANS WITH DISABILITIES 1989

JEFF MYERS INDPLS. IN 10/6/89

THE CIVIL RIGHTS ACT OF 1964 BLAZED A PATH AND SET PRCEDENCE FOR THE BLACK MINORITIES OF THIS COUNTRY. IT'S TIME FOR ANOTHER ACT TO BLAZE A PATH FOR ANOTHER MINORITY, PEOPLE WITH DISABILITIES! IT TOOK THE PEOPLE OF THIS COUNTRY TWO CENTURIES TO ALLOW BLACK CITIZENS TO COME OUT FROM THE BACK OF THE BUS. IT IS NOW TIME TO GET PEOPLE WITH DISABILITIES OUT FROM THE BACK OF THE BUS TOO! IT IS TIME TO MAKE OUR COUNTRY, OUR STATES, OUR CITIES RURAL AND SUBURBAN ACCESSIBLE FOR PERSONS WITH DISABILITIES.

THE STORES, RESTAURANTS, THEATRES, SPORTS FACILITIES AND OFFICES NEED TO BE ACCESSIBLE FOR ALL. IF THIS IS SO IT WILL ENABLE PERSONS WITH DISABILITIES TO WORK, TO SHOP, TO EAT OUT, TO WATCH SPORTING EVENTS AND IN RETURN TO SOCIETY THIS CLASS OF PEOPLE WILL BE SPENDING MONEY, PAYING INCOME TAXES, PAYING SALES AND EXISE TAXES AND OVERALL BE A PRODUCTIVE, SELF SUPPORTING MEMBER OF SOCIETY.

PUBLIC ACCOMODATIONS MUST BE ACCESSIBLE TO ALL PERSONS. I HAVE CALLED A VARIETY OF ESTABLISHMENTS WHERE I WAS PLANNING ON GOING AND THEY STATED THAT, "YES, WE ARE HANDICAPPED ACCESSIBLE." AND WHEN I ARRIVED I FOUND OUT THAT THEY WERE IN FACT NOT ACCESSIBLE. I HAVE LEARNED THAT I WAS NOT BEING TRICKED OR LIED TO. IT'S THAT THE MAJORITY OF PEOPLE DON'T HAVE ANY IDEA OF WHAT NEEDS TO BE DONE TO BE "ACCESSIBLE". THERE NEEDS TO BE BUILDING GUIDELINES FOR CURB CUTS, DOORWAYS, RESTROOMS ETC. SO THAT THIS GAP IS FILLED WITH HELPFUL AND USEFUL AIDS FOR THE EVER INCREASING MINORITY OF PERSONS WITH DISABILITIES.

I WAS TO ATTEND A FUNCTION AT THE HOLIDAY INN'S HOLIDOME IN THEIR BANQUET ROOM, AND WHEN I ARRIVED THEIR IDEA OF ACCESSIBLITY WAS TO CARRY ME AND MY WHEELCHAIR UPSTAIRS TO THE BANQUET ROOM. I WAS ALSO TOLD OVER THE PHONE THAT ILLUSIONS RESTAURANT IN CARMEL WAS ACCESSIBLE AND WHEN I ARRIVED I COULDN'T EVEN GET UP ON THE CURB TO LOOK AT THE FRONT DOOR. I TOOK A RAMP TO GET ON THE SIDEWALK AND THEN I ATTEMPTED TO GO UP THE RAMP WITH THE MANAGER PUSHING ME AND THE RAMP WAS TO STEEP TO EVEN BE PUSHED UP. I HAVE GONE THROUGH THE KITCHEN AT THE GROUND ROUND TO GET TO A TABLE BECAUSE OF STEPS. THIS WAS DANGEROUS IN THAT A MINOR ACCIDENT COULD LEAVE MYSELF VERY SERIOUSLY INJURED AND POSSIBLY OFF OF WORK FOR A LONG PERIOD OF TIME.

IN THEIR OPINION THEY THOUGHT THEY WERE ACCESSIBLE UNTIL CONFRONTED WITH A REAL SITUATION. THIS IS WHY THERE NEEDS TO BE SPECIFIC GUIDELINES SO THAT "ACCESSIBLE" HAS A NATIONAL STANDARD MEETING.

SPORTS FACILITIES IN INDIANAPOLIS HAVE MADE A MINOR STEP IN THIS DIRECTION BUT THERE IS A NEED FOR IMPROVEMENT. A PERSON WITH A PHYSICAL DISABILITY CAN ATTEND SPORTING EVENTS HOWEVER, YOU ARE NOT EXPECTED TO HAVE A FAMILY OR MORE THAN ONE FRIEND. YOU CAN ATTEND AND SPECTATE BUT ONLY ONE PERSON IS PERMITTED TO SIT WITH YOU. THIS MENTALITY IS ERRONEOUS. PERSONS WITH DISABILITIES ARE MEMBERS OF FAMILIES, HAVE FAMILIES OF OUR OWN AND YES WE DO POSSESS MORE THAN ONE FRIEND. A SPORTING ARENA WITH A SEATING CAPACITY OF 20 TO 60 THOUSAND PEOPLE NEEDS TO HAVE INTEGRATED SEATING FOR PERSONS WITH DISABILITIES AND THEIR FAMILIES OR GROUP OF FRIENDS.

I WOULD LIKE TO THANK AND CONGRATULATE PRESIDENT BUSH AND THE MEMBERS OF CONGRESS WHO ENDORSE AND SUPPORT THIS BILL.

Mr. OWENS. Thank you. Marchell Hunt.

STATEMENT OF MARCHELL HUNT, CHAIRPERSON, COMMON CONCERNS, THE DISABILITY ADVOCACY ORGANIZATION

Ms. HUNT. Thank you. Mr. Chairman, Mr. Jontz, I am Marchell Hunt, Chairperson for Common Concerns, a disability advocacy organization in Indianapolis.

May I begin by quoting John Fitzgerald Kennedy who once said, "It is in the American tradition to stand up for ones right even if the new way to stand up for ones rights is to sit down."

Because the lack of transportation is the primary barrier to community participation, education, employment, recreation, adequate medical care, and independent living for people with disabilities, I am sitting here before you today standing up for those civil rights of disabled persons to have access to mainline public transportation.

The crippled state of accessible public transportation in Indianapolis is an embarrassment. Currently, Metro, Indianapolis' public transportation system has only six wheelchair accessible busses.

As a result, there is no flexibility in scheduling and consumers are forced to schedule their activities at least two weeks in advance.

Scheduling however does not necessarily guarantee service. The day I was released from the hospital, Metro called to say that they could not pick me up even though I had scheduled my ride three weeks in advance.

Currently, there are more than 100 persons on a waiting list to utilize this very limited form of accessible public transportation.

Metro has stated that it simply costs too much to equip new busses or if such busses were available, smooth scheduling operations would be interrupted because of the extra three to five minutes needed to board disabled passengers.

In short, it would appear that Metro's financial experts have manipulated their data by including and excluding costs of variables to advance their particular positions.

Considering that cost has become such a critical factor in the debates over accessibility, it would appear that Metro's accounting maneuvers represent yet another embarrassing blow to the disability community.

In response to these and other concerns associated with the current transportation system, Paratransit has been proposed as a possible solution.

However, if solely implemented such a system will serve only to further segregate the disabled from the non-disabled thereby speeding stereotyped public attitudes and beliefs concerning persons with disabilities.

Such stereotypes include misplaced safety concerns, notions that disabled people need to be protected and cared for, a lack of understanding as to why persons with disabilities would even want to leave their home and the personal discomfort that some may feel when coming in contact with people who are physically different.

In short, accessible mainline public transportation can help change attitudes through interaction. For attitudinal barriers can be just as difficult to overcome as those which are physical. Because segregated isolation promotes misconceptions.

Finally, it is socially implied that allowing disabled people greater community access is an act of charity and not an affirmation of civil rights.

Given this implication and periods of limited resources, it is politically acceptable to limit the level and act of charity because of budgetary constraints, traditional practice, or administrative difficulty.

However, reducing benefits may be legitimate, but violating civil rights is not. Therefore, the disabled community of Indianapolis join with other disabled communities throughout the country in rendering our plea and support for the passage of the Americans With Disabilities Act. Thank you.

[The prepared statement of Marchell Hunt follows:]

I am Marchell Hunt, Chairperson for Common Concerns, the Disability Advocacy Organization in Indianapolis.

May I begin by quoting John Fitzerald Kennedy who once said:

> "It is in the American tradition to stand up for one's rights ---even if the new way to stand up for ones's rights is to sit down."

Because the lack of transportation is the primary barrier to community participation, education, employment, recreation, adequate medical care, and independent living for people with disabilities, I am sitting here before you today, standing up for the civil right of disable persons to have access to mainline public transportation.

The crippled state of accessible public transportation in Indianapolis is an embarrassment. Currently Metro, Indianapolis' public transportation system, has only six wheelchair accessible buses. As a result, there is no flexibility in scheduling and consumers are forced to schedule their activities at lease two weeks in advance.

Scheduling, however, does not necessarily guarantee service

> "The day I was released from the hospital, Metro call the hospital to say they could not pick me up even though I had scheduled my ride 3 weeks in advance."

Currently there are more than 100 persons on a waiting list to utilize this very limited form of accessible public transportation.

Metro has stated that it simply cost too much to equip new busses or, if such buses were available, smooth scheduling operations would be interrupted because of the extra 3 to 5 minutes needed to board disabled passengers.

In short, it would appear that Metro's financial experts have manipulated there data by including and excluding cost variables to advance their particular position. Considering that cost has become such a crucial factor in the debate over accessibility, it would appear that Metro's accounting maneuvers represent yet another embarrassing blow to the disabled community.

In response to these and other concerns associated with the current transportation system, paratransit has been proposed as a possible solution. However, if solely implemented, such a system will serve only to further segregate the disabled from the non-disabled thereby feeding stereotyped public attitudes and beliefs concerning persons with disabilities.

Such stereotypes include misplaced safety concerns, notions that disabled people need to be protected and cared for, a lack of understanding as to why persons with disabilities would even want to leave their homes, and the personal discomfort that some may feel when coming in contact with people who are physically different.

In short, accessible mainline public transportation can help change attitudes through interaction, for attitudinal barriers can be just as difficult to overcome as those which are physical, because segregated isolation promotes misconceptions.

Finally, it is socially implied that allowing disabled people greater community access is an act of charity and not an affirmation of civil rights. Given this implication, in periods of limited resources it is politically acceptable to limit benevolent acts of charity because of budgetary constraints, traditional practice, or administrative difficulty, however, reducing benefits may be legitimate, but violating civil rights is not.

Therefore, the disabled community of Indianapolis join with other disabled communities throughout the country in rendering our plea and support for the passage of the Americans With Disabilities Act.

Thank You.

Mr. Owens. Thank you. Mr. David Scott.

STATEMENT OF DAVID SCOTT, INDIANAPOLIS RESOURCE CENTER FOR INDIVIDUAL LIVING

Mr. Scott. Mr. Chairman, Mr. Jones, I also speak on transportation. To be involved in any activity outside of one's own residence an individual needs transportation whether it be for one's own vehicle or through the use of public or private means, having a sense of motility provides opportunity.

Being able to jump into a car and go whether it be to go to school or to work, to shop for one's clothes, to make appointments or take care of business, or fulfill any of one's needs let alone because one wants to are actions a large majority of our population takes for granted.

To the disabled, opportunities for everyday activity and desire for activity are often encumbered by a lack of transportation.

In the Indianapolis area, many individuals with disabilities who can neither navigate nor afford their own transportation currently use Metro Open Door, a service of the Metro Bus System that is accessible to the disabled.

Though the service is helpful, it is grossly inadequate with riders having to wait up to two weeks for a ride to be available.

Even then, the person riding in his own best interest, finds it best to schedule his ride an hour early because they may be over an hour late to the appointment.

And even after the pick up, sometimes trips take an hour and a half to get them there.

Section 504 says, "that a disable individual should have transportation to take him or her to a destination within 24 hours after requesting it."

No matter what improvements take place in the current system there is no way compliance can be achieved. With the passage of the Americans With Disabilities Act, accessible buses will be implemented and the next six to seven years of new buses and this will be a major improvement.

Two years ago, it will be two years ago, Metro proposed brokering out services to private vendors who in greater numbers would be able to meet the transportation of the disabled.

Well, this has not come to fore and it would definitely be an improvement in the present usage. I can see brokering service as an interim improvement but I do not see it as a solution.

Section 504 compliance can be reached through this. To provide adequate services, there is going to be a need for complete accessibility of public transportation.

In the most objectionable words, to have a system that operates under the premise of separate but equal, and the disabled are equal, is discrimination. Thank you.

Mr. Owens. Thank you. Mr. Gary May.

STATEMENT OF GARY MAY, COMMISSIONER, INDIANA DEPARTMENT OF VETERANS' AFFAIRS

Mr. MAY. Chairman Owens, Congressman Jontz, ladies and gentlemen, thank you for giving me the opportunity to provide testimony regarding the Americans With Disabilities Act.

This important legislation would provide strong guidance in addressing discrimination on the basis of disability.

Countless thousands of Hoosiers including over 47,000 military veterans who receive pension or compensation from the U.S. Department of Veterans' Affairs on the basis of disability would benefit from the passage of this legislation.

Persons with disabilities face many challenges unknown to the general population. The general thrust and motivation for adaptive behavior by persons with disabilities has been from the disability as liability perspective.

From this perspective, the existence of a disability is a totally negative phenomenon which must be conquered. This perspective does not fully embrace the concept of individual differences and pushes for standardization and homogenization in a society which operates from the same premise.

This process is commonly understood as fitting the square peg into the round hole. The intractability of the round hole is accepted as a given.

From this perspective the experiences of my friend and former wheelchair basketball teammate are quite acceptable and understandable.

My friend was recently nominated for an award for his achievements in finding suitable employment. His achievements in pursuit of his goal of gainful employment including departing from his home at 4:30 a.m. daily to drive many miles to a place of employment where he worked without compensation until he was able to prove that he had the requisite skills, motivation, and dependability for full time employment which he later obtained.

Such practices subvert a process which could lead to a more enlightened and accepting and accurate understanding of individual differences.

Having to prove oneself in the absence of specific personal data about assets, attributes, and liabilities is akin to assuming that membership in a certain class is inherently negative and inferior and can be overcome only by the acquisition of abundant evidence to the contrary.

We publicly abhorred this process when applied to racial, ethnic, gender, or other groups in American society. We cannot afford to tacitly condone it for persons with disabilities by failing to pass this legislation.

This legislation will benefit many persons whose mobility, access, and participation may be only temporarily diminished.

Such persons would include pregnant women, senior citizens, persons recovering from accidents, injury, medical procedures, et cetera.

Protections would extend from private and public employment, access to public and private accommodations as well as to full participation in the cultural and social life of American.

Earlier I mentioned military veterans as beneficiaries of this legislation. Many who served this country through the military have disabilities as a direct result of their service. In Indiana, they number over 37,000.

The realization that the freedoms and opportunities for which they fought and shed blood are denied to them because of artificial disability related barriers comes as a very bitter pill for many of these men and women.

The message for everyone needs to be clear, concise and consistent. Discrimination on the basis of disability will not be tolerated.

Thank you again for affording me this opportunity to testify in support of this important legislation.

The Americans with Disabilities Act

Submitted by:

Gary E. May, ACSW, Director
Room 707 State Office Building
100 North Senate Avenue
Indianapolis, Indiana 46204
317/232-3910

Thank you for giving me the opportunity to provide testimony regarding the Americans with Disabilities Act. This important legislation would provide strong guidence in addressing discrimination on the basis of disability.

Countless thousands of Hoosiers, including over 47,000 military veterans who receive pension or compensation from the U.S. Department of Veterans' Affairs on the basis of disability, would benefit from the passage of this legislation. Persons with disabilities face many challenges unknown to the general population.

The general thurst and motivation for adaptive behavior by persons with disabilities has been from the "disability as liability" perspective. From this perspective, the existence of a disability is a totally negative phenomemon which must be conquered. This perspective does not fully embrace the concept of individual differences and pushes for standardization and homogenization in a society which operates from the same premise. This process is commonly understood as fitting the square peg into the round hole. The intractability of the round hole is accepted as a given.

From this perspective, the experiences of my friend and former wheelchair basketball teammate are quite acceptable and understandable. My friend was recently nominated for an award for his achievements in finding suitable employment. His achievements in pursuit of his goal of gainful employment included departing from his home at 4:30 a.m. daily to drive many miles to a place of employment where he worked without compensation until he was able to prove that he had the requisite skills, motivation and dependability for full time employment, which he later obtained.

Such practices subvert a process which could lead to a more enlightened, accepting and accurate understanding of individual differences. Having to "prove" oneself in the absence of specific, personal data about assets, attributes, and liabilities is akin to assuring that membership in a certain class is inherently negative and inferior and can be "overcome" only by the acquisition of abundant "evidence" to the contrary. We publicly abhor this process when applied to racial, ethnic, gender or other groups in American society. We can't afford to tacitly condone it for persons with disabilities by failing to pass this legislation.

This legislation will benefit many persons whose mobility, access, and participation may be only temporarily diminished. Such persons would include pregnant women, senior citizens, persons recovering from accidents, injury, medical procedures, etc. Protections would extend from private and public employment, access to private and public accomodations as well as to full participation in the cultural and social life of America.

Earlier, I mentioned military veterans as beneficiaries of this legislation. Many who served this country through the military have disabilities as a direct result of their service. In Indiana they number over 37,000. The realization that the freedoms and opportunities for which they fought and shed blood are denied to them because of artificial disability related barriers comes as a very bitter pill for many of these men and women.

The message for everyone needs to be clear, consise and consistent. Discrimination on the basis of disability will not be tolerated.

Thank you again for offording me the opportunity to testify in support of this important legislation.

Mr. OWENS. Thank you.

Since I would like to make a closing statement I will have Mr. Jontz go first in terms of questions.

Mr. JONTZ. Mr. Chairman, I do not have any questions of this panel but I might note that the completion of Gary May's testimony, I think it is unanimous in favor of the Americans With Disabilities Act.

And I want to thank everybody who has testified today for the helpful statements. We certainly want to return to Washington to do everything we can within the Congress to get the bill passed quickly without any compromising amendments and perhaps with a couple of small improvements which have been recommended here today.

And I want to also thank the staff, the committee staff and my personal staff for their assistance and the others who were responsible for helping us to put the hearing together today. And thank everyone who has come here today.

I would like the record to show that the room has been full for most of the afternoon. We have lost a few here as the evening hours draw close.

But I think this indication of support for the legislation is indicative of how important the Americans With Disabilities Act is to people of this community and our state.

And again, Mr. Chairman, I thank you for bringing the hearing here today.

Mr. OWENS. I also want to thank the members of the audience and the panelists. I had mentioned before that throughout the country we have had hearings and have gotten very moving testimony from people who either have disabilities themselves or have members of their families with disabilities.

We have also gotten some moving testimony from other people. I would like to close out by sharing with you the testimony of one who sat on the other side.

Transportation has been mentioned several times here as a major problem. Transportation always looms as the biggest problem in terms of cost.

And right now the major effort being launched against the passage of this legislation is being launched by the president of Greyhound. I mention him specifically because he is not bashful at all about coming forth, testifying, and influencing a number of other people in an attempt to stop the forward movement of this legislation.

But there are many other transportation authorities—not private but public—across the country that are also resisting.

There is one gentleman in Texas that resisted for years any efforts to have the transit in Houston, Texas changed to accommodate people with disabilities.

And, he testified at one of our hearings. Houston has a reputation for a fortress effort in terms of resistance for a long time. Mr. Robert C. Lanier is a hard-boiled businessman. He is the chairman of Landar Corporation, and when it comes to making the arguments about the dollars and cents that will be needed to make the buses accessible, he was one of the outstanding proponents against outfitting the buses.

But two things changed Mr. Lanier's outlook, his attitude, and his opinion. One was the death of Mickey Leland, the Congressman from Houston, Texas. The other was the Americans With Disabilities Act and the phrasing and the presentation of the concept in terms of basic rights and the fact that rights are there to guarantee people opportunities.

So, this hard-boiled businessman came in and was really expected to testify on the other side. But he came in with the following testimony. It is not very long, so I am going to read it all. He did elaborate on it, but you will get some idea of what an about face this was.

Mr. Lanier stated: "the board of directors of the Metropolitan Transit Authority of Harris County, Texas which is Houston Metro, formally voted to outfit its new buses, vans, and mini-buses with wheelchair lifts commencing with the first purchases of 300 full-sized buses, 60 per year for five years, 51 mini-buses and 35 micro-buses. This board action supplements a door to door pickup service which is presently funded with $5,894,000 of annual expenditure. And incidentally, that is well above the level of most other comparable cities.

The wheelchair lifts were added not because we believed them to be the most cost effective, but because we believe them to be right. The consoling issue as I see it is an attempt to afford all of our citizens the right to fully participate in the economic and political process.

The analogy that comes to mind is the old contention that minorities should be segregated under the separate but equal doctrine. I do not subscribe to that but subscribe to the notion that, as best we can, we should afford all of our citizens the right of full participation.

Houston Metro's decision is a small step in that direction, a step we are comfortable with because it is soundly based in American values and overall economic health.

Many argue that allowing full participation takes people off of the welfare rolls and makes them into tax paying citizens. That is all true. But I think there is a larger value. Had U.S. Congressman, Mickey Leland lived earlier in my lifetime, he would never have been permitted his full participation.

But as society became more inclusive, it is not just he, but us all who benefited from his larger than life contributions. Who knows what outstanding contribution lies dormant within some handicapped person. That contribution teetering on the brink of whether he or she is allowed full participation in our society?

The mobility provided by a wheelchair-equipped bus fleet is an important element of full participation in our society."

And, he closed by quoting excerpts from Gray's Elegy Written in a Country Churchyard. "Full many a flower is born to blush unseen, and waste its sweetness on the desert air. Some mute inglorious Milton here may rest, some Cromwell, guiltless of his country's blood. Here rests his head upon the lap of earth a youth, to fortune and to fame unknown."

Mr. Lanier was quite moved by his own conversion and he moved everybody in the audience. But I close with this to say that the obstacle is not the cost. The obstacle is the attitude. The obstacle is the vision and compassion and overall understanding of the people in charge in terms of what is necessary to guarantee full opportunity to every American.

Thank you very much for being with us today.

[Whereupon, at 5:00 p.m., the hearing was adjourned.]

RICHARD L. BUTLER, ESQ.
Executive Director

Testimony Regarding the Americans With Disabilites Act

Presented to:

The House Education and Labor Subcommittee
on Select Education
Indianapolis, Indiana
October 6, 1989

by

Steve Beebe
Deputy Director for Government Relations
Indiana Health Care Association

on behalf of the

American Health Care Association

(42)

TESTIMONY

Mr. Chairman, members of the Committee, my name is Steve Beebe and I am the Deputy Director of Government Relations for the Indiana Health Care Association (IHCA). IHCA is the trade association representing approximately 460 proprietary, not-for-profit, and hospital based long term care facilities throughout the state of Indiana. However, I am presenting this testimony today on behalf of the American Health Care Association which is the national long term care trade association representing nearly 10,000 nursing facilities and 1.5 million residents nationwide.

The objectives of the Americans with Disabilities Act are laudable, and we support them. Certainly, no otherwise qualified person should be denied employment opportunities because of a disability. The cost to our economy of that lost productivity is far too high to be tolerated.

We and other businesses do, however, have several specific concerns that need to be addressed before the House finally passes this legislation. Some of these concerns are shared by industry generally, while others are unique to the health care industry. I would like to focus my remarks on this latter area.

The first area of special concern to our industry is Title One's overall scope. We, as an industry, firmly believe that qualified handicapped individuals should be hired on a non-discriminatory basis. However, we ask that Congress seriously take into account the unique circumstances of the health care industry. Our residents, our customers, if you will, are - by definition - handicapped. They are either the frail elderly (20 percent of our patients are over the age of 80), the victims of strokes, severe arthritis, diabetes or other disorders which make them either wheel chair bound or in need of other assistance in walking, feeding and bathing themselves or they are suffering from Alzheimer's disease. In some cases, they may have a combination of disabilities.

These factors require that facilities have particularly high standards when they decide whom to hire as a nurse, or nurses' aides. Therefore, accommodations that might be reasonable in other employment contexts, such as in a department store or restaurant, may well pose unacceptable risks to the health and safety of our residents.

We do not feel that the current language in the Senate passed version of this bill will provide sufficient protection for health care providers or our residents. (see attached suggested amendments) There should be a statutory presumption that job requirements imposed by such employers are job related. Because we already, by definition, provide services to those who are disabled, there should be a presumption that we, as the providers, have acted in good faith in setting employment standards. The burden of proof should, therefore, be squarely placed on those who would challenge those standards, and not on the facility that chose them.

Secondly, the health care industry is unique among American business in that we are the only industry in which our costs are mandated, but in which we are not permitted to raise our prices to cover those costs.

Typically two-thirds, or more, of the residents in a nursing facility are covered by either Medicaid or Medicare. Only one-third (or fewer) of our patients are private pay. Therefore, if a facility is required to make major structural modifications that increase its costs above that state's Medicaid cap, that facility will probably be unable to recover those costs. Unlike other business who are able to raise their prices, a facility may not charge a Medicaid or Medicare patient a price that exceeds the maximum allowed under state law.

Thus, it is necessary that health care providers have significant assurances, one way or another, that these additional costs can be recovered, or that such modifications will be delayed, until such time that those costs will be covered.

BEST COPY AVAILABLE

One possible approach would be to require that before any facility is required to make any structural modification, that a court must give substantial consideration to the question of whether, and to what extent, a facility will be able to recover those costs under that state's Medicaid program.

Another possible approach would be for Congress to authorise the Small Business Administration to make low interest loans to businesses which are required to undertake these modifications.

A third approach would be to put a cap on the amount of money that a facility would have to spend in making such renovations. This cap might be either a set dollar figure or a percentage of the original or current value of the affected entity.

We are seeking one or more of these specific protections because we do not believe that the undue burden defense, found in Titles I and III, is specific enough, nor are we willing to trust our financial survival to regulations that Congress will not review and which will not be issued until a year or more after the bill is enacted. We will have only limited input into the writing of these regulations, and we feel that additional statutory protection is essential.

In this regard, I should point out that most long term care facilities, probably more than 80 percent nationwide, are small businesses with annual revenues of less than 3 million dollars, and profit margins under 3 percent. Thus, any significant increase in a facility's cost of doing business imposed without a guarantee of off-setting increased revenue, could spell financial disaster for many facilities.

Also, in the context of determining what financial burden should properly be placed on a facility to comply with the provisions of this bill, we ask that each nursing facility, even if it is part of a chain, be considered as though it were an independent entity.

Facilities operate in 50 different states. They are faced with 50 different reimbursement and regulatory systems. Therefore, they should be regarded as separate entities for purposes of this legislation.

One final concern is the relationship between this proposed legislation and Section 504(a) of the Civil Rights Act. Certainly, the current law applies to all health care facilities. We suggest that the proposed statute needs to be clarified to indicate that facilities in compliance with Section 504 are then deemed to be in compliance with the proposed law.

Again, we commend Congress for its consideration of this legislation. Approval of the kinds of amendments that we have suggested will enable health care facilities to continue to provide, as we have done for decades past, the highest quality health care service, on a non-discriminatory basis, without endangering either the quality of that care or the financial integrity of the facilities that are providing it.

Amendments

1. **Limiting the Requirements That A Facility Be Modified To Accommodate A Handicapped Employee**

Insert on page 9, after line 17 a new subsection 101 (8) (C), as follows:

(C) Notwithstanding the foregoing requirement, a covered entity shall not be required to physically modify any non-public work area unless an otherwise qualified and disabled applicant has been hired for that position.

Justification
The modification of a facility is expensive and the cost of so doing may not always be recoverable. Therefore, a facility should not be required to undertake such modifications unless it is essential that it do so.

2. **Additional Criteria for Establishing An Undue Hardship Defense (Title I)**

Insert in Section 101 (9) (B), on Page 10, Line 10 a new subsection (v) as follows:

(v) In the case of health care providers, the court shall give substantial weight to the ability of the facility to obtain full reimbursement for the expenses incurred from that states Medicaid program, and in the case of an entity that operates more than one facility in a state, each facility shall be treated as a separate entity for purposes of determining the financial or other burden it shall be required to incur in complying with this title.

Justification

In many states facilities will be unable to recover the cost of compliance with this act, or will only be able to capitalize these expenses over the depreciable life of the property. This may require a facility to incur significant up-front costs, with reimbursement spread out over 15 or 20 years.

3. **Additional Criteria to be Used In Establishing the Undue Hardship Defense (Title III)**

Insert in Section 301 (5) (B), on Page 33, line 2, a new Subsection (B) (iv) as follows:

Use the same language that was used for Amendment #2.

Page 8

4. Availability of the Undue Burden Defense

Insert in Sections 302(b) (1) (A) (i), and 302(b) (1) (A) (ii) the following:

a. On page 33, line 22, after the word "entity", the following:

> "A covered entity shall be entitled to raise the defense that the denial of the opportunity to participate in or benefit from these goods, services, privileges or accommodations offered was due to the undue burden created, or the lack of any readily achievable means of providing the goods, services or accommodations in a reasonable manner".

b. On page 34, line 8, after the word "individuals" insert the following:

> "A covered entity shall be entitled to raise the defense that the denial of the opportunity to participate in or benefit from these goods, services, privileges or accommodations offered was due to the undue burden created, or the lack of any readily achievable means of providing the goods, services or accommodations in a reasonable manner."

5. **Amendment Relating to the Case of Resident's With Communicable Diseases**

Insert in Section 302(b) (1) (B), on page 35, line 2, the following:

(ii) Notwithstanding the foregoing a provider of health care services shall be entitled to assign individuals with communicable or contagious diseases to specified portions of a facility, or to specified facilities.

6. Right to Relocate A Resident or Patient to Another Room

Insert at the end of Section 302(b) (2) (A) a new Subsection 302(b) (2) (B), and renumber the succeeding subsections accordingly. Insert on page 39, line 10 the following:

(B) Notwithstanding the foregoing, a provider of health care services shall have the right to relocate a resident or patient to another room in a facility, in lieu of making any structural or other modifications in the facility.

Page 9

7. **Prohibition Against Lawsuits Until Implementing Regulations Are Final**

Insert on Page 60, after line 17, a new section 506, as follows:

Section 506 - Enforcement Litigation

No action to enforce any provision of this Act shall be commenced, either by the United States, by any agency thereof, or by any private party, until one year after the applicable regulations have taken effect.

Justification

Covered entities should have a reasonable period of time to modify their programs, criteria, and physical plant to meet the statutory and regulatory requirements of this Act. This amendment will specifically prevent the filing of enforcement litigation prematurely.

8. **No Double Jeopardy**

Insert, on page 49 after line 20 a new Section 308(b) (2) (D), as follows:

(D) A fine for a repeat violation shall only be imposed if the violation is the deliberate failure of the defendant to correct a previously cited violation.

Page 10

9. Cost Justification As A Defense

Insert on Page 10, after line 10 a new subsection 101(9) (B) (iv), as follows:

(iv) In determining the ability of any health care provider to bear the cost of making any structural modification each facility shall be considered a separate entity and the opportunity for the facility to obtain reimbursement for those costs under the applicable state's Medicaid plan shall be significant factor in determining if a proposed accommodation creates an undue burden.

Justification

Each facility is subject to vastly different state reimbursement policies and regulations. These policies and regulations will determine if, and to what extent, a facility will receive reimbursement for the cost of complying with the act.

Secondly, unlike other covered entities, nursing facilities cannot pass on the cost of compliance by raising their prices. Medicaid law prohibits facilities from charging Medicaid patients fees in excess of that state's Medicaid reimbursement rate, and the rates differ markedly from one state to another.

Third, in some states, because of the specific reimbursement methodology used, a facility may not legally be able to seek an adjustment in its rate that will allow it to recover all of its costs. Moreover, again depending upon the state, those costs may only be recoverable over a period of many years.

10. Amendment Relating To Handicapped Persons Employed In Health Care Facilities

Insert on Page 10, after line 10 a new subsection IV.

(IV) In the case of health care facilities, there shall be a presumption that a facility's determination that a disabled employee or applicant's disability may endanger the health or safety of a resident shall be controlling, unless there is clear and convincing evidence on the record to rebut that presumption, and the burden of proof shall be on the employee or applicant to rebut that presumption.

Justification

Facility employees care for residents who are frail, infirm and suffering from numerous illnesses. Their safety should not be jeopardized, to any degree, by a facility being required to hire, or retain, an employee with a disability that might endanger a resident's health. Therefore, the facility management's views should receive special consideration.

11. Deleting the "Business Necessity" Requirement From Section 102(b) (1) (G)

On page 12, lines 18-19 delete the phrase, "and is consistent with business necessity".

Justification

Section 102(b) (1) (G) requires that any employment test or criteria that tends to screen out a disabled person must meet 2 standards in order to survive a Court (or administrative) challenge. The employer must provide that 1) the standard is "job- related"; and 2) that there is "a business necessity" for it.

An employer should not have to meet this dual burden. It should be sufficient that the employer proves that the standard is "job-related".

Secondly, the "business necessity" standard is vague. What does "necessity" mean? Must an employer prove that a requirement is "absolutely essential", that it is "reasonably necessary" or only that there is "some business justification" for its use?

12. Deleting the "Most Effective Manner" Requirement from Section 102(b) (1) (H)

Delete from page 12 lines 21-22 the phrase "in the most effective manner".

Justification

The phrase "most effective manner" is an invitation to endless litigation because this criteria is completely subjective. There are no standards for determining what is "the most effective" and its use will likely result in a demand for mandatory hiring quotas as the only readily available method for an employee to prove that he/she had complied with the Act.

13. Immunity from Suit for Using Statutorily Mandated Tests

Subsection 102(b) (1) (H) is amended by renumbering paragraph (H) as paragraph (H) (i) and inserting on page 13 line 7 a new subparagraph (H) (ii), as follows:

(ii) A covered entity shall be immune from suit under subsection (H) if any test or standard used to select or promote employees has been designed or mandated by any federal or state law or agency. In such cases, any suit filed to enforce any right granted by this subsection shall be filed only against the agency that required or authorised the test or criteria, and not against the facility or facility staff using it.

Justification

Statutes such as OBRA have mandated that facilities test nurse aides for skills competency. These tests will ultimately be approved by various governmental agencies. Facilities will have no alternative but to use them. Therefore, it would be manifestly unfair to impose any legal liability on the facility under these circumstances. The liability, if any, should fall on the government.

14. Deleting the Business Necessity Requirement from Section 102(c) (4) (A)

a. Delete from page 15, line 9 the phrase, "and consistent with business necessity."

b. Delete from page 15, line 20 the phrase, "and consistent with business necessity."

Justification

It should be sufficient that a medical examination or inquiry is "job-related" in order for it to be lawfully required. It should not be necessary for an employer to meet a second burden of that of proving that there is a "business necessity" for its use. The "business necessity" standard is vague. Is "necessity" equated with "essential", or is an employer only required to prove that there is some need for the medical examination. The use of this dual standard will only stimulate additional, and unjustified, litigation.

15. Establishing a Standard and Burden of Proof for Section 103

Redesignate Section 103(a) as Section 103(a) (1). Insert, after page 15 line 22 a new section 103(a) (2), as follows:

(a) (2) An employer shall meet his/her burden of proof by demonstrating by a fair preponderance of the evidence that any standard, criteria, or test is job-related. An employee (or applicant) who thereafter asserts that the job-related defense is pretextual shall have the burden of proving that assertion by clear and convincing evidence.

Justification

An employer shall be entitled to a presumption that he/she has been acting in good faith when he/she establishes employment standards or tests. The assertion that a standard or test was selected in bad faith should be sustained only if there is more than minimal evidence to sustain it.

16. Provision to Facilities Providing TDY Services

Renumber Sections 307 through 309 as Sections 308 through 310 and insert on Page 47 line 6 a new Section 306, as follows:

(B) Section 306

Notwithstanding any other provision of Titles I, II or III an entity shall not be required to install TDY equipment unless it is fully compensated the cost of purchasing such equipment, either by the person(s) who use it or by reimbursement from either a State or the federal government.

Justification

TDY equipment is very specialized and costly equipment. It is unfair to impose the financial burden of purchasing this equipment, which will be used only by profoundly deaf individuals, on a facility.

NATIONAL MULTIPLE SCLEROSIS SOCIETY
Indiana Chapter
915 North Alabama Street, Room 319 [illegible], Indiana 46204 317) 634-8796
— Northern Region —
1884 [illegible] Street [illegible], Indiana 46[illegible] 219) [illegible]

As Chapter Services and Equipment Coordinator for the Indiana State Chapter, I serve over 3,500 Hoosiers who have multiple sclerosis - a chronic, often disabling disease of the central nervous system. Multiple sclerosis affects young adults most commonly between the ages of 20 and 40 - just as they are starting to live.

The lifetime costs of multiple sclerosis to society - including medical expenses, benefits and lost productivity for people with MS and their families - are estimated by the National Multiple Sclerosis Society at $21 billion.

Because it addresses in a comprehensive and far-sighted manner the issue of discrimination based on physical handicaps, The Americans with Disabilities Act will significantly reduce the economic impact of multiple sclerosis on society. It will allow persons with multiple sclerosis and other handicaps access to jobs that are presently denied them.

The Americans with Disabilities Act is of particular importance to handicapped residents of Indiana because there is at present no Indiana Statute requiring an employer to make reasonable accommodations for a handicapped employee. Although Indiana Code, Section 22-9-1-1 et seq.* addresses discrimination based on handicap, the statute does not, in fact, compel an employer to make any concessions at all for a physically challenged employee.

The accommodations required by the Americans with Disabilities Act are important to the clients I serve. They will impact persons such as Tom, a diesel mechanic who returned to the work place after a two month absence due to a job related injury. During the resulting hospitalization, Tom was tested for multiple sclerosis. The tests proved inconclusive. Tom's employer somehow learned that the doctors suspected he had MS. When Tom later returned to work - with a signed doctor's release - he was given an ultimatum. He was told that he either must agree to transfer his employment to a temporary employment service that the company worked with, or he would lose his job. The company's objective was to avoid carrying Tom on their group health insurance policy. They in effect were denying him job security and benefits because he was suspected of having multiple sclerosis.

* Exact text of Indiana Code is attached.

In another case, a bright young woman was interviewed for a position with a financial institution and was told that she could give notice to her present employer. The woman who interviewed her was to call Tricia with a starting date. Tricia decided to disclose that she had MS. Although Tricia was initially told that it made no difference, the woman who interviewed her failed to call with a starting date. When Tricia called to find out what had happened, she was told that someone else would be hired for the position. The lady who interviewed Tricia admitted that she had been denied the job because she had multiple sclerosis.

Persons who are disabled want and deserve to be productive members of America's work force. The Americans with Disabilities Act removes major barriers that might prevent persons like Tom and Tricia from working. I urge the Congress to pass this most important civil rights legislation.

Indiana Civil Rights Law- Section 22-9-1-13

Employment of handicapped persons; discrimination; promotion or transfer; physical accommodations

Sec. 13. (a) The prohibition against discrimination in employment because of handicap does not apply to failure of an employer to employ or to retain as an employee any person who because of a handicap is physically or otherwise unable to efficiently and safely perform, at the standards set by the employer, the duties required in that job.

(b) After a handicapped individual is employed, the employer shall not be required under this chapter to promote or transfer such handicapped person to another job or occupation, unless, prior to such transfer, such handicapped person by training or experience is qualified for such job or occupation.

(c) This section shall not be construed to require any employer to modify any physical accommodations or administrative procedures to accommodate a handicapped person.

October 16, 1989

My name is Tricia Smitha. I was diagnosed as having Multiple Sclerosis in 1986, when I was 19 years old. I have been employed by the City-County Government for the past four years in accounting positions. I have been in remission from my M.S. since March 1989.

On Tuesday, May 30th, 1989, I interviewed for a job with a local Credit Union. The person who interviewed me, Jan, was very enthusiastic and said that as long as my references were okay, that I had a job with her company.

At that point, I told her about my having M.S., because in 1986 I was off of work for six weeks due to surgery and an excaberation of M.S. I explained to her the situation, and gave her some information about Multiple Sclerosis. She said that she was really glad I was honest with her, but that it did not affect her opinion about my abilities.

The next day, I called her secretary, who told me to go ahead and give notice at my current job. She said that I would be hearing from them for a confirmed start date, which would be sometime around the first of August. I called the first week of July, since I had not heard from them. I was told that Jan was not in, but that she would return my call.

On July 13th, I called back, since Jan had still not called. The secretary informed me that Jan had changed her mind. I asked why, and she said because of "your illness." I asked her what illness and she said, "You know, your M.S." Jan had talked to a friend of hers who has a friend who has M.S. She went on to say that the disease frightened Jan, and that "anything could happen."

I have no disability which would prevent me from performing a job. I have not missed a day of work due to Multiple Sclerosis since 1986, excluding partial days off due to Doctors' appointments. I am a perfectly normal human being who has a right to be employed just like any one else.

I am very lucky that my current employer agreed to let me withdraw my resignation. Other people may not be so lucky, and then have to deal with "disease discrimination" when looking for another employment opportunity.

United Cerebral Palsy of Indiana, Inc. • 446 North Pennsylvania Street • Indianapolis, IN 46204 • (317) 634-7134

TESTIMONY - AMERICANS with DISABILITIES ACT

October 6, 1989 - Indianapolis, Indiana

Honorable Congressmen Major Owens
and Jim Jontz:

United Cerebral Palsy of Indiana (UCPI) is privileged to have the opportunity to speak to you personally at this hearing concerning the Americans with Disabilities Act, recently passed by the U.S. Senate and soon to be considered on the floor in the U.S. House of Representatives.

UCPI heartily endorses this legislation extending equal, civil rights and ending discrimination for our special population of people with disabilities, in the areas of employment, public accomondations, new construction, renovation and transportation.

Further, we would urge that each Committee Member and each Congressman in the House consider carefully any and all changes suggested by pressure groups, before making decisions that would tend to weaken or compromise the bill in any way.

Thank you for the opportunity to express our concerns.

Julian Coleman, President
United Cerebral Palsy of Indiana

A not-for-profit organization dedicated to improving the quality of life for persons with cerebral palsy and other disabilities

TO THE HONORABLE JIM JONTZ, MEMBER OF CONGRESS:

My name is Jimmy L. Deckard, Sr., a victim of cerebral palsy since birth, I've experienced many instances that will be protected by The Americans with Disabilities Act (ADA).

I attended a special school for the handicapped, James E. Roberts School during my grade and high school years. With the movement of a spactic cerebral palsy, the use of my upper extermities were very limited. I was not permitted to write my assignments as my penmanship was not legible. I did everything from English to Geometry on the typewriter.

After my high school years, I attended a Business College and became a bookkeeper and a tax preparer. Upon graduating from the Business College, it became very difficult for me to find employment. After a six month search, I received a call on Christmas Eve afternoon to come for an interview for a printing company. I received employment and worked there for the next two years. I had surgery, the company got behind on my job, and called me back to work early. When I got the job up-to-date, I was fired for being too slow. I then work for several small companies, doing bookkeeping at a comparable low salary.

In 1974, I began employment with the State of Indiana as an account clerk. My state agency, Indiana Rehabilitation Services, which later became the Indiana Department of Human Services, employed me as an account clerk level V and later advanced me to level IV, of which I remain.

In 1983, I was attacted by an assailant, and stabbed five times in the right lung, and three times in the head. The three weeks I spent in Intensive Care was nothing but dreams. I was on a ventalator and respirator and kept paralized for my right lung to heal. The stabbing took place on October 23, 1983 and I returned home to recover on Saturday before Thanksgiving of 1983. With everything going as good as it was, I returned to work January 2, 1984. This was a mistake, I found my strength to be weak and I was very slow doing my job. My ability to work grew worse by the day and I took a year's leave without pay to recover. When the year was expired, I took a disability retirement from the State of Indiana.

During 1987, my condition improved to the extent that I wanted to return to work. When I contacted Indiana Department of Human Services to ask if I could return to work, I was told I must re-enter the rehabilitation process to prove my ability to work. After eleven months of evaluation and work adjustment, I became eligible for employment May 1, 1988. I then returned to Indiana Department of Human Services, October 31, 1988.

I am presently working in the Supported Employment Division of the Indiana Department of Human Services. Working with my own computer system, furnished as a job modification by the Vocational Rehabilitation Division of the Indiana Department of Human Services.

Thank you for your time.

Respectfully,

Jimmy L Deckard, Sr.

Jimmy L. Deckard, Sr.

Rebecca Kaye Jewett
4000 Jennie Lee Dr.
Lafayette, In. 47905
October [illegible]th 1989

Jim Jontz, Rep
Sub-committee to the Committee on Hiring the Disabled

Dear Sir's,

My name is Rebecca Jewett, I would like to communicate my experinces. When I was 29 years old I had a cerebral vascular accident (1980). I have had significant and persistent disorganization of motor function in two extremities (right upper extremity and right lower extremity) resulting in sustained disturbance of gross and dexterous movements (right upper extremity virtually useless and difficulty walking due to motor loss in right lower extremity, requiring use of brace.

After my stroke Voc. Rehab. paid for sending me back to college in library science since I could not return to teach at my choosen profession. However, the state closed the library science dept. at Purdue before I could complete the degree. I have enought hours to direct a small library in the state. There was an opening in Otterbein for a library director, I was living in Otterbein at the time next to a library board member. I applied and was hired - note resume.

BEST COPY AVAILABLE

In February of 1987 I had a reacurrence of Hodgkins disease, I informed my board of this, I would be taking chimotherapy, the doctor would allow me to work only twenty hours during this time. In July at a board meeting before the public one of my board members got up and ask me if I would not be better off on disability.

That previous year I did the paper work necessary to appeal the library budget. I was ask to present my case in Indy before the state board of accounts at that hearing my appeal was one of the few granted.

In October my board hired another person without any experience to work, at this meeting we were told to sign a written contract for three months at the end of this time, we would be evaluated. Previous to this time I had been working without a written contract. I signed and at the Nov meeting I informed my board. I would be resigning I would be resigning at the Dec. meeting. My board president Ronald Wolford ask the board to give me a recommendation and the board refused. So he wrote a recommendation himself for me. Find enclosed History of Job Search - note June 1988.

p. 3.

Jennifer Corns, Job Placement Specialist told me of bad recommendation note in file at Purdue. I was given a bad recomonendation from someone, I believe may have been on the board of the Otterbein Public Library.

Due to the fact I had no insurance and had been at Otterbein for five years, I thought I could better myself I decided to leave. Being a former employee of Purdue U., who has benefits I naturally thought of returning.

Sincerely,

Rebecca Jewett

RESUME CAPSULE

I have 5 years of experience in public library; am skilled in cataloging, reference work, and storytelling; particularly enjoy children's and young people's literature.

EDUCATION

Purdue University: Library Science Certification, 1982
Indiana State University: B.S. Art Education, 1971
Additional Coursework: 12 hours credit towards M.S. degree

WORK EXPERIENCE

Library Director: Otterbein Public Library

- Managed all aspects of the library
- Prepared complete library budget for each fiscal year
- Was appointed to special education committee to update and evaluate library materials
- Wrote newspaper column for local paper
- Attended state meetings and workshops
- Supervised summer work student

ACHIEVEMENTS

- Converted library card catalog to Dewey system
- Started story hour for preschool children
- Reorganized summer reading program
- Developed short story program for Otterbein Care Center

Otterbein, Indiana: 1982-1987

Bibliographical Searcher: Purdue University Libraries - HSSE
West Lafayette, Indiana: 1977-1978

Credit Associate: Loebs Department Store

- Kept itemized monthly records of credit transactions
- Was responsible for transmitting all receipts to comptroller
- Assisted credit customers

Lafayette, Indiana: 1974-1977

Additional Experience: Art teacher, Warren Community Schools; Substitute teacher, Lafayette School System and Benton Community Schools; Sales Associate, Grants Dept.Store: 1971-73

MEMBERSHIP Indiana Library Association, Division 3
Children's and Young People's Literature

HISTORY OF JOB SEARCH

REBECCA KAYE JEWETT
450 South Main
Otterbein, IN 47970

February 1988

-Applied at Purdue for professional and clerical positions. Was put on automatic referral, but was never contacted for an interview, although several positions became available

-Applied and sent resumes to
  -St. Elizabeth Hospital: Library Assistant
  -Purdue University: Library Professional
                      Library Assistant
  -Tippecanoe Co. Library: Library Assistant
  -West Lafayette Library: " "
  -Home Hospital: Library Assistant
  -Oxford Library: Librarian

March 1988

-Called about possible positions at Purdue; no interview opportunities resulted.
-Called St. Elizabeth Hospital (follow-up)

-Made follow-up calls to Tippecanoe Co. Library and West Lafayette Public Library

April 1988

-Sent resume to Flora Library: Librarian position
-Called: Purdue University
         West Lafayette Library
         Tippecanoe County Library

April & May 1988

-Took a job seeking skills class

May 1988

-Took course given by Vocational Rehabilitation Division

-Called: Purdue University
         West Lafayette Library
         Tippecanoe County Library

-Talked to MarK Davis, Greater Lafayette Progress Inc. He is involved in bringing new business to Lafayette area. Discussed possibility of my starting a business; I also asked if Mr. Davis knew of companies that needed a librarian and would be willing to hire the handicapped.

-Called Subaru Isuzu: no plans for a library.
-Talked to Carol Lyons, ~~Librarian~~

BEST COPY AVAILABLF

May 1988

-Jennifer Corns, Job Placement Specialist, called Otterbein Public Library about their job opening, asking if they would hire me back. Although they had agreed (during an unemployment hearing) that they would hire me, they told Ms. Corns that they would not, and gave her no reason.

June 1988

-Called: Purdue University
Tippecanoe Co. Library
West Lafayette Public Library

-Made additional inquiries at:
Coral Ford
Great Lakes Chemical

-Jennifer Corns, Job Placement Specialist, told me of bad recommendation note in file at Purdue. I asked to see Purdue file.

July 1988

-Interviewed at Purdue with Creative Arts Dept
-Called: West Lafayette Public Library
Tippecanoe County Library

-Attended Purdue conference to check out possibility of starting my own business. Was informed by Vocational Rehabilitation that the state would not fund a small business.

-Inquired at Arnett Clinic
-Applied for opening in medical library at St. Elizabeth Hospital.
-Inquired at Great Lakes Chemical
-Inquired at Dunn and Hargitt

August 1988

Made inquires:
-Tippecanoe County Library
-Kirby Risk
-Arnett Clinic
-Home Hospital
-Tippecanoe School Corporation
-Lafayette School Corporation
-West Lafayette School Corporation
-Purdue University

OCT [illegible]

Dear. Mr. Coats

I have a child with down syndrome she is one year old as of Oct 11, 1989. When I gave birth to this special baby I didn't know how I would care for her. The doctor was unable to give me any information on where to go or how I could help her. For the first month my husband and I were [illegible] and [illegible] just crying our hearts out feeling so burden and helpless. After the tears we knew we had to do what ever it took to help her and ourselfs. We looked into our community to see what they had to offer. We found therapist sposored by the government. We found out about S.S.I. That allowed me to stay home with her, to make sure she got the best care possible. I feel very fortunate that my baby has been well cared for. But then I wonder how many people that have special children out there and are not looking into these programs and are neglecting their children. Doctors should notify agencies so they can notify the family to know whats available to them. Because I've notice some familys are embarrasst to ask questions. And

BEST COPY AVAILABLE

in the long run these special children are ignored and abused. There should be a law that the government make sure these silent children have the best our country can offer. If it weren't for these programs my child would be a living vegtable, but now she has a chance of a some what normal life, thanks to her theorpist and I being able to stay home with her.

Please help these babies be able to grow and be the best they can be. I often wonder what would happen to her when I was gone. But that fear is slowly fading. I will teach her to be independant with the help of these programs. Thank You! Mr. Jim Jontz keep up the good work these people need the support of everyone.

Sincerely,
Sandy Hillesheim

AMERICANS WITH DISABILITIES ACT OF 1989

THURSDAY, AUGUST 3, 1989

House of Representatives,
Subcommittee on Civil and Constitutional Rights,
Committee on the Judiciary,
Washington, DC.

The subcommittee met, pursuant to notice, at 9:40 a.m., in room 2237, Rayburn House Office Building, Hon. Don Edwards (chairman of the subcommittee) presiding.

Present: Representatives Don Edwards, William E. Dannemeyer, and Craig T. James.

Also present: Representative Steny H. Hoyer.

Staff present: Stuart J. Ishimaru and Ivy L. Davis, assistant counsels; Jancelyn Brower, secretary; and Colleen Kiko, minority counsel.

Mr. **Edwards**. The subcommittee will come to order.

Mr. Dannemeyer.

Mr. **Dannemeyer**. Mr. Chairman, I ask unanimous consent for the subcommittee to permit the coverage of these hearings in full or in part by television broadcast, still photography, or by radio broadcast, in accordance with committee rule 5.

Mr. **Edwards**. Without objection, it is so ordered.

OPENING STATEMENT OF CHAIRMAN EDWARDS

This morning the subcommittee begins hearings on H.R. 2273, the Americans with Disabilities Act [ADA]. The ADA represents a major effort to provide comprehensive antidiscrimination protections for persons with disabilities. The bill was introduced first by our colleague, the former majority whip, Mr. Coelho, and is now managed by Mr. Hoyer. The bill has broad bipartisan support, with 200 cosponsors.

[The bill, H.R. 2273, follows:]

101st CONGRESS
1st Session

H. R. 2273

To establish a clear and comprehensive prohibition of discrimination on the basis of disability.

IN THE HOUSE OF REPRESENTATIVES

May 9, 1989

Mr. Coelho (for himself, Mr. Fish, Mr. Hawkins, Mr. Conte, Mr. Owens of New York, Mr. Ackerman, Mr. Atkins, Mr. Beilenson, Mr. Bennett, Mr. Borski, Mr. Bosco, Mrs. Boxer, Mr. Campbell of California, Mr. Cardin, Mr. Clay, Mr. Crockett, Mr. de Lugo, Mr. Donnelly, Mr. Dwyer of New Jersey, Mr. Dymally, Mr. Edwards of California, Mr. Fazio, Mr. Feighan, Mr. Frank, Mr. Frost, Mr. Fuster, Mr. Gejdenson, Mr. Gordon, Mr. Hayes of Illinois, Mr. Hoyer, Mr. Hutto, Mr. Jacobs, Mr. Jontz, Mr. Kastenmeier, Mr. Kleczka, Mr. Levin of Michigan, Mr. Lewis of Georgia, Mr. Manton, Mr. Matsui, Mr. McCloskey, Mr. McDermott, Mr. McHugh, Mr. Mfume, Mr. Miller of California, Mr. Mineta, Mrs. Morella, Mr. Oberstar, Mr. Pallone, Ms. Pelosi, Mr. Richardson, Mr. Rowland of Connecticut, Ms. Schneider, Mr. Shays, Mr. Smith of Vermont, Mr. Solarz, Mr. Studds, Mr. Traxler, Mr. Udall, Mr. Vento, Mr. Waxman, Mr. Weiss, Mr. Wise, Mr. Wolpe, Mr. Florio, Mr. Williams, Mr. Roybal, Mr. Morrison of Connecticut, Mr. Brown of California, Mr. Dellums, Mr. Sabo, Mr. Espy, Mr. Dixon, Mr. Miller of Washington, Mr. Young of Alaska, Mr. Foglietta, Mr. Rangel, Mr. Garcia, Mrs. Saiki, Mr. Martinez, Mr. Mavroules, Mr. Conyers, Mr. Markey, Mr. Visclosky, Mr. Kildee, and Mrs. Collins) introduced the following bill; which was referred jointly to the Committees on Education and Labor, Energy and Commerce, Public Works and Transportation, and the Judiciary

A BILL

To establish a clear and comprehensive prohibition of discrimination on the basis of disability.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SECTION 1. SHORT TITLE; TABLE OF CONTENTS.

(a) Short Title.—This Act may be cited as the "Americans with Disabilities Act of 1989".

(b) Table of Contents.—The table of contents is as follows:

Sec. 1. Short title; table of contents.
Sec. 2. Findings and purposes.
Sec. 3. Definitions.

TITLE I—GENERAL PROHIBITION AGAINST DISCRIMINATION

Sec. 101. Forms of discrimination prohibited.

TITLE II—EMPLOYMENT

Sec. 201. Definitions.
Sec. 202. Discrimination.
Sec. 203. Posting notices.
Sec. 204. Regulations.
Sec. 205. Enforcement.

TITLE III—PUBLIC SERVICES

Sec. 301. Definition of qualified individual with a disability.
Sec. 302. Discrimination.
Sec. 303. Actions applicable to public transportation considered discriminatory.
Sec. 304. Regulations.
Sec. 305. Enforcement.

TITLE IV—PUBLIC ACCOMMODATIONS AND SERVICES OPERATED BY PRIVATE ENTITIES

Sec. 401. Definitions.
Sec. 402. Prohibition of discrimination by public accommodations.
Sec. 403. Prohibition of discrimination in public transportation services provided by private entities.
Sec. 404. Regulations.
Sec. 405. Enforcement.

TITLE V—TELECOMMUNICATIONS RELAY SERVICES

Sec. 501. Definitions.
Sec. 502. Telecommunications relay services.
Sec. 503. Regulations.
Sec. 504. Enforcement.

TITLE VI—MISCELLANEOUS PROVISIONS

Sec. 601. Construction.
Sec. 602. Prohibition against retaliation.
Sec. 603. State immunity.
Sec. 604. Regulations by the Architectural and Transportation Barriers Compliance Board.
Sec. 605. Attorney's fees.
Sec. 606. Effective date.

SEC. 2. FINDINGS AND PURPOSES.

(a) FINDINGS.—Congress finds that—

(1) some 43,000,000 Americans have one or more physical or mental disabilities, and this number is increasing as the population as a whole is growing older;

(2) historically, society has tended to isolate and segregate individuals with disabilities, and, despite some improvements, such forms of discrimination against individuals with disabilities continue to be a serious and pervasive social problem;

(3) discrimination against individuals with disabilities persists in such critical areas as employment, housing, public accommodations, education, transportation, communication, recreation, institutionalization, health services, voting, and access to public services;

(4) unlike individuals who have experienced discrimination on the basis of race, sex, national origin, religion, or age, individuals who have experienced discrimination on the basis of disability have often had no legal recourse to redress such discrimination;

(5) individuals with disabilities continually encounter various forms of discrimination, including outright intentional exclusion, the discriminatory effects of architectural, transportation, and communication barriers, overprotective rules and policies, failure to make modifications to existing facilities and practices, exclusionary qualification standards and criteria, segregation,

and relegation to lesser services, programs, activities, benefits, jobs, or other opportunities;

(6) census data, national polls, and other studies have documented that people with disabilities, as a group, occupy an inferior status in our society, and are severely disadvantaged socially, vocationally, economically, and educationally;

(7) individuals with disabilities are a discrete and insular minority who have been faced with restrictions and limitations, subjected to a history of purposeful unequal treatment, and relegated to a position of political powerlessness in our society, based on characteristics that are beyond the control of such individuals and resulting from stereotypic assumptions not truly indicative of the individual ability of such individuals to participate in, and contribute to, society;

(8) the Nation's proper goals regarding individuals with disabilities are to assure equality of opportunity, full participation, independent living, and economic self-sufficiency for such individuals; and

(9) the continuing existence of unfair and unnecessary discrimination and prejudice denies people with disabilities the opportunity to compete on an equal basis and to pursue those opportunities for which our free society is justifiably famous, and costs the United

State billions of dollars in unnecessary expenses resulting from dependency and nonproductivity.

(b) PURPOSE.—It is the purpose of this Act—

(1) to provide a clear and comprehensive National mandate for the elimination of discrimination against individuals with disabilities;

(2) to provide clear, strong, consistent, enforceable standards addressing discrimination against individuals with disabilities;

(3) to ensure that the Federal Government plays a central role in enforcing the standards established in this Act on behalf of individuals with disabilities; and

(4) to invoke the sweep of congressional authority, including its power to enforce the fourteenth amendment and to regulate commerce in order to address the major areas of discrimination faced day-to-day by people with disabilities.

SEC. 3. DEFINITIONS.

As used in this Act:

(1) AUXILIARY AIDS AND SERVICES.—The term "auxiliary aids and services" shall include—

(A) qualified interpreters or other effective methods of making aurally delivered materials available to individuals with hearing impairments;

(B) qualified readers, taped texts, or other effective methods of making visually delivered materials available to individuals with visual impairments;

(C) acquisition or modification of equipment or devices; and

(D) other similar services and actions.

(2) DISABILITY.—The term "disability" means, with respect to an individual—

(A) a physical or mental impairment that substantially limits one or more of the major life activities of such individual;

(B) a record of such an impairment; or

(C) being regarded as having such an impairment.

(3) REASONABLE ACCOMMODATION.—The term "reasonable accommodation" shall include—

(A) making existing facilities used by employees readily accessible to and usable by individuals with disabilities; and

(B) job restructuring, part-time or modified work schedules, reassignment, acquisition or modification of equipment or devices, appropriate adjustment or modifications of examinations and training materials, adoption or modification of procedures or protocols, the provision of qualified readers or interpreters, and other similar accommodations.

(4) STATE.—The term "State" means each of the several States, the District of Columbia, the Commonwealth of Puerto Rico, Guam, American Samoa, the Virgin Islands, the Canal Zone, the Trust Territory of the Pacific Islands, and the Commonwealth of the Northern Mariana Islands.

TITLE I—GENERAL PROHIBITION AGAINST DISCRIMINATION

SEC. 101. FORMS OF DISCRIMINATION PROHIBITED.

(a) IN GENERAL.—

(1) SERVICES, PROGRAMS, ACTIVITIES, BENEFITS, JOBS, OR OTHER OPPORTUNITIES.—Subject to the standards and procedures established in titles II through V, it shall be discriminatory to subject an individual or class of individuals, directly or through contractual, licensing, or other arrangements, on the basis of disability, to any of the following:

(A) Denying the opportunity to participate in or benefit from a service, program, activity, benefit, job, or other opportunity.

(B) Affording an opportunity to participate in or benefit from a service, program, activity, bene-

fit, job, or other opportunity that is not equal to that afforded others.

(C) Providing a service, program, activity, benefit, job, or other opportunity that is less effective than that provided to others.

(D) Providing a service, program, activity, benefit, job, or other opportunity that is different or separate, unless such action is necessary to provide the individual or class of individuals with a service, program, activity, benefit, job, or other opportunity that is as effective as that provided to others.

(E) Aiding or perpetuating discrimination by providing significant assistance to an agency, organization, or individual that discriminates.

(F) Denying the opportunity to participate as a member of boards or commissions.

(G) Otherwise limiting the enjoyment of any right, privilege, advantage, or opportunity enjoyed by others.

(2) EQUAL OPPORTUNITY.—For purposes of this Act, aids, benefits, and services to be equally effective, must afford an individual with a disability an equal opportunity to obtain the same result, to gain the same benefit, or to reach the same level of achievement, in

the most integrated setting appropriate to the individual's needs.

(3) OPPORTUNITY TO PARTICIPATE.—Notwithstanding the existence of separate or different programs or activities provided in accordance with this section, an individual with a disability shall not be denied the opportunity to participate in such programs or activities that are not separate or different.

(4) ADMINISTRATIVE METHODS.—An individual or entity shall not, directly or through contractual or other arrangements, utilize standards or criteria or methods of administration—

(A) that have the effect of discrimination on the basis of disability;

(B) that have the purpose or effect of defeating or substantially impairing the accomplishment of the objectives of the services, programs, activities, benefits, jobs, or other opportunities provided with respect to an individual with a disability; or

(C) that perpetuate the discrimination of others who are subject to common administrative control or are agencies of the same State.

(5) RELATIONSHIPS OR ASSOCIATIONS.—It shall be discriminatory to exclude or otherwise deny equal services, programs, activities, benefits, jobs, or other

opportunities to an individual or entity because of the relationship to, or association of, that individual or entity with another individual with a disability.

(b) **Defenses.**—

(1) **In general.**—It shall be a defense to a charge of discrimination under this Act that an alleged application of qualification standards, selection criteria, performance standards or eligibility criteria that exclude or deny services, programs, activities, benefits, jobs, or other opportunities to an individual with a disability has been demonstrated by the covered entity to be both necessary and substantially related to the ability of an individual to perform or participate, or take advantage of the essential components of such particular program, activity, job, or other opportunity and such performance, participation, or taking advantage of such essential components cannot be accomplished by applicable reasonable accommodations, modifications, or the provision of auxiliary aids or services.

(2) **Qualification standards.**—The term "qualification standards" may include—

(A) requiring that the current use of alcohol or drugs by an alcoholic or drug abuser not pose a direct threat to property or the safety of others in the workplace or program; and

(B) requiring that an individual with a currently contagious disease or infection not pose a direct threat to the health or safety of other individuals in the workplace or program.

TITLE II—EMPLOYMENT

SEC. 201. DEFINITIONS.

As used in this title:

(1) COMMISSION.—The term "Commission" means the Equal Employment Opportunity Commission established by section 705 of the Civil Rights Act of 1964 (42 U.S.C. 2000e-4).

(2) EMPLOYEE.—

(A) IN GENERAL.—The term "employee" means an individual employed by an employer.

(B) EXCEPTION.—The term "employee" shall not include any individual elected to public office in any State or political subdivision of any State by the qualified voters thereof, or any individual chosen by such officer to be on such officer's personal staff, or an appointee on the policy making level or an immediate adviser with respect to the exercise of the constitutional or legal powers of the office.

(C) LIMITATION ON EXCEPTION.—The exception contained in subparagraph (B) shall not

include employees subject to the civil service laws of a State government, governmental agency or political subdivision.

(3) EMPLOYER.—

(A) IN GENERAL.—The term "employer" means a person engaged in an industry affecting commerce who has 15 or more employees for each working day in each of 20 or more calendar weeks in the current or preceding calendar year, and any agent of such a person.

(B) EXCEPTIONS.—The term "employer" does not include—

(i) the United States, a corporation wholly owned by the government of the United States, or an Indian tribe; or

(ii) a bona fide private membership club (other than a labor organization) that is exempt from taxation under section 501(c) of the Internal Revenue Code of 1986.

(4) PERSON, ETC.—The terms "person", "labor organization", "employment agency", "commerce", and "industry affecting commerce", shall have the same meaning given such terms in section 701 of the Civil Rights Act of 1964 (42 U.S.C. 2000e).

(5) QUALIFIED INDIVIDUAL WITH A DISABILITY.—The term "qualified individual with a disability" means an individual with a disability who, with or without reasonable accommodation, can perform the essential functions of the employment position that such individual holds or desires.

SEC. 202. DISCRIMINATION.

(a) GENERAL RULE.—No employer, employment agency, labor organization, or joint labor-management committee shall discriminate against any qualified individual with a disability because of such individual's disability in regard to job application procedures, the hiring or discharge of employees, employee compensation, advancement, job training, and other terms, conditions, and privileges of employment.

(b) CONSTRUCTION.—As used in subsection (a), the term "discrimination" includes—

(1) the failure by an employer, employment agency, labor organization, or joint labor-management committee to make reasonable accommodations to the known physical or mental limitations of a qualified individual with a disability who is an applicant or employee unless such entity can demonstrate that the accommodation would impose an undue hardship on the operation of its business;

(2) the denial of employment opportunities by a covered employer, employment agency, labor organization, or joint labor-management committee to an applicant or employee who is a qualified individual with a disability if the basis for such denial is because of the need of the individual for reasonable accommodation; and

(3) the imposition or application by a covered employer, employment agency, labor organization or joint labor-management committee of qualification standards, tests, selection criteria or eligibility criteria that identify or limit, or tend to identify or limit, a qualified individual with a disability, or any class of qualified individuals with disabilities, unless such standards, tests or criteria can be shown by such entity to be necessary and substantially related to the ability of an individual to perform the essential functions of the particular employment position.

SEC. 203. POSTING NOTICES.

Every employer, employment agency, labor organization, or joint labor-management committee covered under this title shall post notices in an accessible format to applicants, employees, and members describing the applicable provisions of this Act, in the manner prescribed by section 711 of the Civil Rights Act of 1964 (42 U.S.C. 2000e–10).

SEC. 204. REGULATIONS.

Not later than 180 days after the date of enactment of this Act, the Commission shall issue regulations in an accessible format to carry out this title in accordance with subchapter II of chapter 5 of title 5, United States Code.

SEC. 205. ENFORCEMENT.

The remedies and procedures set forth in sections 706, 709, and 710 of the Civil Rights Act of 1964 (42 U.S.C. 2000e–5, 2000e–8, and 2000e–9), and the remedies and procedures available under section 1981 of the Revised Statutes (42 U.S.C. 1981) shall be available, with respect to any individual who believes that he or she is being or about to be subjected to discrimination on the basis of disability in violation of any provisions of this Act, or regulations promulgated under section 204, concerning employment.

TITLE III—PUBLIC SERVICES

SEC. 301. DEFINITION OF QUALIFIED INDIVIDUAL WITH A DISABILITY.

As used in this title, the term "qualified individual with a disability" means an individual with a disability who, with or without reasonable modifications to rules, policies and practices, the removal of architectural, communication, and transportation barriers, or the provision of auxiliary aids and services, meets the essential eligibility requirements for the receipt of services or the participation in programs or activities provided by a State or agency or political subdivision of a

State or board, commission or other instrumentality of a State and political subdivision.

SEC. 302. DISCRIMINATION.

No qualified individual with a disability shall, by reason of his or her disability, be excluded from the participation in, be denied the benefits of, or be subjected to discrimination by a State, or agency or political subdivision of a State or board, commission, or other instrumentality of a State and political subdivision.

SEC. 303. ACTIONS APPLICABLE TO PUBLIC TRANSPORTATION CONSIDERED DISCRIMINATORY.

(a) DEFINITION.—As used in this title, the term "public transportation" means transportation by bus or rail, or by any other conveyance (other than air travel) that provides the general public with general or special service (including charter service) on a regular and continuing basis.

(b) VEHICLES.—

(1) NEW BUSES, RAIL VEHICLES, AND OTHER FIXED ROUTE VEHICLES.—It shall be considered discrimination for purposes of this Act and section 504 of the Rehabilitation Act of 1973 (29 U.S.C. 794) for an individual or entity to purchase or lease a new fixed route bus of any size, a new intercity rail vehicle, a new commuter rail vehicle, a new rapid rail vehicle, a new light rail vehicle to be used for public transporta-

tion, or any other new fixed route vehicle to be used for public transportation and for which a solicitation by such individual or entity is made later than 30 days after the date of enactment of this Act, if such bus, rail, or other vehicle is not readily accessible to and usable by individuals with disabilities, including individuals who use wheelchairs.

(2) USED VEHICLES.—If an individual or entity purchases or leases a used vehicle after the date of enactment of this Act, such individual or entity shall make demonstrated good faith efforts to purchase or lease a used vehicle that is readily accessible to and usable by individuals with disabilities, including individuals who use wheelchairs.

(3) REMANUFACTURED VEHICLES.—If an individual or entity remanufactures a vehicle, or purchases or leases a remanufactured vehicle, so as to extend its usable life for 5 years or more, the vehicle shall, to the maximum extent feasible, be readily accessible to and usable by individuals with disabilities, including individuals who use wheelchairs.

(c) PARATRANSIT AS A SUPPLEMENT TO FIXED ROUTE PUBLIC TRANSPORTATION SYSTEM.—If an individual or entity operates a fixed route public transportation system to provide public transportation, it shall be considered

discrimination, for purposes of this Act and section 504 of the Rehabilitation Act of 1973 (29 U.S.C. 794), for such individual or entity to fail to provide paratransit or other special transportation services sufficient to provide a comparable level of services as is provided to individuals using fixed route public transportation to individuals with disabilities, including individuals who use wheelchairs, who cannot otherwise use fixed route public transportation and to other individuals associated with such individuals with disabilities in accordance with service criteria established under regulations promulgated by the Secretary of Transportation.

(d) COMMUNITY OPERATING DEMAND RESPONSIVE SYSTEMS FOR THE GENERAL PUBLIC.—If an individual or entity operates a demand responsive system that is used to provide public transportation for the general public, it shall be considered discrimination, for purposes of this Act and section 504 of the Rehabilitation Act of 1973 (29 U.S.C. 794), for such individual or entity to purchase or lease a new vehicle, for which a solicitation is made later than 30 days after the date of enactment of this Act, that is not readily accessible to and usable by individuals with disabilities, including individuals who use wheelchairs unless the entity can demonstrate that such system, when viewed in its entirety, provides a level of service to individuals with disabilities equivalent to that provided to the general public.

(e) NEW FACILITIES.—For purposes of this Act and section 504 of the Rehabilitation Act of 1973 (29 U.S.C. 794), it shall be considered discrimination for an individual or entity to build a new facility that will be used to provide public transportation services, including bus service, intercity rail service, rapid rail service, commuter rail service, light rail service, and other service used for public transportation that is not readily accessible to and usable by individuals with disabilities, including individuals who use wheelchairs.

(f) ALTERATIONS OF EXISTING FACILITIES.—With respect to a facility or any part thereof that is used for public transportation and that is altered by, on behalf of, or for the use of an individual or entity later than 1 year after the date of enactment of this Act, in a manner that affects or could affect the usability of the facility or part thereof, it shall be considered discrimination, for purposes of this Act and section 504 of the Rehabilitation Act of 1973 (29 U.S.C. 794), for such individual or entity to fail to make the alterations in such a manner that, to the maximum extent feasible, the altered portion of the facility, the path of travel to the altered area, and the bathrooms, telephones, and drinking fountains serving the remodeled area are readily accessible to and usable by individuals with disabilities, including individuals who use wheelchairs.

(g) EXISTING FACILITIES, INTERCITY RAIL, RAPID RAIL, LIGHT RAIL, AND COMMUTER RAIL SYSTEMS, AND KEY STATIONS.—

(1) EXISTING FACILITIES.—Except as provided in paragraph (3), with respect to existing facilities used for public transportation, it shall be considered discrimination, for purposes of this Act and section 504 of the Rehabilitation Act of 1973 (29 U.S.C. 794), for an individual or entity to fail to operate such public transportation program or activity conducted in such facilities so that, when viewed in the entirety, it is readily accessible to and usable by individuals with disabilities, including individuals who use wheelchairs.

(2) INTERCITY, RAPID, LIGHT, AND COMMUTER RAIL SYSTEMS.—With respect to vehicles operated by intercity, light, rapid and commuter rail systems, for purposes of this Act and section 504 of the Rehabilitation Act of 1973 (29 U.S.C. 794), it shall be considered discrimination for an individual or entity to fail to have at least one car per train that is accessible to individuals with disabilities, including individuals who use wheelchairs, as soon as practicable but in any event in no less than 5 years.

(3) KEY STATIONS.—For purposes of this Act and section 504 of the Rehabilitation Act of 1973 (29

U.S.C. 794), it shall be considered discrimination for an individual or entity to fail to make stations in intercity rail systems and key stations in rapid rail, commuter rail and light rail systems readily accessible to and usable by individuals with disabilities, including individuals who use wheelchairs, as soon as practicable but in no event later than 3 years after the date of enactment of this Act, except that the time limit may be extended by the Secretary of Transportation up to 20 years for extraordinarily expensive structural changes to, or replacement of, existing facilities necessary to achieve accessibility.

SEC. 304. REGULATIONS.

(a) Attorney General.—Not later than 180 days after the date of enactment of this Act, the Attorney General shall promulgate regulations in an accessible format that implement this title (other than section 303), and such regulations shall be consistent with this title and with the coordination regulations under part 41 of title 28, Code of Federal Regulations (as in existence on January 13, 1978), applicable to recipients of Federal financial assistance under section 504 of the Rehabilitation Act of 1973 (29 U.S.C. 794).

(b) Secretary of Transportation.—

(1) In general.—Not later than 240 days after the date of enactment of this Act, the Secretary of

Transportation shall promulgate regulations in an accessible format that include standards applicable to facilities and vehicles covered under section 303.

(2) CONFORMANCE OF STANDARDS.—Such standards shall be consistent with the minimum guidelines and requirements issued by the Architectural and Transportation Barriers Compliance Board in accordance with section 604(b).

SEC. 305. ENFORCEMENT.

The remedies, procedures, and rights set forth in section 505 of the Rehabilitation Act of 1973 (29 U.S.C. 794a) shall be available with respect to any individual who believes that he or she is being or about to be subjected to discrimination on the basis of disability in violation of any provisions of this Act, or regulations promulgated under section 304, concerning public services.

TITLE IV—PUBLIC ACCOMMODATIONS AND SERVICES OPERATED BY PRIVATE ENTITIES

SEC. 401. DEFINITIONS.

As used in this title:

(1) COMMERCE.—The term "commerce" means travel, trade, traffic, commerce, transportation, or communication among the several States, or between the District of Columbia and any State or between any for-

eign country or any territory or possession and any State or the District of Columbia or between points in the same State but through another State or the District of Columbia or foreign country.

(2) PUBLIC ACCOMMODATION.—

(A) IN GENERAL.—The term "public accommodation" means privately operated establishments—

(i)(I) that are used by the general public as customers, clients, or visitors; or

(II) that are potential places of employment; and

(ii) whose operations affect commerce.

(B) INCLUSIONS.—Public accommodations referred to in clause (i)(I) include auditoriums, convention centers, stadiums, theaters, restaurants, shopping centers, inns, hotels, and motels (other than inns, hotels, and motels exempt under section 201(b)(1) of the Civil Rights Act of 1964 (42 U.S.C. 2000a(b)(1))), terminals used for public transportation, passenger vehicle service stations, professional offices of health care providers, office buildings, sales establishments, personal and public service businesses, parks, private schools, and recreation facilities.

1843

(3) Public transportation.—The term "public transportation" means transportation by bus or rail, or by any other conveyance (other than by air travel) that provides the general public with general or special service (including charter service) on a regular and continuing basis.

SEC. 402. PROHIBITION OF DISCRIMINATION BY PUBLIC ACCOMMODATIONS.

(a) General Rule.—No individual shall be discriminated against in the full and equal enjoyment of the goods, services, facilities, privileges, advantages, and accommodations of any place of public accommodation, on the basis of disability.

(b) Construction.—As used in subsection (a), the term "discriminated against" includes—

(1) the imposition or application of eligibility criteria that identify or limit, or tend to identify or limit, an individual with a disability or any class of individuals with disabilities from fully and equally enjoying any goods, services, facilities, privileges, advantages, and accommodations;

(2) a failure to make reasonable modifications in rules, policies, practices, procedures, protocols, or services when such modifications may be necessary to afford such privileges, advantages, and accommodations

unless the entity can demonstrate that making such modifications would fundamentally alter the nature of such privileges, advantages, and accommodations;

(3) a failure to take such steps as may be necessary to ensure that no individual with a disability is excluded, denied services, segregated or otherwise treated differently than other individuals because of the absence of auxiliary aids and services, unless the entity can demonstrate that taking such steps would result in undue burden;

(4)(A) a failure to remove architectural and communication barriers that are structural in nature in existing facilities, and transportation barriers in existing vehicles used by an establishment for transporting individuals (not including barriers that can only be removed through the retrofitting of vehicles by the installation of a hydraulic or other lift), where such removal is readily achievable; and

(B) where an entity can demonstrate that removal of a barrier under subparagraph (A) is not readily achievable, a failure to make such goods, services, facilities, privileges, advantages, and accommodations available through alternative methods if such methods are readily achievable;

(5) with respect to a facility or part thereof that is altered by, on behalf of, or for the use of an establishment later than one year after the date of enactment of this Act in a manner that affects or could affect the usability of the facility or part thereof, a failure to make the alterations in such a manner that, to the maximum extent feasible, the altered portion of the facility, the path of travel to the altered area, and the bathrooms, telephones, and drinking fountains serving the remodeled area, are readily accessible to and usable by individuals with disabilities;

(6) a failure to make facilities constructed for first occupancy later than 30 months after the date of enactment of this Act readily accessible to and usable by individuals with disabilities, except where an entity can demonstrate that it is structurally impracticable to do so, in accordance with standards set forth or incorporated by reference in regulations issued under this title; and

(7) in the case of an entity that uses a vehicle to transport individuals not covered under section 303 or 403—

(A) a failure to provide a level of transportation services to individuals with disabilities, in-

cluding individuals who use wheelchairs, equivalent to that provided for the general public; and

(B) purchasing or leasing a new bus, or vehicle that can carry in excess of 12 passengers, for which solicitations are made later than 30 days after the date of enactment of this Act, that is not readily accessible to and usable by individuals with disabilities, including individuals who use wheelchairs.

SEC. 403. PROHIBITION OF DISCRIMINATION IN PUBLIC TRANSPORTATION SERVICES PROVIDED BY PRIVATE ENTITIES.

(a) General Rule.—No individual shall be discriminated against on the basis of disability in the full and equal enjoyment of public transportation services provided by a privately operated entity that is primarily engaged in the business of transporting people, but is not in the principal business of providing air transportation, and whose operations affect commerce.

(b) Construction.—As used in subsection (a), the term "discrimination against" includes—

(1) the imposition or application by an entity of eligibility criteria that identify or limit, or tend to identify or limit, an individual with a disability or any class

of individuals with disabilities from fully enjoying the public transportation services provided by the entity;

(2) the failure of an entity to—

(A) make reasonable modifications consistent with those required under section 402(b)(2);

(B) provide auxiliary aids and services consistent with the requirements of section 402(b)(3); and

(C) remove barriers consistent with the requirements of section 402(b)(4); and

(3) the purchase or lease of a new vehicle (other than an automobile) that is to be used to provide public transportation services, and for which a solicitation is made later than 30 days after the date of enactment of this Act, that is not readily accessible to and usable by individuals with disabilities, including individuals who use wheelchairs.

SEC. 404. REGULATIONS.

(a) Accessibility Standards.—Not later than 240 days after the date of enactment of this Act, the Secretary of Transportation shall issue regulations in an accessible format that shall include standards applicable to facilities and vehicles covered under section 403.

(b) Other Provisions.—Not later than 240 days after the date of enactment of this Act, the Attorney General shall

issue regulations in an accessible format to carry out the remaining provisions of this title not referred to in subsection (a) that include standards applicable to facilities and vehicles covered under section 402.

(c) STANDARDS.—Standards included in regulations issued under subsections (a) and (b) shall be consistent with the minimum guidelines and requirements issued by the Architectural and Transportation Barriers Compliance Board in accordance with section 604(b).

SEC. 405. ENFORCEMENT.

Sections 802(i), 813, and 814 (a) and (d) of the Fair Housing Act (42 U.S.C. 3602(i), 3613, and 3614 (a) and (d)) shall be available with respect to any aggrieved individual, except that—

(1) any reference to a discriminatory housing practice or breach of a conciliation agreement shall be considered to be a reference to a practice that is discriminatory under this title concerning a public accommodation or public transportation service operated by a private entity; and

(2) subparagraph (B) of paragraph (1) and paragraphs (2) and (3) of subsection (a) of section 813 shall not apply.

TITLE V—TELECOMMUNICATIONS RELAY SERVICES

SEC. 501. DEFINITIONS.

As used in this title:

(1) COMMISSION.—The term "Commission" means the Federal Communications Commission.

(2) TELECOMMUNICATIONS RELAY SERVICES.—The term "telecommunications relay services" means services that enable simultaneous communication to take place between individuals who use TDDs or other nonvoice terminal devices and individuals who do not use such devices.

(3) TDD.—The term "TDD" means a Telecommunication Device for the Deaf, a machine that employs graphic communications in the transmission of coded signals through the nationwide telecommunications system.

SEC. 502. TELECOMMUNICATIONS RELAY SERVICES.

(a) GENERAL RULE.—It shall be considered discrimination for purposes of this Act for any common carrier, as defined in section 3(h) of the Communications Act of 1934 (47 U.S.C. 153(h)), that offers telephone services to the general public, to fail to provide, not later than 1 year after the date of enactment of this Act, interstate or intrastate telecommunication relay services so that such services provide indi-

viduals who use nonvoice terminal devices because of disabilities with opportunities for communications that are equal to those provided to their customers who are able to use voice telephone services, except that it shall not be considered discrimination for such a common carrier to fail to provide such services in any State to which subsection (b) applies if such services are provided under subsection (b).

(b) STATE DISCRIMINATION.—It shall be considered discrimination by a State, that designates an entity to provide interstate or intrastate telecommunication relay services to individuals throughout the entire State in a manner consistent with regulations issued by the Commission, for purposes of this Act, for such State, through the designated entity, to fail to provide, not later than 1 year after the date of enactment of this Act, interstate or intrastate telecommunication relay services so that such services provide individuals who use nonvoice terminal devices because of disabilities with opportunities for communications that are equal to those provided to their customers who are able to use voice telephone services.

(c) CONSTRUCTION.—Nothing in this title shall be construed to discourage or impair the development of improved or future technology designed to improve access to telecommunications services for individuals with disabilities.

SEC. 503. REGULATIONS.

Not later than 180 days after the date of enactment of this Act, the Commission shall issue regulations to carry out this title, and such regulations shall establish minimum standards and guidelines for telecommunications relay services.

SEC. 504. ENFORCEMENT.

(a) CIVIL ACTIONS.—Section 802(i), 813, and 814 (a) and (d) of the Fair Housing Act (42 U.S.C. 3602(i), 3613, and 3614 (a) and (d)) shall be available with respect to any aggrieved individual, except that—

(1) any reference to a discriminatory housing practice or breach of a conciliation agreement shall be considered to be a reference to a practice that is discriminatory under this title concerning the provision of an appropriate interstate or intrastate telecommunication relay service; and

(2) subparagraph (B) of paragraph (1) and paragraphs (2) and (3) of subsection (a) and subsection (d) of section 813 shall not apply.

(b) ADMINISTRATIVE ENFORCEMENT.—

(1) IN GENERAL.—The Commission shall enforce the provisions of this title.

(2) APPLICABLE ENFORCEMENT PROVISIONS.—The remedies, procedures, and rights set forth in sections 206, 207, 208, and 209 of the Communications Act of 1934 (47 U.S.C. 206, 207, 208, and 209) and

in title IV of the Communications Act of 1934 (47 U.S.C. 401 et seq.) shall apply with respect to the enforcement of this title, except that nothing in this subsection shall be construed to limit or restrict in any manner the remedies, procedures, or rights set forth in subsection (a).

(3) CEASE AND DESIST ORDERS.—Whenever, after full opportunity for hearing, on a complaint or under an order for investigation and hearing made by the Commission on the initiative of the Commission, the Commission shall be of the opinion that any carrier, or any State as described in section 502(b), is or will be in violation of this title or of any regulation issued under this title, the Commission shall—

(A) order that the carrier or State cease and desist from such violation to the extent that the Commission finds that such violation exists or will exist; and

(B) take other actions as it finds appropriate and necessary.

(4) PENALTIES.—

(A) IN GENERAL.—Any carrier or State to which section 502(b) applies that knowingly fails or neglects to comply with this title or of any regulation or order made by the Commission in car-

rying out this title shall forfeit to the United States the sum of $10,000 for each such offense.

(B) SEPARATE OFFENSES.—Each distinct violation of the provisions of this title shall be a separate offense under subparagraph (A). In case of a continuing violation, each day shall be considered a separate offense.

(C) RECOVERING FORFEITURES.—Such forfeitures shall be payable and recoverable in the same manner as prescribed in section 504 of the Communications Act of 1934 (47 U.S.C. 504).

TITLE VI—MISCELLANEOUS PROVISIONS

SEC. 601. CONSTRUCTION.

(a) REHABILITATION ACT OF 1973.—Nothing in this Act shall be construed to reduce the scope of coverage or apply a lesser standard than the coverage required or the standards applied under title V of the Rehabilitation Act of 1973 (29 U.S.C. 790 et seq.) or the regulations issued by Federal agencies pursuant to such title.

(b) OTHER LAWS.—Nothing in this Act shall be construed to invalidate or limit any other Federal law or law of any State or political subdivision of any State or jurisdiction that provides greater protection for the rights of individuals with disabilities than are afforded by this Act.

(c) RELATIONSHIP AMONG TITLES.—The requirements contained in titles I through V shall be construed in a manner that is consistent with the other provisions of this Act, and any apparent conflict between provisions of this Act shall be resolved by reference to the title that specifically covers the type of action in question.

SEC. 602. PROHIBITION AGAINST RETALIATION.

No individual shall discriminate against any other individual because such other individual has opposed any act or practice made unlawful by this Act or because such other individual made a charge, testified, assisted, or participated in any manner in an investigation, proceeding, or hearing under this Act.

SEC. 603. STATE IMMUNITY.

A State shall not be immune under the Eleventh Amendment to the Constitution of the United States from an action in Federal court for a violation of this Act. In any action against a State for a violation of the requirements of this Act, remedies (including remedies both at law and in equity) are available for such a violation to the same extent as such remedies are available for such a violation in an action against any public or private entity other than a State.

SEC. 604. REGULATIONS BY THE ARCHITECTURAL AND TRANSPORTATION BARRIERS COMPLIANCE BOARD.

(a) ISSUANCE OF GUIDELINES.—Not later than 6 months after the date of enactment of this Act, the Architectural and Transportation Barriers Compliance Board shall issue minimum guidelines that shall supplement the existing Minimum Guidelines and Requirements for Accessible Design for purposes of sections 304 and 404.

(b) CONTENTS OF GUIDELINES.—The guidelines issued under subsection (a) shall establish additional requirements, consistent with this Act, to ensure that buildings, facilities, and vehicles are accessible, in terms of architecture and design, transportation, and communication, to individuals with disabilities.

SEC. 605. ATTORNEY'S FEES.

In any action or administrative proceeding commenced pursuant to this Act, the court, or agency, in its discretion, may allow the prevailing party, other than the United States, a reasonable attorney's fee, including litigation expenses, and costs, and the United States shall be liable for the foregoing the same as a private individual.

SEC. 606. EFFECTIVE DATE.

This Act shall become effective on the date of enactment.

Mr. Edwards. Yesterday, the Senate Labor and Human Resources Committee marked up the Senate companion bill, S. 933, and unanimously adopted a substitute by its key sponsors, Senators Harkin and Kennedy. I believe the ADA must contain both comprehensive antidiscrimination protection and an effective enforcement mechanism. The compromise worked out between the Senate and the Bush administration will be carefully analyzed by the subcommittee to determine whether it meets these goals. We are pleased, of course, that President Bush has joined us and has endorsed the ADA.

The Rehabilitation Act of 1973 was our first attempt to provide some degree of antidiscrimination protections for persons with disabilities. We continued this progress last year with the enactment of one of the major accomplishments of the subcommittee, as well as the last Congress, the Fair Housing Amendments Act of 1988. The Fair Housing Act now prohibits discrimination against persons with disabilities and requires new, multifamily construction to be accessible and adaptable for the handicapped.

The ADA prohibits discrimination against persons with disabilities specifically in employment, public services, public accommodations, and communications. Because of its scope, the bill has been referred to four committees and numerous subcommittees. This subcommittee's primary interest and jurisdiction falls in the public accommodation title, and this title will be explored in hearings after the August recess.

Does the gentleman from California have an opening statement?

Mr. Dannemeyer. No, Mr. Chairman.

Mr. Edwards. Very good.

Our first witness this morning, who we are really honored to have with us, is James S. Brady, the vice chairman of the National Organization on Disability. Mr. Brady served as an assistant to the President and Press Secretary to President Reagan. Jim Brady is well known and respected by both Democrats and Republicans for his courage, his political insight and his sharp wit. With Mr. Brady is Mark Lewis, director of communications for the National Organization on Disability.

We welcome both of you. You may proceed.

STATEMENT OF JAMES S. BRADY, VICE CHAIRMAN, NATIONAL ORGANIZATION ON DISABILITY, ACCOMPANIED BY MARK LEWIS, DIRECTOR OF COMMUNICATIONS

Mr. Brady. May I say at the start that I never thought I would be in the disability community. As you know, I joined it in an instant 8 years ago, somewhat against my wish.

Ever since I took a bullet in the head, I have had to relearn a lot. I have had to learn to read again, to talk again, and to walk again. I have also learned what it's like to be one of the 37 million people in America with some form of disability. I have come to know the daily problems, frustrations and needs involved. I'm the real article now.

I come before you today as a fiscal conservative, as a Republican, and as a man in his forties with a disability.

If I sound slightly partisan for the next few moments, forgive me. While some of my best friends are Democrats, I am especially proud that the Americans with Disabilities Act was developed by 15 Republicans appointed to the National Council on Disability by my former boss, President Reagan.

Many years earlier, in the fifties, another Republican President, Dwight Eisenhower, alerted this Nation to the staggering costs to society of Federal Government disability programs and benefits. Eisenhower warned us that such programs increase the dependency of disabled people. He urged instead that it would be far better if people with disabilities became taxpayers and consumers and thus reduce the terrible costs to society. That conservative point of view is embodied in the purposes of the Americans with Disabilities Act today.

Still another Republican, George Bush, back in 1983 when he was Vice President, identified new economic forces and the changing nature of our economy which, he said, require changes in attitudes toward disabled people. "We only have to expand our consciousness to be prepared to accept this expansive new world, and the only real stumbling block is prejudice," Mr. Bush declared.

I salute Mr. Bush. He clearly knows more than most nondisabled people about what it's like to be a disabled person. In June 1988, for example, he said that "Although handicapped children and adults have made many gains in the last decade, the stark fact remains that unnecessary segregation and exclusion of handicapped people continues, and as a result disabled adults and families with disabled children suffer from stress, depression and isolation."

Last summer Mr. Bush called for programs and policies that promote independence, freedom of choice, and productive involvement in the mainstream. That means meaningful access to all aspects of society.

In August of last year, in his acceptance speech at the Republican National Convention in New Orleans, Mr. Bush made a pledge: "I am going to do whatever it takes to make sure the disabled are included in the mainstream. For too long they've been left out. But they're not going to be left out any more." Then, as President Bush, he underlined his sensitivity before a joint session of Congress on February 9 of this year: "Disabled Americans," he said, "must become full partners in America's opportunity society."

When the Americans with Disabilities Act was first introduced, President Bush publicly identified the single main purpose of his legislation by saying, "Disabled people do not have the same civil rights protections as women and minorities."

While I am proud as a Republican that conservatives and Republicans have been in the forefront of this significant movement to prohibit discrimination on the basis of disability, I hasten to add this observation.

Disability knows no party lines. There is nothing partisan about disability because no one is immune. Disability knows no distinctions. Anyone can join the ranks tonight. If we are not born with a disability, any of us could find ourselves in a wheelchair or without sight or without hearing, if we live long enough. People don't like to think about this, but disability is a fact of life, the same as being white or black or Hispanic.

This is why the Americans with Disabilities Act is good for society as a whole and warrants bipartisan support. Indeed, Democrats in Congress have played a significant role in shaping, sponsoring and advancing this bill. This bill should be welcomed by nondisabled people, Republicans and Democrats alike, because the number of Americans with disabilities is increasing. As our population ages and medical technology prolongs life, most of us eventually will be in the disability community. Once you're in the disability community, you will want the same civil rights protections that women and other minority groups have. That is why for the past few years I have had a motto: "Get those barriers down."

When barriers come down in stores of every kind, more disabled people can shop and use professional services, and that means more consumers and increased sales of products. In short, getting the barriers down in privately operated establishments, especially stores, is good for business and good for our Nation's economy.

When barriers in public transportation come down, it enables people to be employed and to participate more fully in daily activities. Right now, I can't even think about taking a bus to work because of the uncertainties of wheelchair-accessible buses.

After 8 years of rehabilitation, I am now in a new stage. As vice chairman of the National Organization on Disability, I am voluntarily involved in disability work not only because I happen to be a member of the disability community, but because I believe in the principle that everyone has a part to play in American life and I have faith that Americans will live up to its basic democratic principles.

Therefore, since March of this year, I have been leading a nationwide educational and public affairs campaign on behalf of our organization. The name of this campaign is "Calling on America." My campaign and the Americans with Disabilities Act have the same focus.

A Federal law such as the Americans with Disabilities Act would significantly advance the efforts of our community network because a Federal law would establish and maintain the minimum or basic structure of what accessibility must mean. Experience has shown that no civil right has ever worked without legislation.

The conservative columnist George Will has written that "we are barely at the beginning of the last great inclusion in American life—the inclusion of people with disabilities." I believe that passage of the ADA will bring about the fundamental and necessary changes in the paternalistic way our country has traditionally looked down at disability.

Mr. Chairman, the winds of change are blowing. More disabled people are identifying with common goals and more of us are beginning to identify the external impediments in society that prevent or limit us from enjoying opportunity and full participation.

As you consider this bill, I am reminded of the commercial that said, "You've come a long way, baby." I would add, "But there's still a long way to go, miles to go, because democracy is always unfinished business." I am optimistic that your approval of this vital legislation will expand our democracy. Then all America will gain.

I am delighted that yesterday the President of the United States endorsed the Americans with Disabilities Act and that the Senate

Committee on Labor and Human Resources unanimously voted to recommend the bill to the full Senate.

Thank you.

Mr. EDWARDS. Thank you, Mr. Brady. You've come a long way and we're very proud of you. That's a splendid statement. It gets us off to a wonderful start on this important set of hearings.

[The prepared statement of Mr. Brady follows:]

PREPARED STATEMENT OF JAMES S. BRADY, VICE CHAIRMAN, NATIONAL ORGANIZATION ON DISABILITY

My name is Jim Brady. I am the Vice Chairman of the National Organization on Disability, a private organization.

May I say at the start that I never thought I would be in the disability community. As you know, I joined it in an instant eight years ago--somewhat against my wish.

Ever since I took a bullet in the head, I have had to relearn a lot. I had to learn to read again, to talk again and to walk again.

I have also learned what it is like to be one of the 37 million people in America with some form of disability. I have come to know the daily problems, frustrations and needs involved. I'm the real article now.

I come before you today as a fiscal conservative, as a Republican, and as a man in his forties with a disability.

If I sound slightly partisan for the next few moments, forgive me. While some of my best friends are Democrats, I am especially proud that the Americans with Disabilities Act was developed by 15 Republicans appointed to the National Council on Disability by my former boss, President Reagan.

Many years earlier, in the Fifties, another Republican President, Dwight Eisenhower, alerted this nation to the staggering costs to society of Federal government disability benefits and programs. Eisenhower warned us that such programs increase the dependency of disabled people. He urged, instead, that it would be far better if people with disabilities became taxpayers and consumers and thus reduce the terrible costs to society. That conservative point of view is embodied in the purposes of the Americans with Disabilities Act today.

Still another Republican, George Bush, back in 1983 when he was Vice President, identified new economic forces and the changing nature of our economy which, he said, require changes in attitudes toward disabled people. "We only have to expand our consciousness to be prepared to accept this expansive new world, and the only real stumbling block is prejudice," Mr. Bush declared.

I salute Mr. Bush; he clearly knows more than most non-disabled people about what it's like to be a disabled person. In June 1988, for example, he said that "Although handicapped children and adults have made many gains in the last decade, the stark fact remains that unnecessary segregation and exclusion of handicapped people continues, and as a result disabled adults and families with disabled children suffer from stress, depression and isolation." Last summer Mr. Bush also called for "programs and policies that promote independence, freedom of choice and productive involvement in the mainstream. That means, in other words, meaningful access to all aspects of society." In August last year, in his acceptance speech at the Republican National Convention in New Orleans, Vice President Bush made a pledge: " I am going to do whatever it takes to make sure the disabled are included in the mainstream. For too long they've been left out. But they're not going to be left out anymore." Then, as President Bush, he underlined his sensitivity before a joint session of Congress on February 9 this year: "Disabled Americans", he said, "must become full partners in America's opportunity society." When the Americans with Disabilities Act was first introduced, President Bush publicly identified the single main purpose of this legislation by saying: "Disabled people do not have the same civil rights protections as women and minorities."

BEST COPY AVAILABLF

While I am proud, as a Republican, that conservatives and Republicans have been in the forefront of this significant movement to prohibit discrimination on the basis of disability, I hasten to add this observation:

Disability knows no party lines. There is nothing partisan about disability because no one is immune. Disability knows no distinctions. Anyone can join the ranks tonight. If we are not born with a disability, any of us could find ourselves in a wheelchair or without sight or without hearing, if we live long enough. People don't like to think about this, but disability is a fact of life, the same as being white or black or Hispanic.

And this is why the Americans with Disabilities Act is good for society as a whole and warrants bipartisan support. Indeed, Democrats in Congress have played leading roles in shaping, sponsoring and advancing this bill. This bill should be welcomed by non-disabled people, Republicans and Democrats alike, because the number of Americans with disabilities is increasing. As our population ages and medical technology prolongs life, most of us eventually will be in the disability community. Once you're in the disability community, you will want the same civil rights protections that women and other minority groups have. That is why for the past few years I have had a motto: "Get those barriers down."

When barriers come down in stores of every kind, more disabled people can shop and use professional services, and that means more consumers and increased sales of products. In short, getting the barriers down in privately operated establishments, especially stores, is good for business and good for our nation's economy.

When barriers in public transportation come down, it enables people to be employed and to participate more fully in daily community activities. Right now, I can't even think about taking a bus to work because of the uncertainties of wheelchair accessible buses.

After eight years of rehabilitation, I am now in a new stage. As Vice Chairman of the National Organization on Disability, I am voluntarily involved in disability work not only because I happen to be a member of the disability community, but because I believe in the principle that everyone has a part to play in American life and I have faith that America will live up to its basic democratic principles.

Therefore, since March of this year, I have been leading a nationwide educational and public affairs campaign on behalf of our organization. The name of the campaign is Calling on America. My campaign and the Americans with Disabilities Act have the same focus.

In my public appearances, media interviews, meetings and correspondence, I am calling on America to meet a great challenge. The challenge is to increase the acceptance, dignity and participation of America's citizens with disabilities. I am calling on national, state and local leaders; business and labor; educators, religious leaders and the media. I am calling on all to join the National Organization on Disability and me in this effort.

My message is simple: Help mainstream people with disabilities. We do not want pity or sympathy. We want opportunity and fairness. We want acceptance, and we want to participate and be included and contribute to our nation, just like everybody else.

I am also calling on disabled people themselves to speak out forcefully about our rights as citizens and our desire to help enrich America anew.

The mission of our organization -- to have non-disabled and disabled people participating equally in everyday life -- is carried out at the local level where volunteers develop projects that expand the participation of disabled people and benefit the wide community. While communities in Florida, California and Wisconsin, for example, are doing wonderful work, progress around the county is uneven; voluntarism is important, but there are barriers that good-will cannot overcome.

A Federal law such as the Americans with Disabilities Act would significantly advance the efforts of our community network because a Federal law would establish and maintain the minimum or basic structure of what accessibility must mean. Experience has shown that no civil right has ever worked without legislation.

The conservative columnist George Will has written that "We are barely at the beginning of the last great inclusion in American life - the inclusion of people with disabilities." I believe that passage of the ADA will bring about the fundamental and necessary changes in the parternalistic way our country has traditionally looked at disability.

Mr. Chairman, the winds of change are blowing. More disabled people are identifying with common goals and more of us are beginning to identify the external impediments in society that prevent or limit us from enjoying opportunity and full participation.

As you consider this bill, I am reminded of the commercial that said, "You've come a long way, baby." I would add, 'But there's still a long way to go because Democracy is always unfinished business.' I am optimistic that your approval of this vital legislation will expand our democracy. Then all America will gain.

I am delighted that yesterday the President of the United States endorsed the Americans with Disabilities Act and that the Senate Committee on Labor and Human Resources unamimously voted to recommend this bill to the full Senate.

Thank you.

Mr. **Edwards**. You know, when I was growing up, I never dreamed that my family would be connected with disabilities. You just don't think in those terms, and I'm sure you didn't think in those terms at all. As you say, it happened in an instant.

Now I have found that, of my four grandchildren, two have serious disabilities, and one of my sons has a serious disability. Let me tell you, Mr. Brady, there is a lot of discrimination that goes on.

Mr. **Brady**. I know.

Mr. **Edwards**. My son, who has a disability, is a fine lawyer, with a fine mind, and has a dickens of a time getting any law firm to take him seriously, to even have him fill out an application. It's just shocking, really. I wouldn't have thought in those terms if we hadn't had these personal experiences.

Now, you have to leave at what time, Mr. Brady?

Mr. **Brady**. Right now.

Mr. **Edwards**. OK. You've got to go to the doctor.

Mr. **Brady**. I have to see the physical "terrorist."

[Laughter.]

Mr. **Edwards**. Thank you very much.

Mr. Dannemeyer, I'm sorry I took all the time.

Mr. **Dannemeyer**. That's all right, Mr. Chairman. I want to thank Mr. Brady for his contribution.

Mr. **Brady**. Thank you.

Mr. **Dannemeyer**. Good luck with your "terrorist."

Mr. **Edwards**. We also have with us Mr. James from Florida. I'm sure that all the members of the committee will read your statement with great appreciation. Thank you and goodbye.

Mr. **James**. Thank you so much for your testimony.

Mr. **Edwards**. That, indeed, was a treat, when you think that it wasn't so long ago that Mr. Brady was lying on the sidewalk in front of the hotel and we all thought he was dead. It was announced he had been killed on television, and here he is just doing fine. A real brave, intelligent, and wonderful man.

Our next witness is Peter Addesso of the Paralyzed Veterans of America [PVA]. Mr. Addesso served with the U.S. Marine Corps in Vietnam. He was wounded during the Tet offensive. Mr. Addesso, we welcome you. We have worked with PVA before and appreciate the help PVA has given us in the past. We're delighted to have you here.

STATEMENT OF PETER ADDESSO, PARALYZED VETERANS OF AMERICA

Mr. **Addesso**. Thank you.

My name is Peter Addesso. I live in Harriman, NY, with my wife and two daughters. I speak today as a disabled veteran, representing thousands of brave Americans who willingly fought for their country in faraway wars. I speak on behalf of men who lost limbs while fighting for freedom, only to return home to find that they had lost virtually all the freedoms that every American takes for granted—like taking a bus to work, going to the bank, taking your children to the movies, or just going out to dinner.

As a young man, I dreamed of a career in the Marine Corps. I believed in the importance of serving my country and was proud to fight for freedom—the highest American ideal. When I was 17, I enlisted, and after 2 years I was shipped off to Vietnam. Five months after I arrived in Vietnam, my hopes for officers candidate school were destroyed and my life changed forever. I was only 19 at the time.

During the 1968 Tet offensive, I was a squad leader, fighting to hold our position at the Girl's University in Hue City. On the second day, I took a direct hit from a rifle grenade and I became a paraplegic.

Six weeks later I was back in the States at St. Alban's Naval Hospital. I spent the next several months at the Bronx Veterans Hospital going through long hours of rehabilitation to learn how to use a wheelchair and to take care of my personal needs. When I left the hospital, I moved into my mother's house in Lynbrook, a small community on Long Island.

Despite this setback, I was still looking forward to getting on with my life. I was totally unprepared for the barriers and outright discrimination I encountered. My doctor at the veterans hospital had recommended swimming as the best therapy for me. The only public pool was in Valley Stream, a few miles away. I didn't need any special equipment and the mayor even wrote me a letter of permission. But the park commissioner who controlled the pool wouldn't let me in. I will never forget his words. He said to me, "It's not my fault you went to Vietnam and got crippled." I was shocked at this. But I soon learned that his attitude wasn't unique.

I fought with that commissioner and he reluctantly allowed me into the kiddie pool, which wasn't deep enough for me to swim. After another long fight, I was finally led into the adult pool. That was almost 20 years ago. Things haven't changed much in 20 years. I still read stories about disabled people who have been turned away from that pool.

My community is still fraught with all the physical barriers that exist in most cities and towns across America—the bus I could never ride, the drycleaner, grocery store, theater and bank that I can't get into. Sometimes, even when a place is accessible, discriminatory attitudes, often based on people's unfounded fears about disability, shut me out. For example, I was once thrown out of a Howard Johnson's restaurant because I was considered a "fire hazard."

I now serve as a hospital liaison officer at the Eastern Paralyzed Veterans Association in New York. I visit 16 VA hospitals to work with spinal cord injury patients. Probably the hardest part of my job is working with people who have just been injured and who are going through initial rehabilitation. I never know how to prepare them for their new second-class citizenship status. I can never prepare them for the discrimination they will face, the barriers that will shut them out, and the doors of employment that will never open to them.

I know that my experiences are not unique. All other disabled veterans as well as millions of Americans with disabilities face barriers which limit their full and equal partnership in everyday life. A day does not go by in which some form of subtle discrimination occurs that affects my life or another person's life who has a disability. And some discrimination is not so subtle.

All of us know first hand what it is like to be denied access to theaters or stores, restaurants, office buildings and other places of business simply because a doorway is too narrow or an entrance has steps, or someone doesn't like the way we look.

Enactment of the Americans with Disabilities Act will finally send a message to all Americans, that discrimination against persons with disabilities, no matter whether it is subtle or overt, will no longer be tolerated. I truly believe that this legislation will enable me and my fellow disabled Americans to finally enjoy the freedoms for which we fought and sacrificed so much for.

When I returned home from Vietnam, I received a Purple Heart, a Combat Action Award, and the Vietnamese Cross of Gallantry. Although I am very proud of these honors, they are no substitute for the freedoms I lost to achieve them. On behalf of all veterans who have fought so hard and sacrificed so much for this great Nation, I urge you and your colleagues to act quickly and enact the Americans with Disabilities Act of 1989.

Thank you.

Mr. Edwards. Thank you very much, Mr. Addesso. That's excellent and helpful testimony.

[The prepared statement of Mr. Addesso follows:]

PREPARED STATEMENT OF PETER ADDESSO, PARALYZED VETERANS OF AMERICA

My name is Peter Addesso. I live in Harriman, New York with my wife and two daughters. I speak today as a disabled veteran, representing thousands of brave Americans who willingly fought for their country in faraway wars. I speak on behalf of men who lost limbs while fighting for freedom, only to return home to find that they had lost virtually all the freedoms that every American takes for granted - like taking a bus to work, going to the bank, taking your children to the movies or out to dinner.

As a young man I dreamed of a career in the Marine Corps. I believed in the importance of serving my country and was proud to fight for freedom - the highest American ideal. When I was 17, I enlisted, and after two years, was shipped to Viet Nam. Five months after I arrived in Viet Nam, my hopes for Officers Candidate School were destroyed and my life changed forever. I was nineteen.

During the Tet Offensive, I was a squad leader, fighting to hold our position at the Girl's University in Hue City. On the second day, I took a direct hit from a rifle grenade and I became a paraplegic.

Six weeks later I was back in the States at St. Alban's Naval Hospital. I spent the next several months at the Bronx Veterans Hospital going through long hours of rehabilitation to learn how to use a wheelchair and to take care of my personal needs. When I left the hospital, I moved into my mother's house in Lynbrook, a small community on Long Island..

Despite this setback, I was still looking forward to getting on with my life. I was totally unprepared for the barriers and outright discrimination I encountered. My doctor at the Veterans

Hospital had recommended swimming as the best therapy for me. The only public pool was in Valley Stream, a few miles away. I didn't need any special equipment and the mayor even wrote me a letter of permission, but the Park Commissioner, who controlled the pool, wouldn't let me in. I will never forget his words: "It's not my fault that you went to Viet Nam and got crippled." I was shocked, but I soon learned that his attitude wasn't unique.

I fought with that Commissioner and he reluctantly allowed into the kiddie pool, which wasn't deep enough for me to swim. After another long fight, I was finally let into the adult pool. That was almost twenty years ago. Things haven't changed much in twenty years. I still read stories about disabled people who have been turned away from that pool.

My community is still fraught with all the physical barriers that exist in most cities and towns across America -- the bus I can never ride, the dry cleaner, grocery store, theatre and bank I can't get into. Sometimes, even when a place is accessible, discriminatory attitudes, often based on people's unfounded fears about disability, shut me out. For example, I was once thrown out of a Howard Johnson's restaurant because I was a "fire hazard".

I now serve as a Hospital Liaison Officer at Eastern Paralyzed Veterans Association in New York. I visit 16 VA hospitals to work with spinal cord injury patients. Probably the hardest part of my job is working with people who have just been injured and who are going through initial rehabilitation. I never know how to prepare them for their new second-class citizenship status -- I can never prepare them for the discrimination they will face, the barriers that will shut them out, the doors of employment that will never open.

I know that my experiences are not unique. All other disabled veterans as well as millions of Americans with disabilities face barriers which limit their full and equal partnership in everyday life. A day does not go by in which some form of subtle discrimination occurs that affects my life or another person's life who has a disability. And some discrimination is not so subtle.

All of us know first hand what it is like to be denied access to theatres, stores, restaurants, office buildings and other places of business simply because a doorway is too narrow or an entrance has steps or someone doesn't like the way we look.

Enactment of the Americans with Disabilities Act will finally send a message to all Americans - that discrimination against persons with disabilities, no matter whether it is subtle or overt, will no longer be tolerated. I truly believe that this legislation will enable me and my fellow disabled veterans to finally enjoy the freedoms for which we fought and sacrificed so much for.

When I returned from from Viet Nam, I received a Purple Heart, a Combat Action Award and the Vietnamese Cross of Gallantry. Although I am very proud of these honors, they are no substitute for the freedoms I lost to achieve them. On behalf of all veterans who have fought so hard and sacrificed so much for this great nation, I urge you and your colleagues to act quickly and enact the Americans with Disabilities Act of 1989.

Mr. **Edwards**. Mr. Dannemeyer, do you have any questions?

Mr. **Dannemeyer**. Yes, I do, Mr. Chairman.

Mr. **Edwards**. The gentleman is recognized.

Mr. **Dannemeyer**. I want to thank you for what you have given to us today in coming here to testify, and I want to thank you also as a veteran of the Korean war for the sacrifices you've made in fighting for this country's principles. I just want you to know I appreciate the contribution and sacrifice you've made.

Mr. **Addesso**. Thank you.

Mr. **Dannemeyer**. I want to ask you a question about your knowledge of this act, the ADA. I don't mean to put you on the spot. I don't know how much you've read it or studied it, or to what extent.

For instance, are you comfortable with the idea that within the definition of a disabled person this act would also extend the coverage to a drug addict or an alcoholic?

Mr. **Addesso**. I think it should go to all Americans, no matter what kind of disability they have. Everybody has that freedom. I wouldn't leave a certain class out of it.

Mr. **Dannemeyer**. You are a paraplegic and, of course, I think are fully qualified to perform a variety of work tasks in that capacity, and would not, as I see it, present a hazard to yourself or coworkers in terms of safety in performing those tasks.

But let's think for a moment, if we, as a public policy, extend the coverage of this act to persons who are alcoholics, for instance, do you believe that a person who has exhibited or professes to be an alcoholic should be permitted to drive a bus in the cities of America?

Mr. **Addesso**. Let me say this, sir. A person with a disability overcomes it at a certain point. That shouldn't hinder his performance in the future. I mean, it happened in the past. If he has recovered from it, there should be no way that he should be turned away from society. He should be able to do his job as before. People overcome their disabilities every single day.

Mr. **Dannemeyer**. What if the busdriver who claimed to be a recovered alcoholic becomes involved in an accident with the bus, injures or kills somebody, and an investigation discloses that that person had a blood alcohol level that fits the definition of intoxicated. Do you believe the act should then extend coverage so as to require the bus company to hire that person again as an alcoholic?

Mr. **Addesso**. I have to be honest with you. I have no legal knowledge of the questions that you're asking me. I mean, I think those are legal questions and I'm not qualified to answer.

Mr. **Dannemeyer**. No, no. I think it's a public policy question about this act. What I think is happening here, quite frankly, or may be happening here, is that the proponents of this legislation, including yourself and other groups, are seeking to extend the coverage of the benefits of the protection that's desired, when a person is presented such as yourself in a wheelchair, who has suffered a tragic loss of limbs in defending your country, for groups of people that the American public I'm not sure is willing to extend that benefit for.

For instance, I used the illustration of somebody who is an alcoholic driving a bus. How about a drug addict who is an airline pilot? Do you believe an airline company should be required to hire a pilot to fly a plane, putting at risk the lives of people, who previously was a drug addict?

Mr. **Addesso**. Previous, that's the key. I mean, he probably overcame his disability. I don't think they should shut him out of that. I don't think there should be any limitation on it.

Mr. **Dannemeyer**. What if he's a current user?

Mr. **Addesso**. That's a different story. I mean, if he's a current user, I wouldn't want him on a plane.

Mr. **Dannemeyer**. I suspect that most Americans would not.

Are you familiar, sir, that this act extends the benefits of protection to persons with a communicable disease?

Mr. **Addesso**. Yes, I am.

Mr. **Dannemeyer**. For example, HIV carriers, for instance, are included within the coverage of the act. HIV carriers, a high percentage of them, manifest dementia, a deterioration——

Mr. **Addesso**. Personally, I feel we shouldn't discriminate against anybody. That's how I feel about it.

Mr. **Dannemeyer**. How about to the airline pilot who is HIV positive, and we know that 40 to 50 percent of persons in that category exhibit dementia, deterioration of the brain? Do you believe that person should be flying an airplane?

Mr. **Addesso**. If medical judgment has found him to be sound, yes, I do.

Mr. **Dannemeyer**. Well, at some point——

Mr. **Addesso**. I'm sure they're not going to just let him on a plane without having a medical clearance.

Mr. **Dannemeyer**. That's the question. That's the question, sir. Who gets to decide; who has the burden of proof.

You know, if the person who is HIV positive comes to the airline and says "I want to fly this plane, even though I'm HIV positive," at what point do we know where the deterioration of the immune system as a result of the virus in that person's blood will result in deterioration of the mind, where it impairs their ability to safely fly the plane? I mean, is it sound public policy to say absolutely that being an HIV carrier gives that individual the right to compel that airline, under all circumstances, to let him fly the plane?

Mr. **Addesso**. Well, I think if the time comes, I think we should let legal counsel figure that one out. But I don't think——

Mr. **Dannemeyer**. What I'm suggesting, sir, is that I suspect there may be groups seeking the coverage of this act that go beyond, far beyond what the sensibilities and sympathies of the American public are willing to do in the way of accommodations for persons who have suffered genuine disabilities. That's the only reason I'm raising these questions.

I thank you very much for your contribution.

Mr. **Addesso**. I realize that. Thank you.

Mr. **Edwards**. Mr. Addesso, there is nothing in this bill, to your knowledge, that would require somebody to hire somebody who is not qualified for the job?

Mr. **Addesso**. Not from what I've read.

Mr. **Edwards**. That's right. That's the whole crux of the bill. We're talking about qualified handicapped people.

Mr. **Addesso**. Exactly.

Mr. **Edwards**. And disabled people who are discriminated against despite the fact that they are qualified for the job.

Mr. **Addesso**. That's right.

Mr. **Edwards**. The gentleman from Florida.

Mr. **James**. Thank you so much for your testimony. I have no questions at this time, thank you.

Mr. **Edwards**. Mr. Addesso, we are running into some opposition from the business community. If Mr. Brady was still here, I was going to ask him about that because he very proudly said—and he should be proud of it—that he's a good Republican and he has a lot of friends in the Republican Party and, generally speaking, that's a lot of the business community. But we're getting a lot of flak from the business community on this bill. They say it will cost too much money. The private bus companies say, "Look, we're going to go belly up if we have to make these changes."

What's your response to that?

Mr. **Addesso**. There's a lot of things in this country that cost a lot of money. I think this is well worth the effort and the money, no matter what they have to restructure or change.

Mr. **Edwards**. Thank you very much, Mr. Addesso. We deeply appreciate your testimony. We're proud of you as a veteran and what you did for your country, and the wonderful way that you fought back. I know it hasn't been easy, but it's a privilege for us to have you here today. Thank you for your testimony.

Mr. **Addesso**. Thank you.

Mr. **Edwards**. Our last witness is Chai Feldblum, legislative counsel for the American Civil Liberties Union [ACLU]. Ms. Feldblum formerly served as a clerk to Justice Blackmun and was of great assistance to this subcommittee during our consideration of the Fair Housing Amendments last year. We welcome you and you may proceed.

STATEMENT OF CHAI R. FELDBLUM, LEGISLATIVE COUNSEL, AMERICAN CIVIL LIBERTIES UNION

Ms. **Feldblum**. Thank you.

I have submitted my testimony for the record and I'm just going to highlight the main points here today.

Mr. **Edwards**. Without objection, it will be made a part of the record.

Ms. **Feldblum**. I am very pleased to be here today in support of H.R. 2273, the Americans with Disabilities Act of 1989, a bill that for the first time will extend to the private sector comprehensive Federal antidiscrimination protection for people with disabilities.

For so many years, irrelevant characteristics like race, gender, religion and national origin were used to judge people and then to justify discrimination against those individuals. Ever since the landmark Civil Rights Acts of 1964 and 1968, there has been in place in this country a Federal policy and a Federal prohibition against discrimination against such individuals.

Having these laws in place certainly has not eradicated such discrimination on the basis of race, sex, or religion, but it has at least provided a source of redress for those individuals who have experienced such discrimination in this Nation's courts.

Unfortunately, there are some members of our society that still do not have that basic access to redress for discrimination. People with disabilities constitute one such class.

Mr. **Edwards**. Ms. Feldblum, may I impolitely interrupt just for a moment.

Ms. **Feldblum**. Certainly.

Mr. **Edwards**. The chief sponsor and Member of Congress who is carrying the bill to all of the committees is here, and we are honored to have the gentleman from Maryland, Mr. Hoyer. Mr. Hoyer, will you come up and join the committee.

Mr. Hoyer was at an important official meeting of the leadership and missed the splendid testimony of James S. Brady and Mr. Peter Addesso of the Paralyzed Veterans of America. We congratulate Mr. Hoyer for the splendid progress that has already been made in this bill. As you know, it appears, Mr. Hoyer, in the Senate and at the White House, a lot of the details have been worked out and it looks like we might even have some smooth sailing except for some business interests who think that it's going to cost too much money. We have splendid testimony going on right now from Chai R. Feldblum, who is legislative counsel on behalf of the ACLU. While we don't want to interrupt her, I'm sure she wouldn't mind if you want to say hello.

Mr. **Hoyer**. First of all, Mr. Chairman, I thank you for allowing me to join you. I apologize for being late. I just came from the Whip meeting.

I want to congratulate all of those in the audience and the literally thousands of others who have worked so hard over the past 2 years to get us to this point. I am expecting, Mr. Chairman, to have over a majority of the House of Representatives cosponsoring this legislation, hopefully by the end of business today. We have 214 cosponsors as of this morning. It looks now that all this work that so many in this room have done is coming to fruition. We join the White House and the Senate, Senator Harkin and others, in expressing our belief that this bill will be enacted into law hopefully before we go home finally for this first session of the 101st Congress.

I congratulate you, Mr. Chairman, for your leadership on this effort and thank you again.

Mr. **Edwards**. Thank you, Mr. Hoyer.

I again apologize, Ms. Feldblum. You may proceed.

Ms. **Feldblum**. No problem at all. Thank you.

I was just saying something that I know Congressman Hoyer knows well, which is that while there is protection for people on the basis of race, sex and religion in this country, there is no such protection for people with disabilities. For example, while a private employer under this country's law could not refuse to hire or promote a person because that individual was Jewish, or black, or she was a woman, that private employer could refuse to hire a person with a disability because of that person's disability. Such discrimination happens all too often, in situations where the person with the disability is otherwise completely qualified to do the job in question, and the discrimination that occurs is solely because of myths, stereotypes or fears about the disability.

The same type of discrimination that occurs in employment against people with disabilities occurs across the spectrum in all areas of society. People with disabilities face discrimination in a broad range of public accommodations. In some situations, the discrimination is attitudinal—the grocery store, the dress shop, the exercise club, simply don't want to open their doors to or provide services to persons with a disability. Sometimes the public accommodation simply needs to provide some sort of auxiliary aid or some modification of its policy in order to allow the person with the disability to use its benefits or its services. But that business or accommodation simply doesn't provide the aid or the modification in the policy. Sometimes the discrimination is one of simple physical access. The person with the disability can't even get into the public accommodation.

As someone who works on this bill a lot has often said, people with disabilities just want to get in, to get the same mediocre services that everyone else is getting, if that's what is going on in there. But simply physical access stops people with disabilities from getting in.

Problems with attitudinal discrimination and physical access discrimination exist in the sphere of private and public transportation as well. In order for the person with the disability to get to the job, or to get to the grocery store or the bakery shop or the shoe repair service, that person needs access to transportation. I think those people who are nondisabled take so much for granted our easy access to transportation.

Yet, in this country, many public buses are not equipped with lifts so that people with mobility impairments cannot get on them, and in private transportation, there are even fewer buses that are easily accessible.

People with hearing impairments experience a particular form of discrimination in our country. The basis of our society is communication, and a lot of that communication takes place on the telephone. Well, we use a telephone to do everything—carry out our business, set up appointments, engage in such life-sustaining activities as ordering Chinese food. The telephone is our basis of communication. But for someone who is deaf, they don't have access to this most basic tool of communication unless the entity or person on the other side also has a TDD [telecommunication device for the deaf], which enables them to talk to each other.

The Americans with Disabilities Act offers the means to redress these various forms of discrimination. The bill is a historic piece of civil rights legislation that will finally extend to people with disabilities equal opportunity and equal access in this society.

Now, as a general matter, in prohibiting these various forms of discrimination, the bill draws upon the longstanding case law and regulations that we have developed under the Rehabilitation Act of 1973, in which sections 501, 503, and 504 prohibit discrimination against people with disabilities by the Federal Government, people who have Federal contracts, and entities that receive Federal funds. For example, the definition of disability, who can gain access to protection under this act, the definition of disability in this act is exactly identical to that which is under the Rehabilitation Act, and exactly identical to the definition which this subcommittee put into the Fair Housing Amendments Act of 1988.

Specifically, the different titles of the ADA address the various forms of discrimination that I have just been describing. Title II of H.R. 2273 prohibits discrimination in employment. The bill covers employers who have 15 or more employees. Now, there are lots of people who believe that discrimination should be prohibited by any employer, even if it's two employees, but 15 employees is the number that exists in title VII prohibiting discrimination on the basis of race, sex, religion and national origin, and that is the figure that's put in this bill.

The discrimination that's prohibited is straightforward. An employer cannot refuse to hire, cannot refuse to promote, cannot set different terms or conditions of employment, for a person with a disability because of that disability. That's the straightforward, nondiscrimination mandate.

The bill also requires that employers make reasonable accommodations to the physical and mental limitations of the individual with the disability if that accommodation or modification would then make the person qualified to do the job. As the chairman noted, obviously every person with a disability has to be qualified to do the job. However, in some situations the employer must make reasonable accommodation in order to allow the person to do the essential functions of the job.

Title III of the ADA covers the provision of public services by a State or a subdivision of a State. Now, most of the programs and activities of a State are going to be already covered under section 504 if they get Federal funds, but to the extent that some programs or activities are not covered, title III extends that same coverage to the rest of the activities of the State.

Title III also incorporates specific provisions regarding public transportation. These provisions reflect a focus on the future. Instead of requiring extensive retrofitting of existing buses, this section requires that every new bus that is bought in a public transportation program must be readily accessible to and usable by people with disabilities, including people who use wheelchairs.

Title IV of the ADA prohibits discrimination on the part of all public accommodations operated by private entities. Again, I think this is a title that this subcommittee might be well interested in because it parallels in many ways what the subcommittee just did in the Fair Housing Amendments Act last year.

The bill states simply that no individual can be discriminated against in the full and equal enjoyment of any of the benefits offered by a public accommodation. The bill addresses the two aspects of discrimination that I was talking about before. First, it prohibits attitudinal discrimination. It says a place cannot say "we just don't want you in here; we don't like the way you look." Someone testified earlier on the Senate side, where a young girl with cerebral palsy who was not allowed into a movie theater because the movie theater owner didn't like how she looked. It prohibits attitudinal discrimination.

The second type of discrimination it prohibits is discrimination based on physical access. Again, as with transportation, the bill looks to the future. While there is a requirement that some modifications be made in existing facilities if those modifications would be readily achievable—that is, actions that can be accomplished without much difficulty or expense—the bill's basic requirement is that all design and construction of new buildings must be readily accessible to people with disabilities. This approach of looking to the future and this requirement of physical access is not at all new to this subcommittee, which as I noted just last year brought to the Congress the Fair Housing Amendments Act of 1988 which had the same approach and same requirements of physical access in new buildings.

Finally, title VI of the ADA requires common carriers to provide telecommunication relay systems. This rely system allows deaf individuals who have their own TDD's to be able to communicate with other people and entities, even if the person on the receiving side doesn't have a TDD, by the use of an intermediary relay system.

In conclusion, I would like to reiterate our strong support for the Americans with Disabilities Act of 1989. This bill, when enacted, will be a historic piece of civil rights legislation. It should have been passed in 1964 and in 1968, together with all the other civil rights laws. But it wasn't. It needs to be passed now. It needs to be passed by this Congress this year. The ADA is a piece of civil rights legislation whose time has truly come.

Thank you.

Mr. Edwards. Thank you very much, Ms. Feldblum, for splendid testimony.

[The prepared statement of Ms. Feldblum follows:]

PREPARED STATEMENT OF CHAI R. FELDBLUM, LEGISLATIVE COUNSEL, AMERICAN CIVIL LIBERTIES UNION

Mr. Chairman,

The American Civil Liberties Union (ACLU) is pleased to submit testimony in support of H.R. 2273, the Americans with Disabilities Act of 1989 (ADA). The ACLU is a national, non-partisan organization with over 275,000 members dedicated to the protection and defense of civil rights and civil liberties of all individuals.

The ACLU has a long-standing policy in favor of strong anti-discrimination protection for people with disabilities. We believe that every individual must be judged on his or her merits, without regard to characteristics that are irrelevant to a person's ability or worth.

For many years, irrelevant characteristics such as race, gender, religion, and national origin were used to judge individuals and to justify discriminatory actions against such individuals. Since passage of the landmark Civil Rights Acts of 1964 and 1968, a clear and consistent federal policy and federal prohibition against such discrimination has been in place. While the presence of the Civil Rights Acts has not been able to eradicate discrimination in our country on the basis of race, religion, national origin or sex, it has at least provided a source of redress in our nation's courts for those who have experienced such discrimination.

There are some members of our society, however, who still do not have access to this basic form of redress for unjustified discrimination. People with disabilities constitute such a class. While a private employer could not refuse to hire or promote a person because that individual were black, Jewish or a woman, that same private employer, if it did not receive federal funds or federal contracts, could discriminate against a person with a disability on the basis of the disability. Such discrimination happens all too often, in situations where the person with the disability is otherwise completely qualified to perform the job in question and where the discrimination is simply the result of fear, ignorance or misperception.

The same type of discrimination that occurs in employment occurs across all spectrums of our society. People with disabilities face discrimination in a wide array of privately operated public accommodations. In some situations, the discrimination is attitudinal: a restaurant, a dress shop, an exercise club, a movie theatre or some other service provider may simply not want to provide services to a person with epilepsy, cerebral palsy, AIDS or any other disability. In other situations, the public accommodation needs to provide a simple auxiliary aid to allow a person with a disability access to a particular service or benefit, but the aid is not provided. Finally, in many situations, the discrimination is one of physical access: individuals with mobility impairments often cannot even get into the door of a building that is a public accommodation.

Problems with attitudinal discrimination and physical access exist in the sphere of public and private transportation as well. In order for people with disabilities to get to employment positions or to public accommodations, they must be able to have access to effective transportation. Yet, many publicly-financed transportation systems have few lift-equipped buses that are accessible to people with mobility impairments, and the supplementary "paratransit" systems that are available to people with disabilities have severe limitations. Privately owned transportation systems offer even fewer accessible vehicles.

People with hearing impairments experience a particular form of discrimination in our society. The basis of our society is communication -- often communication that takes place through use of the telephone. We use the telephone to carry out our business, to set up appointments, to call for help, and to order food and theatre reservations. People with hearing impairments do not have access to this most basic tool of communication if the entity on the receiving end does not have a Telecommunication Device for the Deaf (TDD) or if a telecommunications relay system is not in place in that particular geographic area.

The Americans with Disabilities Act offers the means to redress these various forms of discrimination. The bill is a historic piece of legislation that will finally extend to people with disabilities the legal right to equal opportunity and equal access in all spheres of society.

In prohibiting these various forms of discrimination, the ADA properly draws upon the long-standing experience that has been gained through application of Sections 501, 503 and 504 of the Rehabilitation Act of 1973, which prohibit discrimination against people with disabilities by the federal government, federal contractors and those that receive federal financial assistance. The regulations and case law that have been developed under these statutory provisions constitute a basic, workable scheme that has been incorporated in large part by the Americans with Disabilities Act.[1]

In determining who may gain access to the protections of the ADA, the bill adopts the same definition of "disability" that is used under Section 504 of the Rehabilitation Act to define "handicap." Thus, the same broad three-pronged definition of handicap that has been in place for years under Section 504 is incorporated by the ADA.[2] The purpose of this broad definition is to prohibit the range of discriminatory actions that result from myths, stereotypes and fears concerning people with disabilities.

---

[1] The Rehabilitation Act of 1973 has provided important protections over the years to people with disabilities. However, that Act is limited in the scope of entities that it covers: the federal government, federal contractors, and those who receive federal funds. The ADA will fill an important gap by extending anti-discrimination protection to the private sector.

The various sections of the ADA reflect the types of discrimination that are directed against people with disabilities. Title II of the bill prohibits discrimination by private employers who employ more than 15 employees.[3] The section properly reflects the importance of reasonable accommodation in the employment of people with disabilities by requiring employers to make reasonable accommodations to the known physical or mental limitations of an applicant or employee, as well as prohibiting employers from denying employment opportunities to a person with a disability if the reason for the denial is the person's need for a reasonable accommodation. The provision of reasonable accommodations is critical in the employment sector: a person with a disability may be completely qualified to perform the essential functions of a job as long as some accommodation is made for the individual.

---

[2] 2. The ADA uses the term "disability" rather than "handicap," to reflect the term of choice of the disability community. However, the definition used is precisely the definition used under the Rehabilitation Act. Thus, while the defining term has been changed in order to reflect changing and more appropriate terminology ("disability" rather than "handicap"), the substantive definition has not been changed. From a legal standpoint, therefore, the breadth of coverage available under the Rehabilitation Act is the same as that available under the ADA, when that coverage depends on the definition of "disability" or "handicap."

[3] 3. Discrimination against people with disabilities obviously also occurs on the part of entities that employ less than 15 employees. However, Title VII of the Civil Rights Act of 1964, which prohibits discrimination on the basis of race, religion, national origin and sex, currently incorporates an exemption for entities that employ less than 15 employees. The ADA carries over the same exemption for discrimination on the basis of disability. The ACLU believes that all employers should be covered by the anti-discrimination mandate.

In deference to the needs of employers, the ADA also incorporates the protective framework of Section 504 with regard to reasonable accommodation. An entity need not provide a reasonable accommodation if it can demonstrate that provision of the accommodation would impose an undue hardship on the operation of the business. The term "undue hardship" is a long-standing term of art under Section 504 regulations and case law. A determination as to whether a reasonable accommodation would impose an undue hardship depends on well-established factors, including the nature and type of the operation, the number of employees, and the nature and type of the accommodation requested. See 45 C.F.R. §84.12 (1987).[4]

Title III of the ADA covers the provision of public services by a State, agency, or political subdivision of a State.

---

4. The determination whether an accommodation is "reasonable" focuses on whether it will achieve the objective of allowing the employee to perform the essential functions of the job. By contrast, the requirement that the accommodation not pose an "undue hardship" focuses on the burden on the employer in providing the accommodation.

Currently, the activities of most States would be covered under Section 504 if the State received any federal funds in those programs or activities, as that term is defined in the Civil Rights Restoration Act of 1987. However, to the extent that some State or local activities are not currently covered under Section 504, Title III extends that coverage to the remaining programs. As a reflection of the equivalent coverage, section 302 of the ADA incorporates the basic language of the original Section 504 provision.

Title III also incorporates specific provisions regarding public transportation. These provisions reflect a focus on the future of public transportation, by requiring that all new buses that are purchased be accessible to and usable by people with disabilities, including people who use wheelchairs. This provision is critical to the bill. A mark of a truly integrated society is one in which the mainline systems of that society are open and accessible to all.

Title IV of the ADA prohibits discrimination on the part of all public accommodations and services operated by private entities. The bill provides that no individual shall be discriminated against in the full and equal enjoyment of benefits or services provided by a public accommodation. This title incorporates the two aspects of discrimination that can occur in public accommodations, as discussed above. First, the title prohibits the attitudinal discrimination that can occur against people with disabilities in the range of public accommodations. Second, the title requires non-discrimination in terms of physical accessibility. As with the requirements regarding transportation, this title looks primarily to the future. While some modifications are required in existing facilities if such modifications are "readily achievable," the bill basically requires that construction of all new or remodeled buildings be fully accessible to people with disabilities. This approach of looking to the future is similar to that adopted in the Fair Housing Amendments Act of 1988 -- a bill which was actively supported by the ACLU and the Leadership Conference on Civil Rights and which was recently passed by the 100th Congress.

Title IV includes a definition of "public accommodation" which is different from that which appears in Title II of the Civil Rights Act of 1964. The new definition of the ADA appropriately addresses the kinds of discrimination faced by people with disabilities.5/ Title II of the Civil Rights Act defines public accommodations to include establishments which provide lodging, establishments which are engaged in selling

---

5. The ADA defines public accommodations as privately operated establishments that "are by used the general public as customers, clients or visitors or that are "potential places of employment," and whose operations affect commerce. Section 401(2).

food, and places of entertainment.[6] These are the places which presented the most significant problems of racial segregation during the period in which the Civil Rights Act of 1964 was passed and therefore these were the places on which that law specifically focused. By contrast, people with disabilities face discrimination in a range of other public accommodations--in supermarkets, barber shops, laundromats, and in other service providers. It makes no sense to restrict the range of coverage of public accommodations to a definition that was developed at a different time, for a different purpose. Certainly, if we wish to build a truly accessible country in the future by requiring that all new buildings be constructed in an accessible fashion, it makes no sense to restrict artificially the definition of those buildings that should be covered.[7]

---

6. The following types of establishments are covered by Title II: "Any inn, hotel, motel, or other establishment which provides lodging to transient guest..." 42 U.S.C. § 2000a (b) (1); "any restaurant, cafeteria, lunchroom, lunch counter, soda fountain, or other facility principally engaged in selling food for consumption on the premises..." 42 U.S.C. § 2000a (b) (2); "any motion picture house, theater, concert hall, sports arena, stadium, or other place of exhibition or entertainment..." 42 U.S.C. § 2000a (b) (3).

7. It should also be noted that individuals who have been discriminated against on the basis of race or ethnicity have legal recourse under 42 U.S.C. § 1981, as well as recourse under Title II of the Civil Rights Act of 1964. Section 1981 prohibits any discrimination on the basis of race or ethnicity in the making of a contract. See 42 U.S.C. § 1981 ("All persons within the jurisdiction of the United States shall have the same right...to make and enforce contracts, to sue, be parties, give evidence, and to the full and equal benefit of all laws and proceedings for the security of persons and property as is enjoyed by white citizens..."); Saint Francis College v. Al-Khazraji, 95 L. Ed. 2d 582 (1987). Thus, much of what is covered under the ADA's definition of a public accommodation would also

BEST COPY AVAILABLE

Title V of the ADA requires common carriers to provide telecommunication relay services. The provision of such services will be a significant step forward in communications for deaf individuals. The relay system will allow such individuals, who have access to their own telecommunication devices for the deaf, to communicate with others who do not own and use such devices. The provision of such services is an important first step forward in meeting the communication needs of deaf individuals.

Finally, the bill includes well-established provisions with regard to remedies for discrimination. The basic components of an effective remedy system are the availability of a private right of action, access to injunctive relief and damages, and availability of jury trials. These are elements that are available to other minorities under the combination of various other civil rights statutes that currently exist. The ADA appropriately incorporates these elements.

In conclusion, we would like to reiterate our strong support for the Americans with Disabilities Act of 1989. We look forward to working with you closely as you pass this historic piece of civil rights legislation.

---

be covered under Section 1981. *See*, e.g., *Runyon* v. *McCrary*, 427 U.S. 160 (1976) (prohibits private, commercially operated, nonsectarian schools from excluding children because of race); *Jennings v. Patterson*, 488 F.2d 436 (5th Cir. 1974) (protects right to use public streets); *Hernandez* v. *Erlenbusch*, 368 F.Supp. 752 (D. Or. 1973) (protects right to speak Spanish in a bar).

Mr. **Edwards**. I believe Mr. Dannemeyer has some questions.

Mr. **Dannemeyer**. I notice in your presentation, Ms. Feldblum, that you mentioned nothing about making the provisions of the act available to drug addicts, alcoholics, and persons with communicable diseases. I gathered from the sense of your testimony that you used the constant illustration of making it available for those who are in need of assistance because of being in a wheelchair or disabled for that reason.

Let me ask this question. If we would, by amendment, delete within the definition the extension of, in this instance, qualification standards, if we would strike out the availability of persons with communicable disease, would you still support the act?

Ms. **Feldblum**. There is no reason to strike out people with communicable——

Mr. **Dannemeyer**. That's not my question. You can answer yes or no. Would you still support the act if we struck out its applicability for coverage of persons with communicable diseases?

Ms. **Feldblum**. The class of disability——

Mr. **Dannemeyer**. That can be answered yes or no.

Ms. **Feldblum**. No. The class of disability stands——

Mr. **Dannemeyer**. My next question is, if we struck out the application and availability and coverage of the act to drug addicts and alcoholics, would you still support the act?

Ms. **Feldblum**. To that, one has to give a slightly long answer because——

Mr. **Dannemeyer**. It can be answered yes or no.

Ms. **Feldblum**. There is a clear——

Mr. **Dannemeyer**. Ms. Feldblum, the question can be answered yes or no. Would you still support the act if we struck from the definition of the coverage drug addicts and alcoholics?

Ms. **Feldblum**. I would not support it if you struck it out. Now I will explain what the bill does and doesn't do.

Let me also go back to your first point, which I thought was a very interesting point. You said that when I talked I wasn't using examples of contagious diseases or drug addicts.

Mr. **Dannemeyer**. I noted that.

Ms. **Feldblum**. I think that was not intended because such individuals either don't need coverage or it's not important. In fact, when the President's Commission on the HIV Epidemic, which was a Commission appointed by President Reagan, came out with their recommendation, they recommended a broad-based disability rights bill as a means of protecting the HIV individuals.

Mr. **Dannemeyer**. Do you remember what the vote was on making that available for persons with communicable disease?

Ms. **Feldblum**. Excuse me, sir?

Mr. **Dannemeyer**. It was a split vote of the Commission itself on that issue, wasn't it?

Ms. **Feldblum**. No.

Mr. **Dannemeyer**. A shift of two votes would have tilted the judgment the other way on making the act available to persons with communicable disease.

Ms. **Feldblum**. I think what came out of that Commission was a very clear mandate toward having a nondiscrimination mandate.

Mr. **Dannemeyer**. Let me ask you this question. On page 11, where it deals with qualification standards, lines 3 and 4, who has the burden of proof, the applicant, the employee, or the employer?

Ms. **Feldblum**. The burden of proof in this bill follows exactly the burden of proof that exists in section 504. Under that system, the individual has to show that they are covered under the act; that is, that they are a person with a disability. They then have to show they meet the basic qualification standards for the job; that is, that apart from their disability, they meet whatever the requirements are.

For example, some jobs require that you have a college education——

Mr. **Dannemeyer**. Let me be a little more precise, Ms. Feldblum. On line 7, under the definition of drug addict or alcoholic, this is the section requiring that the current use of alcohol or drugs by an alcoholic or drug abuser not pose a direct threat. Who has the burden of proving as to whether or not the current use of alcohol or drugs is a direct threat to a coworker, the employee or the employer?

Ms. **Feldblum**. Here I'm thinking about the 504 case——

Mr. **Dannemeyer**. Two possibilities, Ms. Feldblum, the employer or the employee.

Ms. **Feldblum**. I guess, being a lawyer, doing some of the litigation in these cases, you can see that that's not the way it operates in terms of the judge thinking——

Mr. **Dannemeyer**. Ms. Feldblum, the question can be very simply answered. You helped write this act, didn't you?

Ms. **Feldblum**. Well, there were a number of people involved in putting this together.

Mr. **Dannemeyer**. Were you involved in putting it together?

Ms. **Feldblum**. Sure, yes, together with various other individuals.

Mr. **Dannemeyer**. Based on your involvement, who has the burden of proof, the employer or the employee?

Ms. **Feldblum**. What this bill says is that it is a valid qualification standard that someone not pose a direct threat to——

Mr. **Dannemeyer**. Are you telling me you don't know?

Ms. **Feldblum**. Oh, no. I'm telling you the way it often is in law.

Mr. **Dannemeyer**. Or you don't want to say?

Ms. **Feldblum**. No, no. The way it is often in law, that the question is not, for example, a yes or no issue.

Mr. **Dannemeyer**. Are we finessing legislative history for some judge to resolve?

Ms. **Feldblum**. No.

How about this. Why don't I finish and explain to you how I believe it would work under the law, and then we'll see whether you think it's finessing it or not.

Mr. **Dannemeyer**. Well, wait just a minute. I only have limited time, Ms. Feldblum. You can answer if you want to. My question again is, who has the burden of proof—it's very simple—the employee or the employer, or the prospective employee or the prospective employer?

Ms. **Feldblum**. The person has to make a prima facie case that they are qualified for the job. Now, that would include, for example, if you are someone with HIV, you would have to put in evidence in your prima facie case that HIV in that situation would not pose a direct threat to others; that is, that there isn't a significant risk of you transmitting that infection. That's a burden on the employee. That's a burden on the plaintiff, as part of making that prima facie case.

Once you make that prima facie case, then the burden would shift to the employer to prove that that wasn't the case.

Mr. **Dannemeyer**. In other words, if the employee who is HIV positive—how would they carry that burden of proof? Do you believe the burden of proof could be carried under the unilateral assertion of the employee, who is the HIV carrier?

Ms. **Feldblum**. That should carry that, but in a number of cases, the way that proof is carried is by placing into evidence materials from the Centers for Disease Control, from public health officials, to establish the fact that HIV infection would be transmittable.

Mr. **Dannemeyer**. How about an amendment which would require, in order to carry the burden of proof, that the employee would have to have a doctor's certificate saying the employee's presence on the job would not cause a health threat to coworkers? Would you support that?

Ms. **Feldblum**. I'm not sure I would support an amendment saying that. I would tell you that that would be part of what would be put into evidence. Often it's the person's own physician who will testify, as well as evidence from general medical information. That's exactly what's going on in the cases right now.

Mr. **Dannemeyer**. We know from history that some of these persons have, you know, cytomegalo virus, some of them manifest dementia, and a fairly large percentage of persons who are afflicted with AIDS have a form of tuberculosis. You know, these are opportunistic diseases that are present in persons who are HIV and/or with fully developed AIDS that are a direct threat to coworkers. For this country to adopt a law that extends the coverage of what this act seeks to do to persons in that class is a major policy step with ramifications that I suspect you understand precisely what you're about, but I suspect there are many proponents of this legislation who have no idea of the implications of what this law seeks to do.

Ms. **Feldblum**. You see, that's a very interesting point, to present it as a major policy change. That is sort of confusing to me because, in fact, section 504 has been on the books since 1973. Section 504 has been used in many cases by people who have AIDS or HIV who have been unjustifiably discriminated from their jobs, unjustifiably tossed out of places where they don't pose a threat to others. That's a law that has been in place since the time when Congress has——

Mr. **Dannemeyer**. Ms. Feldblum, you're confusing apples and oranges. There is nothing in section 504 that uses the term "direct threat."

Ms. **Feldblum**. Oh, yes. It was amended in the Civil Rights Restoration Act of 1988. Concerns were raised that you are raising. They said we have a law that covers such individuals. That can't be. Well, Congress then amended section 504——

Mr. **Dannemeyer**. Are you saying that the language "direct threat" is now in section 504?

Ms. Feldblum. Yes, it is. It's been in there——

Mr. Dannemeyer. That's contrary to what my understanding is. Maybe I'm learning something today.

Ms. Feldblum. Well, what happened was, 2 years ago, when concerns were——

Mr. Dannemeyer. There's another concern I want to ask you about and get your assessment, Ms. Feldblum. We have a definition of persons who fit within the coverage of section 504. We also know that last year the Congress adopted an amendment to the Fair Housing Act dealing with this issue of discrimination, and now this is the ADA. Each of these three subsequent pieces of legislation has different language defining the definition of a person who fits within the coverage of the act.

Is that sound public policy?

Ms. Feldblum. The definition of disability in each of those acts—section 504, the Fair Housing Amendments Act and this act—is the same. It's the same definition of——

Mr. Dannemeyer. Maybe I don't know how to read the English language. But when I read the definition of qualification standards on page 11, lines 3 through 12, and then I read the definition of the Fair Housing Act on page 67, section 802, there is not a small difference, Ms. Feldblum, but there is a substantial difference.

For instance, the Fair Housing Act includes within its coverage persons who are drug addicts but not alcoholics. In the ADA, we're making the coverage available to drug addicts and alcoholics, and we have a new term in there, "direct threat," which is not in the act relating to fair housing.

What's the rationale for this?

Ms. Feldblum. The Fair Housing Act does have the same "direct threat" provision later on in the bill. You are correct, that there was a modification made in the definition in fair housing with regard to drug addicts. But I think that also reflects another issue that is very important in this bill, very important. You have to be, as was mentioned before, qualified to do a job. For someone who is a recovered drug addict or recovered alcoholic, that's often no problem at all. For someone who currently uses drugs or alcohol, they are also covered, but they still have to be qualified to do the job, which might be a lot more difficult in certain situations.

Mr. Dannemeyer. Who has the burden of proof for a recovered alcoholic or drug addict?

Ms. Feldblum. It's the same as with any other person with a disability. The person with the disability has to make a prima facie case. They make the prima facie case and then the burden shifts to the employer.

Mr. Dannemeyer. Another question that really boggles the mind about the reach of this act is, if we take the case of the gentleman who was here previously, the veteran, he didn't describe his wife and I don't know whether she's disabled or not—he's shaking his head no. This legislation would also extend to this wife because she's associated with somebody who is disabled.

That's a unique thing in our law, isn't it? What's the rationale and necessity for doing that?

Ms. Feldblum. It would extend to her if she was discriminated against because of her association with her husband. For example,

1891

if she went to apply for a job and the employer found out that she had a husband who uses a wheelchair and said "I don't think someone with a wheelchair will fit into our social functions" and she doesn't get the job because of her known association with a person with a known disability, it's a natural extension of the prohibition against disability. In fact, it's not new policy in this act. That was put into the Fair Housing Act last year.

Mr. DANNEMEYER. As you describe this act, it's possible that there isn't anybody in America that doesn't come within the coverage. It's a brilliant political move about which you're engaged. All of us are disabled.

Ms. FELDBLUM. But you only come under the coverage, of course——

Mr. DANNEMEYER. You should hear some of the things about which they say of me. I mean, people have sincerely questioned not only my judgment but my thinking capacity. I probably would come within the definition of this act. Wouldn't you agree?

Ms. FELDBLUM. You would have to prove that you were mentally disabled in order to get under the protection.

[Laughter.]

Ms. FELDBLUM. I don't know if you want to come into court and do that.

Mr. DANNEMEYER. It's obvious, isn't it, really?

Ms. FELDBLUM. I do want to reiterate that you are protected only if you've been discriminated against because of your association with a person with a disability, and that was a provision that was placed in the Fair Housing Amendments Act last year by this subcommittee. So, in fact, it's not a new policy at all. It's an extension of the policy that was just put into place and passed overwhelmingly by Congress last year.

Mr. DANNEMEYER. How about this phrase in the act—as a lawyer and a legislator, I don't know that I have ever seen this before in proposed statute form. It gives a cause of action to one who is being or about to be subjected to discrimination. Just on the mere suspicion that somebody is discriminated against, you have a cause of action to go to court to bring some employer into the docket.

Is that good policy?

Ms. FELDBLUM. I often find it interesting that that's raised as something new in this bill, because, in fact, the Fair Housing Act that was passed in 1968 and the Public Accommodations Act that was passed in 1964 both had provisions that said, if someone is engaging or one has reasonable cause that someone is about to engage in an act of discrimination, then those acts can be stopped by an injunction, by a cause of action——

Mr. DANNEMEYER. Doesn't that really get the law into analyzing the mental processes of a prospective employer, a prospective landlord, far beyond anything the laws should ever be doing?

Ms. FELDBLUM. What it is is within the context of general injunctive relief; that is, it is not at all something that can sort of be out in the air, that if you somehow speculate that some discrimination can happen you can bring a lawsuit. You have to prove that discrimination is going to occur.

It's a very good example to bring up in disability, and it's actually interesting in terms of businesses. If you find out that there are blueprints for a building that's going to be built, that is going to be built nonaccessible, instead of waiting until that building is built and then bring the lawsuit, which will be incredibly expensive——

Mr. **Dannemeyer**. Ms. Feldblum, I don't think there is anybody in this room that objects to a law saying that, for the construction of new buildings, we have to make those buildings accommodating to persons in wheelchairs. There's no quarrel about that. We don't have to spend our time on that.

Mr. Chairman, I appreciate you giving me more time than I deserve, and I thank you for this indulgence. I thank you for your contribution.

Mr. **Edwards**. Thank you, Mr. Dannemeyer.

Mr. James.

Mr. **James**. I'm a little confused. In dealing with an alcoholic, what would constitute discrimination and what would not? You're a lawyer, correct?

Ms. **Feldblum**. Yes.

Mr. **James**. You have a 16-man law firm. A man or woman comes in, a person, and says "I'm an alcoholic. I'm trying to handle the problem. I don't know if I will succeed. I've been dry for 7 days and I haven't had a drink." What if you, as the head of the firm, said "Well, my requirements are that you be dry for 10 years and I won't hire anybody unless they've been dry for 10 years once they have been a demonstrated alcoholic." Is that discrimination?

Ms. **Feldblum**. Yes. In other words, you're not at all looking at an individual case, as to whether the person is qualified.

Mr. **James**. Yes.

Ms. **Feldblum**. Yes. It's a blanket rule.

Mr. **James**. Nine years?

Ms. **Feldblum**. Yes. I mean, it would——

Mr. **James**. Eight years?

Ms. **Feldblum**. Yes.

Mr. **James**. Seven years? Five, 4, 3, 1 year.

Ms. **Feldblum**. Yes.

Mr. **James**. One year, is that discrimination? I want a demonstration of sobriety, since you're a declared alcoholic, for 1 year.

Ms. **Feldblum**. Sure, if you just had as blanket policy. What is useful is to look at the bill that just came out of the Senate. A lot of these questions were raised——

Mr. **James**. Please. I'm talking facts.

Six months?

Ms. **Feldblum**. But it's going to be the same in terms of a blanket rule. You could, as the employer, say——

Mr. **James**. One week, then? Or 9 days. You've only been dry 7. That would be discrimination, correct, in theory?

Ms. **Feldblum**. You would have—It's interesting. I understand what you're trying to do, but I'm wondering——

Mr. **James**. It is interesting. That's why I'm asking the question. Two days would be theoretically discrimination because I'm setting what, an artificial criteria? Is that what you're suggesting?

Ms. **Feldblum**. But you could say "I have a rule that"——

Mr. **James**. Please. Would 2 days, by your definition, be setting an artificial criteria and, therefore, it would be discrimination and

I would be subject to suit, or you would be if you're the head of the firm—or you're not sure?

Ms. **Feldblum**. Well, what's interesting is that you can——

Mr. **James**. Do you know?

Ms. **Feldblum**. Yes. But——

Mr. **James**. Then answer if you know, or say you don't know. There's two answers possible.

Ms. **Feldblum**. Wait, no. You cannot have an arbitrary rule like that. You can say "You may not come"——

Mr. **James**. Then the answer is you would have at that point in time discriminated because you said the person hasn't been dry for 9 days but dry for only seven?

Ms. **Feldblum**. The person still has to prove that they are qualified for the job.

Mr. **James**. Is that correct?

Ms. **Feldblum**. Yes, yes.

Mr. **James**. I'm assuming the person is super qualified for the job, a graduate of Harvard, Princeton, whatever school meets your qualifications, with an IQ of 200, whatever.

Ms. **Feldblum**. And I don't want to hire them?

[Laughter.]

Mr. **James**. And no other disability, OK?

Ms. **Feldblum**. Yes.

Mr. **James**. That, in itself, would be discrimination because you're setting a 2-day criteria.

What if I said you have to go to AA? Would that be arbitrary, too, Alcoholics Anonymous [AA]? As long as you're in that program, I'll hire you. That's arbitrary, isn't it, if you say AA is the standard?

Ms. **Feldblum**. You, as the employer, can prohibit someone from coming to to work under the influence. You can prohibit the use of drugs or alcohol. This is not out of my mind. This is now in the Senate bill. You can prohibit the use of alcohol or illegal drugs in the workplace. You can require that an employee not be under the influence of drugs or alcohol, and you can require that employees conform to all of the requirements of the Drug-Free Workplace Act that was just passed. You can do all of those requirements.

Mr. **James**. Can I require them to take a breathalyzer each morning when they come in the office?

Ms. **Feldblum**. Yes, because you can require that they not be under the influence of drugs or alcohol in the workplace.

Mr. **James**. But isn't that discrimination unless, in fact, I require everybody to come in the office to take a breathalyzer?

Ms. **Feldblum**. No. What this bill says is that you can require that individuals not be under the influence of drugs or alcohol in the workplace.

Mr. **James**. And what is the definition of "influence?" Is it 0.1, like it is for driving, or is it one-tenth of that? Do you see what I'm getting at?

Ms. **Feldblum**. Sure. I think that's clearly something that you can have set forth in the regulations, in terms of under the influence.

Mr. **James**. Have you ever worked with an alcoholic?

Ms. **Feldblum**. Have I personally?

Mr. **James**. Yes.

Ms. **Feldblum**. Not that I know of. There might be people who are alcoholics who are very capable of doing their jobs and you don't know that they're alcoholics.

Mr. **James**. I can assure you of that. They are, for a significant percentage of the time. It's that other remaining percentage that you worry about, if, in fact, they're not successful in handling it.

Ms. **Feldblum**. That's right, which is why I think this provision was actually put in, not only can you prohibit the use but prohibit that people not be under the influence. You require that people conform to the requirements of the Drug-Free Workplace Act because you would be concerned about even those situations.

The person is not supposed to be qualified just for 80 percent of the time. The person has to be qualified 100 percent of the time.

Mr. **James**. I understand that. But when someone comes in and says they're an alcoholic and they've only been dry for a week, you have to hire them if—I mean, you can't use that as the reason not to hire them. You have to take a chance and hire them because of this act, and say OK, you've been dry for 7 days, or dry for 2 hours, fine. I'll hire you. Since you don't have it in your system now, I'm forced to hire them, even though they tell you they don't know if they can handle it and they have no history to prove they can stay off the alcohol. You would then be required to hire them under the act.

Ms. **Feldblum**. You are never forced to hire anyone that you're not sure is qualified. If I had someone like that, I would require that there be references, et cetera, to make sure that they are qualified. There are definite ways that you can ensure that you get the qualified person for the job, including someone who has had some disability.

Mr. **James**. Yes, but they hadn't worked for a year because they were an alcoholic, and they come in and tell you. You get a thousand references that say, up until a year ago, this guy was fantastic.

Ms. **Feldblum**. Obviously, you can require references that will show that the person is qualified to do the job at the time the person is seeking to do the job.

Mr. **Edwards**. Well, if he was drunk 7 days ago, I think it's pretty clear that he wouldn't be qualified.

Ms. **Feldblum**. Exactly. He's not going to have references to show that he is qualified.

Mr. **James**. In other words, it's only the second employee that's in trouble after the person has been an alcoholic; do you follow what I'm saying? In other words, with the scenario you're setting up, you wouldn't be guilty of discrimination with an alcoholic if—it's that first job that counts. If he gets a good reference with that first job, then the second employer might be guilty of discrimination but not the first because he doesn't have a record of employment and references intervening his alcoholic——

Ms. **Feldblum**. Let me just say in conclusion to this that section 504, which has been on the books since 1973, applies to many, many employers. We have not had troubles with either the coverage of alcoholism or drug addiction under that law, which has been in place since 1973 and has extended to numerous employers. I think that history should be applied to this bill as well.

Mr. **Edwards**. Unfortunately, there will be a series of votes, so we will have to bring this very useful hearing to a close. You're such a valuable resource, Ms. Feldblum, that we're going to send you some written questions. Is that OK?

Ms. **Feldblum**. Yes, sir, that's fine.

Mr. **Edwards**. If you could give us the answers within a week or two, we would appreciate it.

Thanks to all the witnesses. This has been a very useful and informative hearing. We are now adjourned.

[Whereupon, at 10:53 a.m., the subcommittee adjourned, to reconvene subject to the call of the Chair.]

AMERICANS WITH DISABILITIES ACT OF 1989

WEDNESDAY, OCTOBER 11, 1989

House of Representatives,
Subcommittee on Civil and Constitutional Rights,
Committee on the Judiciary,
Washington, DC.

The subcommittee met, pursuant to notice, at 9:40 a.m., in room 2226, Rayburn House Office Building, Hon. Don Edwards (chairman of the subcommittee) presiding.

Present: Representatives Don Edwards, Robert W. Kastenmeier, F. James Sensenbrenner, Jr., and Craig T. James.

Also present: Catherine LeRoy, chief counsel; Ivy L. Davis and Stuart J. Ishimaru, assistant counsels; and Colleen Kiko, minority counsel.

Mr. Edwards. The subcommittee will come to order.

Today the subcommittee continues its review of H.R. 2273, the Americans with Disabilities Act. This bill extends civil rights to the 43 million persons in the United States who are disabled. The bill prohibits discrimination on the basis of disability in public accommodations, employment, public services, and telecommunications and has been referred to four committees in the House for consideration.

Since the introduction of this bill in both Houses earlier this year, the Senate passed an administration-backed compromise by a vote of 76 to 8. The compromise which was negotiated between the Bush administration and Senate sponsors goes a long way toward addressing the major concerns raised by the business community regarding the impact of the bill on their operations.

The House sponsors of ADA were not party to the compromise negotiations. Therefore, it is appropriate that we review the implications of the changes encompassed in this new bill. To that end, each of the committees with jurisdiction—Judiciary, Education and Labor, Energy and Commerce, and Public Works and Transportation—have conducted hearings on the compromise bill.

This legislation has widespread bipartisan support—including the Democratic members of the subcommittee and, as we will hear tomorrow from Attorney General Thornburgh, it is strongly supported by President Bush. Indeed, our witnesses today support the bill but ask House sponsors to consider issues which may require further clarification.

As chairman of the Civil and Constitutional Rights Subcommittee, I support the bill's coverage of Congress; however, this chairman will take steps to ensure such coverage does not conflict with the Constitution's separation of powers provision.

1897

Mr. Kastenmeier.

Mr. **Kastenmeier**. I am pleased, Mr. Chairman, that you are proceeding with this, because it obviously is an important bill and it has very considerable impact on the national community. It is something a lot of people have waited for a long time, and I think the hearing should be extremely important in terms of the ultimate disposition of this matter. I congratulate you for proceeding with it.

Mr. **Edwards**. Thank you.

Mr. Sensenbrenner.

Mr. **Sensenbrenner**. Thank you.

Good morning.

The time has come for the disabled of America to achieve their independence. They should be given as many opportunities as possible to be able to live a normal life and do the everyday things we all do, such as shop for themselves, work along with others, call for pizza, go to restaurants, etc.

This Americans with Disabilities Act legislation gives the disabled a chance to succeed, and I applaud this effort and strongly support it.

The witnesses before us today agree that the Americans with Disabilities Act is a worthwhile goal. They have come here to work with us to make this bill as effective as possible with the minimum of negative impact upon business. It is true that the business community will bear the majority of costs associated with this bill, and I intend to listen carefully to their concerns and to work to make this bill as palatable as possible to all concerned. My aim is to make this bill a victory for the disabled, not a victory for lawyers and another "lawyers and accountants full-employment act," which Congress seems to be passing so often.

So, thank you for being here today, and I look forward to the testimony.

Mr. **Edwards**. Thank you, Mr. Sensenbrenner.

The gentleman from Florida, Mr. James.

Mr. **James**. I, likewise, look forward to the testimony and hope that we can work out definitions that meet everyone's satisfaction so as to proceed to protect the rights of the disabled in every possible way without interference and creating major problems with the definition section.

Thank you.

Mr. **Edwards**. Thank you, Mr. James.

The first witnesses will testify as a panel.

Mr. John Motley is director of Federal Government relations, National Federation of Independent Business here in Washington, DC; Mr. Christopher J. Hoey is assistant treasurer/assistant general counsel for the Woolworth Corp., who is testifying on behalf of the International Mass Retail Association here in Washington; and Mr. James A. DiLuigi, AIA, is director, technical information, Marriott Corp., testifying on behalf of the American Hotel and Motel Association, Washington, DC.

[Witnesses sworn.]

Mr. **Edwards**. Without objection, your full testimony will be made a part of the record and Mr. Motley, are you first?

Mr. **Motley**. I'd like to go first, Mr. Chairman.

Mr. Edwards. You may proceed.

STATEMENT OF JOHN MOTLEY, DIRECTOR OF FEDERAL GOVERNMENT RELATIONS, NATIONAL FEDERATION OF INDEPENDENT BUSINESS

Mr. Motley. Thank you, Mr. Chairman. First of all, let me thank you and the members of the subcommittee for the opportunity for NFIB to testify on the Americans with Disabilities Act on behalf of its 570,000 members across the country.

I guess I should clarify in the beginning that NFIB does not officially support this legislation. In fact, we have a membership vote of roughly 87 percent against the original bill as introduced. We are not opposing the legislation at this time though, and we'll get a little bit more into that as I get into my testimony.

I'd like to address first if I could the types of businesses that we are concerned about in terms of compliance with this legislation if it's passed. Most of them could, I think, be considered main street lifestyle-type businesses rather than franchises or some of the larger businesses that you might think of when you think about access for the disabled.

They would be things like the dress shop that might be in the turn of the century building; dry cleaners establishments which are located on streets with very steep inclines; wood working shops that were started as a part-time and are now a full-time business but operating out of the basement of an individual; hardware stores with narrow aisles stacked with goods, or possibly the jewelry business which was established in a converted mill, which was converted some 20 or 30 years ago in New England. There's an awful lot of them which are there and are being used for that type of purpose.

We are not necessarily well off financially. In a recent survey of NFIB members, we found that roughly 43 percent of our membership grossed less than $350,000 a year, and 57 percent of those polled took out less than $30,000 a year from their businesses. They are not large firms; they do not have large professional staffs. They average somewhere in the neighborhood of 11 to 12 employees. They certainly do not have lawyers on staff or professional personnel administrators on staff, and many of them, roughly one out of four, do not even have accountants. They do their own books.

With that in mind, Mr. Chairman, I would like to get to some of our concerns about the legislation. As I mentioned before, NFIB does not want to oppose the ADA bill. In fact, we believe very strongly in the bill's intent to provide greater access for the disabled, and we believe it's a well-intentioned piece of legislation.

However, we are concerned about the approach taken by the ADA bill to mandate significant and often expensive changes in nearly every business in America. It should encourage businesses to increase opportunities for the disabled, not threaten them into compliance.

There exists a fundamental difference, we believe, between other civil rights legislation and the ADA bill; namely, that access for the disabled comes at the expense of others. These are expenses business owners alone are expected to pay for. Small business owners are concerned with the ADA bill for two major reasons: The need for clarity and its costs.

The intent of the bill is clear. However, the ambiguous language used in certain parts of the bill and its unknown price tag conjure up images within the small business community of a parade of attorneys and lawsuits to the average small business owners. Proponents argue that accommodations costing $25, $50 or $100 are not overly burdensome and that we certainly can agree with.

Unfortunately, we believe that this ignores the accumulated effect of accommodating a number of disabilities in one business. Keep in mind that not all costs are small. For example, it costs $1,000 to $10,000 for a concrete ramp; $3,000 for a new exterior door; $300 to $3,000 to modify a public restroom; $23 an hour for a certified signer; and $5,000 to purchase a computer with speech synthesizer for the blind.

Definitions remain a major problem within the ADA bill, as many of you referred to in your opening statements, since there is little understanding of the specific requirements that it seems to place on business. General guidelines and case law are inadequate in providing specific parameters for business compliance.

For example, the regulations of the Rehabilitation Act do not list what types of disabilities are covered. It is simply ridiculous, we believe, to expect that individual business owners, the type that I mentioned before, know which conditions are legitimate disabilities and therefore must be accommodated.

A solution that NFIB would support would include a list of disabilities, preferably with a layman's description, so that both the business owner and the disabled individual knows if the ADA applies. Small business owners, as I mentioned before, are not specialists in disabilities, nor are they legal experts. Yet the ADA bill, with its current broad approach, demands some—the same level of awareness from them as it does from larger businesses, with their staffs of legal experts and other specialists.

The drafters of the ADA bill recognize the problems faced by many small businesses, and they included a small business exemption in the employment section of the bill. However, an exemption for smaller firms was left out of the public accommodations section. Since the burdens we believe are relatively the same for those businesses under both sections of the bill, an exemption we believe is appropriate in both sections of the bill.

The business community over in the Senate fought long and hard to clarify a number of terms that were either inadequately defined in the original version of the ADA or are new. Even so, some terms such as "readily achievable," "reasonable accommodation," and "undue hardship" have not been adequately addressed.

For example, while a business owner may believe that modifications costing $500 to $5,000 would constitute an undue hardship for his own business, a court may feel differently. A better solution from the NFIB's standpoint would be to use a percentage of net profit cap to define what a business is expected to spend to accommodate the disabled.

NFIB believes that several changes in the enforcement provisions of title III are necessary. Of primary importance is the definition of "pattern or practice of discrimination." Currently, this phrase is defined differently in various laws. We believe that it would be reasonable to define this phrase as suggested by the Attorney General in his letter to Senator Kennedy. He states that "pattern or practice" should refer to egregious and willful acts of discrimination.

Also of concern in the enforcement section of title III is the undefined phrase "monetary damages." While the Senate committee report indicates that monetary damages are not punitive, it does not state what is intended. The chief Senate sponsor of the bill, Senator Harkin, stated firmly and repeatedly during Senate debate that damages could be awarded under the ADA bill—could not be awarded, excuse me.

Therefore, NFIB strongly urges that monetary damages be specifically defined to mean out of pocket expenses incurred by a plaintiff as a result of the actions of a business. Such clear direction would provide consistency and clarity.

In conclusion, Mr. Chairman, without question the ADA bill in our estimation is one of the most sweeping civil rights bills in decades. It is not enough to agree with the goals of this legislation. Members of this committee must also reach a balance between its noble intentions and the real world consequences of its vague language.

NFIB urges member to carefully weigh the ramifications of specific language in the ADA bill, so that the clearest and most enforceable statute can be enacted. Thank you, Mr. Chairman.

Mr. Edwards. Thank you very much, Mr. Motley.

[The prepared statement of Mr. Motley follows:]

NFIB
National Federation of
Independent Business

STATEMENT OF

JOHN J. MOTLEY III
DIRECTOR OF FEDERAL GOVERNMENTAL RELATIONS

NATIONAL FEDERATION OF INDEPENDENT BUSINESS

Before: House Judiciary Committee
Subject: Americans with Disabilities Act, H. R. 2273
Date: October 11, 1989

The National Federation of Independent Business (NFIB) is a voluntary membership organization made up of more than 570,000 small and independent business owners nationwide. Our membership parallels the national business population in that approximately 50% of our members own retail and service enterprises. 25% are in manufacturing and construction; and the remaining 25% operate agricultural, transportation, mining, wholesale, financial, insurance, or real estate enterprises. The average NFIB member has 13 employees and grosses about $350,000 in annual sales.

NFIB does not want to oppose the ADA bill. In fact, we believe the bill's intent -- to provide greater access for the disabled -- is noble and well intentioned. Proponents of the bill have noted that small businesses voluntarily have done more than larger businesses to accommodate the disabled. Small business owners view the disabled as educated, reliable, and talented employees. In a diminishing labor pool, the disabled are high on the list of desirable employees. And employers take pride in encouraging and sharing their success with their disabled employees.

Suite 700
600 Maryland Ave. SW

FAX (202) 554-0496

The Guardian of
Small Business

Small business owners also see the disabled as customers and clients, and in order to compete for their purchasing power, many voluntarily make adjustments in their facilities to accommodate the disabled.

While a good deal more needs to be done to accommodate the disabled, small business owners have done a great deal voluntarily to provide access to the disabled. And more will be done on a voluntary basis over the coming years. Therefore, the approach taken by the ADA bill to mandate significant and often expensive equipment, services, and structural changes in nearly every business in America is simply wrong headed. Instead of providing incentives, education, and opportunities to encourage greater access, the ADA bill takes a negative approach of imposing vague requirements followed by significant penalties if businesses fail to comply.

Many in the disability community view the ADA bill as a declaration of their independence, just as other minority groups have viewed major civil rights bills in the past. But there exists a fundamental difference between statutes for other groups and the ADA bill -- namely, as currently written, access for the disabled comes at the expense of others. Under past civil rights laws, businesses were required to "open their doors" to the various minority groups. The ADA would do the same for the disabled. However, in addition to opening the doors, businesses will be required to spend their own money to make alterations in those doorways and make other accommodations. These accommodations may include structural modifications along with the installation of ramps, accessible restrooms and dressing rooms, lower drinking fountains, and the use of auxiliary aids and services. These alterations and purchases of equipment and services are an expense that business owners alone are expected to pay for.

It is important to keep in mind that U.S. businesses are currently facing a full array of social legislation that they, not the public in general, are going to be expected to fund. Added to the potential burdens of upcoming child care, parental leave, and other mandated benefit legislation, business owners are now going to be forced to foot the bill for an unspecified number of modifications to their businesses whether or not disabled people ever choose to seek a job or to patronize a particular business.

Small business owners are particularly concerned with the ADA bill for two primary reasons -- clarity and cost. The intent of the bill is clear. However, the ambiguous language in the bill and the unknown price tag conjure up images of a parade of attorneys and lawsuits to the average small business owner.

Proponents of the bill claim that the language is clear and unambiguous, particularly as a result of changes made first during the Senate markup and later during Senate floor debate. Without question, progress has been made. The original version of the bill was entirely unworkable and unacceptable to anyone with an understanding of how businesses operate on a day-to-day basis.

However, even the Senate-passed version needs further refinement. NFIB and its members urge that the House take up the Senate-passed version of the ADA bill and add substantive, creative modifications to enact a bill that is balanced and fair to all affected people, both the disabled and the business community.

Scope of Coverage Under ADA and Associated Costs

For the first time ever, private businesses that receive no federal funds will be required to make alterations to their facilities to provide access to the disabled. In the past, only federal contractors and programs receiving federal grants were required to comply (under the Rehabilitation Act of 1973). The belief was that those who chose to accept federal money should, in turn, provide access to the disabled as a federally-mandated requirement -- in effect a quid pro quo for receiving Federal funds.

This is not the case with the ADA bill. Private businesses will be expected to provide accommodation without the benefit of receiving federal funds to offset those additional costs. Proponents argue that those businesses and programs already covered say that the cost of accommodating the disabled is "no big deal". They argue that accommodations costing $25, $50, or $100 are not overly burdensome. Unfortunately, this ignores the fact that the accumulated effect of a number of smaller costs can seriously threaten the economic health of a small business.

Contrary to what proponents would like us all to believe, not all the costs are small. The following is a list of prices for various accommodations based upon several studies and reputable news articles published during 1988:

- $1,000 to $10,000 for a concrete ramp (cost depending on number of steps to be ramped)
- $3,000 to widen and install a new exterior door
- $300 to $600 to widen and install a new interior door
- $200 to lower an existing water fountain
- $300 to $3,000 to modify an existing public restroom
- $23/hour to hire a certified sign language interpreter
- $150 to $700 to purchase a Telecommunications Device for the Deaf
- $2.50/page to translate written text into Braille form
- $5,000 to purchase a computer with speech synthesizer and appropriate software for the blind

This list is by no means exhaustive, but it indicates that not all accommodations can be described as "no big deal", particularly to a small, marginal business.

Small businesses are not necessarily well off and able to afford many extra expenses. According to a recent NFIB survey, 42.7 percent of small businesses averaged gross receipts of less than $350,000 last year. Another 18.8 percent averaged less than $750,000. More than half of small business owners (56.6%) took out of their businesses less than $30,000 last year.

In light of these statistics, it should be no surprise that small businesses fear the costs associated with the ADA bill. Several modifications of the language can alleviate a substantial portion of their concern.

Understanding of Disabilities

While the ADA bill has been reformulated to reflect certain "definitions" within the Rehabilitation Act, little understanding exists regarding the specific requirements for businesses. General guidelines are provided, and case law provides additional guidance with respect to individual cases, but these are entirely inadequate in providing specific parameters for business compliance.

For example, the regulations for the Rehabilitation Act do not list what types of disabilities are covered. The result of this lack of clarity is reflected in the confused case law associated with the Act where courts have been forced to determine which conditions, diseases, and behavioral patterns are "disabilities" protected by the Act on a case-by-case basis. One case was brought in which a woman claimed a disability because she was dependent upon her dog. While the woman did not prevail, her case is illustrative of the types of "disabilities" individuals may attempt to bring under the ADA bill.

It is simply ridiculous to expect individual business owners to know which disabilities are covered and therefore must be accommodated. And business owners will never know if they have guessed right or wrong until a complaint is filed and a decision is rendered.

A Senate amendment specifically excluded from coverage several types of conditions or behaviors that would have had serious consequences for business owners – particularly pyromania and kleptomania. But how many more conditions that could endanger a business remain in the bill? And how many more cannot possibly be anticipated by a business owner? And how can a business owner be expected to know how to accommodate some of the lesser known disabilities when he/she has no concrete list to which to refer?

At the very least, a list of disabilities, with a layman's description of each disability, should be included in the bill. When necessary, it can be amended to add or delete disabilities as technology and research bring us closer to understanding and addressing various disabilities. Certainly, it will be difficult to compile a list of the 900 types of disabilities the proponents indicate are covered under the ADA bill. But without such a list to provide guidance, business owners will not know what is covered and will never be safe from the threat of litigation. And individuals with less well known disabilities will never know if they can expect accommodation.

Small Business Exemption

Small business owners are not specialists in disabilities, nor are they legal experts. Yet, the ADA bill, in its broad approach, demands the same level of awareness and responsiveness from them as it does on large businesses.

The drafters of the ADA bill recognized the problem small businesses will face in the employment section of the bill and included a small business exemption. However, an exemption was left out of the public accommodations section which affects patrons to the business. This makes no sense whatsoever. The employment section is no more burdensome than the accommodations section, leading one to conclude that an exemption is appropriate in both.

The bill does not provide specific parameters, only general definitions that are inadequate. No one has any idea of what the ADA bill will cost small businesses. No one has any idea of the specific types of disabilities covered by the bill. Clearly, a small business exemption for public accommodations, based upon the language on the employment section, is appropriate and necessary. It will remove the fear of litigation from the smallest of businesses who are least able to afford it.

Definition Questions in the ADA Bill

The business community fought long and hard to get clear definitions of a number of terms that either appeared in the Rehabilitation Act or are new. Even so, some of these terms -- "readily achievable", "reasonable accommodation", and "undue hardship" -- have not been adequately addressed.

To paraphrase Title I (the employment section), businesses must make reasonable accommodation unless it results in an undue hardship. Title III (the public accommodations section) requires accommodation if it is readily achievable. Both of these standards pose serious threats to small businesses, even in their amended forms. Undue burden is defined as "an action requiring significant difficulty or expense". Readily achievable is defined as "easily accomplishable and able to be carried out without much difficulty or expense". This last term has never before been used in law.

Both of these standards are further refined to take into consideration (paraphrasing) the size of the business, the type of facilities, the size of the budget, the type of operation, and the cost of the accommodation. In addition, an amendment was added to the public accommodations section that "good faith efforts" by a business owner to comply with the law must be considered during a civil action against a business owner.

NFIB supports these hard-won clarifications. However, business owners will still never know if they have done what is necessary to avoid legal action since all of the above criteria are, like beauty, in the eye of the beholder. While a business owner may believe that modifications costing more than $500 or $2,000 or $5,000 would constitute an undue hardship, a court may feel differently.

A better solution would be a dollar or percentage-of-net-profit cap on what a business is expected to spend on structural alterations, physical alterations, and auxiliary aids and services. Such a cap would provide a type of safe harbor against lawsuits. This is particularly important for small, marginal, or failing businesses since the costs of going to court, even if the business owner eventually prevails.

can seriously affect the economic viability of the business before a decision is rendered.

Access Incentives

Many businesses want to accommodate the disabled, both as employees and as patrons. While many small businesses provide access as they become more economically sound, the Federal government can aid directly in this process. According to the Senate floor debate, the Federal government spends roughly $70 billion in support payments to the disabled -- clearly, a large amount of money.

Unfortunately, the only Federal assistance available to businesses to accommodate the disabled is a maximum $35,000 tax deduction that currently exists in the Internal Revenue Code to make structural alterations. If this nation really wants to accommodate the disabled to the greatest extent possible, the cap should be lifted and the deduction should be expanded to cover physical alterations and auxiliary aids and services, as well as the currently covered structural alterations.

While an expanded deduction would be useful for profitable businesses, a tax credit is necessary for those businesses that do not make enough money to take advantage of a deduction. A small tax credit limited to small businesses would encourage greater access for the disabled and a cooperative, creative spirit among struggling businesses to serve disabled employees and patrons. Such an incentive is a better approach to increase accessibility than the punitive approach currently contained in the ADA bill.

Enforcement Provisions in Title III

While NFIB has serious problems with the requirements of the ADA bill, of no less concern is the enforcement scheme currently included in Title III. Unlike Title I, Title III (the public accommodations section) provides no administrative procedure to correct cases of discrimination.

If a disabled individual has a complaint, that individual can attempt to receive injunctive relief (basically, correction of the situation), certain other costs, and attorney's fees. The case would be decided by a federal court.

If the Attorney General has reason to believe that a "pattern or practice" of resistance to compliance (more than one occurrence) has taken place, he can bring a civil action against a business owner. Penalties would include correction of the problem, civil penalties of up to $50,000 for the first violation and $100,000 for subsequent violations, monetary damages, and attorney's fees.

The judge can consider certain defenses on the part of the business owner, including cost of the modification, size of the business, and good faith efforts to comply. These are important defenses for small businesses, but they don't solve the basic problem. Even relatively modest fines will have serious consequences for many small businesses.

Keep in mind that one half of all new businesses start up with less than $20,000 in total capital. And as noted before, the majority of small businesses take out less than $30,000 in income each year.

To ensure fair, reasonable treatment under the law, several changes in the enforcement provisions are necessary. Of primary importance is a clear definition of "pattern or practice" of discrimination. Currently, this phrase is defined differently in various laws. A reasonable definition would be to define pattern or practice as suggested by Attorney General Thornburgh in his recent letter to Senator Kennedy. He states that the term pattern or practice should refer to egregious and willful acts of discrimination.

Small businesses, particularly, may unintentionally commit acts of discrimination due to the vague language of the ADA bill. Remember that small business owners do not have access to civil rights attorneys and personnel managers to advise them on the complexities of this type of legislation which has never before applied to them. They do not have access to the Federal Register to get an idea of what they are required to do. And they frequently do not belong to organizations that can adequately inform them of what their specific type of business must do to approach compliance.

It would be naive to think that innocent violations of the law will not occur, despite the best intentions of business owners. Therefore, it would be reasonable and correct to reserve the civil actions brought by the Attorney General to those cases where discrimination was truly egregious and willful.

The original intent of civil rights legislation was to "make a victim whole". By providing injunctive relief, victims will be made whole. For those cases where discrimination is egregious, the civil penalties will still apply.

Also of concern in the enforcement section of Title III is the undefined phrase "monetary damages". To NFIB's knowledge, this term has not previously been defined in case law. While the Senate committee report indicates that monetary damages are not punitive, it does not state what is intended.

The chief Senate sponsor provided some light to this issue by stating firmly and repeatedly that "damages" could not be awarded under the ADA bill. This would seem to imply that damages for pain and suffering, which can be large damage awards, are not to be included. However, neither the business community nor the courts have a specific definition upon which to understand potential liability without a clarification of "monetary damages". Therefore, NFIB strongly urges that monetary damages be specifically defined to mean out-of-pocket expenses incurred by a plaintiff as a result of the actions of a business. Such clear direction would provide consistency and understanding of the law.

Another concern with respect to the enforcement procedures in both Title I and Title III of the ADA bill is a result of a recent Federal court decision regarding jury trials. In the past, jury trials were not permitted except in cases brought under one particular law written in the post-civil war era. For civil rights laws written since 1964 (including the Civil Rights Act and the Rehabilitation Act used as bases for the ADA bill), no jury trials were allowed. However, in Beesley v. Hartford Fire Insurance Company, the court overturned the prohibition against jury trials, leaving a question about procedures for current civil rights cases.

A specific prohibition against jury trials in cases involving the disabled is important to maintain fairness. Unlike other types of civil rights, the determination on whether an individual is disabled under the provisions of the ADA bill will be very difficult to make. In addition, because of the subjective standards and vague language in the ADA bill, it will take many years of interpreting past civil rights laws, the legislative history of the ADA bill, and the regulations to make fair, balanced decisions.

Conclusion

As with all civil rights laws, fairness should be the overriding issue in the ADA bill. However, to date, the bill has moved much too fast for careful, thoughtful, responsible consideration. The Senate was held to artificial time deadlines that did not permit full and careful consideration by Senators. In fact, the ADA bill was marked up just days before the August recess, and the committee report was not available until near the end of the recess. Yet the bill was brought to the floor only two days after Senators returned to Washington, and it passed the same day.

Unlike the Senate, Members in the House of Representatives have the opportunity to carefully review the language contained in the ADA bill. It is well worth the time and energy, since the bill affects virtually every business in America.

Think of the neighborhood dress shop built in a turn-of-the- century building; think of the dry cleaner on a steep incline; think of the hardware store with narrow aisles and goods stacked to the ceiling; think of the delicatessen where the owner is trying to feed, clothe, and educate his children. All of them will be affected in some degree by the ADA bill.

NFIB has listed a number of concerns with the Senate-passed ADA bill. While it is not an exhaustive list, addressing these points will result in an improved bill to accommodate the disabled and to assist the business community in attaining that goal. Several of the suggested changes are simply technical in nature to clarify intent. Others would make broader changes to make the bill more equitable which will better serve everyone.

Without question, the ADA bill is the most sweeping civil rights legislation since the Civil Rights Act of 1964. It is not enough to agree with the goals of the bill. Members of Congress must also reach a balance between noble intentions and the consequences of ill-considered language. NFIB urges Members of Congress to carefully weigh the ramifications of the specific language in the ADA bill to enact the best legislation possible.

0206G/wl

Mr. EDWARDS. Now, Mr. Hoey.

STATEMENT OF CHRISTOPHER J. HOEY, ASSISTANT TREASURER AND ASSISTANT GENERAL COUNSEL, WOOLWORTH CORP., ON BEHALF OF THE INTERNATIONAL MASS RETAIL ASSOCIATION

Mr. HOEY. Thank you.

I am Christopher J. Hoey. I'm assistant secretary and assistant general counsel for the Woolworth Corp., where I deal with personnel and employment law issues.

I am here for the International Mass Retail Association and its 140 major discount retail chain members, who operate over 25,000 stores and employ well over a million individuals. IMRA appreciates this opportunity to express the views of the Nation's mass retail industry on the Americans with Disabilities Act.

ADA's very laudable objective and important goal is bringing disabled persons into the mainstream of American life. We completely share that objective and endorse that goal. Achieving it will not only benefit disabled persons but the entire Nation. By resolving some practical questions about ADA's effects in some areas and by fixing some provisions in the bill that are ambiguous, imperfectly drawn, or have insufficiently considered likely adverse effects, this subcommittee can improve ADA.

IMRA's questions and suggestions on public accommodations fall into four main areas: (1) Identifying ADA's specific requirements for existing buildings and the costs they impose; (2) adopting a site-specific test for what actions are readily achievable; (3) giving building operators sufficient flexibility to develop the most workable alternatives; and (4) clarifying new construction requirements, particularly in the area of potential places of employment.

Existing buildings—the Senate report stresses that ADA's intent is to require changes to existing buildings used by public accommodations only if they can be achieved without major expense or difficulty. IMRA remains concerned that this intent has been incompletely or imperfectly realized.

One statement in the Senate report has caused considerable concern in retailing. It states that ADA may require the removal of physical barriers, including those created by the arrangement or location of such temporary and movable structures as furniture, equipment, and display racks. For example, a restaurant may need to rearrange tables and chairs or a department store may need to adjust its layout of display racks and shelves in order to permit access to individuals who use wheelchairs where these actions can be carried out without much difficulty or expense.

Layout costs are substantial. My company normally calculates the cost of physically moving merchandise from one location to another within the store, even an adjacent location, at $2.50 per square foot. Thus, in a relatively small outlet of 10,000 square feet of selling space, a reconfiguration could cost the average retailer $25,000, but there are other much larger costs associated with relayouts.

Many stores have at least some aisles that are not wide enough for a wheelchair to navigate. It would be a drastic and, in some cases, a ruinous step to impose 4- or 5-foot aisles on stores which presently have 2- or 3-foot widths. This would mean that affected areas would lose up to three-fifths of their productive space, with consequent reduction in sales and employment.

Equally profound would be the impact if ADA could be interpreted as limiting the height of merchandise shelves and displays. Mass retailers typically stock merchandise to a height of at least 8 feet. Some go significantly higher. There would be substantial costs in lowering existing shelves so as to be reachable by an individual using a wheelchair—up to $10 per square foot in labor and equipment costs alone, but by far, the largest cost would be in lost productivity, as retailers would forfeit one-half or more of the current shelf space, with corresponding reductions in sales, profits, and employment.

Interpretations that would force across-the-board changes in such key productive factors as aisle width or shelf height would be the functional equivalent of closing a substantial fraction of the Nation's stores or even of outlawing some types of stores. The subcommittee should make clear that advancing the rights and aspirations of disabled persons does not require substantial reformatting of store aisles, shelves, fixtures, and displays so as to provide physical access to every nook and cranny of a store.

Site-specific analysis in public accommodations—for multisite companies, such as mass retailers, whether or not an accommodation is "readily achievable" or creates an "undue burden" is judged on a very different basis than ADA currently provides. It defines "readily achievable" as easily accomplishable and able to be carried out without much difficulty or expense.

Up to this point, we can support this section fully, as long as architectural barriers mean a building's major structural features, such as walls, roofs, stairways, entranceways, and interior supports, but not its nonstructural items, such as merchandise displays, counters, or shelves, but the current definition of "readily achievable" raises one major difficulty that, if not remedied, will have significant and unfortunate consequences.

ADA defines the factors to be considered in determining whether an action is "readily achievable" as including the overall size of the covered entity.

Our company has analyzed the continued economic liability of any particular facility not on the basis of the company's overall size but on the basis of the particular site's performance. The same is true for assessing a change in operation, such as remodeling. Whether a company continues to operate at any particular site depends on the site's operating results, not the company's. A location which becomes marginal or unprofitable faces closing, even when the company is profitable overall.

Ignoring these site-specific economics is likely to produce more, not fewer, closings. That result would not benefit disabled or nondisabled workers and customers.

Our testimony gives the real world of a company which operates over 500 very small stores located in communities with populations of 10,000 or less. For a significant number of stores, the annual gross sales is less than $250,000. An additional $2,000 expense figured on a facility earning an industrywide pretax average return of 2 percent of sales would need an additional $100,000 in sales to offset the added $2,000 expense. Some types of alterations—for example, being required to retrofit an electric-eye door, which costs about $8,000—would wipe out one of these stores.

This example in the testimony dealt with small rural communities, but the same could be said for many older, inner-city stores, whose customers may experience special difficulties finding or getting other places to shop.

Applying the "readily achievable" on an establishment basis rather than on an enterprisewide basis has ample precedent under sections 503 and 504. Section 503 compares the nature and cost of an accommodation with the size of the operation involved in the contract, not to the overall size of the enterprise received in the contract. Section 504 uses the size of the program activity in the geographically separate facility, not the overall size of the enterprise. ADA should also use site-specific rather than enterprise-wide comparisons in analyzing "readily achievable" and "undue burden" and "undue hardship."

Ensuring flexibility on accessibility alternatives—where an accommodation is required, an employer or facility operator needs flexibility to accommodate disabled persons in any effective method. This avoids forcing more expensive and disruptive methods where better, less burdensome alternatives exist.

We believe this is ADA's intent, but it needs clarification to make clear it is not discriminatory but, rather, reasonable accommodation for a store to employ any effective method of its own choosing to assist disabled customers to obtain access to goods and services in areas of a facility that are not completely accessible. Where not all merchandise is readily accessible to some disabled customers, the facility needs to have the flexibility to respond in a systematic fashion that is most appropriate for its type and size of operation, and our testimony gives some examples.

The point is that the facility should have the freedom to provide an alternative method of accommodation that effectively serves disabled customers.

New construction—the dramatic and, we believe, unintended impact of restricting such key operational factors as aisle width, counter height and shelf height, which I have already outlined, would remain true for new construction. We believe that its accessibility requirements properly deal with structural factors, not store layout.

In addition, there needs to be practical alternatives to completely restructuring fixtures and equipment used in normal operation. For instance, a snack bar or lunch counter should have the alternative of making some, not all, of its spaces of a height and width suitable for wheelchairs or its customers.

Finally, "potential places of employment" should be removed from section 303(a)(1). If it remains, it may have the effect of bringing under the public accommodations sections nonpublic working areas, such as backrooms and behind checkout and displays.

Any accommodations that employers must undertake in these nonpublic workplace areas are best handled by ADA's employment provisions, which require employees to tailor accommodations to the specific needs of the actual job applicant or employee.

ADA speaks of alterations or major structural operations but nowhere defines either term. IMRA suggests adopting the sensible delineations used in the Pennsylvania statute enacted last year which ties the degree of accessibility required to the percentage of the building's value affected by the remodeling or renovation.

In the area of auxiliary aids and services, we have three comments and suggestions.

First, "readily achievable" ought to be the standard for provision of aids and devices in employment and public accommodations, as well; second, a site-specific analysis is the most realistic and productive way of addressing needed accommodations; and finally, the discussion of auxiliary aids and devices should explicitly take into account how frequently the service is needed, the size of the particular facility or establishment, and the economic benefits.

IRMA greatly appreciates this opportunity to share with the subcommittee our suggestions for making ADA as workable and cost-effective as possible in ending discrimination against the Nation's disabled.

Mr. EDWARDS. Thank you, Mr. Hoey.

[The prepared statement of Mr. Hoey follows:]

PREPARED STATEMENT OF CHRISTOPER J. HOEY, ASSISTANT TREASURER AND ASSISTANT GENERAL COUNSEL, WOOLWORTH CORP., ON BEHALF OF THE INTERNATIONAL MASS RETAIL ASSOCIATION

I am Christopher J. Hoey, Assistant Secretary/Assistant General Counsel for the Woolworth Corporation, with which I have been associated for about 25 years, dealing with personnel and employment law issues. My company employs nearly 75,000 persons and operates 5,700 stores of various types and sizes, ranging from 2,200 square-foot jewelry boutiques to large downtown multi-level self-service general merchandise stores.

I am appearing here today on behalf of the International Mass Retail Association. IMRA is a trade association that represents 140 major discount retail chains. Collectively, they do business in all fifty states, the District of Columbia, Puerto Rico and the Virgin Islands and represent an overwhelming majority of the $130 billion a year discount retail industry. Our members operate over 25,000 stores and employ well over a million individuals.

IMRA appreciates this opportunity to appear to express the views of the nation's mass retail industry on the "Americans with Disabilities Act" (ADA). IMRA's comments today will deal almost exclusively with Title III's public accommodations provisions. We would welcome the opportunity to continue this dialogue on those provisions, and other portions of the bill where we can identify questions or concerns, in an effort to address particular issues of how the bill can best serve disabled citizens while at the same time recognizing legitimate business concerns.

The ADA aims at the very laudable objective and important goal of bringing disabled persons as fully as possible into the mainstream of American life. IMRA completely shares that objective and endorses that goal. Achieving it will not only benefit disabled persons, but the entire nation. Our businesses are always looking for capable workers; our stores obviously have a compelling interest in attracting and serving customers.

No matter how praiseworthy ADA's intentions are, and how desirable its aims, your duty, and ours, is to examine how well it will work in practice. By resolving some practical questions about ADA's effects in some areas, and by fixing some provisions in the bill as presently drawn that are ambiguous, imperfectly drawn or have insufficiently considered likely adverse effects, this subcommittee can improve ADA by making it more effective, more predictable, and less needlessly burdensome.

IMRA's questions and suggestions on public accommodations fall into four main areas: (1) identifying ADA's specific requirements for existing buildings and the costs they impose, (2) setting the most productive and realistic standard for analyzing what actions are "readily achievable," (3) ensuring that building operators have sufficient flexibility to develop the most workable alternatives, and (4) clarifying the coverage for new construction.

Our analysis will draw on the Senate-passed bill, and accompanying report, since we believe that S. 933 will -- and should -- be the starting point for consideration of ADA in this subcommittee and in the House.

Specific requirements and costs for existing buildings

At the outset, IMRA notes that while concerns have been raised about the potential costs that will be occasioned by ADA in such areas as transportation and telecommunications, similar study does not appear to have been made of the costs that ADA's public accommodations provisions may impose. The sketchy estimates in the Senate Committee's report, for instance, estimate the costs of accommodations in employment (it says that 49% of disabled workers may need accommodation with a cost impact, and the costs may exceed $100 in 70% of those cases), and for renovations and new construction (it estimates up to 1% of budget). No estimate was made, however, for the costs of what public accommodations may be needed in existing buildings. IMRA respectfully suggests that the Committees considering the ADA request a cost-analysis as quickly as possible from an appropriate government agency.

With what we hope is considerable understatement, the Senate report on S. 933 noted that "Witnesses recognized that it is probably not feasible to require that existing facilities be completely retrofitted to be made accessible." While the report also contains a number of statements stressing that ADA's intent is to require changes to existing buildings used by public accommodations only if they can be achieved without major expense or difficulty, IMRA remains concerned that this intent has been incompletely or imperfectly realized.

From the point of view of the nation's mass retailers, retrofitting of existing buildings can be a very complex and costly proposition, and IMRA believes that ADA attempts, although imperfectly, to recognize that. As IMRA understands it, one of ADA's primary aims is promoting the elimination of architectural barriers that deny disabled persons access to a wide range of public accommodations, including stores of various types.

One statement in the Senate report, for which we see no clear support in the bill's somewhat general wording, has caused considerable concern in retailing. It does not deal with the well-recognized term "architectural barriers," but instead introduces the new and troubling term "physical barriers." It states:

> What the "readily achievable" standards will mean in any particular public accommodation will depend on the circumstances... but the kind of barrier-removal

> which is envisioned includes the addition of grab bars, the simple ramping of a few steps, the lowering of telephones, the addition of raised letter and braille markings on elevator control buttons, the addition of flashing alarm lights, and similar modest adjustments.

Yet perhaps without realizing the magnitude of what is being suggested, the report then introduces the previously unseen term "physical barrier" and gives an example that is far from a "modest adjustment."

> This section may require the removal of physical barriers, including those created by the arrangement or location of such temporary or movable structures as furniture, equipment, and display racks. For example, a restaurant may need to rearrange tables and chairs, or a department store may need to adjust its layout of display racks and shelves, in order to permit access to individuals who use wheelchairs, where these actions can be carried out without much difficulty or expense.

Retailers know that layout costs are substantial. One division of my company, for instance, normally calculates the cost of physically moving merchandise from one location within a store to another, even adjacent location at $2.50 per square foot. I am reasonably confident that this standard estimate that we use would apply to most other retailers as well. Thus in a relatively small outlet of 10,000 square feet of selling space, a mandated reconfiguration would cost the average retailer $25,000.

But there are other costs associated with re-layouts that would dwarf that not-inconsiderable sum. Many stores, especially older ones, have at least some aisles that are not wide enough for a wheelchair to navigate. It would be a drastic, and in some cases, ruinous step to impose four- or five-foot aisles on stores which presently have two- or three-foot widths; this would mean that affected areas would lose anywhere from one-third to three-fifths of their productive space, with consequent reductions in sales and employment.

Equally profound would be the impact if ADA could be interpreted as limiting the height of merchandise shelves and displays. Depending on the type of operation, mass retailers typically stock merchandise to a height of at least eight feet; some types of operations, such as warehouse-type retailers, may go significantly higher. There would be substantial costs in lowering existing shelves so as to be reachable by an individual using a wheelchair (between $3 and $5 per square foot in labor costs alone to lower existing shelves, and up to $10 per square foot in labor and equipment costs to acquire and install lower shelving).

The most enormous costs, however, would be in lost productivity, as retailers would forfeit one-half or more of their current shelf space -- with corresponding reductions in sales, profits and employment (but not in rental and most other overhead costs).

Interpretations that would force across-the-board changes in such key productive factors as aisle width or shelf height would be the functional equivalent -- in lost sales and employment -- of closing a substantial fraction of the nation's stores, or even of outlawing some types of stores. The subcommittee would perform a major service to making ADA better-understood and focused by making clear that advancing the rights and aspirations of disabled persons does not require re-formatting of store aisles, shelves, fixtures and displays.

IMRA wishes to raise one other question related to when retrofitting of existing stores is required. Section 302(b)(2)(vi) of ADA requires a higher degree of accessibility for existing buildings during alterations, and yet a higher standard for buildings where a "major structural alteration" is being undertaken. Yet nowhere in ADA is either of these significant terms defined. IMRA suggests that the subcommittee consider adopting the sensible delineations used in a Pennsylvania statute (Act 1988-166) on disabled accommodations enacted last year, wherein the degree of accessibility required is tied to a definite and ascertainable standard, the percentage of the building's value affected by the remodeling or renovation.

Under the Pennsylvania statute, when the construction cost of remodeling is less than 30% of the building's worth, only the remodeled area or areas need by made accessible, and an accessible route to the remodeled area or areas is not required. When the construction cost is 30% or more, but less than 50%, of the building's worth, the remodeled area or areas must be accessible and an accessible route provided; a series of remodelings within a three-year period will be subject to this provision if their accumulated cost is 30% or more but less than 50%. Only if remodeling costs over a three-year period exceed 50% of the building's value must the entire building and site be made accessible.

Site-specific analysis in public accommodations

For multi-site companies such as mass retailers, whether or not an accommodation is "readily achievable" or creates an "undue burden" is judged on a very different basis than ADA currently provides.

Section 302(a) generally prohibits discrimination by a retail store or other public accommodation, and section 302(2) contains a number of specific prohibitions. Among other items, these include:

- o failure to remove architectural barriers, and communication barriers that are structural in nature.... where such removal is readily achievable [in section 302(b)(2)(iv)]; and

- o when removal of such a architectural/structural communication barriers is not readily achievable, failure to use alternative readily achievable methods of making available goods, services, facilities, privileges, advantages and accommodations [in section 302(b)(2)(v)].

Section 301(5)(A) defines "readily achievable" as:

> easily accomplishable and able to be carried out without much difficulty or expense.

Up to this point, IMRA can support this section fully, as long as architectural barriers are defined, as we believe they should be, to include a building's major structural features (such as walls, roofs, stairways, entranceways, and interior supports), not its non-structural items as merchandise displays, counters or shelves.

The current definition of "readily achievable," however, raises one major and, we believe, insufficiently considered difficulty, since its analysis differs in one important respect from the analysis used by companies with multi-site operations. If not remedied, this imbalance will have significant and unfortunate consequences.

Section 301(5)(B) defines the factors to be considered in determining whether an action is "readily achievable" as including:

> (i) the overall size of the covered entity with respect to the number of employees, number and type of facilities, and the size of the budget;
>
> (ii) the type of operation of the covered entity, including the composition and structure of the entity; and
>
> (iii) the nature and cost of the action needed.

When businesses such as ours analyze the continued economic viability of any particular facility, they do so not on the basis of the company's overall size or success, but on the basis of the particular site's performance. The same is true for assessing a change in operations, such as a remodeling, whether mandated by government or by competitive factors. Whether or not a company continues to operate in any particular site depends on the *site's* operating results, not the *company's*. A location which becomes marginal or unprofitable faces likely closing, even when the company is profitable overall, just as an investor with a diversified portfolio does not keep non-performing assets just because the overall portfolio is profitable.

Ignoring these site-specific economics -- as would be the case if the cost of any accommodation is assessed on the basis of its impact on the overall company -- is likely to produce more, not fewer, closings. That result would benefit neither disabled nor able-bodied workers and customers.

Take one "real world" example. One IMRA member company operates over 500 very small stores, typically about 6,000 square feet, located in communities with populations of 10,000 or less. The stores average five employees; some have only two or three. For a significant number of stores, the annual gross sales is less than $250,000.

Industrywide, the gross pre-tax operating profit is about 2% of sales. This means that an additional $2,000 expense imposed on a facility earning that average return would need an additional $100,000 in sales to offset the added $2,000 expense.

Some types of alterations -- for example, being required to retrofit an electric-eye door, which costs about $8,000 -- would be heavy enough to wipe out the profitability of one of these stores. Yet since the company is not a small business and shows a profit overall, it might well be required, under ADA's present test for "readily achievable," to undertake major costly changes or stop operating in those locations -- which are primarily in underserved rural areas. According to the company operating those 500 smalltown stores, analyzing what actions are readily achievable on the basis of the company's overall size, rather than on the size of the facility in question:

> will force us to close many of the smaller, marginally profitable stores, and reduce the overall economic viability of our company. Thus, while the goal of ADA is to extend access to jobs and retail services to the handicapped, the actual effect will be to reduce the number of jobs and services to everyone, including the handicapped. The hardest hit will be the small rural communities which are often only served by small retail establishments which are part of a larger chain.

The same could be said for many older inner-city stores whose closings would have a similar impact on the populations they serve, who may experience special difficulties finding or getting to other places to shop.

Applying the "readily achievable" test on an establishment basis, rather than on an enterprise-wide basis, has ample precedent. Regulations under sections 503 and 504, which are the model for much of ADA, use a similarly better-targeted analysis. Under Section 503, the nature and costs of an accommodation are compared to the size of the operation involved in the contract, not to the overall size of the enterprise receiving the contract. The comparison in section 504 is with the size of the program or activity involved, which for most private-sector corporations does not mean the entire corporation (unless the Federal assistance is extended to the corporation as a whole). Section 504 generally applies to "a geographically separate facility" receiving Federal assistance, not to the overall enterprise.

Likewise, the proper comparison under ADA should be with the affected "facility or establishment," rather than with the overall size of the enterprise operating the facility or establishment. The term "facility" already appears several times in ADA; the term "establishment" is well-defined in the Fair Labor Standards Act. For these reasons -- practicality and precedent both -- a site-specific, rather than enterprise-wide, test should apply both to "readily achievable" and "undue burden" analyses in the public accommodations section, and to "undue burden" in section 101(9) of ADA's employment title.

Ensuring flexibility on accessibility alternatives

A fundamental principle for IMRA's approach to ADA's provisions on reasonable accommodations is that, where an accommodation is required, sufficient flexibility needs to be provided for the employer or facility operator to accommodate disabled persons in any effective method. This is necessary to avoid forcing more expensive and disruptive methods where alternatives exist that are better-suited to, and less burdensome on, the business involved.

IMRA believes that this is ADA's intent, but some statutory and report language needs clarification to give adequate guidance to the Department of Justice and courts. For instance, sections 302(b)(1)(A)(ii) and (iii) provide that:

> It shall be discriminatory to subject an individual or class of individuals on the basis of a disability or disabilities of such individual or class... to a denial of the opportunity... to participate in or benefit from the goods, services, facilities, privileges, advantages, and accommodations of an entity [or]...
>
> to provide an individual or class of individuals, on the basis of a disability or disabilities of such individual or class.., with a good, service, facility, privilege, advantage or accommodation, or other

> opportunity that is as effective as that provided others.

In addition, section 302(b)(1)(B) provides that:

> INTEGRATED SETTINGS. Goods, facilities, privileges, advantages, accommodations, and services shall be afforded to an individual with a disability in the most integrated setting appropriate to the needs of the individual.

IMRA believes that these provisions must be more fully and carefully explained so as to make clear that it is not discriminatory, but rather a reasonable accommodation, for a store to employ any effective method of its own choosing to assist disabled customers obtain access to goods and services in areas of a facility that are not completely accessible. For example, the store could designate store clerks, greeters, managers or other personnel to respond to questions or obtain merchandise that a customer is unable to locate or reach. Some establishments may choose to use accessible telephones for such inquiries, while others may prefer other systems allowing customers to signal for and receive assistance.

Where not all merchandise is readily accessible to some disabled customers, the facility needs to have the flexibility to respond in a systematic fashion that is most appropriate for its type and size of operation. The Senate report, for instance, gives a few examples. In discussing auxiliary aids, it states:

> ...a bookstore need not braille its price tags, stock brailled books, or lower all its shelves so that a person in a wheelchair can reach all the books. Rather, a salesperson can tell the blind person how much an item costs, make out a special order of brailled books, and reach the books that are out of the reach of the person who uses a wheelchair.

At another point, in discussing a public accommodation's obligation to provide "readily achievable" alternatives when removing architectural barriers is not readily achievable, the report gives several examples:

> ...coming to the door to receive or return drycleaning; allowing a disabled patron to be served beverages at a table even though nondisabled persons having only drinks are required to drink at the inaccessible bar; providing assistance to retrieve items in an inaccessible location; rotating movies between the first floor accessible theater and a comparable second floor inaccessible theater.

IMRA believes that ADA's provisions on integrated settings are presently open to interpretation as requiring a public accommodation to change its operations in response to the particular wishes of each disabled customer, rather than providing a system of its own devising that effectively serves customers.

In this regard, it needs to be noted that the accommodation system chosen by one type of operation may not be appropriate for other operators, even those within the same overall industry. Traditional department stores may be better able to provide counter personnel to assist shoppers than would be a central check-out self-service mass retailer, which may prefer to provide accommodations through an accessible central location. Even different mass retailers may choose to devise different systems. The essential point is that the facility should have the freedom to provide any alternative method of accommodation that effectively serves disabled customers.

A related issue in both the employment and public accommodations sections of ADA is the provision of "auxiliary aids and services." ADA's public accommodations title, in section 302(b)(2)(A)(iii), includes among the act's specific prohibitions:

> failure to take such steps as may be necessary to ensure that no individual with a disability is excluded, denied services, segregated or otherwise treated differently than other individuals because of

the absence of auxiliary aids and services, unless the entity can demonstrate that taking such steps would fundamentally alter the nature of the good, service, facility, privilege, advantage or accommodation being offered or result in undue burden.

"Auxiliary aids and services" are defined, in section 3(1), to include:

(A) qualified interpreters or other effective methods of making aurally delivered materials available to individuals with hearing impairments;

(B) qualified readers, taped texts, or other effective methods of making visually delivered materials available to individuals with visual impairments;

(C) acquisition or modification of equipment or devices;

(D) other similar devices and actions.

In this area, IMRA has three comments or suggestions. First, as the Senate report notes, "undue burden" and "undue hardship" -- which cover accommodations in existing buildings and employment -- are each a significantly higher standard than "readily achievable." So too is the burden of demonstrating that provision of an auxiliary aid or device would alter the fundamental nature of the goods or services being provided. IMRA believes that "readily achievable" ought to be the standard for provision of aids and devices in employment and public accommodations as well.

As discussed previously, IMRA strongly believes that a site-specific analysis is the most realistic and productive way of addressing needed accommodations. This should be the case as well for auxiliary aids and devices.

Finally, the Senate report's discussion of auxiliary aids and devices in the area of employment notes that many can be acquired for nominal sums, and that interpreters or readers will often be needed only on an intermittent, on-call basis, while normally performing other duties. The only instance where the report suggests that a reader might be required on even a part-time basis is for a "otherwise qualified" attorney in a law firm (unless that presented an undue hardship).

Whatever the merits of requiring an employer to provide a part-time reader for a visually-impaired attorney, the discussion of auxiliary aids and devices should explicitly take into account how frequently the service is needed, the size of the particular facility or establishment, and -- for employment purposes -- the economic benefits. A part-time reader may be justified for a highly skilled, trained and productive employee, such as an attorney, but would not be for a less-skilled or productive position, such as a clerical worker or a store cashier.

Standards for New Construction

ADA sets stricter standards for accessibility of new construction for first occupancy thirty months after its effective date. The dramatic and, we believe, unintended impact of restricting such key operational factors as aisle width, counter height and shelf height or depth, which we have already outlined, would remain true for new construction; we believe that its accessibility requirements properly deal with structural factors, not store layout.

In addition, there need to be practical alternatives to completely restructuring fixtures and equipment used in normal operation. For instance, a snack bar or lunch counter should have the alternative of making some -- not all -- of its spaces of a height and width suitable for wheelchairs.

Finally, "potential places of employment" should be removed from section 303(a)(1). This is not intended, the Senate report notes, to add to an employer's duties. But if it remains, it may have the effect of bring under the public accommodations section non-public working areas (such as in back rooms and behind checkout and displays).

Any accommodations that employers must undertake in these non-public workplace areas are best handled by ADA's employment provisions, which require employers to tailor accommodations to the specific needs of the actual job applicant or employee. Imposing public accommodations standards on non-public work space could result in facilities being required to make expensive but unneeded changes (such as installing elevators going only to non-public work areas when no employees require them). If qualified disabled job applicants apply, or employees needing such as accommodation are later hired or transferred, or employees at the site become disabled, they would have the protections of ADA's provisions on employment.

IMRA wishes to make brief comments on several provisions of ADA in areas other than public accommodations. These include:

"Pattern or practice": In finding a "pattern or practice" of discrimination, multi-site operations should not be found to have multiple violations for unrelated occurences at physically separate sites. Mass retailers typically operate in many locations, often far-flung and usually with a large degree of de-centralization. Typically, store managers or assistant managers handle hiring interviews and decisions on-site, and nearly any manager or employee in a store may come into contact with members of the public. When facility managers have operating authority, separate instances should not automatically be charged against the company as a "pattern or practice." Several years ago, the Judiciary Committee recognized this principle in the Immigration Reform and Control Act.

This is especially true since ADA at present lacks a requirement, found elsewhere in Title VII, that violations be intentional, and that "pattern or practice" violations be wilful or egregious. IMRA suggests that ADA likewise adopt the requirement of intent generally, and set an even higher standard of intent for its "pattern or practice" provisions.

Exclusive remedies: ADA does not pre-empt differing state or local government requirements in these areas, leaving employers and operators of public accommodations subject to being sued in several different forums. The bill should either pre-empt differing state and local requirements in the area of discrimination and the disabled, or at a minimum, provide that the remedies provided by ADA are the exclusive remedies for alleged violations of ADA. In states and local jurisdictions where tort actions may be brought for violations of "public policy," making ADA remedies exclusive will prevent litigants from bypassing the intent of Congress and, by referring to ADA, availing themselves of procedures -- such as jury trials -- or penalties -- such as punitive damages -- which ADA does not contemplate.

Mr. **Edwards**. We will now recess for a very few minutes for a vote in the chamber.

[Brief recess.]

Mr. **Edwards**. I apologize for the delay. The subcommittee will come to order and we will now hear from the third member of the panel, Mr. James A. DiLuigi.

[Witness sworn.]

STATEMENT OF JAMES A. DiLUIGI, AIA, DIRECTOR, TECHNICAL INFORMATION, MARRIOTT CORP., ON BEHALF OF THE AMERICAN HOTEL AND MOTEL ASSOCIATION, WASHINGTON, DC

Mr. **DiLuigi**. Good morning, Mr. Chairman. My name is James DiLuigi. I'm executive director of technical information, specifications and quality assurance for the Architectural and Construction Division of the Marriott Corp. I'm an architect. I'm a member of the American Institute of Architects. Prior to joining Marriott 10 years ago, I was engaged in private practice for 11 years. I'm pleased to be here this morning on behalf of the American Hotel and Motel Association to present this testimony on the Americans with Disabilities Act.

The American Hotel and Motel Association has approximately 9,000 member properties; 1.5 million rooms; and, we represent all the major hotel chains, as well as many independent properties of all sizes. In that respect, I think it's important to understand, even though we do represent chains and I'm a member of a chain, each property in that chain kind of has to stand alone. It's an independent business and it has to sink or swim.

AH&MA is and has been for quite some time committed to expanding opportunities for individuals with disabilities, both in employment and in public accommodations. According to statistics, some cited in your reports and some cited in other places, there are somewhere between 37 million and 45 million people with disabilities and apparently 8 million of those folks are looking for jobs. So we have a specific interest.

Also, it's important to understand that one in every two people over the age of 65 has some sort of disability. So we are looking to accommodate disabilities both for those who would be our potential customers, and for those who would be our potential employees. Mark Donovan, one of my associates at Marriott, spoke highly of the employment aspects of this bill before the Labor Committee previously. So today we are going to kind of focus on title III, which are the public accommodations aspects, and on title V of the enabling legislation.

On a little bit of a sadder note and personal note, I'd like to state that there is some sadness in our industry this week. Our President, who I am representing here, Elaine Etess, lost her son, who is also in the hotel business, in an unfortunate accident yesterday. Our President, Bill Marriott, had a heart attack last week. So we ask for your prayers and thoughts for their well-being.

On the issue of the bill, there are three things I'd like to speak about. These are not presented this way in the testimony. This will be a little bit of a more candid discussion. One is the need to understand exactly what is being required. Another is the methodology for developing the design guidelines to help us implement the legislation. The third is balancing costs against return.

The need to understand exactly what is required kind of falls into four stages, and the two gentlemen to my left spoke a little bit about them. The term readily achievable is defined as easily accomplishable, able to be done without much difficulty or expense. These are rather subjective statements and are easily argumentative statements and are the kinds of things that one of the gentlemen on the council mentioned earlier that can lead us into lots of legal arguments and not get the job done that we're looking to try to accomplish.

If, for instance, one owner has more debt than another, if one makes less profit, if one has less occupancy, is he or she less compelled to act than the person next to them that has another property with different circumstances and maybe a similar property? Some items that may appear to be easily accomplishable may be more difficult than first perceived. For instance, if we were to put grab bars in all of the guest baths, the grab bars maybe cost $25 to $100, but to put them in correctly to preserve the safety of the people using them, you have to remove walls and you have to put support in behind them, and that can cost easily $2,000 or more per unit.

Now, we should have enough units; that's not a point of argument here; but we should not go off haphazardly and say we should put them in all the units if we know that the cost is a significant factor. Alterations; make accessible to the maximum extent feasible is the terminology used in the legislation. We would ask what does that mean? What are the priorities? What should our priorities be? We want to help develop the priorities.

Where should we invest our dollars in order to get the benefit of the maximum extent feasible that's asked for? Can routine maintenance and replacement costs be excluded in the definition of spending money for alterations? I don't believe that is addressed in the legislation. And can there be an incentive? For example, if we were to have a 10-year deadline tax credit for implementing certain standards with a diminishing return where, if you were to do it within the first couple of years, you would get a full credit. If you were to delay certain things that needed to be done, you would get a diminishing credit. To be an incentive to take care of these issues that we need to put in our properties.

The third term is major structural alterations. That is addressed in the same language as alterations, but it's not clear where they divide. It is clear that it requires we address passive travel, bathrooms and water fountains in major structural alterations. That particular issue was addressed by my colleague to the left, suggesting that we look at the Pennsylvania statutes which say that 50 percent of the building cost formula might be used in identifying what is a major structural alteration.

Lastly, new construction. We have questions in regard to what is the intent for nonpublic work areas. There are certain work areas that pose a threat or a danger to both able and disabled people and for people with certain disabilities, there are higher risks than those who are fully able. I believe that should be looked at carefully.

The second item, methodology for developing the design guidelines. Here we request the balanced approach with representation of all affected parties. I'm happy to say in the testimony we refer to this particular publication, Design for Hospitality. The AH&MA, the Marriott Corp. and other hotel corporations worked for 2 years with the Paralyzed Veterans of America to develop this design guideline which addressed the public areas in hotels and motels.

It was a struggle; it wasn't simple. We addressed many different kinds of disabilities. We're not just talking about wheelchairs. We're talking about many types of disabilities. As I said earlier, the elderly population, which I will be one of in the not too distant future, of over 65 will be one in two of those people who will have some sort of disability.

So we request a balanced approach. We request to be able to participate and all industry members be encouraged to participate. This is a new territory. There's going to be a lot of exploration needed. There's going to be a lot of testing needed. There's going to be a lot of attitudinal adjustments to be made in solving these problems.

The National Fire Protection Association, which started about 1913, creates some standards aimed at our life safety. They didn't go from fire safe building products to fire proof roofing and building materials to smoke detectors to sprinkler systems in 6 months. It takes a lot longer than that and it's an ongoing process and there are standards that need to be updated approximately every 3 years to be effective.

There are many types of disabilities to be addressed. I would like to stress that. We're not just talking about people who have difficulty because they are in wheelchairs. They maybe have the biggest difficulty in terms of certain aspects of making a facility accessible, but there are people with hearing, with vision, with tactile senses, with range of motion, hand function, with strength and stamina, with mobility and with cognitive ability problems and these can all be addressed through design, but it takes a lot of research and a lot of work and a lot of cooperation.

Lastly, balancing costs against priorities. Perhaps in the design guidelines that are required to be set up, a first objective would be to develop a prioritized list of barriers to be removed. Those lists might be developed according to building types and according to new versus retrofitted construction. These lists don't have to have these solutions, but at least the need should be established so that we know how to work and where to start.

If I had a sum of money available, I'd like to know best how to use it. If I had $10,000, if I had $100,000, or if I had $1 million, I'd like to know where to put that money to best satisfy these needs. I don't want to do A if B is better and I don't want to do B if it has no value unless C is done along with it.

Retrofit costs can be significant; more so for existing buildings than old. For my company, we have approximately 125,000 guest rooms, 55,000 of those were put into service 10 years ago. We didn't know what we know now. We know a lot more today and the buildings today reflect that. It's going to be expensive to go back and we need to know what things are most critical. We would expect for a combination of new and retrofit construction to spend $45 to $116 million annually, depending on the range of requirements that were established.

After 10 to 15 years if we were to have all of our older facilities brought up to date, we'd spend $10 to $40 million annually, and we'd spend another $2 million annually for the employment aspects of added medical insurance. For those we would expect to get return on investment. But some of the items mentioned earlier as to employment issues, such as personal attendance and readers, we kind of see those as a necessity to make this thing work, but we sort of see those as a social service also and we'd like to see some thought given to a tax credit along those particular lines.

In conclusion, I'd just like to say that we know about this subject. We've been working on it and continue to work on it. We applaud the legislation and we ask for a balanced approach in developing the tools to make it work. Thank you very much.

Mr. EDWARDS. Thanks to all three witnesses. Your testimony has been very helpful.

[The prepared statement of Mr. DiLuigi follows:]

PREPARED STATEMENT OF JAMES A. DILUIGI, AIA, DIRECTOR, TECHNICAL INFORMATION, MARRIOTT CORP., ON BEHALF OF THE AMERICAN HOTEL AND MOTEL ASSOCIATION, WASHINGTON, DC

Good morning, Mr. Chairman, my name is James A. DiLuigi. I am the Executive Director of Technical Information, Specifications and Quality Assurance for the Architectural & Construction Division of Marriott Corporation. I am a member of the American Institute of Architects, and prior to joining Marriott ten years ago, was engaged in the private practice of Architecture for 11 years. I am pleased to be here this morning on behalf of the American Hotel & Motel Association to present testimony on the Americans with Disabilities Act to this subcommittee.

The American Hotel & Motel Association is a federation of affiliated lodging industry associations located throughout the United States, Puerto Rico, and the Virgin Islands. The association represents almost 9,000 member properties comprising more than 1.4 million rooms. Our membership includes all the major hotel chains as well as many independent properties of all sizes.

AH&MA is committed to expanding opportunities for individuals with disabilities both in employment and in public accommodations. Recently, we worked with the Paralyzed Veterans of America to develop the book entitled Design for Hospitality. The purpose of that book is to illustrate for architects, designers, and hotel and motel developers how to design and construct buildings that expand accessibility to hotels and motels for all potential guests. A copy of the book was provided to subcommittee staff and is evidence of our long-standing commitment in this area.

In addition, Elaine Grossinger Etess, 1989 president of the American Hotel & Motel Association has dedicated her term to expanding employment opportunities for individuals with disabilities as well as for senior citizens. In numerous speeches to the lodging industry, Mrs. Etess has encouraged her colleagues to tap this pool of employable talent to meet the growing human resource needs of our industry.

With this history of commitment to expanding opportunities for all members of our society, we welcome the Congress's and White House's efforts to provide fair and balanced federal legislation. We have worked with the White House and the Senate as they attempted to refine the Americans with Disabilities Act as originally introduced. We believe substantial progress resulted from that effort, and that S. 933 as passed by the Senate was a better bill than that introduced. We also believe that the Committee Report accompanying S. 933 clarified the legislation in many instances.

However, we believe that there remain issues to be addressed in ADA, and we applaud the Judiciary Committee for holding these hearings on the bill. We look forward to working with you on this important issue.

It is our intention throughout to refer to S. 933 as passed by the Senate and to the committee report which accompanied that bill. We believe it appropriate to build on the foundation formed in the Senate with the hope of erecting a structure that strikes the appropriate balance between the needs of all individuals with disabilities and the legitimate concerns of those who must implement the requirements of this legislation in our society.

While the lodging industry will be impacted by this legislation in several areas, including that of employment, we will concentrate today, on Title III of S. 933, dealing with Public Accommodations as well as the accompanying committee report, and more specifically to the requirements imposed on our physical structures. We will also address Title V dealing with design guidelines.

Title III defines a continuum of response by lodging facilities to the needs of individuals with disabilities for accessibility. That continuum can be conveniently broken down into four stages: the "readily achievable" stage which requires certain retrofitting of existing facilities; the alteration stage which imposes requirements on certain areas when they are altered; the major structural alteration stage which adds to the alteration stage certain requirements on paths of travel; and finally, the new construction stage which imposes requirements on new buildings.

Along each stage, the burden to the facility is increased, as the effort undertaken by the facility on its own behalf increases. This is an appropriate pattern and one we do not disagree with. However, we feel several issues must still be addressed.

I. Readily Achievable

"Readily Achievable" barrier removal is used as the standard for retrofitting existing public accommodations where no modification, alteration or similar change is ongoing. The term is given a general definition of "easily accomplishable" which unfortunately is little more than a synonym for the term being defined and adds nothing to the understanding of the term. That synonym is then somewhat modified by a description of "able to be carried out without much difficulty or expense."

Several factors are then cited to help determine whether an action is "readily achievable". However, those factors fail to contain a direct link to the economic health of the specific entity either by reference to profitability or other specific measure that a business may rely on. There also is an implied indication that there would likely be only one "readily achievable" action for a facility. However, such may not be the case, particularly in a large facility such as a hotel. This lack of some specific measurement or limit is exacerbated in the committee report which gives several examples of what may be considered "readily achievable" changes including grab bars and ramps over a few steps.

The reality is that the installation of grab bars typically requires at a minimum removal of the existing outer wall, installation of reinforcement such as 3/4 inch plywood into the wall, and replacement of the wall prior to installation of the grab bar. If you are speaking of a bathroom, in addition to sheetrock, there would also be ceramic tile to be removed and replaced. Additionally, there is the potential for electrical wires within the wall which may need to be moved.

The total cost of materials and labor for the installation of a single grab bar could be more than $2,000. While the bill seems to suggest only one action, the open-ended nature of the example in the committee report suggests this cost could be replicated numerous times in a single hotel facility. This seems to far exceed what one would call "readily achievable", but is a foreseeable event under the definition and examples of readily achievable.

Similarly, ramping one or several steps cannot be done by merely throwing a few sheets of plywood down. Liability concerns, code requirements, aesthetics, and durability of materials among others require installation of a permanent ramp. Again, the cost for such a ramp may be several thousand dollars, and more than one ramp might be demanded for a facility to make it truly accessible. Other examples in the committee report raise similar cost issues.

A larger concern under the "readily achievable" standard is the broad range of potential changes which may be requested. Considering the wide scope of disabilities covered by this bill, it is not likely to be just one ramp, or just one grab bar, but several of each as well as other changes including alarm lights, plumbing fixture relocations, door hardware modifications, and the like. The overall cost of all the "readily achievable" changes could exceed the ability of a facility to afford such cost, but no limitation on cumulative changes is found in the legislation. When the cost of "readily achievable" standards was mentioned in the Senate, it was frequently said that minor changes costing $50 to $150 may be all that was required. However, as can be seen from these examples, the likelihood is for costs far in excess of the minimum amount mentioned. A measurable limit on "readily achievable" must be added by this committee.

A specific problem with the example of grab bars used in the committee report is whether, when applied to a hotel, the changes are intended only for the common use, public areas of the hotel, or whether individual guest rooms are contemplated. An interpretation that "readily achievable" changes of the nature contained in the committee report would be required in all guest rooms would create a burden that would likely lead to the closing of some facilities. In addition, it would be inconsistent with committee report language under "new construction" that not all rooms must be fully accessible.

In spelling out this concern over the potentially broad scope of "readily achievable" despite the seeming limitations of S. 933 cited above, it is not our intention to call for removal of this provision but rather to request this subcommittee to eliminate any possibility of such unintended effect by adding to the existing definition an understandable limit that is knowable and can be adhered to by businesses. Given a standard or guideline more specific than that offered to date, a standard which a business can know and understand, it will respond with a high degree of compliance. The vague standard we currently have offers no clear way for a business that wishes to comply to do so.

It is not our intention to offer specific language in this testimony, but having pointed out the need for such language, we readily offer the staff and resources of AH&MA to work with committee members and staff to reach clearer language.

II. Alterations/Major Structural Alterations

The legislation passed by the Senate contains requirements when a facility makes alterations/major structural alterations. The essential difference in the bill's requirements is that when a major structural alteration is undertaken, the paths of travel, bathrooms, and water fountains in addition to the altered portion of the facility must be readily accessible to and usable by individuals with disabilities. This "readily accessible" standard applied to new construction is limited by a standard that requires accessibility only to the "maximum extent feasible" in the two alteration situations. The principal problem with the two alteration requirements is the lack of a dividing line between them. It is not clear when an alteration ends and a major structural alteration begins. Also, there is no exception to the alteration requirement for routine maintenance and replacement of items subject to wear and tear which have at most only a minor impact on accessibility and usability by individuals with disabilities.

The lack of a clear line between alterations and major structural alterations is further muddied in the committee report which does not discuss at all or provide even a single example of an "alteration" and which discusses major structural alterations in a way which is at variance with the common meaning of those words as well as the meaning of those terms as used within the building industry.

The emphasis in the committee report discussion is on "major" meaning the same as "important," rather than as describing a level of alteration. In the same way, "structural" is equated with "facility usability" rather than with elements integral to the building such as load bearing walls which actually support the structure.

The result of this confusion is to push typical alterations into the higher category of major structural alterations. This creates the extra responsibility of making paths of travel accessible where true structural alterations have not occurred. The likely result of this requirement, if unchanged, will be to curtail building alterations, thereby cutting against the goal of this legislation.

In saying the above, it is not our intention to criticize the committee report, but rather to present to the subcommittee an opportunity to remove confusion and add clarification in this area.

Since this problem can be solved by a simple amendment to the bill, we would recommend that a percentage limitation - measured against the value of the facility being altered - be inserted into the bill. An alteration costing more than 50% of the value of the building would be a major structural alteration. Any alteration of a value of 50% or less would be an alteration. A de minimus exception to the alteration standard for replacement of routine items, limited to no more than 5% of the value of the building would allow maintenance and upkeep to take place without disruption, and should also be included as part of the definition.

This simple solution would obviate the attempted explanation of "major structural alteration" contained in the committee report. We understand it would be consistent with the approach taken by Pennsylvania in its legislation.

III. New Construction

Newly constructed facilities are required to be "readily accessible and fully usable by" individuals with disabilities except where structurally impracticable. The committee report in attempting to further explain this concept speaks in terms of excluding from this standard "unusual spaces that are not duty stations."

However, within a facility such as a hotel, there are public areas such as the lobby, restaurants, meeting rooms, and guest rooms, etc. There are also nonpublic areas such as offices, kitchens, storage rooms, and mechanical/electrical equipment areas, and the like where only employees are allowed. Within the nonpublic areas are work stations where some individuals with certain disabilities would not be able to meet the requirements of the job done at that station. Under the employment title, this would seem to present no problem.

Under the "new construction" standard, it appears a hotel may be expected to make that work station "fully accessible to and usable" by individuals with disabilities. An example of such a situation may be a wheelchair bound individual being unable to work at a stacked oven, tilt kettle, or commercial stove, yet the hotel may be faced with demands for wheelchair accessibility to and of that work station. In fact, it is not clear that demands to make the fixture itself, the stove etc. in our example, fully accessible, could not be made, despite the fact that there is only a lesser standard, "reasonable accommodation" under the employment title. Despite language in the committee report that Title III does not cover employment situations, the "readily accessible" standard for both new construction and alterations applies so broadly, that clearly exempt work stations do not appear to be exempted.

While we are concerned about the sweep of this provision, it is not our intention to request significant modifications. We agree with the committee report that the purpose of this standard is to enable people with disabilities to get to, enter, and use a facility. We point out, however, where use is not contemplated, costly modifications should not be demanded.

The term "readily accessible" has another implication for the lodging industry when the term is applied to guest rooms. While the committee report indicates that "the term does not necessarily require the accessibility of every part of every area," when it uses a hotel as an example, it speaks of all doors and doorways being designed to allow passage into and within all hotel rooms. If that is intended as a specific requirement, that all doorways in newly constructed hotels be of sufficient width to allow wheelchair passage, we have no disagreement with that. If it is interpreted as an example of the level of conformity hotels will be held to for all items in the guest room or for other areas of the facility such as parking lots, we are greatly concerned about the financial implications of such an interpretation.

Some comfort exists in the language of the committee report which speaks of "readily accessible" as requiring a percentage of each class of hotel room to be fully accessible. However, what is intended as a "class of hotel rooms" is not explained by the report, nor is that a term which has a commonly accepted definition within the lodging industry. Related to the "class of rooms" problem is the segregation issue which is a unique problem for hotel guest rooms. Uniformity of design and construction requirements make randomly placed fully accessible rooms difficult to install in newly constructed hotels. Modification of the design of the building either vertically or horizontally to accommodate differing plumbing and electrical needs often necessitates a grouping of rooms that are fully accessible. Such grouping could be claimed to be segregation, even though done merely to accommodate construction requirements. Clarification by the subcommittee of these issues is required.

IV. Design Considerations

It is AH&MA's objective to help design and construct facilities to be accessible. However, there has been very little effective guidance available to designers and developers to help accomplish that objective. The American Standards Institute's "Specifications for Making Buildings and Facilities Accessible to and Usable by Physically Handicapped Persons" (ANSI 117.1-1986) is lacking in its ability to provide design solutions. Our Design for Hospitality book was an attempt to address this lack with specific design solutions.

However, we believe that overall, enough has not been done to date. The Americans with Disabilties Act will have a significant positive impact in seeing that more will be done. As currently drafted, it requires that design guidelines be developed by the Architectural and Transportation Barriers Compliance Board within six months after it becomes law. We are not confident that this is a fully conceived assignment of that responsibility or that six months is sufficient to develop the design guidelines. We, therefore, request that this part of the legislation be reconsidered by the House of Representatives.

We suggest that a well balanced group representing all facets of the issue be involved in developing the design guidelines and in continually cultivating them over time. A good model for such a group is The National Fire Protection Association (NFPA) which originated in 1913 and which develops standards and regulations pertaining to life safety in buildings and structures. The design standards which are published by NFPA are typically adopted by state and local code authorities by simple reference.

It is our request, therefore, that composition of the Architectural & Transportation Barrier Compliance Board be evaluated for its ability to meet that objective and that its membership be adjusted as necessary.

The AH&MA would like to participate in the development and maintenance of the design guidelines and encourages professional organizations, industry associations, public sector officials, advocacy groups, service providers, and independent interested individuals to similarly contribute to the effort of seeking practical solutions to the needs of the disabled. We believe that the inclusion of all parties as active participants in this problem solving process will yield good answers and even more importantly lay a strong foundation for effective implementation.

IV. Conclusion

In closing, the goal we ask you to strive for is that of eliminating as much litigation as possible by giving business clear standards to be achieved, with reasonable protection of their financial integrity. Many steps have been taken to reach the goal of eliminating discrimination on the basis of disability. We believe the areas we highlighted in our testimony will not hinder that goal in any way, but will instead further that goal by promoting a higher degree of cooperation by the business community.

Mr. Edwards. Mr. Sensenbrenner.

Mr. Sensenbrenner. Thank you very much, Mr. Chairman.

First of all, let me say that the testimony I think on balance has been very helpful. Obviously with an increasing percentage of our society having some kind of disability or another coupled with a shrinking labor pool, having protection for the disabled is an economic necessity in the real world of economics today.

If people close their doors to workers or potential workers with disabilities it will be that much more difficult to find qualified people to do the tasks that need to be done in businesses and as far as retail establishments that are providing goods or services to the public, closing one's door to disabled customers will probably mean that 20 to 25 percent of the potential buying public will be excluded from spending their money in a retail establishment and it simply isn't good business.

I also agree with many of the witnesses that there are some ambiguities that need to be clarified in the Senate-passed bill and obviously what we would like to see happen is a very clear set of guidelines on what you've got to do and what you don't have to do in order to comply with this law so you don't need to hire a lawyer and an accountant and spend money that could be used fixing the place up to make it accessible to the handicapped on lawyers' fees and other types of litigation expenses.

Now having said all of that, you know, let me specifically take issue with some of your statements, Mr. Motley, about an insinuation that those of us who want to do something for the disabled are oblivious to the real world consequences of what we're doing here in the Congress.

I happen to have a wife who's a paraplegic and a sister-in-law who has Down's syndrome and maybe some of your members are oblivious to the real world consequences of having to live with a disability on a day-to-day basis and that is why this legislation is here and that's why it passed the Senate by an overwhelming margin and has got the support of a probusiness national administration and President of the United States, so I would hope that when we approach this issue— you know we are going to do it in a constructive manner to try to clarify these ambiguities rather than trying to nitpick the bill to death, and some of the statements, Mr. Motley, in your prepared testimony in my opinion are very nitpicky and I'd like to ask you a question about one of them.

On the bottom of page 9 you say a better solution would be a dollar or percentage of net profit cap on what a business is expected to spend.

Can you tell me how a potential buyer in a retail establishment who's disabled is able to determine whether or not the business has complied with the ADA simply because it might be less profitable than the competitor down the street?

Mr. Motley. No, I can't tell you that, Mr. Sensenbrenner.

I would think though that if there is cause for that individual to think that the business is not living up to its obligations that that information can be found out rather readily.

If I am also not mistaken it's part of the North Carolina law in this particular area where that is defined as reasonable. Before going on though——

Mr. **Sensenbrenner**. My time is limited. You know, following up on that statement——

Mr. **Motley**. So is mine, Mr. Sensenbrenner.

Mr. **Sensenbrenner**. Following up on your statement there, Mr. Motley, you know you said that it could be found out relatively readily if a business is not living up to its obligations.

If a business should be exempted for one reason or another, would you support an amendment to the law that would require that business to hang a sign out in front that says "Disabled Not Welcome?"

Mr. **Motley**. I don't get the gist of your question.

Mr. **Sensenbrenner**. Well, that would inform somebody who was going down the street who's disabled who wants to go shopping that the business is not readily accessible according to the terms of the law and they can go spend their money elsewhere because I am sure that a disabled person would want to support a business that's helping them out and not support one that isn't.

Mr. **Motley**. Well, that's a matter of choice for the disabled person to support any business it wants, just as it is a matter of choice for any other individual in the country to support a business.

Mr. **Sensenbrenner**. Well, your point, Mr. Motley, was that a disabled person should know whether or not the establishment is in compliance with the law and hanging a sign out in front that says "Disabled Not Welcome" would drive that point home pretty quickly.

Mr. **Motley**. I would assume, Mr. Sensenbrenner, if the individual has a complaint that the individual would look into the remedies which are available in the legislation and it would be relatively simple I believe for a lawyer or for some other official to find out whether the business has the available amount of money to make the changes.

Mr. **Sensenbrenner**. But isn't it one of everybody's goals including your organization's to try to keep these complaints out of court so we don't spend money on lawyers' fees but we get the job done?

Mr. **Motley**. It is also my intention and the desire of my organization to make sure that businesses are not forced out of business and people lose their jobs because they cannot make the types of changes which are referred to in the legislation or are needed.

Mr. **Sensenbrenner**. You were the one who suggested a percentage of net profit cap in your testimony.

Mr. **Motley**. And that's right out of the North Carolina State law.

Mr. **Sensenbrenner**. Well, you know I can't understand if one is in the business of selling goods to the public or selling services to the public why a percentage of net profit cap can be used for an exemption or not. Basically what you are doing is saying that unprofitable businesses or less profitable businesses don't have to comply with the law but very profitable businesses do. You are ending up penalizing the profitable ones.

Mr. **Motley**. I wouldn't put it exactly that way but the way I see what you're saying is that we're going to treat everybody exactly the same and we don't give a darn about the consequences of it.

Mr. **Sensenbrenner**. No, that's not what I am saying.

Mr. **Motley**. We don't care whether people are put out of work. We don't care whether the business closes. We don't care if there are five or six disabled people working for this that they lose their jobs.

Mr. **Sensenbrenner**. Sir, I have received a Guardian of Small Business Award from your organization for the last several years. You're off base on this one. You are way off base on this one and if I don't get a Guardian of Small Business Award because of my support of the ADA, that's just too bad.

Thank you, Mr. Chairman.

Mr. **Motley**. Mr. Chairman, could I make one comment, please?

Mr. **Edwards**. Yes. Go ahead.

Mr. **Motley**. Mr. Sensenbrenner, we very well could have brought a number of different witnesses in here. We have NFIB members across the country who are severely disabled who run businesses. We have other NFIB members who have done a great deal to help the disabled and I think in the conversations we've had with the disabled community and that the Congress has had with the disabled community they tend to feel that small business is doing a fairly decent job of trying to accommodate them. Therefore you know we are not coming in here to nitpick the legislation.

In addition to that, you know my membership does feel that many of the pieces of legislation that come out of Congress, come out of Washington don't apply very well in the real world. I simply refer you to section 89 of the Internal Revenue Code, auto logs, a number of other things which have caused severe problems.

Mr. **Sensenbrenner**. Well, Mr. Motley, I was the only member of my State's delegation that voted against the 1986 tax bill and I did so——

Mr. **Motley**. Because of section 89?

Mr. **Sensenbrenner**. Well, it was not just because of section 89 but that was because of one of these, one of the provisions and I have worked to make a lot of civil rights laws more workable and more flexible in terms of their application and have had no problems in having very strong disagreements with the chairman of this subcommittee, whom I respect very greatly.

My point to you is simply this, and that is that disability has been the ignored reason for discrimination far too long in this country.

I want to make this bill more workable and I agree with all three of the witnesses that have appeared before us this morning that there are certain provisions in the Senate-passed bill which are so ambiguous that nobody knows what they've got to do and whether doing what they think they have to do is going to place them in compliance with the law or not.

My argument is with the attitude and with the tenor of your testimony. It is not with the attitude and tenor of the other two witnesses' testimony and it seems to me that you are not approaching this issue in a constructive manner to try to clean up these ambiguities, you know. You are trying to figure out how to exempt as many of your clients as possible.

That certainly is a legitimate reason for someone who is a hired gun for a trade association. It is not a legitimate reason for someone who is supposed to represent the public interest.

Mr. **Motley**. Mr. Chairman, from the beginning of this process NFIB has attempted to work within the process to make the bill better. It is not our desire to have to oppose this particular piece of legislation. With the administration, with the Senate committee and with the various different House committees, with the Democratic and Republican leaderships we have made the same point. That is our intention in appearing here today and I am sorry, Mr. Sensenbrenner, that you don't believe it's such.

I would hope that the committee would make changes in the legislation which we feel will make it easier for small business to comply with the law and also make it easier for the Justice Department to enforce it.

Mr. **Sensenbrenner**. Well, I would just say in response to the comment that you made is that one of your principal points is that there is an undue hardship exemption in title I which is the employment section but you want to have the same type of exemption for title III which is the public accommodations section.

I think there is a considerable difference between the two because with the public accommodations section that covers facilities that are open to the public, which means everybody including the 20 to 25 percent of the American population that has got some kind of a disability. It is entirely different than the employment section where there has to be an agreement between the employer and the employee that there be a hiring and you know there you are not open to the public and there are some small businesses that do not sell goods and services at retail that are open to the public——

Mr. **Motley**. But most of them do.

Mr. **Sensenbrenner**. There is a justification for that.

Mr. **Motley**. The vast majority of businesses in this country, Mr. Sensenbrenner, are in the area of public accommodations, either in service retail or in some other type, and I think our suggestion for an exemption—we don't see—there are differences. From the standpoint of the employer we don't see where there are such significant differences not to consider the same type of treatment and I think what we are asking the committee to do is to you know balance the extent and coverage and accessibility to the handicapped against the cost of compliance, against the problems that it will cause.

This type of an approach is one which you know is in law in the Regulatory Flexibility Act for smaller businesses.

If an exemption is not possible, possibly a phase-in period for smaller businesses is something that would work.

You are going to have an extremely difficult time getting small, main street rural businesses of this country to realize what their obligations are under this statute and they are going to be sitting out there not knowing that they are going to comply, not knowing the types of disabilities that they are going to have to change their businesses for.

We are terribly, terribly concerned that under those circumstances they become sitting ducks for the type of legal actions that you are concerned about preventing and that we are concerned about preventing.

That is the reason for our suggestion.

Mr. **Sensenbrenner**. Let me give you a hypothetical. How about a small rural filling station. Do the bathrooms have to be wheelchair accessible? Should they be?

Mr. **Motley**. I would think that they should be, yes.

Mr. **Sensenbrenner**. OK. Thank you very much.

Mr. **Motley**. But I would also think, looking at a legitimate smaller business exemption, even a small rural filling station unless it's just family operated would have more than just, let's say, five or six employees. They'd have to, to operate the station and keep it open to make business.

Mr. **Edwards**. Mr. Motley, do you think that there should be a general exemption for small businesses?

Mr. **Motley**. We believe that the cost of compliance, Mr. Chairman, in the very smallest of small businesses, is literally outweighed by the benefits that might be gained. We also believe that many of these would probably come into compliance on their own over time. So that's our official position.

If it's not possible to have an outright small business exemption, again a phase-in is something that we would wish the committee to consider, such as the type of phase-in which has been done on some of the environmental laws, because you have just a class of businesses out there who simply will not know what their obligations are under this law.

Mr. **Edwards**. Thank you. Mr. DiLuigi.

Mr. **DiLuigi**. Yes, if I may speak to that issue a little, in terms of the rural filling station or the small hotel, whatever it might be. Our experience in working with the Paralyzed Veterans of America in developing this particular design guideline book has really shown that there are many different solutions available to many different problems, and it takes some arm-wrestling, sometimes, to get the solutions out on the table, and it takes some understanding of the thing to be solved by the design community and the two working together.

For instance, in a small property or a small hotel, where you may not be able to afford to tie or to tear out a front desk and put a new desk in which would be accessible to someone in a wheelchair, it is possible to have clipboard, something as simple as a clipboard that can be handed over the counter and used by that particular individual.

Similarly, in maybe a larger or luxury hotel, you can have a concierge desk which can be used in a more gracious manner to solve that particular problem. Also, we've learned that most wheelchairs can get through a 2-foot-6-inch-wide door. We don't necessarily need to have 32-inch net clear openings or 3-foot-wide clear openings. Those are good to do in new construction, definitely, and standards should be developed for new construction because it doesn't cost but pennies more or even nothing in many cases to put that in, new construction, than it does to go and tear it out of old construction.

So there really needs to be a balance of standards. The things you can do to make a place more accessible in an existing facility can be a lot less, maybe not as completely accessible, maybe not as desirable, but still accessible to meet the intent of the legislation, and that really needs to be understood.

Mr. **Edwards**. Thank you. When this subcommittee handled the fair housing bill last year, and when we came to new construction of apartments and so forth for the handicapped, we found that hypothetical questions that we would feel obliged to answer was a very useful process, and I would suggest that some of this discussion today has been too theoretical, insofar as nailing down answers that your people have to have.

So the subcommittee would invite a series of hypothetical questions, such as Mr. Sensenbrenner asked about the rural service station. We would welcome just dozens of them and then you would pass the buck to us and we would have to struggle with them, with experts just like you have had to in your hotel business.

Generally speaking, I believe that the testimony of all three witnesses is that you are in favor of a bill, but it does need that kind of clarification; is that generally true?

Mr. **DiLuigi**. Yes.

Mr. **Hoey**. Yes.

Mr. **Edwards**. So that you can live with it without getting into real trouble financially and legally; is that also correct? Mr. Motley.

Mr. **Motley**. Yes, that's correct, Mr. Chairman. Let me say that from our standpoint, the more that can be clarified in terms of the vagueness and ambiguity of the language, the less need there is for exemptions.

Mr. **Edwards**. All right. Well then you put your thinking cap on and write us some questions on it. We'll wrestle with them, because we're going to get asked those questions anyway. We're going to get asked those questions in the full committee and on the floor and back home, and we welcome them. Yes?

Mr. **DiLuigi**. Sir, if I might, the key point I've tried to make here is that you can't legislate the solutions, I don't believe, that the solutions are going to have to be evolved, and that there's much work needed to be done because we haven't done it in the past.

The legislation would be best suited to allow for that kind of an effort to occur, for the kind of exchange to occur between businesses, between the design community and with the disabled, to come up with good solutions. Make it happen through the legislation; force it to happen through the legislation, but allow for the creativity to do it effectively

Mr. **Motley**. And Mr. Chairman, many of the solutions that have come about out there have been done in the trial and error atmosphere of, you know, of a working everyday business. Things that will work are decided upon by the business owner and by the disabled individual who either is seeking employment or wants to deal with the business, and I think that's an extremely important point. Now all of the mailing——

Mr. **Edwards**. We have to make the legislation specific enough so there's not too much trial and error. We would like to have some answers so that your clients, your members, can move ahead with some competence in doing their business.

Mr. **Motley**. That's very important.

Mr. **Hoey**. Mr. Chairman, in the hypothetical question area, we have been trying to get questions—answers from proponents of this legislation. I have been trying to get it in the area of what is meant by "potential place of employment" and what is required of a retailer. If I want to build a store 30 months down the road after you pass this legislation, what do I have to do to accommodate a potential disabled applicant?

Do I have to lay my place flat so I take chances on who comes in the door? I specifically addressed it in a case of a security counter with cameras or jewelry. Do I have to leave a 5-foot place behind that counter and low counters in case somebody wants to work there in a wheelchair?

These are the questions which if we leave the employment part in the bill, in the public accommodations bill, and would leave that part in new construction, it will cause hotel people problems in their kitchen areas. It causes us problems in the layout of our stores and planning. If you literally read it, you can't build a so-called snackbar because it can't be accessed behind it by a person in a wheelchair to wait on you at the snackbar. Snackbars are usually in excess of 40 inches in height.

When you go through the airport at National Airport, there are loads of snackbars, but the person behind that can't really work at it in a wheelchair. Now if we pass the bill in its present form, you will outlaw that type of an operation. I shudder to think what it will do to a place like McDonald's and Burger King for future planning.

How are we going to accommodate—and that's just wheelchair. I'm not talking about all of the other 899 disabilities. So that's a factor that really has to be taken under consideration before 303 stays in the law. It's a nightmare.

Mr. **Edwards**. Well, you ask us those questions, Mr. Hoey and we'll wrestle with them. That's what we're getting paid for—we're not getting paid enough, but that's what we'll do.

[Laughter.]

Mr. **Hoey**. Nobody does.

Mr. **Edwards**. Thank you very much. It's been very helpful. We're now going to welcome our second panel: Laura Cooper, Esq., of the law firm of Pettit & Martin in San Francisco, and the Rev. Scott Allen, who is a member of the National Commission on AIDS here in Washington, DC.

[Witnesses sworn.]

Mr. **Edwards**. Ms. Cooper. Without objection, your full statements will be made a part of the record and Ms. Cooper, you may proceed.

STATEMENT OF LAURA D. COOPER, ATTORNEY, PETTIT & MARTIN, SAN FRANCISCO, CA

Ms. **Cooper**. Thank you. My name is Laura Cooper. I'm an attorney with Pettit & Martin, a major international law firm based in San Francisco, CA. I'm also the current chair of the Disabled Lawyers Committee of the American Bar Association, Young Lawyers Division, the former California State chair of the Dole Disability Coalition and a former national cochair of the Bush/Quayle National Disability Coalition.

Recently, I was named as 1 of 20 outstanding young lawyers of 1989 by the American Bar Association, Young Lawyers Division and its Barrister publication editorial board. While these credentials may, at first blush, create the appearance of a career path that's been unmarred by discrimination, that's, in fact, not the case.

Just 4 years ago, after graduating near the top of my law school class at the University of Washington with law review experience, a regional moot court award, an internship experience at a Federal appellate court and a summer clerking experience with the west coast's leading intellectual property law firm, I found it nearly impossible to land any kind of legal job.

My experiences in attempting to locate employment clearly showed a pattern of discrimination. I can recall representatives from firms who told me, among other things, that they were afraid of how their clients would react to me; that they didn't want to give me work I couldn't handle; that I somehow wasn't right for their firm's culture and I was rejected over 400 times by legal employers.

I have with me today a sample of just some of those rejections that I received from legal employers during my job search. Nevertheless, I persisted and I was one of the extremely lucky ones. I finally found a firm that was willing to look at my qualifications and not just my disability.

Now, I'm busy in the litigation department of Pettit & Martin in San Francisco. I'm here before you today in a number of capacities as a result of my life experiences and with a unique set of experiences that enables me to appreciate the critical importance of the ADA.

I am an American with a severe disability, a capacity that's profoundly affected both my outlook as well as the course and content of my life. I'm also a former resident of a nursing home, a status that I was forced to endure as recently as 1980, by virtue of the inaccessibility of the community in which I was living.

As such, I have a personal understanding of the unnecessary dependence and isolation wrought by architectural and attitudinal and communication barriers that exist in many aspects of daily living for most Americans with disabilities. Third, I'm here as a practicing attorney with a disability, an honor that places upon me a profound sense of responsibility for improving the landscape of opportunities for other Americans with disabilities that will come after me.

I'm also an active member of the party of Abraham Lincoln, well aware of the need for limited government, yet supportive of well-reasoned and well-crafted legislation designed to serve compelling Federal interests in the causes of individual liberty, opportunity and the recognition of human dignity.

The significance of the ADA public accommodations provisions to Americans with disabilities simply can't be emphasized enough. Ten years ago in 1979, I was diagnosed as having multiple sclerosis and wound up using a wheelchair before the year ended. In 1980, I had to use the drive-through window at my bank in my wheelchair, even in the rain and the snow, because I couldn't gain access to the front door of the building.

In 1981, I was turned away from a movie theater without an attendant because of the architectural layout of that particular movie theater. The management told me that I would have had to overcome significant barriers at the fire exit in case of fire.

In 1982, I was forced to stay in my van for days at a time as I attempted to tour the west coast, without leaving because I couldn't find accessible bathrooms, restaurants, hotels, retailers and other businesses, both large and small. In 1983, I had to transfer to a new law school because I was unable to climb aboard a municipal bus to get to and from school and no comparable accessible services existed in the community in which I was attending school.

In 1985, I had to sit by myself on stage at my law school graduation, instead of with my classmates in the gallery and the auditorium in which the graduation was being held because I couldn't climb the stairs to receive my degree. In 1986, I was thrown out of a shopping mall because a security officer believed that my electric wheelchair was a safety hazard to other patrons.

That same year, I was told by a clerk in a shoe store that I would have to take my developmentally disabled friend to another store to buy shoes because she might scare other customers away. In 1988, I was forced to invent a set of bathroom grab bars out of wooden chairs in an inaccessible hotel room that I had to occupy for a week while I was traveling on business.

As recently as August of this year, I was excluded from a significant portion of the annual meeting of the American Bar Association, even after I had traveled all the way to Honolulu, because the facilities in which the meeting's functions and events were being held were largely inaccessible.

Thus, a lack of access of public accommodations not only deprives me of social and recreational and commercial opportunities, but it has a very real and a very negative impact on my ability to be employed; to be able to function as a practicing attorney in the real world; both when I'm required to travel on client-related business and when I attempt to participate in activities of the organized bar, such as continuing legal education programs and local, State, and national bar association meetings, functions and events.

If the employment provisions of the ADA are to have any real meaning, the public accommodations provisions must be seen both as free-standing provisions designed to eliminate isolation and segregation among all of America's disabled citizenry, as well as provisions necessary to open and maintain meaningful employment and corollary associational opportunities for persons with disabilities.

While I, along with most good Republicans, view any effort to regulate business with an extremely jaundiced eye, I can safely say that my reasoned analysis of the Senate compromise ADA allows me to conclude that this bill is essential, timely and absolutely reasonable.

Aside from the human dignity and productivity benefits that will obtain from the ADA, there will also be a direct financial benefit to the Federal Government and to employers. In my case, when I was finally able to obtain permanent employment, I no longer had to collect my monthly Social Security disability payment, Medicare benefits or vocational rehabilitation funding.

Instead, I became a productive, taxpaying citizen and consumer, able to support the domestic and medical and other bills I incurred, through salary and benefits obtained on my job. Even though the

Federal benefits I was receiving before I became employed, were pretty minuscule compared to those received by most persons with severe disabilities, only 4 years after going to work, I now estimate that the net, direct and positive financial impact on the Federal Government due to my employment alone is approximately $40,000 to $50,000 per year.

In addition to these measurable benefits, the ADA can be seen as sort of, as it's been called, an emancipation proclamation for Americans with disabilities. The ADA would make possible for persons with disabilities, what we have always wanted to believe about America—that the truest measure of a person is the content of that person's character and not the presence of a disability.

Mr. EDWARDS. Thank you very much, Ms. Cooper. I'm sure I'm speaking for all the members of the subcommittee and the staff when I tell you what huge respect we have for you and how moving your testimony was.

[The prepared statement of Ms. Cooper follows:]

PREPARED STATEMENT OF LAURA D. COOPER, ATTORNEY, PETTIT & MARTIN, SAN FRANCISCO, CA

My name is Laura D. Cooper. I am an attorney with Pettit & Martin, a major international law firm based in San Francisco, California. I am also the current Chair of the Disabled Lawyers Committee of the American Bar Association/Young Lawyers Division, the former California State Chair of the Dole Disability Coalition, and a former National Co-Chair of the Bush/Quayle 1988 Disability Coalition. Recently, I was named as one of twenty outstanding young American lawyers for 1989 by the American Bar Association/Young Lawyers Division and its Barrister publication editorial board.

While these credentials may at first blush create the appearance of a career path unmarred by discrimination, that is not in fact the case. Just four years ago after graduating near the top of my law school class with law review experience, a regional moot court award, an externship experience at a federal Circuit Court of Appeals, and a summer clerking experience with the west coast's leading intellectual property law firm, I found it nearly impossible to land a job. When I went to on-campus interviews at my law school, interviewers typically cut the interview short and concentrated on my disability instead of my resume by asking questions such as how fast my wheelchair could go. When I sent resumes directly to law firms as an alternative to the campus interview process, I discovered that when I did not indicate on my resume that I was disabled, I almost invariably received an interview request from the firm to which the resume was sent. In those cases, however, I generally arrived for a scheduled interview and discovered that the interview location was inaccessible. Even where I was able to attend an interview, the interviewer usually still did not know how to deal with the fact that I was disabled, or I was often simply kept waiting until the interview was cancelled altogether -- even though I usually had travelled hundreds or thousands of miles at my own expense to attend the interview.

So then I tried another tactic. I began inserting a benign indication on my resume that I was interested in disability-related issues, and also added a neutral signal in my cover letter indicating that I had a disability. Subsequently, I only rarely received any interview requests.

My experiences clearly showed a pattern of discrimination. Following one interview during my last year of law school I received an offer to work as a permanent law clerk for a firm in Portland, Oregon for a salary of $6/hour. When I turned that job down, the firm instead hired a full-time associate attorney. I also vividly recall classmates receiving interviews and job offers from firms that previously had told me they were not hiring, and classmates who had neither performed as well as I had in law school nor had comparable law school experiences or achievements getting job offers at firms that would not even interview me. I can recall representatives from firms who told me, among other things, that they would not hire me because of what I would do to their insurance rates, that they were afraid of how their clients would react to me, that they did not want to give me work I could not handle, that they were not sure I knew what litigation was all about because if I did I would not assume that I was capable of doing it, that I somehow just was not "right" for their firm culture, or that they doubted that I could handle the stress of a law firm practice.

Nevertheless, despite these horrific experiences, I am one of the lucky ones. I persisted, and after over 400 rejections from legal employers, I finally found a firm that was willing to look at my qualifications instead of my disability. I am now busy in the litigation department of Pettit & Martin in San Francisco, practicing in the field of accountant liability.

I look back now to the unbelievable experiences I had in trying to find professional employment and am astonished at what has transpired over the last four years. I went from nobody's choice in 1985, to a federal appellate clerkship with the Fifth Circuit in New Orleans in 1986, to a Pettit & Martin litigation position in 1987, to an interview for a position with C. Boyden Gray as Associate Counsel to the President in 1988, to being selected as one of the twenty outstanding young American lawyers in 1989. It is difficult to understand how -- only two years into a career as a private practitioner I could be so highly regarded by my peers when only four years ago I was not valued in any demonstrable way by any firm to which I had applied for employment.[1]

---

[1] I have since discovered through my contacts with other attorneys with disabilities as Chair of the Disabled Lawyers Committee of the ABA/YLD that my experiences were all too typical

The dramatic change in my status that I have experienced over the last several years allows me to come before you today in a number of capacities, and with a unique set of experiences that enables me to appreciate the critical importance of the legislation you are presently considering. First, I come to you as an American with a severe disability -- a capacity that has profoundly affected my outlook as well as the course and content of my life. Second, I come to you as former resident of a nursing home, a status that I was forced to endure as recently as 1980 by virtue of the inaccessibility of the community in which I was living. As such, I have a personal understanding of the unnecessary dependence and isolation wrought by the architectural and attitudinal barriers that exist in so many aspects of daily living for most Americans with disabilities. Third, I am here as a practicing attorney with a disability -- an honor that places upon me a profound sense of responsibility for improving the landscape of opportunities for other Americans with disabilities that will come after me. Fourth, as the Chair of the Disabled Lawyers Committee of the ABA/YLD, I appear as a representative of other practicing attorneys with disabilities, all of whom collectively and individually experience nightmarish conditions in their attempts to survive and advance in the profession due to the pervasiveness of architectural, attitudinal, and communication barriers. Fifth, I am here as an active member of

---

among law school graduates who have disabilities. *See* N.Y. Times, Dec. 31, 1988, (Section on *The Law*). A copy of the cited article is attached to this statement.

the party of Abraham Lincoln, well aware of the need for limited government, yet supportive of well-reasoned and crafted legislation designed to serve compelling federal interests in the causes of individual liberty, opportunity, and the recognition of human dignity. Finally, and most importantly, I am here as a citizen of the United States, entitled to the full enjoyment of the same rights and privileges that are enjoyed by able-bodied citizens. In every one of these capacities I strongly urge you to pass the Americans with Disabilities Act of 1989 (the "ADA") as it is composed in the compromise Senate Bill.

The significance of the ADA to the population of Americans with disabilities, including myself, cannot be emphasized enough. My own experiences in fact paint a vivid picture of the need for this legislation.

It was only ten years ago in 1979, while engaged in my first year of teaching junior and senior high school science after graduating from college, that I was diagnosed as having multiple sclerosis. In 1980 I had to use the drive-through window at my neighborhood bank -- even in the rain and snow -- because I could not gain access to the front door of the building; in 1981, I was turned away from a movie theater without an attendant because of the architectural barriers that I would have had to overcome at the fire exit in case of fire; in 1982, I stayed in my van for days at a time as I attempted to tour the west coast because I could not find accessible bathrooms, restaurants, hotels, or retailers; in 1983, I had to transfer to a new law school because

I was unable to climb aboard a municipal bus to get to and from school, and no comparable accessible service existed in the community in which I was attending school; in 1984, I was trapped for hours in a bathroom in a restaurant because the double set of doors were not far apart enough for me to get out without getting stuck; in 1985, I had to sit by myself on stage at my law school graduation instead of with my classmates in the gallery because I could not climb the stairs in the auditorium to receive my degree; in 1986 I was thrown out of a shopping mall because a security officer believed that my electric wheelchair was a safety hazard to other patrons; that same year, I was told by a clerk in a shoe store that I would have to take my developmentally disabled friend to another store to buy shoes because she "might scare other customers away"; in 1987 I was thrown off an airplane after boarding because the pilot believed that my lack of mobility exposed the airline to greater liability in the event of an emergency; in 1988, I was told that I was "lucky" because I was allowed to vote outside my inaccessible polling place; also in 1988, I was forced to invent a set of bathroom grab bars out of wooden chairs in an inaccessible hotel room that I had to occupy for a week while I was traveling on business; in 1989 I was excluded from a significant portion of the annual meeting of the American Bar Association even after I had traveled all the way to Honolulu, because the facilities in which the meetings, functions, and events were taking place were often inaccessible.

Thus, inaccessibility in public accommodations has affected every aspect of my existence. Not only does a lack of access in public accommodations deprive me of social and recreational opportunities, but it has a very real and very negative impact on my ability to function as a practicing attorney. Among the larger problems I have experienced in that regard are those that arise when I am required to travel on client-related business[3] and those associated with attempting to participate in activities of the organized bar such as continuing legal education programs, and local, state, and national bar association meetings, functions, or events.[4] Because these difficulties are so pervasive and enormous, and because they often engender humiliation, embarrassment, or stress on my part, when I am otherwise not required to patronize public accommodations for business reasons, I generally choose not to eat in restaurants, stay in hotels, fly on airplanes, ride on buses, shop in stores, visit museums, attend sporting or cultural events, or otherwise avail myself of the public accommodations in my own community.

---

[3] In addition to the difficulties I encounter in air travel, the largest impediments I routinely experience in my attempts to travel are the lack of sufficient numbers of truly accessible hotel rooms, my inability to obtain a guaranteed accessible room reservation under hotel industry standard reservation practices, a complete lack of reasonably-priced and reliable demand-responsive accessible ground transportation in almost every major city in the country, and the general inaccessibility in restaurants and other public accommodations at many sites where business is being conducted. In fact, the effort necessary to determine in advance whether a particular location is physically accessible and to arrange adequate transportation is often extremely time-consuming and grueling, if not impossible. My need to investigate accessibility every time I have to attend a meeting away from the office results in a substantial increase in the number of hours I must work to achieve parity with my peers in overall productivity.

[4] The problems that disabled attorneys face in their attempts to become integrated into the organized bar are largely a result of vicarious inaccessibility: bar activities are generally inaccessible because they are reliant upon services and are conducted largely in facilities that are provided for the public at large. To the extent that these facilities and services are inaccessible, the adoption of them for use by the bar results in a lack of access for attorneys with disabilities. An unfortunate but necessary result of this pervasive pattern of vicarious inaccessibility in bar activities has been an inability for attorneys with disabilities to form an effective voice within the

If the employment provisions of the ADA are to have meaning, the public accommodations provisions must be seen both as free-standing provisions designed to eliminate isolation and segregation among all of America's disabled citizenry, as well as provisions necessary to open and maintain meaningful employment and corollary associational opportunities for persons with disabilities who also want to work.

To that end, it is important that the provisions in the ADA address the fact of inaccessibility rather than its cause. It is my firm belief that many, but not all of the inaccessibility problems that I have encountered are not so much the result of hostility or willful discrimination; rather, they are the result of benign neglect and a lack of understanding or concern about how particular policies or practices affect the disabled patrons

---

profession. We are highly underrepresented in places of legal employment; we are, however, even more underrepresented in the policies, practices, and activities carried out by the organized bar, including those relating to the admission to practice law in the first instance. Consequently, I also hear scores of horror stories on an annual basis arising from the experiences of persons with disabilities who attempt to take bar examinations.

in our midst.[7] Nevertheless, regardless of the reasons for the historic attitudes and treatment of persons with disabilities, the remedies feature of the ADA focuses on the cure rather than the diagnosis. The Section 504 model used in the ADA ensures that it is the actual _effects_ of policies or practices of covered entities, rather than the _reason_ for those policies or practices, that is addressed by the legislation.[8]

---

[7] Architecturally inaccessible facilities are not natural occurrences. They are the product of human attitudes that — consciously or not -- have accepted the notion that structural use limited to the able-bodied is an acceptable design standard. Just as it is unthinkable to design a building with a bathroom only for use by men, it ought to be just as unacceptable to design a building that can only be used by able-bodied persons. It is exclusive _designs_, and not any inevitable consequence of a disability that results in the isolation and segregation of persons with disabilities in our society. Our structures are a reflection of our social attitudes; every inaccessible structure represents at least one person whose conscious or unconscious attitude toward the disabled is based on the notion that segregation of the disabled is an acceptable practice.

[8] This point is consonant with the litigation experience under Section 504, whereunder the vast majority of cases brought are not for willful refusals to accommodate persons with disabilities. *See, e.g., Pushkin v. Regents of University of Colorado*, 658 F.2d 1372, 1385 (10th Cir. 1981)(in rejecting University's assertion that "disparate treatment" test requiring some proof of motivation by intentional discrimination should be required in Section 504 cases, court noted that "[i]t would be a rare case indeed in which a hostile discriminatory purpose or subjective intent to discriminate solely on the basis of handicap could be shown. Discrimination on the basis of handicap usually results from more invidious causative elements and often occurs under the guise of extending a helping hand or a mistaken, restrictive belief as to the limitations of a handicapped person.") Most cases instead deal with whether an accommodation would be effective and whether it would pose an undue burden on the covered entity without focusing on the mental state of the entity being sued. This is a very pragmatic approach in dealing with problems related to disability in that it focuses energies on remedies rather than fault. Under the Senate compromise ADA bill, individual plaintiffs are only allowed to obtain injunctive relief. Consequently, even more than in a private action for

Moreover, in addition to providing a means for remedying already extant accessibility problems, the regulatory process envisioned by the ADA will provide an effective means for educating the public about accommodating persons with disabilities. The regulations promulgated under the ADA will serve as an effective encouragement with good working instructions for covered entities to provide an alternative to the all-too-common current practice of segregating or ignoring persons with disabilities.

This educational process is a critical step in any effort to integrate persons with disabilities into the mainstream of American society. It is precisely because of historic ignorance or oversight by ADA-covered entities that persons with disabilities are isolated. The common disability-related experience of isolation makes it extremely difficult for persons with disabilities to develop the resources and organization necessary to educate and persuade the general public about their needs and capabilities. Consequently, the ADA regulations will serve an important social role that neither the marketplace nor American culture has independently fulfilled.

The fact that this social role has never been and is unlikely to be filled by any private initiative, along with the

---

damages under Section 504, the state of mind of a covered entity is irrelevant to a determination of an appropriate remedy designed to integrate the person with a disability; it will be accommodation and not blame or punishment that will serve as the substantive focus for any private lawsuit brought under the public accommodations provisions of the ADA.

BEST COPY AVAILABLF

enormously important ultimate objectives of the ADA, legitimizes the legislation even as against the sacrosanct ideal of unobtruded free enterprise. While I, along with most good Republicans, view any effort to regulate business with an extremely jaundiced eye, I can safely say that a reasoned analysis of the Senate compromise ADA renders inescapable the conclusion that it is essential, timely, and absolutely reasonable as presently crafted.

My initial review of the original bill last year left me with some concern about its impact on small business. I was very understanding of the need to include small businesses within the scope of the substantive provisions of the ADA. If the public accommodations provisions in the ADA are to have any meaning, they must have broad application to small as well as larger businesses. Many restaurants where my client or firm business is conducted are small businesses. Many of the businesses in my neighborhood and community that I would like to patronize but cannot due to inaccessibility are small businesses. It is important that the public accommodations substantive provisions not differentiate among businesses of different sizes because it is access that is at stake. Any exemption based strictly on size and no other factor would effectively deny the very right of access to the types of businesses that this bill is designed to create.

Nevertheless, I was concerned that there was no safety valve for the enormous cost pressures that might be imposed on small businesses within some circumstances contemplated by the bill. That concern has been more than vitiated by the Senate compromise version of the bill that includes an "undue burden" relief provision.[8]

I am now firmly convinced that all of America stands to gain from the passage and implementation of the ADA as it now exists. Aside from the human dignity benefits that will be reaped by Americans with disabilities, the most obvious benefit to the public at large will be realized from the unleashing of the talents, potential, and enthusiasm of the millions of working-age Americans with disabilities who are isolated, segregated, or unproductive simply by virtue of the inhospitable and inaccessible environments in which they live.

---

[8] The small business exemptions in the ADA track the exemptions that exist in other civil rights laws. Title VII of the Civil Rights Act of 1964, which prohibits discrimination in employment on the basis of race, sex, religion or national origin, exempts employers with 15 or fewer employees. The ADA adopts the same exemption. By contrast, Title II of the Civil Rights Act of 1964, which prohibits discrimination in public accommodations on the basis of race, religion or national origin, does not have a small business exemption. This differentiation is logical: the point of a public accommodations provision is to ensure that people with disabilities (or people of a certain race) can gain access into public places, such as restaurants, movie theaters and stores. The fact that such a business may have only five or ten employees is irrelevant to the issue of providing access.

One related relevant consideration, however, would be whether the provision of access would create an undue burden for any particular business -- no matter what the size of the business. The ADA in fact takes this concern into account and provides a flexible measure of undue burden by considering the size of the business along with the cost of the accommodation in deciding whether the provision of the accommodation would create an "undue burden" on the business. Size alone does not transform every form of accommodation into an "undue burden."

Even though this flexible standard is necessary in order to reasonably address the vast number of different situations that are likely to arise under the ADA, the standard and practice for determining the existence of an "undue burden" under the ADA will be guided by fifteen years of experience using the same standard under Section 504. The factors outlined in the ADA are the same factors set forth in the Section 504 regulations (size of business, type of operation and cost of accommodation).

There will also be a direct financial benefit to the federal government. In my case, when I finally was able to obtain permanent employment I no longer had to collect my monthly Social Security disability payment, Medicare benefits or vocational rehabilitation funding. Instead, I became a productive, tax-paying citizen able to support the domestic and medical bills I incurred through salary and benefits obtained on the job. Even though the federal benefits that I was receiving before I became employed were minuscule compared to those received by most persons with severe disabilities, only four years after going to work I now estimate that the net direct and positive financial impact on the federal government due to my employment is approximately $40,000 to $50,000 per year. This benefit is reaped not just directly by the federal government, but also indirectly by all taxpayers -- including the covered entities that will incur the direct costs associated with the ADA.

The other direct beneficiaries in this process will be employers. In my case, Pettit & Martin now has a professional employee who is enormously grateful for the opportunity to work and live independently. The result, I believe, is that I exhibit on-the-job performance well above firm expectations, a level of dedication and commitment to the firm that is typically not found among associate attorneys, a willingness eagerly to perform the hardest or least-desired tasks on assigned matters, and a ready-made desire to achieve excellence in practice that is difficult to instill in any employee. I know from whence I came, and I would just as soon not go back.

In addition to these measurable benefits, the ADA represents the idea of possibilities to millions of Americans. The ADA is a statement to millions of Americans with disabilities that we may all dare to dream. It is a statement to even more Americans that if they or a loved one were to develop a disability, they would not need to stop dreaming. The ADA simply makes possible for persons with disabilities what we have always wanted to believe about America -- that the truest measure of a person is the content of that person's character, and not the color of the person's skin, or the presence of a disability. For the above reasons, I heartily urge you to adopt the ADA as it is composed in the Senate compromise.

THE NEW YORK TIMES THE LAW FRIDAY, DECEMBER 30, 1988 p. B6

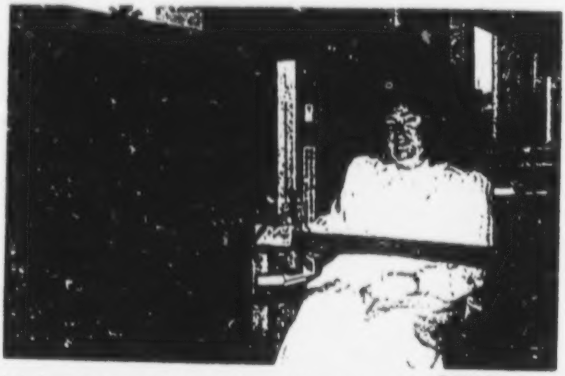
Disabled Lawyers Join in Drive on Bias in Hiring

By LIS WIEHL

As the legal profession opens its doors to many it once shunned, handicapped lawyers are presenting themselves for consideration. They are raising their voices against discrimination by law schools and law firms and pushing for special legislation and improved hiring.

"Lawyers more than anyone are supposed to be advocates for the unheard," said Laura Cooper, a 34-year-old wheelchair-bound lawyer who heads the American Bar Association's Disabled Lawyers Committee. "If they don't do better, who will?"

After graduating near the top of her law school class at the University of Washington and winning a judicial clerkship, she was rejected 400 times before she got her first job offer from the San Francisco firm of Pettit & Martin.



The New York Times/[illegible]

Laura Cooper, head of the A.B.A.'s Disabled Lawyers' Committee, with her specially equipped van. After graduating near the top of her law school class, she was rejected 400 times before she got her first job offer.

Rejected as 'Freak'

Paul Miller, a recent Harvard graduate who heads the legal affairs committee of Little People of America, said firms often showed bias against dwarfs. "I did as well as most of my classmates in law school, but I had to make literally hundreds of job inquiries," he said. "A Philadelphia firm told me they didn't want clients to think they were running a sideshow freak act."

Ms. Cooper's bar committee is seeking data on the number of disabled lawyers ("No one has ever bothered to count us," she said) and is finding such statistics hard to come by.

Organizations for blind lawyers report combined rolls of nearly 500 members, said Steven Speicher, director of the American Blind Lawyers Association, Lincoln, Neb. There are at least 12 blind judges.

Tapping the Rights Act

Several hundred lawyers in wheelchairs have graduated from law schools in the 80's. Many are Vietnam veterans. The National Center for Law and the Deaf refers prospective clients to a list of 13 deaf lawyers. Little People of America keeps a list, too.

Federal civil rights laws offer the disabled almost no protection and handicapped lawyers are lobbying for a measure extending protections now accorded other groups by the Civil Rights Act of 1964. It prohibits most private employers from discrimination based on race, gender and religion.

The handicapped are lobbying for a bill in Congress.

The bill, endorsed by Vice President Bush in his campaign, would bar employers from turning away applicants unless a disability would interfere substantially with the job. It would also require, within certain cost limits, that employers remodel the place of business if, for instance, a doorway was too narrow for a wheelchair. Certain employers would also have to get special equipment for the disabled.

Disabled lawyers are also putting direct pressure on law firms to acquire new aids, including synthetic speech systems that already let blind lawyers use computer research tools like Westlaw and Lexis. Hearing-impaired lawyers want amplification devices in courtrooms. Mr. Miller wants law schools to use their leverage with firms that recruit on campuses.

Many impaired lawyers said their feelings of alienation began in law school. "It was a hint of things to come," said R. Donald Brown, a 58-year-old blind lawyer in Seattle, who heard students complain that his presence cheapened their degrees. His wife, Lisa, also blind, is to become his sole law partner. "Professors tell us bluntly that we'll never keep up with the reading," he said, "but with recorded materials and volunteer readers, we get it done."

The sites of bar examinations can pose problems for applicants in wheelchairs, said Ms. Cooper. "It is inconceivable to me that lawyers could schedule important events in places that I can't get to," she said. "But it happens all the time, including depositions and compulsory bar seminars."

Her committee is drawing up rules for accommodating the disabled at bar exams. Robert Raven, president of the American Bar Association, said he could foresee special test sites.

Disabled lawyers say law firms hire women and members of racial minorities but not the handicapped. "It is nearly impossible for us to get hired," Ms. Cooper said. "The jobs we find are usually low-paying ones, working with people who don't readily believe in our worth, in courtrooms and offices that are often inaccessible."

The Firms' Point of View

The firms say that from their point of view, the issue is largely economic. "I'm not sure what the response of our firm would be in hiring a blind lawyer, but we'd certainly have to look at the costs," said Kenneth Anderson, hiring partner at Gibson, Dunn & Crutcher in Los Angeles. He fears that disabled lawyers might not be able to work long hours. "To compensate for lost efficiency, we would probably adjust compensation."

He said his firm could accommodate only a limited number of disabled lawyers. "We could have one person off the partnership track because of a mobility impairment, but we can't have 15," he said. His firm has more than 600 lawyers.

At Cravath, Swaine & Moore in New York, the hiring partner, Evan Chesler, said that in evaluating disabled applicants, his firm would apply its usual standards, but would not want to "put people into situations they can't handle."

Those Who Scrabble By

Because few disabled lawyers have been hired by big firms, most have government jobs or small practices. When Mr. Brown opened his practice he depended on clients no other lawyers would take. "The local bar sent me all its disabled referrals, evidently believing that disabled clients should have disabled lawyers," he said. "Can you imagine a deaf client and a blind lawyer talking?"

Some disabled lawyers get high government jobs. Evan Kemp, confined to a wheelchair, is a commissioner of the Equal Employment Opportunity Commission. But firms that do hire disabled lawyers often assign them to tax work, estate planning and real estate. "Many firms hope they'll quietly turn out memos where no one will see them," Mr. Speicher said. "The few who break into litigation are often pulled off cases immediately before trial."

Mr. Edwards. We now hear from the Rev. Scott Allen, who is a member of the National Commission on AIDS.

STATEMENT OF REV. SCOTT ALLEN, COMMISIONER, NATIONAL COMMISSION ON AIDS, WASHINGTON, DC

Mr. Allen. Mr. Chairman and members of the committee, I'm Rev. Scott Allen, a Commissioner on the congressionally mandated National Commission on AIDS. I am pleased to provide testimony on the importance of the Americans with Disabilities Act, with particular focus on antidiscrimination protections for people with HIV-related conditions.

My work with AIDS has been varied and diverse. I am employed by the Christian Life Commission of the Baptist General Convention of Texas. My specific experience began with AIDS when I was the founding director of the AIDS Interfaith Network of Dallas, an organization that provides AIDS education for our religious communities and pastoral care for persons living with AIDS, as well as their family members and loved ones.

In addition, I have served as a member of the Dallas County AIDS Planning Commission, and on the Legislative Task Force on AIDS for the State of Texas, chairing the State Responsibility Subcommittee. As a citizen, minister and participant in the development of AIDS policy at the local and State level, I fully support the Americans with Disabilities Act. I urge the House to move expeditiously, so as to provide important redress for the acts of discrimination that have such devastating impact on the lives of many Americans, particularly those with the HIV virus and with AIDS.

As a Commissioner for the National Commission on AIDS, I am charged with the important task of advising Congress on the implementation of the recommendations of the President's Commission on the HIV Epidemic. Admiral Watkins and the other Commissioners are to be commended for their exhaustive and thoughtful articulation of the important issues related to the HIV epidemic.

As you well know, the centerpiece of their recommendations was the passage of a bill to address discrimination experience by people with AIDS and HIV infection. They specifically recommended comprehensive Federal antidiscrimination legislation which prohibits discrimination against persons with disabilities in the public and private sector, including employment, housing, public accommodations, and participation in government programs, should be enacted.

All persons with symptomatic or asymptomatic HIV infections should be clearly included as persons with disabilities, who are covered by the antidiscrimination protections of this legislation. That recommendation was endorsed by President Bush immediately after issuance of the Commission's report. One year after the President's Commission made that recommendation, the ADA moved through the Senate. The President's endorsement was clearly a key factor in the Senate's overwhelming passage of ADA.

It is now incumbent upon the Congress, with the assistance of the National Commission, to move this bill as quickly as possible without damaging amendments. Truly, with an epidemic that has affected more than 100,000 Americans with 37 million other Americans with the disability awaiting the protections guaranteed under this act, the political and moral imperatives are clear.

To underscore the priority of the ADA, the National Commission on AIDS passed its first resolution in support of this bill. We stated: We the members of the National Commission on Acquired Immune Deficiency Syndrome strongly support passage of the Americans with Disabilities Act, legislation which would implement the key recommendation of the Presidential Commission on the Human Immunodeficiency Virus epidemic.

People living with AIDS and HIV infection and those regarded as such deserve the same discrimination protections as all people with disabilities. Such protections from discrimination are not only necessary to enhance the quality of life for people with AIDS and HIV infection, they are, as the Presidential Commission and the Institute of Medicine have reported, the linchpin of our Nation's effort to control the HIV epidemic.

Thousands of Americans who would seek voluntary counseling and testing services, and many who need lifeprolonging medical treatment, will not come forward if they believe that doing so could result in the loss of their job or lack of access to public accommodations.

Legislation that is based not only on compassion but sound public health principles is a must if we are to reach and assist these individuals. We are extremely pleased that the majority of the U.S. Senate and the White House have made a bipartisan commitment to enact the Americans with Disabilities Act. We oppose any effort to reduce the scope of coverage of the present bill, particularly in respect to HIV, the special focus of this Commission.

The ADA will provide a clear and comprehensive mandate to greatly extend discrimination protections for people with disability. We are proud to endorse this landmark legislation.

A diagnosis of HIV infection and its related diseases is clearly a devastating event in a person's life. The subsequent act of irrational discrimination that occurs has been one of the unfortunate landmarks of our Nation's response to the HIV epidemic.

A review of a front-page headline over the past 8 years will awaken in most of us the urgent need for a bill like the Americans with Disabilities Act. Remember, Ryan White, denied entry to school. The Ray family, burned from their home. A woman with AIDS denied entry with her children to a public swimming pool. A bright young attorney forced into poverty because he was fired from his job.

The ADA will not be able to address all forms of private discrimination, but it will provide protections in the critical areas of private employment and public accommodations. Mr. Chairman, you may wonder how a Baptist minister from Texas sojourned through the local ministry to families affected by AIDS to city and State task forces and then finally to the national level and congressional testimony on this bill.

The answer is simple. I have seen first hand the dual tragedy of HIV infection and illness, coupled with the cruelty of discrimination. I walk with people on a daily basis who encounter the cruelty of discrimination. I've listened to their words of bewilderment as to how a society as ours could be so callous to a person who is sick.

I have seen families living in absolute fear at the thought that one of their family members' HIV positive status might be disclosed. I witness people who are HIV positive and who are healthy, contributing members of our society, lose their jobs, lose their homes, their medical insurance and other necessities of life due to discrimination.

The question always arises how can people be so mean? How can our society be so cruel? With the passage of the Americans with Disabilities Act, Congress will be able to lead our societal structures in providing a compassionate response of equal protection to people with disabilities in our Nation, including people with HIV infection. These stories and hundreds like them provide the impetus for action for the National Commission on AIDS and for millions of compassionate and concerned Americans.

The wonderful work of many commissions and task forces that have addressed the AIDS epidemic have virtually expressed unanimous agreement that antidiscrimination protections are the cornerstone to addressing the complex public policy issues presented by AIDS. The good work of these dedicated and concerned citizens has moved many city and State legislatures to enact antidiscrimination measures. But a great deal more needs to be done.

In my own experience, neither the city councils of Dallas County nor the Texas State Legislature have formally adopted the recommendations made by the commissions established to advise them. The action by the U.S. Senate last month was the first hopeful and direct statement that perhaps the Congress will take the leadership and move the ADA, with the blessing of President Bush, in a timely manner.

Please be assured that for myself, the Commission and most importantly persons living with HIV and their loved ones, this action is enthusiastically welcomed. Mr. Chairman, our Nation's public policy is dependent on the responsible and informed actions of Congress. The ADA is a bill that utilizes 15 years of antidiscrimination protections for people with disabilities in federally assisted programs and extends those protections to the private sector.

The bill's inclusion of people with HIV infection, AIDS and those who care for them is a hallmark in our fight against this epidemic. There may be yet challenges against inclusion of such individuals. Exclusion would be a tragic mistake. As Secretary Sullivan, a fellow Commissioner has stated, discrimination against individuals with a virus is unacceptable. This administration is committed to enacting legislation that will prohibit such discrimination.

Therefore, I urge you to remember that this bill has the strong support of the President. Bipartisan leadership of the Congress, a multitude of national organizations including public health professionals, religious communities, service organizations and advocacy groups, and particularly the National Commission on AIDS.

We as a nation have the blessings of wealth and resources. We pride ourselves in our compassion and spirit. In passing the ADA, the Congress will embody the best of the American spirit and send the needed message that equal rights and compassion are a standard that this Nation will uphold with pride and vigilance.

I would like to submit additional materials for the record, including letters of support and policy statements from our religious communities.

Mr. Edwards. Without objection, they will be received and made part of the record.

[The prepared statement of Mr. Allen follows:]

PREPARED STATEMENT OF REV. SCOTT ALLEN, COMMISSIONER, NATIONAL COMMISSION ON AIDS, WASHINGTON, DC

Mr. Chairman and members of the Committee, I am Rev. Scott Allen, a commissioner on the Congressionally mandated National Commission on AIDS. I am pleased to provide testimony on the importance of the Americans with Disabilities Act, with a particular focus on anti-discrimination protections for people with HIV-related conditions.

In conclusion, Mr. Chairman, our nation's public policy, is dependent on the responsible and informed actions of the Congress. The ADA is a bill that utilizes fifteen years of anti-discrimination protections for people with disabilities in federally assisted programs and extends those protections to the private sector. The bill's inclusion of people with HIV infection, AIDS, and those who care for them is a hallmark in our fight against the epidemic. There may yet be challenges against inclusion of such individuals. Exclusion would be a tragic mistake. As Sec. Louis Sullivan, a fellow commissioner, has stated "discrimination against individuals infected with the virus is unacceptable. This administration is committed to enacting legislation that will prohibit such discrimination." Therefore, I urge you to remember that this bill has the strong support of the President; bipartisan leaders of the Congress; a multitude of national organizations including public health professionals, religious communities, service organizations and advocacy groups and particularly of the National Commission on AIDS.

We have as a nation the blessings of wealth and resources. We pride ourselves on our compassion and spirit. In passing the ADA, the Congress will embody the best of the American spirit and send a needed message that equal rights and compassion are standards this nation will uphold with pride and vigilance.

Thank you.

Mr. **Edwards**. Mr. Sensenbrenner.

Mr. **Sensenbrenner**. Thank you very much. Ms. Cooper, I would like to add my voice to the chairman's in commending you for your testimony. I think that you have come up with some very concrete examples as to the effects of discrimination on people who are disabled and those who are severely disabled and how counterproductive that discrimination is.

Your statement that your getting the job has saved the Federal Government $40,000 to $50,000 per year. I think if we can just multiply that by all of the other people who are in the situation that you were in prior to your employment, we would be able to make our society better as well as reduce the Federal budget deficit a bit.

I can say that, in my family, with my wife having disability, probably the thing that has stood out the most since we got married is, 3 years ago when President Reagan appeared in my district, she had to be taken to the stage alone for 1½ hours prior to the President's appearance, with the other elected officials and their spouses. She stood up there underneath the hot television lights in front of a crowd of several thousand people for 1½ hours before the President arrived and the show came on, and you can imagine what that did to her makeup, among other things.

I'd like to ask a question or two, if I could, to you, Reverend Allen. Now, as you know, the Senate, when it passed the bill, passed a provision that specifically excluded homosexuality from the definition of a disability. While HIV-related diseases are not exclusively homosexual, I think that it is fair to say that the preponderance of those who are HIV positive are homosexual by sexual preference.

Given that basic framework, how do we deal in the context of the Senate-passed bill with someone who is an admitted homosexual and, thus, not disabled by definition and one who has tested HIV positive, particularly in the employment discrimination provisions?

Mr. **Allen**. I think it should be emphasized that we're dealing with illness. We're dealing with someone who is disabled. So one's sexuality should not be an issue in this decision process of an employer. So that's how we deal with it. Is this individual able to do the work? That's how I would deal with it.

Mr. **Sensenbrenner**. I guess I'm looking for both a legally acceptable and a politically acceptable clarification of what I think is probably a contradiction in terms. Obviously, with the exemption for homosexuality in the Senate bill—and let's face it, that's the way the bill is going to pass—an employer could simply turn down an application on the basis of admitted homosexuality of the applicant and be exempt from any kind of sanctions, and we do not get into whether the person has tested HIV positive or not. Now, how do we get out of this conundrum?

Ms. **Cooper**. May I jump in here for a moment, sir?

Mr. **Sensenbrenner**. Sure.

Ms. **Cooper**. I think that part of the answer to that problem lies in the burden of proof under the model 504 case. In the 504 case, the plaintiff, the person who is claiming that they have been discriminated against based on their disability, has to show enough evidence to at least raise an inference that the category in which they fall, that falls under the qualified disability label, if that—I mean—let me back up for a minute.

In order to make out a 504 case, somebody would have to show that they, in fact, meet the definition of a disabled person within the statute. Homosexuality is excluded, but being an HIV positive person is not. If there was enough evidence to show that the employer's action was calculated based on the presence of HIV positivity, that would then make out——

Mr. SENSENBRENNER. Then the complainant has met his burden?

Ms. COOPER. That's right. In other words, the fact that somebody is a homosexual wouldn't make out that prima facie case.

Mr. SENSENBRENNER. In other words, what you're saying, Ms. Cooper, is that we don't need to change the definitional sections of the Senate-passed bill in order to get ourselves out of the conundrum which I have asked in my question to Reverend Allen.

Ms. COOPER. No. You would have the same problem with somebody who had another characteristic that is specifically exempted, but also perhaps had a disability. If the employment decision was based on some acceptable criteria, such as the use of illegal drugs, then that does not raise the issue of discrimination based on disability under this statute. There would have to be some other additional indicia, enough evidence to at least raise an inference that the decision was, in fact, calculated based on a covered disability for there to be a prima facie case.

Mr. SENSENBRENNER. In other words, this is basically a determination that is made by the trier of fact.

Ms. COOPER. Well, I don't think you would necessarily say that it's a determination based on the trier of fact, because you can—a judge can grant a directed verdict if the inference hasn't been raised and the plaintiff hasn't made out his case and the defendant doesn't even have to go forward. You wouldn't necessarily have to have the judge sitting as trier of fact at the end of the case making that determination. It comes very quickly.

Mr. SENSENBRENNER. Thank you very much.

Mr. EDWARDS. Ms. Cooper, you were here when the representatives of various businesses testified and the witness for small businesses felt that there was really too much of a burden on small businesses; the mom-and-pop store, the two or three employees, and so forth. Do you think that this bill puts too much burden on small businesses?

Ms. COOPER. I don't, and I think that there is a principal difference between the sections in public accommodations and the section in employment. The employment section exempts small business, but the exemption of businesses that employ 15 or fewer people wouldn't preclude employment opportunities for persons with disabilities. There would be other businesses out there that persons with disabilities could go to.

But if you turn around and you look at the issue of access, if you exempt small businesses, then access is really what is lost. The very purpose of the public accommodation section is undermined by any exemption based specifically on the size of the business. I think it's a legitimate consideration in some instances to consider more than just size, but size alone is not enough of an indicia of an ability of a business to provide the accommodations or accessibility necessary.

I also want to point out that there are some forms of exemptions in the public accommodation section that already exist. There is an exemption for elevators, so that a building that is three stories or less or has less than 3,000 square feet per floor, with the exception of particular categories of businesses, doesn't have to install an elevator. There is an undue burden exemption for business in providing auxiliary agent services.

I don't think that it's reasonable just based on size alone to exempt a business from the provisions of the ADA, because we would lose the very grist of this bill, of this part of the bill, which is access, that's so critical.

Mr. EDWARDS. Thank you. Now, Ms. Cooper, what do owners of buildings have to do to provide you with service? What do you envision a building, an existing building—what changes should be made in an existing building to provide you with services?

Ms. COOPER. The existing building standard is that of being—the accommodations really are those that are going to be readily achievable. There is no——

Mr. EDWARDS. What do you think "readily achievable" means?

Ms. COOPER. Well, "readily achievable" is a lower standard than "undue burden," which is in the employment section. It is my understanding that that standard was incorporated specifically in order to address the concerns of business. It is without significant, I think, I do not remember the language exactly—significant expense or—I forget the other term. But it is a much lower standard than "undue burden."

It seems to me that although it is not regulatorily defined because it has never been used in the 504 context, it is a significant compromise to the business community already. "Readily achievable" would be something that a business owner could do without a lot of trouble or cost. And the clipboard example that was given by the representative from the hotel-motel industry is the perfect example.

There is no requirement that there be, in fact, sign interpreters available or menus in braille. You can just have them, or, you know, all the price tags be braille, or that all of the high shelves be brought down. I mean it is very accommodating under the "readily achievable" standard to have somebody go and reach something for you if you cannot reach it because it is too high, or to have the waiter read the menu, or to have somebody working in the stores read the price tags for you. There are various ways to accommodate a disability that do not require lots of technology, lots of significant expense or cost.

I think it is really a misunderstanding of the availability of low cost options that causes a lot of people concern. I think the point that the gentleman who was sitting here earlier made that when they really started looking at the various options, that, you know, things do not have to be as expensive or as troublesome as originally believed.

Has not that been the case in 504 compliance? That in fact costs of accommodations in 504 cases have been minimal. I do not perceive any reasoned basis for assuming that in existing facilities under a "readily achievable" standard, which is, in fact, lower than any of the other standards in the regulations, that this is going to be a significant expense or problem for small or large businesses.

Mr. **Edwards**. Thank you. Well, what experience do you have, we will say—you are from San Francisco—at the San Francisco airport at the snackbars? Are they accessible to you?

Ms. **Cooper**. In some respects they are. I mean there are State laws, as well as Federal laws, in California. I can use facilities where people are willing and able and understanding and help me. I can say that a lot of the counters are too high for me. But that does not really preclude me from using the services operated by the business, because I mean it is just a matter of courtesy for somebody to help you. You know, all you have to do is flag them down and get their attention, and they can come out from around behind the counter and do whatever you need to help. They can get things and they can come around and hand it to you.

They have not had to rebuild counters. They have not had to, you know, go through and make sure that everything was at a height that I could reach and that I could personally handle. I have not had really those kinds of problems in the San Francisco area—in the airport or in public accommodations there.

I have had problems with architectural barriers that have been there a long time. But I do not recall any major problems in, you know, those kinds of situations.

Mr. **Edwards**. Well, one of the witnesses brought up the subject of a retail store where all of the shelves would have to be, or the aisles, would have to be changed. Have you had that experience where your wheelchair would not get down an aisle?

Ms. **Cooper**. I have, but I also have had the experience of being able to ask somebody to go get what it was that I could not reach. That was a perfectly acceptable means for me to shop in a retail store that had narrow aisles. In an existing facility, the "readily achievable" standard does not require anybody to rebuild all of the shelves and to eliminate a lot of floor space in any retail business. That just simply is not the only alternative available under this bill, and I think it is a real misapprehension of what the various standards are that causes somebody to come to that conclusion

Mr. **Edwards**. Well, I think I would like to have you hanging around when some of these questions come out.

The last question that I have before I ask if counsel has any questions, is about the public safety threat. When you are at a motion picture show, where is your wheelchair? In the aisle?

Ms. **Cooper**. It depends on the way the place is built. If it is built with those nice big old cushy seats, I like to jump in those instead. But if it is, you know, of the newer facilities and there is a relatively—the slope of the hill going down is not too bad, or there is a big space in the back and they have got the wonderful sound, then I would just as soon park in the back and that way I can come and go as I please.

Mr. **Edwards**. But you are not in the way in the case of a fire?

Ms. **Cooper**. Well, I cannot imagine somebody thinking that I am going to be any more in the way than the 20 people in front of them. My wheelchair moves, as do other bodies, and I find it difficult to believe that the fact that I use tires instead of toes to get in and out of a building makes me somehow a threat. I have yet to see a situation where that, in fact, was the case.

Mr. Edwards. Well, in my family we have had the same kind of an experience with discrimination in employment. One of my sons has a disability because of spinabifida. He can walk, but with great difficulty, and he has lost a lot of his height, and so forth.

He is a good lawyer, a graduate of Stanford and of Santa Clara Law School. He cannot get a job.

Ms. Cooper. Sounds something like me.

Mr. Edwards. So he has to open his own law office, with his wife as his secretary, and get cases from the judges where the public defender is disqualified. It really is very difficult. Of course, being where there is a birth defect, it seems to me that it is easier to have or more likely to have a lack of confidence because the discrimination starts almost immediately upon birth.

Ms. Cooper. I think that is true.

Mr. Edwards. And I notice that men and women who get their disability later in life, it doesn't seem to diminish their self-confidence which is already built up.

Ms. Cooper. I think that we also have more of a sense of outrage because we have been on the other side, and we know what life is like for a nondisabled American. We were fortunate to get the same education while we were young and to have the same benefits that everybody else had.

I mean that sense of outrage generally propels people forward.

Mr. Edwards. Counsel.

Ms. Davis. Thank you, Mr. Chairman.

Ms. Cooper, you have shown us a segment of the rejection letters that you got. Why are you so convinced that you were discriminated against because of your disability?

Ms. Cooper. Well, I have some pretty explicit examples in here. Let me pull one out. This is probably the best. In this particular case, I am not going to name the law firm. I will just say that it is in the Palm Springs area in California. I interviewed with this particular law firm in early February 1985.

The secretary of this law firm did not see fit just to send me the rejection letter in the particular rejection letter envelope. She sent me the entire file that law firm had kept, including the draft rejection letter, the notes taken by the attorney with whom I interviewed, who wrote down the nature of my disability and questions about health and life insurance on the yellow pad.

I also have the interoffice memorandums that were created following that interview, one specifically asking about how my disability would interface with the insurance coverage at that office. Then the response from somebody else in the office showing how it would interface. That response was dated just a few days before the rejection letter I received.

The rejection letter I received does not mention any of that. It simply says that they decided they wanted somebody who was already admitted to the California Bar. But they flew me down there knowing that I was not admitted to the California Bar.

So I think this is a pretty explicit example of that.

Ms. Davis. It is too bad this law was not in effect at the time that could have established your prima facie case.

Ms. **Cooper**. Yes, although I am not sure I would want to work there anyway.

Ms. **Davis**. There have been some concerns raised about the cost of this legislation and comparing it to other civil rights laws where the argument has been there hasn't been a big cost involved. There are those who say that cost should never be a factor when considering the civil rights of an individual and others say it should be the deciding factor.

Certainly, we have heard that in certain instances with respect to this legislation. Do you have a sense of how the ADA deals with the cost factor? Do you feel that it's addressing it adequately?

Ms. **Cooper**. Absolutely. I don't know any other civil rights statute that even has any cost analysis or cost exemptions or cost justifications or cost anything in it. This is the only major civil rights bill I have ever seen that really attempts to address the needs of those who are going to be making the expenditures. I think it's extremely reasonable in that experience under 504 has shown that the cost of compliance generally has been exaggerated by the persons who thought they were going to have to spend the money to comply, that in fact, accommodations don't cost that much.

The provisions in the ADA for undue burden, undue hardship, the readily achievable standard, I think really do adequately address costs and the beauty of all of those standards is that with the exception of readily achievable, they're both flexible but they've also got 15 years of history behind them so you're not dealing with a total vacuum.

Now readily achievable, it's true, it doesn't have the regulatory history but it was inserted in order to appease the concern of the business community. Now if they would like to take it out so that we could put in the more rigorous standard, I'd be willing to do that, one that they already understand but I think that was done in order to address those concerns of cost. Anything that strips away any more of the protections of this bill by addressing cost, I think, puts too much emphasis on the fact that it historically has not been shown to be significant in the implementation of nondiscrimination based on disability law.

Ms. **Davis**. I have one final question. Many of us like the chairman have family members who are disabled. What would you say to persons in the disability community in terms of how the quality of life for them is going to change as a result of this law. What can they anticipate do you think?

Ms. **Cooper**. That's hard to predict exactly. I can say that in my case, I can only really speak from the standpoint of persons with mobility impairments. It's difficult for me to fully comprehend how this bill is going to change the lives particularly of persons with hearing impairments. The relay service is really I think going to have a major impact for them.

Persons with mobility impairments have been excluded from living normal lives, not just because they couldn't get out their front door but because of a whole combination of factors. We've had legislation that has in kind of a piecemeal way addressed some of those problems one at a time. This is the first time that somebody has recognized that in order to live a normal life, to hold a job, to have a family, to survive in the community, you can't just have vocational rehabilitation.

You can't just put somebody through school. You can't just make sure they don't get discriminated against in the hiring decisions. It recognizes that transportation, public accommodations and all those concerns are part of that picture and it addresses them altogether. So, I'm very hopeful that this is going to have a significant impact on persons 18 to 64 with disabilities who want to work, that after all the implementation period, after the regulatory process is finished, after the Attorney General is active in enforcement that in fact we will see a different landscape of opportunities for persons with disabilities in America and it won't be a sentence to unproductivity and life in an institution just because you happen to have a medical diagnosis that tells you that you're going to end up mobility impaired.

I think that's the biggest freedom. In fact, I kind of look forward to the day that somebody over at the Social Security office has to look at a mobility impaired claimant and say, so? I mean I think that that would really be a major step forward. Right now, our public just assumes that that's a cause for unproductivity and I would like to see that changed.

Ms. KIKO. Mr. Chairman, I just have one question and I will address it to either of you who would care to answer it. The definition of disabled includes a term called, being regarded as having a disability.

With respect to the definition, exclusion of homosexuality under the Senate-passed bill, I'm wondering if you believe that in fact, the exclusion of homosexuality from the definition of disabled is essentially usurped by the definition of disabled where it says, being regarded as, if an individual who is homosexual claims to be discriminated against on the basis of being regarded as having AIDS or HIV positive reactions of some sort, could anybody address and answer?

Mr. ALLEN. You may address more of the legal. I can address some of how crucial that phrase is in this legislation in that what we are looking at as I look in a community-based organization and trying to implement compassion and care and care teams out of churches for individuals that are infected that there is the potentiality of individuals who want to volunteer being discriminated against because of perceived impairment, that, if you touch someone who has AIDS then you're going to have AIDS, that kind of mentality.

I have a specific example of a seminary student who worked out of a Baptist church in Fort Worth and was a volunteer at the AIDS clinic at the public hospital. Her church in which she was employed found out and said, you either work here or you work there but you cannot do both. It was basically because of the AIDS and that's a perceived impairment, basically, and so she decided to quit her job at the church.

That happens. So, if we're going to be able to utilize the volunteerism across this Nation, we have to have protections of people who want to volunteer and this is just one instance of how that takes place. Being a homosexual does not mean you're HIV positive. So that's—I don't see how that could be discerned as being someone who has a physical impairment—just being homosexual.

So I don't see how that could be part of the decision process. My concern is that we do exclude many people that want to volunteer, want to be a part of care. It is absolutely crucial in this strategy to get people in their homes, out of hospitals, and we need help and churches can help in a significant way and others can help but if it's found out that you're helping someone and you lose your job, then that's going to diminish the potentiality of getting individuals to care.

So I believe that's a very crucial element of this legislation.

Ms. Cooper. I would just add that if somebody's operating on the assumption that all homosexuals are HIV positive, that's a pretty irrational fear and it seems like that's exactly what the "regarded as" category is designed to address—irrational fears that employers have. To the extent that the decision is based strictly on homosexuality, it's not covered explicitly by this bill.

To the extent that the decision is based on the irrational fear that all homosexuals are HIV positive, that's another matter altogether and then somebody's being discriminated against based on the perceived status of a disability that doesn't in fact exist, that doesn't in fact limit their capability to perform on the job or that doesn't make them otherwise unqualified for the position and I think that that would be a legitimate basis for raising a complaint.

Ms. Kiko. It just seems a fairly fine line to attempt to understand if there is discrimination going on, if it is basically because someone has an irrational fear against homosexuality in general or if they have an irrational fear that all homosexuals may have the AIDS virus and I think that—it just makes me wonder whether there is in fact an exclusion for homosexuality in the bill.

Ms. Cooper. I don't see that line as being so fine. I think that there's a difference between facts and perceptions that aren't grounded in facts. To the extent that somebody excludes somebody from a job because they're HIV positive and they represent a direct threat, therefore, they're not otherwise qualified, then there is a ground for excluding them from the work force.

To the extent that somebody believes somebody is HIV positive and they're not and therefore there is no grounds for thinking they're a direct threat, then there is a basis for a complaint. To the extent that somebody only voices, look, you're homosexual, we don't hire homosexuals. There's no basis for a complaint. To the extent they say, you're a homosexual and we all know homosexuals are HIV positive and therefore I'm not going to hire you, there's a basis for a complaint.

The real test is and I think this is pretty bright, it's a pretty bright line, if it's an irrational fear based on the status of being HIV positive or an irrational fear and a direct threat based on the status of being HIV positive, it falls within the provisions of the statute.

If somebody is hired or not hired simply by virtue of the fact that they're a homosexual, it's not covered by the statute. To the extent an employer gets those mixed up, if their mixup is grounded in fact, they don't have a problem. If it's not grounded in fact, they might.

I don't see a fine line there at all. I mean, all we're doing is asking people to use their heads when they make hiring decisions. I don't see that it's a fine line.

Mr. **Edwards**. Well, both of you have been very helpful and it's been a great pleasure to have you testify. Thank you very much.

[Whereupon, at 11:43 a.m., the subcommittee adjourned, to reconvene subject to the call of the Chair.]

AMERICANS WITH DISABILITIES ACT OF 1989

THURSDAY, OCTOBER 12, 1989

House of Representatives,
Committee on the Judiciary,
Washington, DC.

The committee met, pursuant to notice, at 10:22 a.m., in room 2141, Rayburn House Office Building, Hon. Jack Brooks (chairman of the committee) presiding.

Present: Representatives Jack Brooks, Robert W. Kastenmeier, Don Edwards, John Conyers, Jr., William J. Hughes, Mike Synar, Patricia Schroeder, Barney Frank, Bruce A. Morrison, Edward F. Feighan, Howard L. Berman, Harley O. Staggers, Jr., George E. Sangmeister, Hamilton Fish, Jr., Henry J. Hyde, F. James Sensenbrenner, Jr., Bill McCollum, George W. Gekas, Michael DeWine, William E. Dannemeyer, Howard Coble, D. French Slaughter, Jr., Lamar S. Smith, Chuck Douglas, and Craig T. James.

Also present: Representative Steny H. Hoyer.

Staff present: William M. Jones, general counsel; Robert H. Brink, deputy general counsel; Daniel M. Freeman, counsel; and Alan F. Coffey, Jr., minority general counsel.

OPENING STATEMENT OF CHAIRMAN BROOKS

Mr. Brooks. The committee will come to order.

I have called this morning's hearing of the full Committee on the Judiciary to receive the testimony of the Attorney General of the United States on the bill, H.R. 2273, the Americans with Disabilities Act [ADA]. The fact that this hearing is being held before the full committee underscores the importance of this legislation and the eminence of our witness this morning.

Over the past several decades, our Nation has made some measure of progress in protecting the rights of those with physical or mental conditions that limit their activities and full participation in our society.

The Rehabilitation Act of 1973, which outlaws discrimination in federally funded programs, and the Fair Housing Amendments Act of 1988, which was shaped by this committee, are important steps in the process of ensuring equitable treatment to the disabled.

Nevertheless, under current law, disabled Americans are not accorded the same protection against discrimination that the law provides to racial minorities, religious groups, or others who in the past have been denied the chance to participate on an equal basis in our society's activities.

The Americans with Disabilities Act is intended to redress this shortcoming in the law. It would prohibit discrimination against the disabled in the areas of employment, public transportation services, public accommodations, and telecommunications.

It is clear that there is a strong consensus in the Congress, in the executive branch, and in the Nation in favor of this legislation. The Senate passed S. 933, a companion version of the bill which is before us today, by a vote of 76 to 8 on September 7. The administration has announced its support of the measure as passed by the Senate. H.R. 2273 itself has 230 cosponsors.

As we work to move the ADA through the legislative process, it is important for us to put into place a structure that preserves this consensus in favor of the rights of the disabled, at the same time that it seeks to protect those rights.

In order to do this, we must ensure that the legislation we enact is as clear and precise as possible, so that those who are affected by its provisions understand what their duties are under the law and can comply with them.

This will be the focus of the testimony of our witness this morning, and the questions that the members of the committee pose to him. As the chief law enforcement officer of the Nation, it will ultimately be the Attorney General who bears the responsibility for ensuring that the Americans with Disabilities Act works effectively and consistently with the intent of Congress.

This is Attorney General Dick Thornburgh's second appearance before the committee during this session of Congress. As all of you know, this former Governor of Pennsylvania and former U.S. attorney is a lead player in some of the most important issues facing our Nation, including the war against drugs, our immigration policy, and our efforts to control street crime.

General, we welcome you and we appreciate your taking the time to meet with us this morning.

Now, I will yield to the distinguished ranking member from New York, Hamilton Fish.

Mr. FISH. Thank you, Mr. Chairman.

I want to join with you in welcoming the Attorney General, and particularly to thank him for his leadership role in this legislation, his important statements and letters going back to July, and more recently to newspapers, clarifying comments made about this legislation, have at all stages shown a thorough analysis and understanding and strong support for this legislation, which has meant a lot to its sponsors.

Thank you.

Mr. BROOKS. I also want to recognize the distinguished whip of the Democratic Party, Steny Hoyer from Maryland, who has graced us with his presence here this morning. He has been interested in this legislation.

Mr. HOYER. Thank you very much.

Mr. BROOKS. Mr. Attorney General, I want to assure you, I am going to stay here just as long as I can. But I believe we are going to have the flag bill on the floor this morning, and I will need to be over there to manage that bill.

Mr. THORNBURGH. What time does the flag go up?

Mr. BROOKS. I need to go over shortly. You can proceed.

Mr. THORNBURGH. I understand.

STATEMENT OF DICK THORNBURGH, ATTORNEY GENERAL OF THE UNITED STATES OF AMERICA

Mr. THORNBURGH. Thank you, Mr. Chairman.

Mr. Chairman, distinguished members of this committee, it is a great pleasure for me to be able to present to you the administration's views on the proposed Americans with Disabilities Act. It is exciting to be a part of a process which, this year, will see the passage of legislation that will extend the Nation's civil rights guarantees to Americans with disabilities.

Persons with disabilities have already made enormous contributions to American society, and can and will contribute even more as legislation goes forward in this Congress to increase their access into the social and economic mainstream of American life. We want America to be an opportunity society for all Americans, and that requires taking actions to make opportunities available to Americans with disabilities.

Despite the best efforts of all levels of government and the private sector, and the tireless efforts of concerned citizens and advocates everywhere, many persons with disabilities in this Nation still lead their lives in an intolerable state of isolation and dependence.

Over 15 years have gone by since the Rehabilitation Act of 1973 conferred on Federal and federally assisted programs the responsibility to accommodate Americans with disabilities. In that time, the doors of opportunity have been opened to persons with disabilities.

Nevertheless, persons with disabilities are still too often shut out of the economic and social mainstream of American life. The unreasonable and, in most cases, unthinking failure to eliminate attitudinal, architectural, and communications barriers in employment, transportation, public accommodations, public services, and telecommunications denies persons with disabilities an equal opportunity to contribute to and benefit from the richness of American society.

The continued maintenance of these barriers imposes staggering economic and social costs and inhibits our sincere and substantial Federal commitment to the education, rehabilitation and employment of persons with disabilities. The elimination of these barriers will enable society to benefit from the skills and talents of persons with disabilities and will enable persons with disabilities to lead more productive lives.

On June 22, 1989, I testified on the Americans with Disabilities Act before the Senate Committee on Labor and Human Resources. At that time, the administration endorsed the concept of comprehensive legislation in the disability rights area and viewed S. 933, the Senate analog to H.R. 2273, as the appropriate vehicle for such landmark legislation.

My testimony did, however, raise areas of concern that needed to be addressed before the administration could specifically endorse the Americans with Disabilities Act. During this past summer, representatives of the administration engaged in prolonged negotiations with the Senate on this bill. These discussions led to revisions in S. 933 and eventually to the bill that passed the Senate on September 7, 1989, with broad bipartisan support.

I am therefore pleased to reiterate the administration's support of the Americans with Disabilities Act. This bill is fair, balanced legislation. It will ensure that persons with disabilities in this country enjoy access to the mainstream of American life. It builds on an extensive body of statutes, case law and regulations to avoid unnecessary confusion; it allows maximum flexibility for compliance; and it does not place undue burdens on Americans who must comply.

The administration asks that you consider the Americans with Disabilities Act expeditiously and the administration hopes that the bill will be signed into law before the end of this year.

President Bush has consistently supported efforts to bring persons with disabilities into the mainstream of American society. As Vice President, he stated that we must develop programs and policies that promote independence, freedom of choice, and productive involvement in our social and economic mainstream.

This means access to education, jobs, public accommodations, public services, and public transportation; in other words, full participation in and access to all aspects of society. This year, in his remarks to the joint session of Congress, the President reiterated this commitment.

We believe that S. 933 successfully incorporates the President's goals. It provides an effective means of combating discrimination and yet gives latitude to employers, public accommodation, and other entities covered by the bill to allow them the flexibility to achieve compliance without placing an undue burden on their operations.

The comprehensive scope of the Americans with Disabilities Act will fill serious gaps in the patchwork quilt of existing Federal laws protecting disabled persons. Perhaps the most glaring gap in the fabric of existing disability rights laws is that there is little in the Federal law that prohibits discrimination in employment in the private sector against those with disabilities.

While persons who work for the Federal Government, who work in federally assisted programs, or who work for certain Federal contractors are protected from discrimination on the basis of handicap, most other workers are not. Each year in this country, over 150,000 young men and women with disabilities complete their education under the Education of the Handicapped Act, some receiving high school diplomas, some receiving certificates of completion.

This education law has been one of our modern success stories in the disability area. But if our investment in the education of these students is to bear fruit, we must ensure that they face a labor market similarly free of discrimination on the basis of handicap.

The Americans with Disabilities Act wisely parallels in the disability area title VII of the Civil Rights Act of 1964, the landmark statute that prohibits discrimination in employment on the basis of race, color, national origin, sex, or religion.

The Americans with Disabilities Act, as passed by the Senate, appropriately phases in its coverage. When they go into effect 2 years after enactment, the employment provisions will cover only those employers with 25 or more employees. Two years later, coverage will be extended to include all employers with 15 or more employees.

Under this phase-in approach, the more immediate burdens of compliance will fall on those larger businesses most able to bear them. We also believe that the 2-year implementation period will ease any initial confusion regarding compliance requirements by giving the administration adequate time to craft regulations and engage in wide-reaching technical assistance efforts.

Furthermore, the administration is pleased that the employment provisions of the Americans with Disabilities Act closely follow the standards provided by section 504 of the Rehabilitation Act of 1973, including the concept that nondiscrimination includes the requirement that an employer make reasonable accommodation to the known mental or physical impairments of qualified disabled persons as long as making the accommodation would not result in an undue hardship on the operations of the employer.

The fact that many of the employment provisions of the Americans with Disabilities Act are drawn directly and, in many instances, even taken verbatim from the Federal regulations, implementing section 504 represents a particularly wise choice. The section 504 standards are familiar to large segments of the private sector already covered by the Rehabilitation Act. Experience has shown that these standards do not result in undue costs or excessive litigation.

The administration is satisfied that the Senate-passed Americans with Disabilities Act is consistent with Federal drug-free workplace initiatives. I need not remind this committee of the scourge of illegal drug use in this country and its frightening impact on daily American life.

Under the Senate bill, individuals who are illegally using drugs are not included within the protections of the bill, and the legality of drug testing is not affected. The bill is fully consistent with this administration's commitment to the eradication of substance abuse in the workplace and elsewhere.

The inclusion of public accommodations in the Americans with Disabilities Act is a Federal recognition that an opportunity society provides access to the mainstream of everyday life. Just as title II of the Civil Rights Act of 1964 opened up hotels, restaurants and theaters to black Americans, the Americans with Disabilities Act promises to persons with disabilities the right to enjoy full participation in our American way of life.

The administration endorses the prohibition of discrimination on the basis of disability in public accommodations and its extension to a wide range of entities. Persons with disabilities should not be discouraged from attending concerts, going to restaurants, and attending movies. And they should not have to face insurmountable obstacles in accomplishing such vital tasks of daily life as grocery shopping or visiting a pharmacy or doctor's office, or going to the dry cleaners.

We recognize that imposing an unlimited requirement that public accommodations make themselves accessible to persons with mobility impairments and provide auxiliary aids to those with visual and hearing impairments could result in significant costs.

However, the ADA, as passed by the Senate, provides a series of limitations on compliance requirements. For example, physical barriers need only be removed when the removal is "readily achievable," and auxiliary aids must be provided only if they will not result in an undue burden.

Under the Americans with Disabilities Act, for example, a restaurant would not be required to provide menus in braille for blind patrons, if the waiters in the restaurant were willing to read the menu. The act also has minimal requirements for retrofitting existing facilities. In fact, the act's "readily achievable" standard requires that existing architectural barriers be removed when doing so is easily accomplishable or able to be carried out without much difficulty or expense.

As an essentially forward-looking bill, the legislation reserves the most rigorous accessibility requirements for new construction, resulting in an estimated increase of construction costs of no more than 1 percent. Even this new construction requirement has certain limitations that attempt to mitigate costs.

The Americans with Disabilities Act contains an exception for placing elevators in new or altered buildings, perhaps the most costly capital expense for making buildings accessible under the bill in its present form.

Any building that has less than 3,000 square feet per story or that is less than three stories in height need not be constructed with an elevator. The administration believes a more prudent course would make the requirement apply to new construction of buildings with more than three stories.

Only multistory shopping malls, professional offices of health care providers, and other categories of buildings designated by the Attorney General would be required to have elevators.

The administration also supports the Senate bill's exclusion of religious organizations and entities controlled by religious organizations from the reach of the public accommodations provisions. Places of worship and the activities of entities controlled by religious organizations have been prudently excluded from the bill.

The administration is well aware of the costs that litigation designed to test novel theories can impose on business in this country. In order to avoid unnecessary and costly litigation, the Americans with Disabilities Act, in most cases, rather than attempting to develop new terms and standards, incorporates terms and concepts from section 504, a law that now has a 16-year history.

We are pleased that the Americans with Disabilities Act, as passed by the Senate, does not create additional monetary incentives for private litigation. Earlier versions of the bill would have unduly encouraged private suits by offering the prospect of jury trials, large monetary awards, and punitive damages.

Under the Senate bill, the remedies available in suits by private litigants against public accommodations are limited to injunctive relief, attorneys fees, and court costs. Authority to seek monetary damages and civil penalties is given only to the Attorney General and, even then, only in pattern or practice cases or suits of general public importance.

The Department of Justice intends to limit its requests for monetary damages to compensation for out-of-pocket losses and would not include speculative damages or damages for pain and suffering.

In fact, it is only in the employment area that any monetary relief is available to private litigants, and that particular relief, in the form of back pay, has been available under other civil rights employment statutes for the last 25 years.

The provision of accessible transportation for persons with disabilities has been one of the most complex issues faced by Congress and the executive branch. Four statutes and a series of current Department of Transportation regulations present an interrelated, complicated set of obligations. Several Federal circuit courts have interpreted these statutes and rules.

The President agrees that additional legislation is needed to bring certainty to this area and believes that the Americans with Disabilities Act appropriately clarifies transit requirements.

Our goal, and yours, is to ensure that persons with disabilities have access to adequate transportation in this country. The Americans with Disabilities Act would, for the first time, guarantee that public bus systems in this country are accessible to persons with mobility impairments by requiring that all new public buses be accessible to persons with disabilities with the Department of Transportation empowered to grant waivers in the narrow circumstances where such buses are unavailable. No retrofitting of existing buses is required by the bill.

Requiring that all new buses be accessible is a major change in Federal transportation policy and a welcome one. The unavailability of accessible public transportation in areas served by public transit continues to be a major barrier to the employment of persons with disabilities and a significant factor in continuing their isolation from everyday American life. The administration views this provision of the Americans with Disabilities Act as a key component of the bill.

Approximately 35 percent of the buses used in urban mass transit in this country are already accessible. Because the average life of a bus is 12 years, accessible bus transportation would become a reality in this country in a relatively short period of time.

In addition, the administration is pleased that the Americans with Disabilities Act requires the provision of supplementary paratransit services. Approximately 75 percent of all transit agencies already provide paratransit services.

The Americans with Disabilities Act would permit paratransit services that supplement, rather than duplicate, the fixed-route bus service. Further, under the Americans with Disabilities Act, paratransit services need only be provided to those disabled persons who are unable to use mainline accessible transportation.

Thus, those persons whose physical or mental disability is so severe that they are unable to use the accessible mainline bus system will be eligible to gain access to their community through paratransit services.

Again, the Americans with Disabilities Act wisely recognizes the cost implications of paratransit service. If providing paratransit services at a level that is comparable to the accessible fixed route system is so costly that it results in undue financial burden on the local transit authority, the local government can provide a reduced level of services.

The Secretary of Transportation will issue regulations on what constitutes an undue financial burden and, in doing so, can use a "flexible numerical formula" that incorporates appropriate local characteristics.

In this era of fiscal constraints, the paratransit provisions of the Americans with Disabilities Act strike a responsible balance between providing accessible transportation and protecting the economic viability of local transit providers.

During negotiations between the Senate and the administration, the exact nature of the accessibility requirements for intercity bus services by private entities proved to be a thorny issue. The administration believes the indepth 3-year study to be done by the Office of Technology Assessment will provide valuable information on cost-effective ways to provide accessible intercity bus transportation and can provide a basis for further legislation in this difficult area.

Because there is substantial evidence of the financial fragility of private intercity bus operators, the administration expects that the study will provide detailed analyses and recommendations on a wide range of accessibility strategies and their relationship to the provision of bus service, particularly in rural areas.

We think that delaying the implementation of the Americans with Disabilities Act's requirement that new intercity buses be accessible until 7 years from the date of enactment for small providers—6 years for other bus service providers—is necessary.

The 3-year period between the completion of the OTA study and the effective date of the Americans with Disabilities Act's requirements will give more than ample time for the Department of Transportation and the Congress to make appropriate regulatory and statutory changes based on the study. Maintaining the act's accessible bus requirement during this interim period will act as a spur to the development of technological advances in this area.

On another matter, the administration strongly supports the Americans with Disabilities Act requirements mandating that our Nation's telecommunications system be made accessible to deaf persons. The inability to communicate by telephone renders the routine tasks of daily living—such as making a doctor's appointment or inquiring about a job opportunity—difficult or even impossible to accomplish. Establishment of a telecommunications relay service is clearly a vital step toward full integration of deaf persons into the mainstream.

The administration particularly endorses the technical assistance provisions in the Americans with Disabilities Act that were added to the bill in an amendment sponsored by Senator Dole. It is our belief that the entities covered by this landmark bill—employers, public and private transit agencies, State and local governments, telephone companies, and public accommodations—will comply with the law voluntarily. We, therefore, expect that Federal efforts to provide information on the law's requirements and on how to comply in a cost-effective manner will be well-received and reduce the total cost to society of complying.

We at the Department of Justice wholeheartedly share the goals of the Americans with Disabilities Act and commit ourselves to an effective program of enforcement of the act's provisions. We have begun the process of analyzing the Department's specific responsibilities under the bill and pledge that our enforcement effort will be fair and vigorous and that our technical assistance program will be thorough, creative, and cost-effective. In addition, the Department of Justice is currently reviewing the impact of the Americans with Disabilities Act on its resources and organizational structure.

As a parent, as a former Governor, and as Attorney General, I have witnessed the many faces of discrimination confronting persons with disabilities. About 40 million people in this country are disabled by reason of some physical or mental handicapping condition.

The mere existence of these handicapping conditions does not, for many of these individuals, prevent them from interacting freely with others in society, or from performing the same tasks that others perform on a daily basis.

But persons with disabilities are all too often not allowed to participate because of stereotypical notions held by others in society—notions that have, in large measure, been created by ignorance and maintained by fear.

It is precisely these sorts of antiquated attitudes that have blocked people with disabilities from entering the mainstream of American life. Certainly attitudinal changes cannot be simply commanded or even legislated out of existence. No particular court order or single piece of legislation can alone change longstanding perceptions or misperceptions; regrettably, attitudes can only be reshaped gradually. One of the keys to this reshaping process, however, is to increase contact between and among people with disabilities and their more able-bodied peers. And an essential component of that effort is the enactment of a comprehensive law that promotes the integration of people with disabilities into our communities, schools and work places.

Mr. Chairman, the Americans with Disabilities Act can be the vehicle that brings persons with disabilities into the mainstream of American life. We have a historic opportunity to move legislation through the Congress given the broad support for its purpose.

On behalf of the administration, I pledge to this committee and to the Congress our support to produce a bill that can be signed this year.

Thank you very much, Mr. Chairman.

Mr. EDWARDS [presiding]. Thank you very much, Mr. Attorney General.

[The prepared statement of Mr. Thornburgh follows:]

Prepared Statement of Dick Thornburgh, Attorney General of the United States of America

Mr. Chairman, distinguished members of the Committee, it is a great pleasure for me to be able to present to you the Administration's views on the proposed Americans with Disabilities Act. It is exciting to be a part of a process which, this year, will see the passage of legislation that will extend the Nation's civil rights guarantees to Americans with disabilities. Persons with disabilities have already made enormous contributions to American society, and can and will contribute even more as legislation goes forward in this Congress to increase their access into the social and economic mainstream of American life. We want America to be an opportunity society for all Americans, and that requires taking actions to make opportunities available to Americans with disabilities.

Despite the best efforts of all levels of government and the private sector and the tireless efforts of concerned citizens and advocates everywhere, many persons with disabilities in this Nation still lead their lives in an intolerable state of isolation and dependence. Over fifteen years have gone by since the Rehabilitation Act of 1973 conferred on Federal and federally assisted programs the responsibility to accommodate Americans with disabilities. In that time, the doors of opportunity have been opened to persons with disabilities. Nevertheless, persons with disabilities are still too often shut out of the economic and social mainstream of American life. The unreasonable and, in most cases, unthinking failure to eliminate attitudinal, architectural, and communications barriers in employment, transportation, public accommodations, public services, and telecommunications denies persons with disabilities an equal opportunity to contribute to and benefit from the richness of American society. The continued maintenance of these barriers imposes staggering economic and social costs and inhibits our sincere and substantial Federal commitment to the education, rehabilitation, and employment of persons with disabilities. The elimination of these barriers will enable society to benefit from the skills and talents of persons with disabilities and will enable persons with disabilities to lead more productive lives.

On June 22, 1989, I testified on the Americans with Disabilities Act before the Senate Committee on Labor and Human Resources. At that time, the Administration endorsed the concept of comprehensive legislation in the disability rights area and viewed S. 933, the Senate analogue to H.R. 2273, as the appropriate vehicle for such landmark legislation. My testimony did, however, raise areas of concern that needed to be addressed before the Administration could specifically endorse the Americans with Disabilities Act. During this past summer, representatives of the Administration engaged in prolonged negotiations with the Senate on this bill. These discussions led to revisions in S. 933 and eventually to the bill that passed the Senate on September 7, 1989, with broad bipartisan support.

I am therefore pleased to reiterate the Administration's support of the Americans with Disabilities Act. This bill is

BEST COPY AVAILABLF

fair, balanced legislation. It will ensure that persons with disabilities in this country enjoy access to the mainstream of American life. It builds on an extensive body of statutes, case law, and regulations to avoid unnecessary confusion; it allows maximum flexibility for compliance; and it does not place undue burdens on Americans who must comply. The Administration asks that you consider the Americans with Disabilities Act expeditiously and the Administration hopes that the bill will be signed into law before the end of this year.

President Bush has consistently supported efforts to bring persons with disabilities into the mainstream of American society. As Vice President, he stated that we must develop programs and policies that promote independence, freedom of choice, and productive involvement in our social and economic mainstream. This means access to education, jobs, public accommodations, public services, and public transportation - in other words, full participation in and access to all aspects of society. This year, in his remarks to the Joint Session of Congress, the President reiterated this commitment.

We believe that S. 933, successfully incorporates the President's goals. It provides an effective means of combating discrimination and yet gives latitude to employers, public accommodations, and other entities covered by the bill to allow them the flexibility to achieve compliance without placing an undue burden on their operations.

The comprehensive scope of the Americans with Disabilities Act will fill serious gaps in the patchwork quilt of existing Federal laws protecting disabled persons. Perhaps the most glaring gap in the fabric of existing disability rights laws is that there is little in the Federal law that prohibits discrimination in employment in the private sector against those with disabilities. While persons who work for the Federal Government, who work in federally assisted programs, or who work for certain Federal contractors are protected from discrimination on the basis of handicap, most other workers are not. Each year in this country, over 150,000 young men and women with disabilities complete their education under the Education of the Handicapped Act, some receiving high school diplomas, some receiving certificates of completion. This education law has been one of our modern success stories in the disability area. But if our investment in the education of these students is to bear fruit, we must ensure that they face a labor market similarly free of discrimination on the basis of handicap.

The Americans with Disabilities Act wisely parallels in the disability area title VII of the Civil Rights Act of 1964, the landmark statute that prohibits discrimination in employment on the basis of race, color, national origin, sex, or religion. The to large segments of the private sector already covered by the Rehabilitation Act. Experience has shown that these standards do not result in undue costs or excessive litigation.

The Administration is satisfied that the Senate-passed Americans with Disabilities Act is consistent with Federal drug-free workplace initiatives. I need not remind this Committee of the scourge of illegal drug use in this country and its frightening impact on daily American life. Under the Senate bill individuals who are illegally using drugs are not included within the protections of the bill and the legality of drug testing is not affected. The bill is fully consistent with this Administration's commitment to the eradication of substance abuse in the workplace and elsewhere.

The inclusion of public accommodations in the "Americans with Disabilities Act" is a Federal recognition that an opportunity society provides access to the mainstream of everyday life. Just as title II of the Civil Rights Act of 1964 opened up hotels, restaurants, and theaters to Black Americans, the Americans with Disabilities Act promises to persons with disabilities the right to enjoy full participation in our American way of life. The Administration endorses the prohibition of discrimination on the basis of disability in public accommodations and its extension to a wide range of entities. Persons with disabilities should not be discouraged

Americans with Disabilities Act, as passed by the Senate, appropriately phases in its coverage. When they go into effect two years after enactment, the employment provisions will cover only those employers with 25 or more employees. Two years later, coverage will be extended to include all employers with 15 or more employees. Under this phase-in approach, the more immediate burdens of compliance will fall on those larger businesses most able to bear them. We also believe that the two-year implementation period will ease any initial confusion regarding compliance requirements by giving the Administration adequate time to craft regulations and engage in wide-reaching technical assistance efforts.

Furthermore, the Administration is pleased that the employment provisions of the Americans with Disabilities Act closely follow the standards provided by section 504 of the Rehabilitation Act of 1973 -- including the concept that nondiscrimination includes the requirement that an employer make reasonable accommodation to the known mental or physical impairments of qualified disabled persons as long as making the accommodation would not result in an undue hardship on the operations of the employer. The fact that many of the employment provisions of the Americans with Disabilities Act are drawn directly and, in many instances, even taken verbatim from the Federal regulations implementing section 504 represents a particularly wise choice. The section 504 standards are familiar from attending concerts, going to restaurants, and attending movies. And they should not have to face insurmountable obstacles in accomplishing such vital tasks of daily life as grocery shopping or visiting a pharmacy or doctor's office, or going to the dry cleaners.

We recognize that imposing an unlimited requirement that public accommodations make themselves accessible to persons with mobility impairments and provide auxiliary aids to those with visual and hearing impairments could result in significant costs. However, the ADA, as passed by the Senate, provides a series of limitations on compliance requirements. For example, physical barriers need only be removed when the removal is "readily achievable," and auxiliary aids must be provided only if they will not result in an undue burden. Under the Americans with Disabilities Act, for example, a restaurant would not be required to provide menus in braille for blind patrons, if the waiters in the restaurant were willing to read the menu. The Act also has minimal requirements for retrofitting existing facilities. In fact, the Act's "readily achievable" standard requires that existing architectural barriers be removed when doing so is easily accomplishable or able to be carried out without much difficulty or expense.

As an essentially forward-looking bill, the legislation reserves the most rigorous accessibility requirements for new construction, resulting in an estimated increase of construction costs of no more than one percent. Even this new construction requirement has certain limitations that attempt to mitigate costs. The Americans with Disabilities Act contains an exception for placing elevators in new or altered buildings, perhaps the most costly capital expense for making buildings accessible. Any building that has less than 3,000 square feet per story or that is less than three stories in height need not be constructed with an elevator. The Administration believes a more prudent course would make the requirement apply to new construction of buildings with more than 3 stories. Only multistory shopping malls, professional offices of health care providers, and other categories of buildings designated by the Attorney General would be required to have elevators.

The Administration also supports the Senate bill's exclusion of religious organizations and entities controlled by religious organizations from the reach of the public accommodations provisions. Places of worship and the activities of entities controlled by religious organizations have been prudently excluded from the bill.

The Administration is well aware of the costs that litigation designed to test novel theories can impose on business in this country. In order to avoid unnecessary and costly litigation, the Americans with Disabilities Act, in most cases, Congress and the Executive Branch. Four statutes[1] and a series of current Department of Transportation regulations present an interrelated, complicated set of obligations. Several Federal circuit courts have interpreted these statutes and rules. The President agrees that additional legislation is needed to bring certainty to this area and believes that the Americans with Disabilities Act appropriately clarifies transit requirements.

Our goal, and yours, is to ensure that persons with disabilities have access to adequate transportation in this country. The Americans with Disabilities Act would, for the first time, guarantee that public bus systems in this country are accessible to persons with mobility impairments by requiring that all new public buses be accessible to persons with disabilities with the Department of Transportation empowered to grant waivers in the narrow circumstances where such buses are unavailable. No retrofitting of existing buses is required by the bill. Requiring that all new buses be accessible is a major change in Federal transportation policy and a welcome one. The unavailability of accessible public transportation in areas served by public transit continues to be a major barrier to the employment of persons with disabilities and a significant factor

in continuing their isolation from everyday American life. The Administration views this provision of the Americans with Disabilities Act as a key component of the bill.

Approximately 35% of the buses used in urban mass transit in this country are already accessible. Because the average life of a bus is 12 years, accessible bus transportation would become a reality in this country in a relatively short period of time.

In addition, the Administration is pleased that the Americans with Disabilities Act requires the provision of supplementary paratransit services. Approximately 75% of all transit agencies already provide paratransit services. The Americans with Disabilities Act would permit paratransit services that supplement, rather than duplicate, the fixed-route bus service. Further, under the Americans with Disabilities Act, paratransit services need only be provided to those disabled persons who are unable to use mainline accessible transportation. Thus, those persons whose physical or mental disability is so severe that they are unable to use the accessible mainline bus system will be eligible to gain access to their community through paratransit services.

Again, the Americans with Disabilities Act wisely recognizes the cost implications of paratransit service. If providing paratransit services at a level that is comparable to the accessible fixed route system is so costly that it results in undue financial burden on the local transit authority, the local government can provide a reduced level of services. The Secretary of Transportation will issue regulations on what constitutes an undue financial burden and, in doing so, can use a "flexible numerical formula" that incorporates appropriate local characteristics. In this era of fiscal constraints, the paratransit provisions of the Americans with Disabilities Act strike a responsible balance between providing accessible transportation and protecting the economic viability of local transit providers.

During negotiations between the Senate and the Administration, the exact nature of the accessibility requirements for intercity bus services by private entities proved to be a thorny issue. The Administration believes that the in-depth three year study to be done by the Office of Technology Assessment will provide valuable information on cost-effective ways to provide accessible intercity bus transportation and can provide a basis for further legislation in this difficult area. Because there is substantial evidence of the financial fragility of private intercity bus operators, the Administration expects that the study will provide detailed analyses and recommendations on a wide range of accessibility strategies and their relationship to the provision of bus service, particularly in rural areas. We think that delaying the implementation of the rather than attempting to develop new terms and standards, incorporates terms and concepts from section 504, a law that now has a 16-year history.

We are pleased that the Americans with Disabilities Act, as passed by the Senate, does not create additional monetary incentives for private litigation. Earlier versions of the bill would have unduly encouraged private suits by offering the prospect of jury trials, large monetary awards, and punitive damages. Under the Senate bill, the remedies available in suits by private litigants against public accommodations are limited to injunctive relief, attorneys fees, and court costs. Authority to seek monetary damages and civil penalties is given only to the Attorney General and, even then, only in pattern or practice cases or suits of general public importance. The Department of Justice intends to limit its requests for monetary damages to compensation for out-of-pocket losses and would not include speculative damages or damages for pain and suffering. In fact, it is only in the employment area that any monetary relief is available to private litigants, and that particular relief, in the form of back pay, has been available under other civil rights employment statutes for the last 25 years.

The provision of accessible transportation for persons with disabilities has been one of the most complex issues faced by

Americans with Disabilities Act's requirement that new intercity buses be accessible until 7 years from the date of enactment for small providers (6 years for other bus service providers) is necessary. The three-year period between the completion of the OTA study and the effective date of the Americans with Disabilities Act's requirements will give more than ample time for the Department of Transportation and the Congress to make appropriate regulatory and statutory changes based on the study. Maintaining the Act's accessible bus requirement during this interim period will act as a spur to the development of technological advances in this area.

On another matter, the Administration strongly supports the Americans with Disabilities Act requirements mandating that our Nation's telecommunications system be made accessible to deaf persons. The inability to communicate by telephone renders the routine tasks of daily living -- such as making a doctor's appointment or inquiring about a job opportunity -- difficult or even impossible to accomplish. Establishment of a telecommunications relay service is clearly a vital step toward full integration of deaf persons into the mainstream.

The Administration particularly endorses the technical assistance provisions in the Americans with Disabilities Act that were added to the bill in an amendment sponsored by Senator Dole. It is our belief that the entities covered by this landmark bill

-- employers, public and private transit agencies, State and local governments, telephone companies, and public accommodations -- will comply with the law voluntarily. We therefore expect that Federal efforts to provide information on the law's requirements and on how to comply in a cost-effective manner will be well-received and reduce the total cost to society of complying.

We at the Department of Justice wholeheartedly share the goals of the Americans with Disabilities Act and commit ourselves to an effective program of enforcement of the Act's provisions. We have begun the process of analyzing the Department's specific responsibilities under the bill and pledge that our enforcement effort will be fair and vigorous and that our technical assistance program will be thorough, creative, and cost-effective. In addition, the Department of Justice is currently reviewing the impact of the Americans with Disabilities Act on its resources and organizational structure.

As a parent, as a former Governor, and as Attorney General, I have witnessed the many faces of discrimination confronting persons with disabilities. About 40 million people in this country are disabled by reason of some physical or mental handicapping condition. The mere existence of these handicapping conditions does not, for many of these individuals, prevent them from interacting freely with others in society, or from performing the same tasks that others perform on a daily basis. But persons with disabilities are all too often not allowed to participate because of stereotypical notions held by others in society -- notions that have, in large measure, been created by ignorance and maintained by fear.

It is precisely these sorts of antiquated attitudes that have blocked people with disabilities from entering the mainstream of American life. Certainly attitudinal changes cannot be simply commanded or even legislated out of existence. No particular court order or single piece of legislation can alone change longstanding perception or misperceptions; regrettably, attitudes can only be reshaped gradually. One of the keys to this reshaping process, however, is to increase contact between and among people with disabilities and their more able-bodied peers. And an essential component of that effort is the enactment of a comprehensive law that promotes the integration of people with disabilities into our communities, schools, and work places.

Mr. Chairman, the "Americans with Disabilities Act" can be the vehicle that brings persons with disabilities into the mainstream of American life. We have an historic opportunity to move legislation through the Congress given the broad support for its purpose. On behalf of the Administration, I pledge to this Committee and to the Congress our support to produce a bill that can be signed this year.

Mr. Edwards. As explained to you, the chairman is unavoidably detained on the floor to handle the American flag bill.

I was pleased to read in the paper when you first endorsed the ADA. As former chairman of the Americans for Democratic Action, does that include that ADA?

Mr. Thornburgh. I will take the fifth amendment on that.

Mr. Edwards. Mr. Attorney General, the chairman is very interested in asking you this question. Would you suggest that additional attention be given to providing more precise statutory definitions of such terms as "readily achievable" and "undue burden" in the law. That has caused some problems and whether or not that will open up different matters to lawsuits.

Mr. Thornburgh. Various Members in this House and the other House have raised this question with me, Mr. Chairman. I think it is important to note that most of the terms used in the Americans with Disabilities Act that prompt such inquiries, terms such as "reasonable accommodation," "undue hardship," "undue burdens," "fundamental alteration" derive from already existing legislation, section 504 of the Rehabilitation Act of 1972. The term "readily achievable" is fairly narrowly defined in the legislation, stating that retrofitting, for example, must be undertaken only where it is easily accomplishable and can be carried out without much difficulty or expense.

It seems to me that in the last case it would be difficult to provide a more precise definition of the term "readily achievable" than the act contains and which has been the subject of much discussion.

With regard to the others, what one might call "terms of art," they have acquired in the 15 years or 16 years that they have been part of the accepted meaning in the courts and through regulatory practices that ought to reduce any confusion or litigation to an absolute bare minimum.

Obviously, applying these terms to new factual situations is going to create new questions. But the notion that a whole flood of undefined terms is being loosed on an unsuspecting public, I believe it much exaggerated.

Mr. Edwards. Thank you. I believe we would like to send you some very specific questions in writing.

The committee will be operating under the 5-minute rule in order to give all the members the opportunity to question the Attorney General.

The gentleman from New York, Mr. Fish.

I believe we will have to go to vote on the floor before we get to that answer.

The committee will recess now to go vote.

[Recess.]

Mr. Edwards. The committee will come to order.

The gentleman from New York, Mr. Fish.

Mr. Fish. Mr. Attorney General, I am sure that you and I agree that this is the most important civil rights legislation of this session of Congress. As I said before, I certainly do appreciate your leadership role. We all do. It is incumbent on us as legislators, however, to do the best of our ability to assure that this comes out the way we want it and that it is clear, as you mentioned.

I would like to raise an issue in this spirit. The term "covered entity" means an employer, employment agency or joint labor management committee. In two major pieces of major legislation, the Immigration Control Act of 1986 and more recently, the Fair Housing Act, we get into this question.

The thought arises, shouldn't a "covered entity" be more site specific and the definition go to the facility rather than a general word like "employer?" What I am thinking is, of course, that as in all cases of discrimination you may have hundreds or thousands of business outlets that do their own hiring and their top management, the employer, would not really know about egregious conduct that may result in a suit by your Department.

So I just raise that issue about the covered entity being more precisely the hiring facility or hiring authority.

Going to the question of your remedies, I am dealing from the Senate bill, section 308, enforcement. It is 308(b), enforcement by the Attorney General: (1)(a), duty to investigate. "The Attorney General shall investigate alleged violations of this title, which shall include undertaking periodic reviews of compliance of covered entities under this title." Now, the rest of this, injunctive relief, pattern and practice, it is language we are all familiar with.

But this particular part I read you was not in the House bill I introduced. It is obviously the Senate edition. It is a novel provision to me.

I wonder if you would comment on the meaning of it and your approval or disapproval of it. Once again, this does not have to be a matter, unless you are prepared to speak to now, it could be a matter like my first question that you could reserve judgment on.

Mr. THORNBURGH. Let me take a try at it, although I perhaps ought to reserve the right to give you a more precise response. In carrying out our responsibilities to see that the laws are obeyed, we sometimes are in a reactive posture and sometimes in a proactive posture.

I think that is what is contemplated by 308(b)(1)(a), investigating allegations which come to us in the normal course is one thing. Undertaking reviews of compliance is quite another where the initiation would come from the Department of Justice.

That I think is meant to round out the definition of our enforcement responsibilities to ensure that we are not like the Maytag repairman waiting for the phone to ring before we undertake some investigation of compliance. That would be the allegation side. But what this talks about is our own periodic reviews of the compliance with the act.

Mr. FISH. You may wish to think about it since this is a new measure that was not considered in the drafting of the House proposal. Your letter of July 26 to Senator Kennedy, in that you speak of using the pattern and practice authority given the Attorney General in the Fair Housing Act amendments as a model. The Attorney General should be given authority to seek civil penalties concerning egregious violations of the pattern and practice provision in the Senate bill is the usual remedy. I wondered if, well, I talked about A, duty to investigate, and that is the next section, "potential violation."

I wondered whether you felt that the terms "egregious and willful" should be in the statute, should be in the committee report.

Mr. THORNBURGH. Well, this, again, has been the subject of some discussion. I think the use of the term "issue of general public importance" is sufficient to provide adequate guidance to me or any successor in the Attorney General's Office as to the type of relief that should be sought. Obviously, under those guidelines trivial denials or violations would not be encompassed and probably in fact would be restricted to egregious and serious violations, but I am not sure that the addition of that language as a substitute for or in amplification of the issue of general public importance language would add something.

Mr. FISH. It is just that it is language in other laws that we have had in dealing with discrimination.

Mr. THORNBURGH. We have limited resources in this area, Congressman Fish. We obviously are going to be looking only at the most egregious cases. But I am a little worried about trying to put that into a statutory setting in this instance.

Mr. FISH. In the committee report, then, which I think is in the Immigration Act.

Mr. THORNBURGH. Yes, I don't have any problem with that.

Mr. FISH. I have one other question before I yield to my colleagues, who have lots of questions, I know. If I could refer you to section 303, called new construction in public accommodations, potential places of employment, this is just to direct your attention to this, and it says in section 303, "application of term as applied to potential place of employment, the term discrimination shall mean a failure to design and construct facilities for first occupancy later than 30 months after date of enactment of this act that are readily accessible to and usable by individuals with disabilities except where an entity can demonstrate that it is structurally impracticable to meet the requirements of such subsection in accordance with standards as set forth or incorporated by reference in regulations issued under this title."

This does not answer the question as to whether every part of a facility, new construction facility, is covered, or whether those parts that might lend themselves to a need for accessibility under the circumstances.

I know this question has been raised as to just a matter of clarifying exactly what we mean in terms of new construction.

Mr. THORNBURGH. Are you referring to the exception language, the term structurally impracticable?

Mr. FISH. Not really, because that I think is clear. That is something a structural answer will answer, whether or not it is structurally impracticable. But I am wondering what is meant, whether or not every single part of a new construction is to be made accessible; and if not, then failure would be a discrimination or whether there is some clarification needed here.

Mr. THORNBURGH. The existing design standards for new buildings talk about reasonable numbers of accessible entrances, toilets, those kinds of things. It doesn't mean that all parts of every building have to be accessible, if that is what you are pointing toward.

Mr. FISH. That is the term that has been raised, yes.

Mr. THORNBURGH. I am not quite sure what the concern is.

Mr. **Fish**. I suppose it is when you build any new construction, and depending what it is, it might have food services, maybe employment requirements in the job that would not lend themselves to somebody in a wheelchair, and therefore, you would not need to have accessible entrances.

I just presented you with some issues that have been raised by others.

Mr. **Thornburgh**. Well, I think the only answer to that is to look at it from the point of view of the standard of reasonableness which excludes the notion that every portion of every building, every service included within the building, must be accessible, under the standard of reasonableness.

If there are a reasonable number of those kinds of necessary components of the public accommodation that are accessible, that fulfills the requirements of the act as it is written.

Mr. **Fish**. I thank the gentleman.

Mr. **Frank** [presiding]. The chairman of the Subcommittee on Civil and Constitutional Rights, Mr. Edwards, had to go over to the floor, because he had management responsibility on the flag bill.

I want to read a statement Mr. Brooks wanted to put into the record. If there is no objection, I will read it and have it put in the record.

"A long-time friend of mine and the son of a former staff director of my subcommittee, Geoffrey M. Baynard, is here in the audience. Geoffrey suffered a head injury in an automobile collision caused by a drunk driver. He was unconscious for 5 weeks, but survived and made a miraculous recovery, though he has some residual disabilities. Geoffrey has prepared a statement on the Americans with Disabilities Act, which I would ask unanimous consent to insert in the hearing record at the appropriate point."

There being no objection, that will be put in the record.

[The prepared statement of Mr. Baynard follows:]

October 12, 1989

STATEMENT OF GEOFFREY M. BAYNARD BEFORE THE HOUSE JUDICIARY COMMITTEE ON THE PROPOSED AMERICANS WITH DISABILITIES ACT OF 1989 (ADA).

I am a thirty-five year old survivor of a very serious head injury. I received my injury when an unlicensed, uninsured drunk driver, with prior convictions, ran a red light while he was being pursued by police at a high rate of speed.

He was driving a Cadilac in excess of 70 miles per hour when he smashed into my compact car broadside, shearing off my door with me being thrown twenty feet landing on my head in the other lane of traffic.

My scalp was ~~was~~ split open from ear to ear. The massive blow to the head has caused permanent brain stem injury. I also had a fractured pelvis from knocking over a 4-by-4 inch sign post, and an exploded disc in the shoulder area of my back from landing on my head.

For five weeks I was unconscious with the doctors telling my family I had little chance to live and if I lived I would have little chance of walking, talking or even remembering my name. In other words, I would be a basket case. I was in a coma for five weeks and sure enough when I became conscious I couldn't walk at all, nor talk coherently.

So, for the first time in my life, I was a member of a minority group - I was now physically disabled. I was to become handicapped as well - not directly from my injuries but from alcohol, and more important, people's attitudes. My physical disabilities made me appear as though I were impaired by alcohol - by the way I walked and talked. I talked with a slur and walked with an uneven gait even when I had not been drinking.

The accident occurred in February, 1974, which was the virtual dark ages in the rehabilitation of the head injured because of the lack of awareness about the epidemic proportions of this type of injury in our Society. The staggering statistics are that one out of every 200 people in our population is directly affected or involved in some form of head injury.

Because of the absence of visible disability, i. e. braces, walkers or crutches, I have personally experienced more forms of discrimination than one would think possible. Most important, I have experienced discrimination in my efforts to obtain suitable employment.

My first experience with the federal government where persons are classified as "handicapped" regardless of whether they have a physical or mental impairment. I was given a job as a laborer and told to perform tasks which were beyond my physical capabilities. When I complained, I was told to be grateful for the subpar wage I received. Meanwhile, within the agency there were many positions that were within my physical capacities which were denied me because I was under the "handicapped" program.

I had to leave government to survive because I could not perform the physical tasks required for me to do. Then I did two things. I enrolled in college and applied for disability from Social Security. Satisfactory completion of two years of college work established that I have a "level" of capability, despite a permanent lesion on my brain stem..

In other words, I am not a complete dummie. Also, my long three and a half year battle with Social Security proved conclusively that I also have a serious spinal injury which limits my capacity to perform physical labor. As one bone specialist suggested, one of my shoulder vertebra looks like it been smashed with a sledge hammer.

But I say to you - this is not the whole story, for old fashioned frustration, having nothing to do with our injury, plays an important part.

First, of course, is the lack of effective state and federal programs to assist those of us with these problems. And then there is discrimination. Let me give you some examples.

In 1986. I applied for a job with the Commonwealth of Virginia in the Department of Rehabilitative Services working with newly head injured persons. The Commonwealth, in a masterpiece of bureaucratic splendor, simply withdrew the job announcement citing economic concern rather than employing a head injured survivor.

I have submitted more than fifty applications with the city of Alexandria. I have been interviewed only once. No jobs have been offered me.

In summary, in the years since my injury, I have applied for more than a thousand positions. I have only been interviewed for some ten or twenty. Because of strong political backing I was offered two in the federal government requiring strenuous labor and totally unsuitable for a person in my physical condition.

And then there has also been the attitude of people. As an example, recently at a foodstore checkout counter, I was treated in an awkward manner by the checkout clerk. After leaving the store, my companion expressed her outrage at the attitude of the clerk. As so often before, a slurred word or two and my uneven gait had lead to the conclusion that I was drunk. After 15 years of such treatment, I let such occurrences slide but my friend did not have as tough an attitude as I have developed - an attitude I have developed to protect myself from the discrimination that seems to come upon head injured and other disabled persons from every side.

What does all this have to do with the ADA - that is, the proposed Americans with Disabilities Act of 1989? The answer - everything. There is no equal opportunity employment except in the mind of the person that thought up this three word phrase. In the 1980's, as this country was trying to recover from an economic backslide, the disabled people took it on the chin and lost not only opportunity to work but opportunity to even move about freely in our Society. Furthermore, many disabled have ~~been~~ been denied the freedom they deserve because of the lack of public accommodations and services.

In my many years as a disabled person in contrast with my non-disabled life, I have learned that the disabled when deprived of the opportunity of freedom of movement and adequate accommodations often lose the respect of our fellow citizens. They are prisoners in an otherwise free Society - in practical terms as caged in as the criminal inmates in our highest security penal institutions.

Please reweave the safety net for disabled people by approving this legislation.

Mr. Frank. Mr. Sangmeister.

Mr. Sangmeister. I understand the provision to remove illegal drug users from the protection of the legislation. I have no doubt that you support that. Subsequently, I have been advised that an amendment was added that would grant protection to illegal drug users if they have some other recognized disability.

If the opportunity arises in the House to delete that language, would you support that?

Mr. Thornburgh. I think and I hope I made clear in my statement that this administration does not want to see legislation designed to deal with persons with disabilities becoming a loophole for providing protection to persons who are using illegal drugs or illegally using legal drugs.

To the extent that any ambiguity in that regard can be removed, we would certainly support a technical amendment, addressing the point that you raised.

Mr. Sangmeister. Thank you.

Mr. Frank. Mr. McCollum.

Mr. McCollum. Thank you, Mr. Chairman.

It is good to see you, Mr. Attorney General. I think all of us support the basic premise of this act. The ADA has been long needed in this country to establish civil rights for those who are handicapped. There have been numerous cases raised over the last few weeks, especially since the Senate passed what I think were improvements which I congratulate you for achieving.

I want to ask about a couple of them. One of the things the business community has been particularly concerned with has been in the public accommodations section. They have been very concerned that there is no exemption for small business there, as there has for small business in the employment section.

In title III, in other words, if you have 14 or 25 or fewer employees, you still have to abide by it. They give examples and say, despite the fact of undue hardship language and that sort of thing, it is not a very practical matter for little businesses that have, oh, a stand with teeshirts like you see in stores in the malls or shopping areas, they have very limited square footage, and you and I could not walk between the aisles, let alone somebody who is handicapped.

They suggest there ought to be a small business exemption altogether for small enough businesses, either by size of employers or another determination, or there ought to be a provision that allows a clear-cut, not litigable way to go about doing this, to help the handicapped, such as providing a separate area within the small store that they have for all the samples to be, or something like that, so somebody could come to that area.

Has there been thought given to that? Is that of any concern to you at all?

Mr. Thornburgh. There has been a great deal of thought given to that, Representative McCollum. Let me mention, first of all, one difficulty that was immediately encountered in talking about transporting the small business exemption in the employment section into the public accommodations section.

The small business exemption in the employment section, which we wholeheartedly support and which is consistent with title VII of the Civil Rights Act of 1964, results in the exemption of about 20 percent of the employers who would otherwise be subject to the act without the exemption.

That is the best figure that we can come up with. To use that same exemption in the public accommodations section, however, would result in the exemption of well over 90 percent of the public accommodations, and in certain categories such as doctors' and dentists' offices, drugstores, laundry and cleaning services, the very mainstream-oriented types of public accommodation that we are most concerned about, close to 100 percent of the establishments would be exempt.

Accordingly, the requirements with regard to public accommodations have been drafted to provide for minimizing the burden on small businesses. The barriers are required to be removed in a very narrow area of cases where that removal is readily achievable and can be carried out without much difficult or expense.

That, it seems to me, would be a very, very limited area where retrofitting or removal might be called for on occasion and is in recognition of the very points that you raised with regard to a number of small businesses.

Mr. McCollum. May I interrupt and suggest that despite the fact that I agree with you, the problem with using the same definition, if you have that little store where you can envision all those teeshirts in just two racks on a narrow lane and you squeeze between the two, there is no barrier to be removed. They would have to take out some of their stock.

I realize by regulation we can maybe do something. But there are a lot of folks concerned about that kind of situation. That has been raised to me.

Mr. Thornburgh. If it cannot be done easily or without difficulty or expense, it is not obliged to be done.

Mr. McCollum. There is expense, the cost to that little business. It may be that he takes out half his inventory, then.

Mr. Thornburgh. It seems to me the requirement that it be done without much difficulty or expense, if you are going to have to sacrifice half the room devoted to your inventory, that would constitute to me a substantial cost or expense or difficulty.

Mr. McCollum. I want to at least put that on the record that that is your view, so we have a way to interpret that, because I have a great concern in that area.

Mr. Thornburgh. You are grappling with the same types of problems we looked at in fashioning the legislation on the Senate side. It may deserve some study, but I think we felt that having found the transportation from one section to another of the exemption relating to employment, the number of employees was not a workable feature, so we tried to agree upon a way to otherwise minimize any prospective burden on these very small businesses.

Mr. McCollum. I realize my time has expired. I hope we will have a second round on this.

Mr. Frank. I will take my question now.

General, I want to express my very deep appreciation to the President and to yourself for taking such an active role on this legislation. I think it is extremely important. I think we ought to be very clear about what we are saying.

It is important to be honest about it. There will be, obviously when this is actually implemented, some slight additional cost, and what we are saying is that that additional cost distributed across the entire population will have, we believe, disproportionate benefits for a small number of our fellow citizens who have been in some ways unfortunately affected.

I think that is what we are talking about. I think it is a mark of social maturity of which we ought to be proud, that we accept that principle. I think your answers have helped make it clear that that is the principle that is going to guide you; that we are not going to be unreasonable and there is not going to be excess.

I think we have to be explicit about one other thing here. We are often told by the private sector that they want certainty. I understand that. We don't want to be subjected to arbitrariness. I think what we are saying in this case is that we are in a new area.

Although we have legislated here in the Fair Housing Act and in the immigration bill, we are talking about some areas that are somewhat new to us. It is important to have discretion.

I think what we are saying, I am hoping the majority of my colleagues will recognize the good faith and the intelligence with which you and your colleagues are prepared to administer that.

I think what you have said so far, and what you have done helps bear that out. We are often told that we should resist micromanagement. I think this is an important example of where we ought to be resisting micromanagement, that we ought to be accepting the fact that this is a difficult and socially very important task, we ought to accept the bona fides of yourself and the people working with you, and I think everything that has been done to date shows that.

The experience has been that people who have raised legitimate concerns have had them dealt with, going back to the Fair Housing Act, where many of us worked with homebuilders and worked out a set of rules which seem to be OK now.

I don't think there is any way not to give discretion. If we did not give a great deal of discretion, we would more likely overlegislate. Congress is not going away. People who are administering it, Congress says, well, we have confidence in the people administering, but what about the future group?

Congress is not going away. The people most concerned about this bill, the people who are themselves suffering from disabilities and the people who expect most to benefit from the broadening of opportunity here I think understand on the whole that it is to their interest to make sure that this is reasonably done.

The worst thing you can do from the standpoint of meeting the very legitimate request of people who are disabled in some way is to overdo this in ways that would impose a cost for too little benefit. Everything I have seen so far suggests that we have that kind of understanding.

I would hope that you would comment on that and tell me that in this case, I have got it right. If we are not prepared to legislate in that fashion, then I think we are going to have a very hard time.

Mr. **Thornburgh**. Let me add two additional comments in that regard, Mr. Chairman. One is that as I noted, there are lagtimes provided in certain sections of this bill that are designed to take into account what careful study and consideration of the more vexatious provisions, potentially vexatious provisions that can be dealt with.

Second, we propose to, as I indicated, carry forward an aggressive program of technical assistance, which will enable us to work hand in glove with those persons who are affected both in terms of their rights and their responsibilities to ensure that our administration is, in fact, sensible, reasonable, and consistent with the notion of balancing the cost imposed for compliance with the full recognition of the rights of the persons who are sought to be benefited.

Mr. **Frank**. Thank you.

I have one specific question which I have been asked by some groups. I had some requests from some people in the construction field. Are we sure that this legislation fits in well with preexisting legislation, for instance, Grove City and fair housing? Are there any possibilities that people are going to be subjected to conflicting mandates or different timetables?

Mr. **Thornburgh**. I hesitate to give you absolute assurance, but I think those have been attended to. If there are areas where that is not the case——

Mr. **Frank**. That is a better way to phrase it, which is, namely, it would be our intention if there were any glitches, that it would be our intention that no one would be subjected to conflicting or confusing, substantive or chronologically——

Mr. **Thornburgh**. I would certainly raise them.

Mr. **Frank**. We would invite any groups who feel there are any such conflicts to let us know about it, because it is important for us to work those out and have nobody subjected to that.

Mr. DeWine.

Mr. **DeWine**. Thank you.

Can you tell us the administration's position about the use of a tax credit for small business that has to comply with the requirements for this law?

Mr. **Thornburgh**. That has been suggested and asked in the course of the framing of the legislation before you for consideration, but because of—well, it has, I must acknowledge, an equitable appeal, but because of the fiscal situation and restraints, the administration at this time does not support any such provision.

Mr. **DeWine**. One could make the argument that the goals of this bill certainly are laudable and certainly I would hope are shared by all Americans, and that the question then is, who is going to pay for it?

It seems to me that the choice when you are dealing with a tax credit issue, the choice is between spreading the cost among everybody in this country or having the small businessmen and women in the country pay for it.

Can you react to that? Is that a fair characterization or not?

Mr. **Thornburgh**. I think that is a fair characterization, and from a point of view of simple equity, that may recommend itself for consideration. There is, under section 190 of the IRS Code, presently a deduction of up to $35,000 per year for taxpayers for expenses associated with removal of qualified architectural and transportation barriers.

My understanding is that Senator Dole intends to review this existing tax deduction provision in the context of the Americans with Disabilities Act, with particular attention to the problem that you suggest, and that is the obligations of small businesses.

It may well be that you want to communicate with Senator Dole or his staff in that regard. As I said, at the present time the administration does not support any additional tax benefits or credits.

Mr. **DeWine**. Let me ask you about the public safety issue. I wonder if you can comment in general terms on what your understanding of this bill is in regard to what it provides for a business person to make a decision based upon public safety.

Let me give you an example. It may not be a good example, but it is an issue that has been raised by some of my constituents over the last few years. That has to do with airlines that routinely assign blind people a certain space on the plane.

There has been a controversy for a long time. The airlines have said that they have to be located in a certain place. The other side would argue that that really has nothing to do with public safety at all, there is no evidence that the airlines have ever established that putting that blind person in one particular seat and not letting them go into the general assignment of seats has anything to do with public safety.

There has been no demonstrated need to do that. That has been an ongoing dispute for a number of years. I have heard both sides of the issue. What is your understanding of the public safety aspect of this and how business may or may not make that determination and then what is that criteria, who has the burden of proof on that and how are we going to deal with that problem?

We can all think of many examples but that is just one.

Mr. **Thornburgh**. First of all, my understanding is that the provision for blind persons in aircraft is currently the subject of regulations being drafted by the Department of Transportation under the Air Carrier Access Act and is unresolved.

They are not final, although I believe the view the FAA and the Department of Transportation expresses is the one you expressed concern about. But as a general matter, it seems to me obvious that safety considerations should be taken into account in making public accommodations accessible and precisely how that applies to particular cases is obviously going to call for some recognition of common sense.

But the notion that public accommodation requirements should ignore safety considerations I find to be inadmissible. I think what we want to be careful to avoid is that the judgments that are made about public accommodations, accessibility, don't provide on the basis of stereotypical presumptions, that they, in fact, relate to real situations and the problems of people with particular disabilities.

How you can be more precise in that regard, I cannot suggest. But clearly safety considerations have to be a part of the factoring in of these requirements for accessibility.

Mr. **DeWine**. Thank you.

Thank you, Mr. Chairman.

Mr. **Edwards** [presiding]. The gentleman from California, Mr. Dannemeyer.

Mr. **Dannemeyer**. Thank you.

Mr. Attorney General, good morning.

Mr. **Thornburgh**. Good morning.

Mr. **Dannemeyer**. There is no question in my mind that the vast majority of the American people recognize the goals of this act. I do. Our hearts go out to anyone who was born with a defect or as a result of an accident in life described by our chairman, Mr. Brooks, for his friend deserves the recognition of society that we need to make adjustments in accommodations.

My questions this morning, Mr. Attorney General, relate to a matter of concern that I have for my constituents: Is it sound public policy to include within the definition of disabilities persons who have engaged in intentional conduct and as a result of that intentional conduct now claim to be disabled, drug addicts, alcoholics and persons with a communicable disease who acquired the disease when they knew the consequences when they engaged in that conduct.

I am not sure whether the people who read this legislation have thought through the consequences of what the adoption of this legislation will do in terms of the impact on Federal spending. I am speaking specifically about HIV carriers that we have probably, nobody knows, maybe 3 million in America, as the legislation is pending before the House, it probably will follow that upon its adoption these HIV carriers will come within the definition of disability and accordingly will be eligible for D.I.

After 2 years on D.I., they are eligible for Medicare. Now, for our society to say to persons who have intentionally engaged in activities that result in the acquisition of a fatal disease, HIV carriers, that we are going to provide this kind of coverage, I think in the minds of a lot of the public raises questions about what we are about.

So my first question is: Would you support an amendment that would say to a person who acquired a communicable disease such as HIV positive status that we would limit those who are HIV carriers within the definition of disability to those who receive that status as a result of a blood transfusion, were born to a mother with AIDS, or were a hemophiliac who got that status as a result of acquiring blood in the blood supply, in other words, somebody who I would classify as not having acquired the status from intentional conduct.

This would exclude the coverage of disability to those who are drug addicts or homosexuals who have engaged in conduct and acquired this status as a result of intentional misconduct?

Mr. **Thornburgh**. I think in response to your concerns I have to first note that illegal drug use, that is the use of illegal drugs or the illegal use of legal drugs, does not constitute a handicap the way the ADA is drafted.

With regard to contagious disease, the act adopts the standard that has been applied in cases arising under section 504 of the Rehabilitation Act. The Supreme Court in the *Arline* case held that people with contagious diseases are entitled to protection afforded by section 504 and that in those cases where an individual poses a significant risk of communicating an infectious disease to others in the workplace, that coverage and the benefit of that act would be denied unless a reasonable accommodation would eliminate that risk.

But the holding of the *Arline* case interpreting section 504, the recommendations of the Presidential Commission chaired by now Secretary of Energy, Admiral Watkins, and the views of the Surgeon General are the views of the President.

The current language and the current posture of the treatment of these situations as they are set forth in the present draft of the act are supported by the administration.

Mr. **Dannemeyer**. Our time has just about expired. The *Arline* decision presented the applicant in that case with tuberculosis. I am not aware that TB is something that is acquired as a result of conduct whereby the person who acquires it knows when they engage in the conduct they are going to get TB.

The decision of the AIDS Commission, to which you referred, was not unanimous. It was an 8-to-5 decision.

I question the whole *Arline* decision itself was not a unanimous decision of the U.S. Supreme Court. I question the public policy statement that a society is going to go down the road of extending disability status with all the protection it entails to somebody who intentionally engages in misconduct and as a result of that misconduct acquires a communicable disease.

It is not unlike a young man who kills both parents and then throws himself on the mercy of the court because he is an orphan. Is this what we seek to do for our society?

Mr. **Thornburgh**. I can only respond, Congressman Dannemeyer, with the administration's view.

The President has made a pledge to support legislation against AIDS discrimination based on the findings of the Watkins Commission. I think that it is not always easy to prove how AIDS in particular was acquired and that the kinds of rules which you suggest——

Mr. **Dannemeyer**. We know statistically that nationally about 70 percent of the cases are male homosexuals and about 23 percent are intravenous drug users.

That was made clear to us. Is it sound public policy for a society to give disability status and all the protection that it entails to individuals in our culture who have intentionally engaged in conduct where going in they knew they were engaging in activity to put them at risk? That is the question.

I have some other questions. I realize my time has probably expired.

Mr. **Edwards**. The gentleman from Virginia, Mr. Slaughter.

Mr. **Slaughter**. I have no questions, Mr. Chairman.

Mr. **Edwards**. The gentleman from Florida, Mr. James.

Mr. **James**. I am sympathetic with the rights of people who are disabled and I think this is a great move in the direction of these people, to protect their rights. Thank you so much for your testimony. It has been very enlightening and allays some of the fears that I had with some of the specific language.

There are some questions that have been asked of me. Maybe you have covered them but I am not sure I have the answers.

For example, in retail stores is there anything in this act that suggests that you now have to change the height of all displays in all grocery stores, et cetera, to where it would be—in other words, for someone in a wheelchair to be able to reach all goods in a store.

Could that be a reasonable interpretation to put on this act?

Mr. **Thornburgh**. Not as a blanket requirement.

Mr. **James**. Is the position that this statute could be used for this purpose to say that all shelving could not be more than three feet in height so that you could reasonably reach the shelves? Would that be a possible interpretation under the act or not?

Mr. **Thornburgh**. No. I think what you are talking about are reasonable accommodations. If you have the precedents of section 504 to look to and carry those standards forward into ADA, any kind of blanket requirement that those specific undertakings be entered into by a retail store would, to my view, be unthinkable.

Reasonable requirements without undue burdens, it seems to me, would exclude the notion of going into a store and saying you have to lower every shelf to accommodate someone who comes in in a wheelchair.

Mr. **James**. Could the businessman look to any precedent to define these?

Mr. **Thornburgh**. They are defined under section 504, the regulation and cases interpreted over the last 16 years. It is for that reason that I feel confident in recommending them to the Congress because they, as I indicated earlier, are not made up out of the whole cloth. There is a body of law that can provide guidance to an individual.

Mr. **James**. Then your testimony is that it would be unreasonable to require that.

Mr. **Thornburgh**. It sounds unreasonable to me.

Mr. **James**. You think the law would require that?

Mr. **Thornburgh**. I think it would be imposing an undue burden.

Mr. **James**. Your lawyers have told you that?

Mr. **Thornburgh**. Yes.

Mr. **James**. Have they said that?

Mr. **Thornburgh**. A man who acts as his own lawyer has a fool for a client.

Mr. **James**. I have heard that said, but the Attorney General——

Mr. **Thornburgh**. Even Attorneys General.

Mr. **James**. I believe the Attorney General is my lawyer in many instances.

Mr. **Thornburgh**. I hope that you don't have a fool for a lawyer.

Mr. **James**. Indeed, we both hope that. For new establishments, it will be a different standard, would it not?

Mr. **Thornburgh**. Yes.

Mr. **James**. My same question is posed for new establishments, under section 504, under the law pursuant to the advice or research of the Attorney General's Office, what would my answer be then to people who would ask me will the height limitation be changed on new store construction or the grocery story, hardware stores, clothing stores, et cetera. Do you have an answer for that type of thing?

Mr. **Thornburgh**. Once again, you are relying upon standards of reasonableness and a desire to avoid undue burdens.

Mr. **James**. I understand that. Let's pretend you are my lawyer. I come in and I say to you as my attorney and I am a businessman, I want to build a new store and I want—my shelves are going to be designed x height limitation, that will be the normal height, whatever they are in the store without consideration of this act.

What would the Attorney General's advice be to me as to height on a new store if he were my lawyer, understanding reasonableness is not what I am asking. I want to be reasonable but the question is what is the reasonable height.

Mr. **Thornburgh**. I think, again, you have thrown back on precedent—the ATBCB—I remember the acronym, but not the name, the Access Board will look at those kinds of standards but the simple answer to the particular case you have described is that if there is a clerk there who is willing to assist an individual who might be using a chair, for example, that that is the kind of accommodation that can be made at very little cost and fulfill the reasonable requirements of the act, it seems to me.

These are regulations that will be used to flesh out the bill once passed, but passed in the form that it is presently, I can't conceive of a requirement that would—in particular, the answer to the first question it seems unthinkable that you would cause someone to have to sacrifice half their inventory space to lower the shelves to that level.

In new buildings, I think by that time people will be aware of their obligations under the act and in the case of a person using a chair in the store, saying I want to see something on that shelf, there would be someone to assist them.

If they refuse and say they are not going to make reasonable accommodations, there might be a violation but that seems to me to be unreasonable on the part of the individual who is in charge of this.

Mr. **James**. On existing establishments—the reason I asked the question is on existing establishments there is a different standard and I can imagine all stores now having a totally different elevation for clothing racks, dropping them a foot. To the extreme if that were required.

Apparently, you don't feel that it is.

Mr. **Thornburgh**. I am not an extremist.

Mr. **James**. You don't think there is a new standard for shelf elevation for new stores, is what you are saying?

Mr. **Thornburgh**. I understand that we have a period of time during which regulations would be prepared and drafted and promulgated available for public comment. We intend to carry out aggressive public information and technical advice.

We want to help people comply with the act, not prosecute them for not complying with the act.

Mr. **Edwards**. The time of the gentleman has expired.

Mr. Fish has assigned his time to Mr. McCollum.

Mr. **McCollum**. I want to clarify some things because there are three or four committees looking at this in the House and our leadership, Democrats and Republicans have looked at clarifying language. I assume that you have no problems with some of the types of things that the leadership has been considering for clarifying when a new clean bill is introduced.

One of them, for example, is the contagious disease area where we have talked about the fact that you don't have to comply if you are hiring a handicapped person if they have a contagious disease and they pose a direct threat to somebody's health—in the Senate, I understand in the report language they equated that to the language of significant risk and it was our intent at the present time to encourage substitution of the word "significant risk" for direct threats, since that seemed to be more simple language.

Mr. **Thornburgh.** That is the language that the Supreme Court used in the *Arline* case.

Mr. **McCollum.** Second, there was a concern that undue hardship was not always clearly linked to reasonable accommodations. In other words, there are any number of places here we talk about reasonable accommodations and we also talk about undue hardship, but there is a question technically whether or not we really tied that down.

I assume that an undue hardship exception for wherever a reasonable accommodation is a requirement and it would not be a problem if we made that clear.

Mr. **Thornburgh.** Those are section 504 terms and have developed an accepted meaning over the years and for that reason I think are useful rather than introducing a different and more detailed definition.

Mr. **McCollum.** I think there was concern as to what else we might add to undue hardship, but there was simply some concern that the undue hardship language be linked throughout all of this for fear that this would be more litigated than 504.

Two or three substantive concerns. I have been asked by people and I have never gotten a good answer, though I have listened to people argue it a few times, saying basically it is already in 504 and it is no problem and there must be somebody out there covered by it, but in the disability definition, we have three parts, (a) physical or mental impairment of substantial limits of one or more of the major life activities of such individual (b) a record of such an impairment or (c) being regarded as having such an impairment.

A lot of my disabled community said we don't know why you need being regarded as having such an impairment since they can't imagine a case where there wouldn't actually be a physical or mental impairment and that would actually be covered, you have it or you don't have it.

Isn't that excess language just to appease somebody who is worried that we have to have everything but the kitchen sink and we might overlook something? Is there an example where that comes into play?

Mr. **Thornburgh.** It draws, as you note, on section 504, and I think probably the best reason for that is in the *Arline* case, where the court said, "By amending the definition of handicapped individual to include not only those who are actually physically impaired, but also those who are regarded as impaired and who as a result are substantially limited in a major life activity, Congress acknowledged that society's accumulated myths and fears about disability and disease are as handicapped as are the physical limitations that flow from actual impairment."

Mr. **McCollum.** But I can't imagine, Mr. Attorney General, even though that is true, that we acknowledge that, that we can do that in a sense of Congress where you would have a case where somebody could be regarded as, and that would be the handicap, when they didn't have a handicap already. In other words, it is a myth or a fear, but it presents a lot of heartburn to people looking at this, not knowing what might some day be litigated over this, even though we have had language on the books for 10 years and nobody has done it.

Mr. THORNBURGH. I don't suggest that heartburn is disabling or gives rise to being regarded as impaired, but certainly cancer does. Someone may have cancer, they are perfectly capable of doing the job, but there may be persons who think they cannot do it because of this disease.

A person with a limp may not be handicapped in any substantial way, but people, because of the myths and misunderstandings and fears that have grown up about this whole aspect of our culture and the desire, I think that the court has stressed that is embodied in section 504 is aimed at buttoning up these kinds of cases where a disability may not meet the first two——

Mr. MCCOLLUM. I understand——

Mr. THORNBURGH. Major life activities definitions——

Mr. MCCOLLUM. I understand where you are coming from. I haven't been able to see it myself. The question we have had as to essential functions comes from concerns businesses have with regard to who is going to decide the qualifications of an individual with a disability, whether or not that person can perform the essential functions of the employment position.

I know that language is in 504, and there are a couple of cases on what essential functions mean. My concern is that with the broad sector of the public, rather than just Government contractors having the law apply, there is likely to be a lot of litigation over individual cases, because essential functions can be in dispute.

A lot of folks can disagree on what the essential functions of a job are. In a restaurant business, somebody could be the busboy or whatever. Does everybody have to have a job description that includes every conceivable thing when they are hired? Businessmen say we don't want to have to do that, we don't do that now.

If somebody is going to come over our shoulder afterwards and say that the guy can do the essential functions of this job, and we decided what those functions were, somebody else is going to disagree what they are. How do we answer that? And do we need regulations to specifically spell this out, or can we better refine it in law—what do you think?

Mr. THORNBURGH. I think that some of the people who raise questions of this kind are suspicious of the Congress and the executive branch as seeking to foist some kind of unreasonable requirement upon them.

I don't happen to think that there is anything inherently potentially harassing in the use of the term "performing essential functions." The Supreme Court has made it clear in a whole line of cases dealing in this area that they don't want to engage in a wholesale second-guessing of employers regarding what is demanded by a particular job, and I can certainly subscribe to that.

We have enough today dealing with the egregious type of situation that was referred to earlier on, patterns and practices where someone on a wholesale basis decides they are simply not going to hire people with handicaps.

I would—certainly you have to take a look at each of these phrases and terms, and I don't mean to denigrate their importance, but I think the notion that we in the Department of Justice are going to support any kind of harassing or second-guessing of employers in this regard, I think the vast majority, the overwhelming majority of employers are perfectly willing to consider people with disabilities who can perform a job, and those that aren't deserve a nudge in the right direction, and will get it from this legislation.

I just—I am afraid I don't fear the, what I would characterize as sometimes hypertechnical assessments of some of these terms. I understand them, but don't——

Mr. McCollum. The only reason I raised this one as opposed to others is I have heard it more than anything else.

Mr. Thornburgh. These acquire a life of their own.

Mr. McCollum. If litigation really takes hold in this area, we will both be second-guessing them. One other thing I would like to ask, and I would like to submit questions for details, in the broad policy question area, intentional versus unintentional.

That runs throughout the questioning of the business community, the pattern of practice is here, but there is a great concern expressed over the fact that somebody can do a lot of this unintentionally and get just as much punishment as someone who does it intentionally.

Shouldn't there be more punishment for the guy who says, "I know what the rule is, but I am going to refuse to remove the barrier?" Why should you have a $50,000 fine——

Mr. Thornburgh. As a practical matter, the only one subject to a $50,000 fine is going to be the intentional egregious violator. We don't support the concept that legislation should lay traps for the unwary. That person needs guidance on how to comply, not a crackdown due to some——

Mr. McCollum. But the law does allow you to?

Mr. Thornburgh. It does. It allows me to act unreasonably. I think I would have to answer to you and your colleagues and my boss if I were to do so, but I hope Representative Frank's characterization didn't fall on deaf ears, that we have an intention of seeing that this law, a new law——

Mr. McCollum. You have reassured me, and I believe you, but this law is going to be around for a lot of Attorneys General and other administrations?

Mr. Thornburgh. Probably some more reasonable than I.

Mr. Fish. Would the gentleman yield?

I think this is an appropriate place in the record, Mr. Attorney General, to state that the discussion that you two have had has been very helpful and being regarded as having an impairment as the third prong of the term "disability" is discussed in some detail on pages 23 and 24 of the Senate report, and where it gives examples such as a severe burn victim or somebody who might be discriminated against in employment with controlled diabetes or epilepsy or wearing a hearing aid or somebody refused entry into a restaurant because of having cerebral palsy.

Thank you.

Mr. **Edwards**. We thank the Attorney General for helpful testimony today, and we congratulate the Department and administration on its affirmative attitude on this legislation. I know that no member wants to miss the vote on the flag.

Further questions can be submitted to you in writing, Mr. Attorney General, and thank you again.

The committee is adjourned, and in about 5 minutes, the subcommittee handling this matter will be called to attention for further hearings on the ADA.

[Whereupon, at 12:20 p.m., the committee adjourned, to reconvene subject to the call of the Chair.]

AMERICANS WITH DISABILITIES ACT OF 1989

THURSDAY, OCTOBER 12, 1989

House of Representatives,
Subcommittee on Civil and Constitutional Rights,
Committee on the Judiciary,
Washington, DC.

The subcommittee met, pursuant to notice, at 12:30 p.m., in room 2141, Rayburn House Office Building, Hon. Don Edwards (chairman of the subcommittee) presiding.

Present: Representatives Don Edwards, F. James Sensenbrenner, Jr., and Craig T. James.

Also present: Stuart J. Ishimaru and Ivy L. Davis, assistant counsels; and Colleen Kiko, minority counsel.

Mr. Edwards. The subcommittee will come to order.

This afternoon, the subcommittee continues hearings on the Americans with Disabilities Act. Just moments ago, the full committee heard testimony from the Attorney General in full support of the bill, as passed by the Senate.

Yesterday, the subcommittee heard testimony from a number of groups who were concerned about the bill. I believe that most of their concerns can be accommodated within the confines of the bill, and I look forward to working with them to clear up any uncertainties.

Without objection, I would like to place in the record statements from the Associated General Contractors of America and from Prof. Stephen Fawcett and Barbara Bradford of the University of Kansas.

[The prepared statements follow:]

STATEMENT BY
THE ASSOCIATED GENERAL CONTRACTORS OF AMERICA

TO
THE SUBCOMMITTEE ON CIVIL AND CONSTITUTIONAL RIGHTS
OF
THE HOUSE JUDICIARY COMMITTEE

ON
H.R. 2273
THE AMERICANS WITH DISABILITIES ACT OF 1989
OCTOBER 2, 1989

SKILL RESPONSIBILITY INTEGRITY

AGC is:

- More than 32,500 firms, including 8,000 of America's leading general contracting firms, responsible for the employment of 3,500,000-plus employees;
- 102 chapters nationwide;
- More than 80% of America's contract construction of commercial buildings, highways, industrial and municipal-utilities facilities.

The Associated General Contractors of America (AGC) welcomes the opportunity to comment on H.R. 2273, "The Americans with Disabilities Act of 1989." AGC supports the goals of this bill, and its Senate companion, S. 933. AGC cannot, however, lend its support to all of the specific provisions of the proposed legislation, because some provisions could have a negative impact on the construction industry's effort to stop unlawful drug use, and to ensure jobsite safety. AGC is also concerned that vague language will waste resources on litigation.

DRUG USE

First, AGC believes that it remains important to ensure that the legislation will not hinder the business community's efforts to discourage unlawful drug use. The construction industry has found that drug users not only cut productivity, but also increase accident rates.

Recent studies reveal that as many as 23% of all American workers use drugs on the job, and that drug use may account for over half of all accidents in the workplace. Some AGC members have found that 30% to 50% of their job applicants cannot pass pre-employment drug tests. One AGC member recently found that 40% of its employees tested positive for drug use after workplace accidents. Responding to its members' concern, AGC has adopted a "zero tolerance" policy that does not tolerate any level of unlawful drug use by anyone in the construction industry.

S. 933 appears to protect the employer's right to test for unlawful drug use, but H.R. 2273 does not. AGC urges the members of the subcommittee to take the Senate's approach, in order to avoid the problem that the Rehabilitation Act of 1973 has created for federal contractors and certain others. Within the last month, a federal court has held that the 1973 statute forbids the Immigration and Naturalization Service to discharge a drug-addicted attorney arrested for cocaine use and possession of narcotics paraphernalia. Nisperos v. Buck, Case No. CC-88-4039-WWS (N.D. Cal. September 12, 1989).

CONSTRUCTION JOBSITES

AGC's second concern is that the proposed legislation will compromise sound employment decisions made in the interest of jobsite safety. The unique nature of the temporary construction jobsite, with its ever-changing structure, makes it impractical, if not impossible, to guarantee the safety and health of all disabled Americans who might seek employment on construction jobsites.

The proposed definition of "disability" is extremely broad. The U.S. Supreme Court has held that elementary school teachers with contagious tuberculosis fit within the similar definition in the 1973 statute. Nassau County School Board v. Arline, 480 U.S. 273 (1987). More importantly, the courts have held that construction workers with congenital back anomalies fit within that definition, even though they risk injury from routine lifting, and other physical work required on construction jobsites. E.E. Black, Ltd. v. Marshall, 497 F.Supp. 1088 (D. Haw. 1980). The construction industry simply cannot afford to employ a helper for everyone susceptible to physical injury from lifting or other work required on construction jobsites.

Most employers have at least the opportunity to amortize the cost of accommodating a disabled individual over a long period of time, or to build the cost into their price structure. Construction employers, however, have neither of these advantages. Construction employers have to amortize the cost of making an accommodation over the short time available to complete a particular project. Construction employers cannot build the cost into their price structure because the cost is not foreseeable at the time when bids are due.

Other terms used in the proposed legislation, such as "reasonable accommodation" and "undue hardship," are simply too vague to assist construction employers in their efforts to comply with the law. These terms are subjective, and will tend to waste resources on litigation.

AGC is cognizant of the recent colloquy between Senator Hatch and Senator Harkin on "reasonable accommodation" and "undue hardship." On September 7, 1989, during the Senate debate on S. 933, Senator Hatch questioned whether that bill takes "the nature of a particular industry into account," and Senator Harkin responded that "each industry, and indeed each separate business, may be unique in the type of accommodation employers are able to provide without significant difficulty or expense." Senator Harkin later stated that "[c]onstruction is unlike manufacturing, and most other types of industries, in that an employer is usually confronted with monitoring multiple worksites at remote locations...."

AGC appreciates this effort to clarify the vague terms in the proposed legislation, but believes that the House of Representatives must do more. The statutory language still invites case-by-case determinations, on specific facts, and without objective guidance.

CONCLUSION

In closing, AGC would like to thank the subcommittee for the opportunity to express these views. AGC strongly supports the cause of the many disabled Americans who simply seek their rightful place in the American workplace. AGC believes that all citizens should be, and are committed to, equal opportunity for all in our society, and in every respect. With that said, AGC urges the subcommittee to exercise the utmost care in the drafting of this legislation to ensure that, unlike recent legislation enacted by Congress, extended debate and corrective legislation does not become necessary later to correct mistakes that maximum care can now avoid.

PREPARED STATEMENT OF STEPHEN B. FAWCETT, PH.D., PROFESSOR OF HUMAN DEVELOPMENT AND RESEARCH ASSOCIATE OF THE RESEARCH AND TRAINING CENTER ON INDEPENDENT LIVING [RTCIL] and Barbara Bradford, Training Associate, RTCIL, University of Kansas, Lawrence, KS

We and our colleagues have conducted a study, now 8 years in running, of the concerns of people with physical disabilities. The study captures disabled citizens' ideas for improving the communities in which we all live. This research information provides a perspective of how people with disabilities themselves see the issues and options that affect their independence. Accordingly, it may be helpful to your deliberations about the Americans with Disabilities Act.

Using our Concerns Report Method, we have collected data from over 17,000 people with physical disabilities in 12 states. Participants were drawn from entire states, such as Indiana and Iowa, large urban areas, such as Los Angeles and Orange County, California, and many small rural communities. Survey participants included people with all types and severities of impairments. Their living conditions are consistent with the Harris poll sample; about two thirds are unemployed and have incomes below poverty guidelines.

Unique surveys were developed by local groups of disabled citizens. They identified the top problems and strengths in each community. Consumers discussed the issues in town meetings and generated their own ideas about what could be done to improve things.

We have attached, for the record, a copy of the latest edition of the summary report on this research, a document entitled Common Concerns of Disabled Americans: Issues and Options. We will draw on this report in our testimony.

Imagine: People from places as different as Anaheim, CA; Des Moines, IA; the Missouri Ozarks, and the Arapaho-Shoshone reservation in Wyoming saying quite similar things about the barriers that affect their personal independence. This representative group of over 17,000 disabled citizens says, with a united voice, and many times over, that they face limited opportunities and discrimination in employment, work disincentives, unwillingness of employers to provide reasonable accommodation, and lack of access to public transportation, streets and sidewalks, and commercial and public buildings.

Disabled citizens spoke about public accommodations issues through specific survey questions and comments at the town meetings. The data support retaining, and perhaps even expanding, the scope of coverage as it now reads.

Our concerns data on access to commercial services show an average rating of 87% on importance (very high), with a satisfaction rating of only 47%. Issues of public access had a high importance rating of 81% and a relatively low satisfaction rating of 48%. What if a corporation like McDonald's conducted a similar survey and found that satisfaction with its fries was only 48%? We can bet that there would be more than symbolic action.

What people really seem to care about is access to stores, local restaurants, public buildings, banks, utility companies, and service agency offices: those places necessary for the everyday conduct of all of our lives. Can I get to the grocery store or discount shopping center? And, if I can get there, can I get in it and around it?

To restrict the coverage of the bill to motels, hotels, places of entertainment, and the offices of health care providers leaves out many of the places necessary for the everyday conduct of people's lives. Also, since the majority of people with disabilities are poor, access to fine hotels and restaurants is something many can only hope to enjoy some day.

It is essential that hotels, motels, and recreational facilities be accessible on an equal basis, and critical that access to health care is available to all Americans. But, to restrict the scope of the ADA to these places ignores the basic rights and needs of the great majority of disabled Americans, leaving them socially isolated in their homes, and still barred from equal participation in society. People are calling for their rights to access to the everyday places in their own neighborhoods and towns.

To summarize, we found substantial and widespread dissatisfaction with an array of access issues by this representative group of the 36 million disabled Americans. And, with the imminent passage of the ADA, Congress has demonstrated its responsiveness.

But, what about implementation? How can this important civil rights legislation be implemented in places as diverse as Bismark, North Dakota and Los Angeles? How can it be done in a way that minimizes litigation by angry consumers and limits unjustified claims of "undue burden" by businesses?

A successful implementation strategy must balance potentially conflicting interests: the rights to equal access and opportunity and the responsibility to avoid placing an undue burden on those public and private entities accountable for making changes.

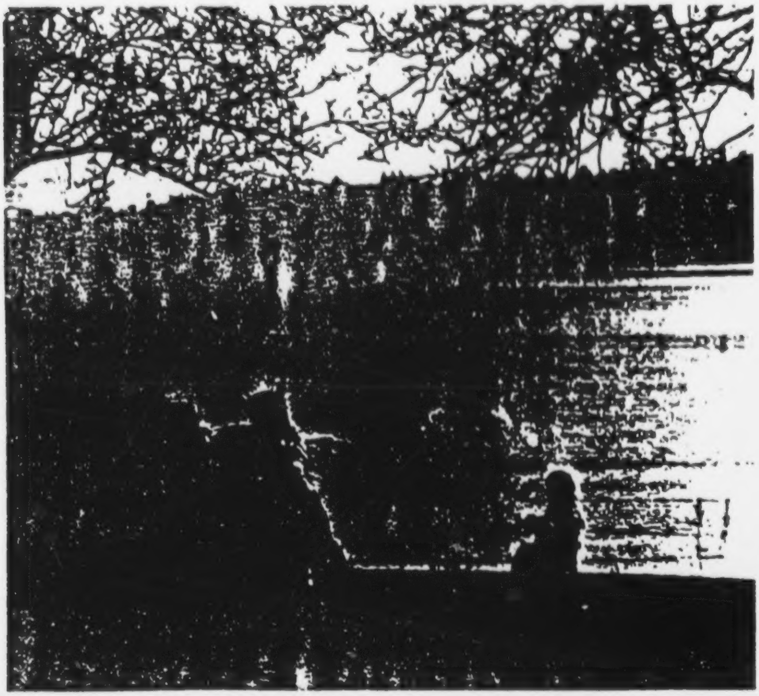
The town meetings provided an insight that may be helpful. In gathering after gathering, disabled citizens stood ready to take significant responsibility for ensuring that their basic rights are met. There was a consistent theme of self-help: what we ourselves can do to make things better.

We recommend that the technical assistance amendments for the ADA encourage self-help initiatives. Consumers should be involved in setting access goals in local communities. Disability Ambassadors programs might be established to promote person-to-person contact between local consumer representatives and businesspeople, and to negotiate reasonable accommodations. Self-help micro-grants might be awarded to encourage citizen involvement in setting goals, working for their implementation, and monitoring goal attainment. Local implementation scorecards might be used to make public each community's progress in implementing the ADA. The national network of over 300 independent living centers could play a role in supporting these self-help initiatives and negotiating differences in the successful implementation of the ADA.

We hope that this testimony contributes to your discussion about this, one of the most important pieces of civil rights legislation of our times. Maximum involvement by disabled citizens in the law's implementation can help bring down the barriers of discrimination. Our collective actions should help bring us a step closer to the long-awaited dream of full access for all our citizens.

Common Concerns of Disabled Americans: Issues and Options

by Yolanda Suarez de Balcazar, Barbara Bradford, and Stephen B. Fawcett



Social Policy, 1988, 19 (2), 29-35.

BEST COPY AVAILABLE

The hallmark value of the disabilities rights and independent living movements is the assurance of equal access to all activities society offers, both work- and leisure-related. Over 30 million people with disabilities accept responsibility for their work, family, and individual lives. Their substantial contribution to society can be attributed both to personal competence and to the strengths of those communities that foster and support attempts to live independently. However, there are still many physical and social barriers that limit adequate jobs, housing, accessible transportation, and other needed services. These community problems thwart even the most heroic personal attempts to pursue a full life.

This article outlines the major problems in communities that limit independence. It also provides alternatives for action from the perspective of people with disabilities. It summarizes quantitative data from nearly 13,000 people with disabilities in 319 communities in 10 states and provides qualitative information about the issues and options they identified during local town meetings and public forums. This compendium presents common concerns of people with disabilities and their insights into what actions would help assure equality of opportunity.

Questionnaires were administered to all identified citizens with disabilities in the local community or state. Sponsoring organizations included independent living centers, state vocational rehabilitation agencies, and consumer advisory committees. Average scores for importance and satisfaction were used to identify relative strengths (i.e., items of high importance and high satisfaction) and possible problems (i.e., items of high importance and low satisfaction). Finally, qualitative information was obtained when the results of each survey were discussed in town meetings. Disabled citizens discussed major issues, identifying specific dimensions of issues and generating possible solutions.

YOLANDA SUAREZ DE BALCAZAR is research associate and BARBARA BRADFORD is training associate at the Research and Training Center on Independent Living, University of Kansas, where STEPHEN B. FAWCETT is research associate and professor in the department of human development. This article is adapted from a Research and Training Center publication.

MAJOR PROBLEMS IDENTIFIED BY DISABLED AMERICANS

This section provides a summary of 18 issues identified as major problems, which are organized alphabetically by category headings. Under each category, problematic aspects are noted as well as the total number of participants who responded to surveys in which that issue was chosen as a top problem. The overall average importance and satisfaction ratings for all respondents are also presented.

Assistive Devices: Affordability and Availability

The issue of assistive devices (e.g., wheelchairs) involves aspects such as affordability, availability of financial assistance, cost of services and repair, cost of rental, and price. Six related survey items were chosen by consumers and responded to by 6,355 people with disabilities in 6 different surveys. The issues received consistently high importance ratings, an average of 80 percent, and relatively low satisfaction ratings, an average of 42 percent.

Consumer-Identified Dimensions:

- Assistive devices, such as wheelchairs, are very expensive. Most people with disabilities do not have enough money to purchase devices.
- Rental of assistive devices is almost nonexistent. If rental is possible, consumers don't know where to go or get needed information.
- Medicaid and Medicare do not cover all assistive devices.

Consumer-Generated Alternatives:

- Change legislation regarding Medicaid and Medicare to cover purchase and repair of assistive devices.

Commercial Services: Accessibility

The issue of accessibility of businesses, particularly public restrooms, has been selected as a problem in three different surveys. Two related survey items were responded to by 299 consumers. The issues were rated with an average importance of 87 percent and an average satisfaction rating of 47 percent.

Consumer-Identified Dimensions:

- In many businesses and restaurants, the restrooms are inaccessible.
- The restroom doors are too hard to push, and the stalls are too narrow.

Consumer-Generated Alternatives:

- Make a list of accessible and responsive businesses.
- Survey businesses and provide feedback and suggestions.
- Write letters to local businesses about upgrading facilities.
- Consumers should keep informed about and review access plans and permits for new construction in the community.

Commercial Services: Availability of Discounts

A second issue related to commercial services and identified as a problem is the availability of special rates for disabled consumers. This issue was selected in one survey involving 1,185 respondents, with an importance rating of 82 percent and a satisfaction rating of 35 percent.

Consumer-Identified Dimensions:

- Disabled people do not get the same discounts and shopping privileges as senior citizens. Most disabled people are on a very low fixed income.

Consumer-Generated Alternatives:

- Independent living centers can sell discount cards to consumers for use with participating merchants, as was done by Westside CIL in Los Angeles.
- Have a group of disabled people discuss a proposal with local merchants.

Community Support and Responsiveness

This category includes issues related to family, community and government support in meeting the needs of persons with disabilities. Five somewhat related items were chosen by 1,914 consumers in six surveys. They received consistently high importance ratings, with an average of 86 percent, and relatively low satisfaction ratings, with an average of 46 percent.

Consumer-Identified Dimensions:

- Families and communities do not encourage disabled members to be independent.
- The community does not provide opportunities or assistance for disabled

BEST COPY AVAILABLF

people to live independently.

- There are not enough support groups available for people with disabilities and their families.
- Sexuality counseling for people with disabilities is not available.
- Local governments are unresponsive to disability issues, especially if solutions cost money. For example, disabled citizens are discouraged from registering and voting by inaccessible registration sites, polling places, and lack of transportation.

Consumer-Generated Alternatives:

- Encourage community groups to organize support groups and events to involve disabled people and their families.
- Encourage churches to work with support groups, and include disabled people and their families in church activities.
- Use local media to feature stories about including people with disabilities in community activities.
- Ask city councils for help in organizing programs that will encourage independence for disabled people and their families.
- Independent living centers should provide training for their staff counselors in sexuality counseling or bring in professional counselors for a workshop and provide materials.
- Consumer groups should represent themselves at city council and county court meetings, become familiar with city budgets, and advocate for funds for access improvements and disability programs.
- Consumer groups should encourage and assist disabled citizens to register to vote.
- Use the American Civil Liberties Union to enforce existing access and registration laws.

Disability Rights and Advocacy

Issues related to involving disabled citizens in advocacy activities, increasing their knowledge about their rights, and training in self-advocacy were selected in four different surveys. Three related questions were chosen by 2,430 people with disabilities. They received an average importance rating of 88 percent and an average satisfaction rating of 45 percent.

Consumer-Identified Dimensions:

- People with disabilities are unaware of their legal rights.
- Most people with disabilities are unaware of what pending legislation at state and national levels they should support or oppose.
- People with disabilities need training in forming advocacy organizations.

Consumer-Generated Alternatives:

- Professionals and independent living centers can foster local and state leadership within the disabled community.
- People with disabilities need to inform themselves and attend advocacy meetings at all levels, get on mailing lists for disability groups involved in legislation, and obtain names, addresses, and numbers of elected officials.
- Disabled consumers should organize locally around identified issues and connect with state and national groups.
- Training in advocacy skills should be provided.

Employment Accommodations, Disincentives, and Training

Five survey items related to job accommodations in the workplace, work disincentives, and quality of job assistance and training programs were identified by 9,118 consumers as relative problems in six surveys. They received an average importance rating of 83 percent and an average satisfaction rating of 42 percent.

Consumer-Identified Dimensions:

- Many businesses do not provide reasonable accommodations in the workplace.
- Work disincentives still exist within the social security system. In addition to loss of economic benefits are losses or reductions in medical benefits, housing subsidies, food stamps, attendant services, etc.
- Disabled job hunters lack basic job-seeking skills and are unaware of incentives to employers and laws prohibiting discrimination.
- Blind people have lost their tax credit; other disability groups were never eligible.
- People with disabilities do not know where to go for job training or assistance in finding a job.

Consumer-Generated Alternatives:

- Consumer groups need to form a coalition to lobby legislators at federal and state levels for tax credits.
- VR could offer training in job-seeking skills.
- Consumer groups should develop guidelines on what constitutes reasonable accommodation in the workplace.
- Disseminate information about where to go for job training skills and job-related assistance.

Employment Discrimination

Two survey items related to job discrimination were identified by 9,314 consumers as top problems in eight surveys. They received an average importance rating of 86 percent and an average satisfaction rating of 41 percent.

Consumer-Identified Dimensions:

- People with disabilities are discriminated against because of their disability.
- Qualified disabled individuals are not given the same opportunity as nondisabled people.

Consumer-Generated Alternatives:

- Consumers need to teach disabled job seekers about proper attitudes and how to develop a businesslike demeanor when dealing with a potential employer. Disabled people must sell an employer on their abilities and not rely on sympathy.
- If a specific employer is perceived as insensitive, invite a representative of that company to speak to a disability group about employment.
- Independent living centers and advocacy groups need to encourage and assist disabled job applicants and employees to enforce laws and regulations prohibiting discrimination.
- Disabled individuals can contact the Job Accommodations Network or similar resources for help in locating jobs and training, marketing themselves to prospective employers, and obtaining reasonable accommodation.

Employment Opportunities

Two survey items related to employment opportunities were identified by 9,412 consumers as relative problems in 11 surveys. They received an average importance rating of 84 percent and an average satisfaction rating of 40 percent.

Consumer-Identified Dimensions:

- Job opportunities for people with disabilities are very limited.
- If there is a nondisabled person and a disabled individual applying for a

job, employers prefer to hire the nondisabled person.

Consumer-Generated Alternatives:

- Consumers should educate employers in tax credits, reasonable accommodation, and advantages of hiring disabled employees.
- Disability groups must keep a coalition going at the national level to lobby for reduction of work disincentives.
- Job placement people should know which employers routinely hire disabled applicants.
